AS I entered the Temple by the Tudor Street gate the aspect of the place smote my senses with an air of agreeable familiarity. Here had I spent many a delightful hour when working with Thorndyke at the remarkable Hornby case, which the newspapers had called “The Case of the Red Thumb Mark”; and here had I met the romance of my life, the story whereof is told elsewhere. The place was thus endeared to me by pleasant recollections of a happy past, and its associations suggested hopes of happiness yet to come and in the not too far distant future.
My brisk tattoo on the little brass knocker brought to the door no less a person than Thorndyke himself; and the warmth of his greeting made me at once proud and ashamed. For I had not only been an absentee; I had been a very poor correspondent.

"The prodigal has returned, Polton," he exclaimed, looking into the room. "Here is Dr. Jervis."

I followed him into the room and found Polton—his confidential servant, laboratory assistant, artificer and general "familiar"—setting out the tea-tray on a small table. The little man shook hands cordially with me, and his face crinkled up into the sort of smile that one might expect to see on a benevolent walnut.

"We've often talked about you, sir," said he. "The doctor was wondering only yesterday when you were coming back to us."

As I was not "coming back to them" quite in the sense intended I felt a little guilty, but reserved my confidences for Thorndyke's ear and replied in polite generalities. Then Polton fetched the tea-pot from the laboratory, made up the fire and departed, and Thorndyke and I subsided, as of old, into our respective arm-chairs.

"And whence do you spring from in this unexpected fashion?" my colleague asked. "You look as if you had been making professional visits."

"I have. The base of operations is in Lower Kennington Lane."

"Ah! Then you are 'back once more on the old trail'?"

"Yes," I answered, with a laugh, "the old trail, the long trail, the trail that is always new."

"And leads nowhere," Thorndyke added grimly. I laughed again; not very heartily, for there was an uncomfortable element of truth in my friend's remark, to which my own experience bore only too complete testimony. The medical practitioner whose lack of means forces him to subsist by taking temporary charge of other men's practices is apt to find that the passing years bring him little but grey hairs and a wealth of disagreeable experience.

"You will have to drop it, Jervis; you will, indeed," Thorndyke resumed after a pause. "This casual employment is preposterous for a man of your class and professional attainments. Besides, are you not engaged to be married and to a most charming girl?"

"Yes, I know. I have been a fool. But I will really amend my ways. If necessary, I will pocket my pride and let Juliet advance the money to buy a practice."

"That," said Thorndyke, "is a very proper resolution. Pride and reserve between people who are going to be husband and wife, is an absurdity. But why buy a practice? Have you forgotten my proposal?"

"I should be an ungrateful brute if I had."

"Very well. I repeat it now. Come to me as my junior, read for the Bar and work with me, and, with your abilities, you will have a chance of something like a career. I want you, Jervis," he added, earnestly. "I must have a junior, with my increasing practice, and you are the junior I want. We are old and tried friends; we have worked together; we like and trust one another, and you are the best man for the job that I know. Come; I am not going to take a refusal. This is an ultimatum."

"And what is the alternative?" I asked with a smile at his eagerness.

"There isn't any. You are going to say yes."

"I believe I am," I answered, not without emotion; "and I am more rejoiced at your offer and more grateful than I can tell you. But we must leave the final arrangements for our next meeting—in a week or so, I hope—for I have to be back in an hour, and I want to consult you on a matter of some importance."

"Very well," said Thorndyke; "we will leave the formal agreement for consideration at our next meeting. What is it that you want my opinion on?"

"The fact is," I said, "I am in a rather awkward dilemma, and I want you to tell me what you think I ought to do."

Thorndyke paused in the act of refilling my cup and glanced at me with unmistakable anxiety.

"Nothing of an unpleasant nature, I hope," said he.

"No, no; nothing of that kind," I answered with a smile as I interpreted the euphemism; for "something unpleasant," in the case of a young and reasonably presentable medical man is ordinarily the equivalent of trouble with the female of his species. "It is nothing that concerns me personally at all," I continued; "it is a question of professional responsibility. But I had better give you an account of the affair in a complete narrative, as I know that you like to have your data in a regular and consecutive order."

Thereupon I proceeded to relate the history of my visit to the mysterious Mr. Graves, not omitting any single circumstance or detail that I could recollect.

Thorndyke listened from the very beginning of my story with the closest attention. His face was the most impassive that I have ever seen; ordinarily as inscrutable as a bronze mask; but to me, who knew him intimately, there was a certain
something—a change of colour, perhaps, or an additional sparkle of the eye—that told me when his curious passion for investigation was fully aroused. And now, as I told him of that weird journey and the strange, secret house to which it had brought me, I could see that it offered a problem after his very heart. During the whole of my narration he sat as motionless as a statue, evidently committing the whole story to memory, detail by detail; and even when I had finished he remained for an appreciable time without moving or speaking.

At length he looked up at me. “This is a very extraordinary affair, Jervis,” he said.

“Very,” I agreed; “and the question that is agitating me is, what is to be done?”

“Yes,” he said, meditatively, “that is the question; and an uncommonly difficult question it is. It really involves the settlement of the antecedent question: What is it that is happening at that house?”

“What do you think is happening at that house?” I asked.

“We must go slow, Jervis,” he replied. “We must carefully separate the legal tissues from the medical, and avoid confusing what we know with what we suspect. Now, with reference to the medical aspects of the case. The first question that confronts us is that of sleeping sickness, or negro-lethargy as it is sometimes called; and here we are in a difficulty. We have not enough knowledge. Neither of us, I take it, has ever seen a case, and the extant descriptions are inadequate. From what I know of the disease, its symptoms agree with those in your case in respect of the alleged moroseness and in the gradually increasing periods of lethargy alternating with periods of apparent recovery. On the other hand, the disease is said to be confined to negroes; but that probably means only that negroes alone have hitherto been exposed to the conditions that produce it. A more important fact is that, as far as I know, extreme contraction of the pupils is not a symptom of sleeping sickness. To sum up, the probabilities are against sleeping sickness, but with our insufficient knowledge, we cannot definitely exclude it.”

“You think that it may really be sleeping sickness?”

“No; personally I do not entertain that theory for a moment. But I am considering the evidence apart from our opinions on the subject. We have to accept it as a conceivable hypothesis that it may be sleeping sickness because we cannot positively prove that it is not. That is all. But when we come to the hypothesis of morphine poisoning, the case is different. The symptoms agree with those of morphine poisoning in every respect. There is no exception or disagreement whatever. The common sense of the matter is therefore that we adopt morphine poisoning as our working diagnosis; which is what you seem to have done.”

“Yes. For purposes of treatment.”

“Exactly. For medical purposes you adopted the more probable view and dismissed the less probable. That was the reasonable thing to do. But for legal purposes you must entertain both possibilities; for the hypothesis of poisoning involves serious legal issues, whereas the hypothesis of disease involves no legal issues at all.”

“That doesn’t sound very helpful,” I remarked.

“It indicates the necessity for caution,” he retorted.

“Yes, I see that. But what is your own opinion of the case?”

“Well,” he said, “let us consider the facts in order. Here is a man who, we assume, is under the influence of a poisonous dose of morphine. The question is, did he take that dose himself or was it administered to him by some other person? If he took it himself, with what object did he take it? The history that was given to you seems completely to exclude the idea of suicide. But the patient’s condition seems equally to exclude the idea of morphinomania. Your opium-eater does not reduce himself to a state of coma. He usually keeps well within the limits of the tolerance that has been established. The conclusion that emerges is, I think, that the drug was administered by some other person; and the most likely person seems to be Mr. Weiss.”

“Isn’t morphine a very unusual poison?”

“Very; and most inconvenient except in a single, fatal dose, by reason of the rapidity with which tolerance of the drug is established. But we must not forget that slow morphine poisoning might be eminently suitable in certain cases. The manner in which it enfeebles the will, confuses the judgment and debilitates the body might make it very useful to a poisoner whose aim was to get some instrument or document executed, such as a will, deed or assignment. And death could be produced afterwards by other means. You see the important bearing of this?”

“You mean in respect of a death certificate?”

“Yes. Suppose Mr. Weiss to have given a large dose of morphine. He then sends for you and throws out a suggestion of sleeping sickness. If you accept the suggestion he is pretty safe. He can repeat the process until he kills his victim and then get a certificate from you which will cover the murder. It was quite an ingenious scheme—which, by the way, is characteristic of intricate crimes; your subtle criminal often plans his crime like a genius, but he generally executes it like a fool—as this man seems to have done, if we are not doing him an injustice.”

“How has he acted like a fool?”

“In several respects. In the first place, he should have chosen his doctor. A good, brisk, confident man who ‘knows his own mind’ is the sort of person who would have suited him; a man who would have jumped at a diagnosis and stuck to it;
or else an ignorant weakling of alcoholic tendencies. It was shockingly bad luck to run against a cautious scientific practitioner like my learned friend. Then, of course, all this secrecy was sheer tomfoolery, exactly calculated to put a careful man on his guard; as it has actually done. If Mr. Weiss is really a criminal, he has mismanaged his affairs badly."

"And you apparently think that he is a criminal?"

"I suspect him deeply. But I should like to ask you one or two questions about him. You say he spoke with a German accent. What command of English had he? Was his vocabulary good? Did he use any German idioms?"

"No. I should say that his English was perfect, and I noticed that his phrases were quite well chosen even for an Englishman."

"Did he seem to you 'made up' in any way; disguised, I mean?"

"I couldn’t say. The light was so very feeble."

"You couldn’t see the colour of his eyes, for instance?"

"No. I think they were grey, but I couldn’t be sure."

"And as to the coachman. He wore a wig, you said. Could you see the colour of his eyes? Or any peculiarity by which you could recognize him?"

"He had a malformed thumb-nail on his right hand. That is all I can say about him."

"He didn’t strike you as resembling Weiss in any way; in voice or features?"

"Not at all; and he spoke, as I told you, with a distinct Scotch accent."

"The reason I ask is that if Weiss is attempting to poison this man, the coachman is almost certain to be a confederate and might be a relative. You had better examine him closely if you get another chance."

"I will. And that brings me back to the question, What am I to do? Ought I to report the case to the police?"

"I am inclined to think not. You have hardly enough facts. Of course, if Mr. Weiss has administered poison ‘unlawfully and maliciously’ he has committed a felony, and is liable under the Consolidation Acts of 1861 to ten years’ penal servitude. But I do not see how you could swear an information. You don’t know that he administered the poison—if poison has really been administered—and you cannot give any reliable name or any address whatever. Then there is the question of sleeping sickness. You reject it for medical purposes, but you could not swear, in a court of law, that this is not a case of sleeping sickness."

"No," I admitted, "I could not."

"Then I think the police would decline to move in the matter, and you might find that you had raised a scandal in Dr. Stillbury’s practice to no purpose."

"So you think I had better do nothing in the matter?"

"For the present. It is, of course, a medical man’s duty to assist justice in any way that is possible. But a doctor is not a detective; he should not go out of his way to assume police functions. He should keep his eyes and ears open, and, though, in general, he should keep his own counsel, it is his duty to note very carefully anything that seems to him likely to bear on any important legal issues. It is not his business officiously to initiate criminal inquiries, but it is emphatically his business to be ready, if called upon, to assist justice with information that his special knowledge and opportunities have rendered accessible to him. You see the bearing of this?"

"You mean that I should note down what I have seen and heard and say nothing about it until I am asked."

"Yes: if nothing further happens. But if you should be sent for again, I think it is your duty to make further observations with a view, if necessary, to informing the police. It may be, for instance, of vital importance to identify the house, and it is your duty to secure the means of doing so."

"But, my dear Thorndyke," I expostulated, "I have told you how I was conveyed to the house. Now, will you kindly explain to me how a man, boxed up in a pitch-dark carriage, is going to identify any place to which he may be carried?"

"The problem doesn’t appear to me to present any serious difficulties," he replied.

"Doesn’t it?" said I. "To me it looks like a pretty solid impossibility. But what do you suggest? Should I break out of the house and run away up the street? Or should I bore a hole through the shutter of the carriage and peep out?"

Thorndyke smiled indulgently. "The methods proposed by my learned friend display a certain crudity inappropriate to the character of a man of science; to say nothing of the disadvantage of letting the enemy into our counsels. No, no, Jervis; we can do something better than that. Just excuse me for a minute while I run up to the laboratory."

He hurried away to Polton’s sanctum on the upper floor, leaving me to speculate on the method by which he proposed that a man should be enabled, as Sam Weller would express it, "to see through a flight of stairs and a deal door"; or, what was equally opaque, the wooden shutters of a closed carriage.

"Now," he said, when he returned a couple of minutes later with a small, paper-covered notebook in his hand, "I have set Polton to work on a little appliance that will, I think, solve our difficulty, and I will show you how I propose that you should
make your observations. First of all, we have to rule the pages of this book into columns."

He sat down at the table and began methodically to rule the pages each into three columns, two quite narrow and one broad. The process occupied some time, during which I sat and watched with impatient curiosity the unhurried, precise movements of Thorndyke's pencil, all agog to hear the promised explanation. He was just finishing the last page when there came a gentle tap at the door, and Polton entered with a satisfied smile on his dry, shrewd-looking face and a small board in his hand.

"Will this do, sir?" he asked.

As he spoke he handed the little board to Thorndyke, who looked at it and passed it to me.

"The very thing, Polton," my friend replied. "Where did you find it? It's of no use for you to pretend that you've made it in about two minutes and a half."

Polton smiled one of his queer crinkly smiles, and remarking that "it didn't take much making," departed much gratified by the compliment.

"What a wonderful old fellow that is, Jervis," Thorndyke observed as his factotum retired. "He took in the idea instantly and seems to have produced the finished article by magic, as the conjurers bring forth rabbits and bowls of goldfish at a moment's notice. I suppose you see what your modus operandi is to be?"

I had gathered a clue from the little appliance—a plate of white fret-wood about seven inches by five, to one corner of which a pocket-compass had been fixed with shellac—but was not quite clear as to the details of the method.

"You can read a compass pretty quickly, I think?" Thorndyke said.

"Of course I can. Used we not to sail a yacht together when we were students?"

"To be sure we did; and we will again before we die. And now as to your method of locating this house. Here is a pocket reading-lamp which you can hook on the carriage lining. This notebook can be fixed to the board with an india-rubber band—thus. You observe that the thoughtful Polton has stuck a piece of thread on the glass of the compass to serve as a lubber's line. This is how you will proceed. As soon as you are locked in the carriage, light your lamp—better have a book with you in case the light is noticed—take out your watch and put the board on your knee, keeping its long side exactly in a line with the axis of the carriage. Then enter in one narrow column of your notebook the time, in the other the direction shown by the compass, and in the broad column any particulars, including the number of steps the horse makes in a minute. Like this."

He took a loose sheet of paper and made one or two sample entries on it in pencil, thus—

and so on. Note every change of direction, with the time; and whenever you hear or feel anything from outside, note it, with the time and direction; and don't forget to note any variations in the horse's pace. You follow the process?"

"Perfectly. But do you think the method is accurate enough to fix the position of a house? Remember, this is only a pocket-compass with no dial, and it will jump frightfully. And the mode of estimating distance is very rough."

"That is all perfectly true," Thorndyke answered. "But you are overlooking certain important facts. The track-chart that you will produce can be checked by other data. The house, for instance, has a covered way by which you could identify it if you knew approximately where to look for it. Then you must remember that your carriage is not travelling over a featureless plain. It is passing through streets which have a determined position and direction and which are accurately represented on the ordnance map. I think, Jervis, that, in spite of the apparent roughness of the method, if you make your observations carefully, we shall have no trouble in narrowing down the inquiry to a quite small area. If we get the chance, that is to say."

"Yes, if we do. I am doubtful whether Mr. Weiss will require my services again, but I sincerely hope he will. It would be rare sport to locate his secret burrow, all unsuspected. But now I must really be off."

"Good-bye, then," said Thorndyke, slipping a well-sharpened pencil through the rubber band that fixed the notebook to the board. "Let me know how the adventure progresses—if it progresses at all—and remember, I hold your promise to come and see me again quite soon in any case."

He handed me the board and the lamp, and, when I had slipped them into my pocket, we shook hands and I hurried away, a little uneasy at having left my charge so long.

III. — “A CHIEL’S AMANG YE TAKIN’ NOTES”

The attitude of the suspicious man tends to generate in others the kind of conduct that seems to justify his suspicions. In most of us there lurks a certain strain of mischief which trustfulness disarms but distrust encourages. The inexperienced kitten which approaches us confidingly with arched back and upright tail, soliciting caresses, generally receives the gentle treatment that it expects; whereas the worldly-wise tom-cat, who, in response to friendly advances, scampers away and
grins at us suspiciously from the fancied security of an adjacent wall, impels us to accelerate his retreat with a well-directed clod.

Now the proceedings of Mr. H. Weiss resembled those of the tom-cat aforesaid and invited an analogous reply. To a responsible professional man his extraordinary precautions were at once an affront and a challenge. Apart from graver considerations, I found myself dwelling with unholy pleasure on the prospect of locating the secret hiding-place from which he seemed to grin at me with such complacent defiance; and I lost no time and spared no trouble in preparing myself for the adventure. The very hansom which bore me from the Temple to Kennington Lane was utilized for a preliminary test of Thorndyke’s little apparatus. During the whole of that brief journey I watched the compass closely, noted the feel and sound of the road-material and timed the trotting of the horse. And the result was quite encouraging. It is true that the compass-needle oscillated wildly to the vibration of the cab, but still its oscillations took place around a definite point which was the average direction, and it was evident to me that the data it furnished were very fairly reliable. I felt very little doubt, after the preliminary trial, as to my being able to produce a moderately intelligible track-chart if only I should get an opportunity to exercise my skill.

But it looked as if I should not. Mr. Weiss’s promise to send for me again soon was not fulfilled. Three days passed and still he made no sign. I began to fear that I had been too outspoken; that the shuttered carriage had gone forth to seek some more confiding and easy-going practitioner, and that our elaborate preparations had been made in vain. When the fourth day drew towards a close and still no summons had come, I was disposed reluctantly to write the case off as a lost opportunity.

And at that moment, in the midst of my regrets, the bottle-boy thrust an uncomely head in at the door. His voice was coarse, his accent was hideous, and his grammatical construction beneath contempt; but I forgave him all when I gathered the import of his message.

“Mr. Weiss’s carriage is waiting, and he says will you come as quickly as you can because he’s took very bad to-night.”

I sprang from my chair and hastily collected the necessaries for the journey. The little board and the lamp I put in my overcoat pocket; I overhauled the emergency bag and added to its usual contents a bottle of permanganate of potassium which I thought I might require. Then I tucked the evening paper under my arm and went out.

The coachman, who was standing at the horse’s head as I emerged, touched his hat and came forward to open the door.

“I have fortified myself for the long drive, you see,” I remarked, exhibiting the newspaper as I stepped into the carriage.

“But you can’t read in the dark,” said he.

“No, but I have provided myself with a lamp,” I replied, producing it and striking a match.

He watched me as I lit the lamp and hooked it on the back cushion, and observed:

“I suppose you found it rather a dull ride last time. It’s a longish way. They might have fitted the carriage with an inside lamp. But we shall have to make it a quicker passage to-night. Governor says Mr. Graves is uncommon bad.”

With this he slammed the door and locked it. I drew the board from my pocket, laid it on my knee, glanced at my watch, and, as the coachman climbed to his seat, I made the first entry in the little book.

“8.58. W. by S. Start from home. Horse 13 hands.”

The first move of the carriage on starting was to turn round as if heading for Newington Butts, and the second entry accordingly read:

“8.58.30. E. by N.”

But this direction was not maintained long. Very soon we turned south and then west and then south again. I sat with my eyes riveted on the compass, following some difficulty its rapid changes. The needle swung to and fro incessantly but always within a definite arc, the centre of which was the true direction. But this direction varied from minute to minute in the most astonishing manner. West, south, east, north, the carriage turned, “boxing” the compass until I lost all count of direction. It was an amazing performance. Considering that the man was driving against time on a mission of life and death urgency, his carelessness as to direction was astounding. The tortuosity of the route must have made the journey twice as long as it need have been with a little more careful selection. At least so it appeared to me, though, naturally, I was not in a position to offer an authoritative criticism.

As far as I could judge, we followed the same route as before. Once I heard a tug’s whistle and knew that we were near the river, and we passed the railway station, apparently at the same time as on the previous occasion, for I heard a passenger train start and assumed that it was the same train. We crossed quite a number of thoroughfares with tram-lines —I had no idea there were so many—and it was a revelation to me to find how numerous the railway arches were in this part of London and how continually the nature of the road-metal varied.

It was by no means a dull journey this time. The incessant changes of direction and variations in the character of the road kept me most uncommonly busy; for I had hardly time to scribble down one entry before the compass-needle would swing round sharply, showing that we had once more turned a corner; and I was quite taken by surprise when the carriage slowed down and turned into the covered way. Very hastily I scribbled down the final entry (“9.24. S.E. In covered way”), and having closed the book and slipped it and the board into my pocket, had just opened out the newspaper when the
The dose of permanganate that I had given was enough to neutralize any reasonable quantity of the poison that might yet remain in the stomach. I had next to deal with that portion of the drug which had already been absorbed and was
exercising its poisonous effects. Taking my hypodermic case from my bag, I prepared in the syringe a full dose of atropine sulphate, which I injected forthwith into the unconscious man’s arm. And that was all that I could do, so far as remedies were concerned, until the coffee arrived.

I cleaned and put away the syringe, washed the tube, and then, returning to the bedside, endeavoured to rouse the patient from his profound lethargy. But great care was necessary. A little injudicious roughness of handling, and that thready, flickering pulse might stop for ever; and yet it was almost certain that if he were not speedily aroused, his stupor would gradually deepen until it shaded off imperceptibly into death. I went to work very cautiously, moving his limbs about, flicking his face and chest with the corner of a wet towel, tickling the soles of his feet, and otherwise applying stimuli that were strong without being violent.

So occupied was I with my efforts to resuscitate my mysterious patient that I did not notice the opening of the door, and it was with something of a start that, happening to glance round, I perceived at the farther end of the room the shadowy figure of a man relieved by two spots of light reflected from his spectacles. How long he had been watching me I cannot say, but, when he saw that I had observed him, he came forward—though not very far—and I saw that he was Mr. Weiss.

“I am afraid,” he said, “that you do not find my friend so well to-night?”

“So well!” I exclaimed. “I don’t find him well at all. I am exceedingly anxious about him.”

“You don’t—er—anticipate anything of a—er—anything serious, I hope?”

“There is no need to anticipate,” said I. “It is already about as serious as it can be. I think he might die at any moment.”

“Good God!” he gasped. “You horrify me!”

He was not exaggerating. In his agitation, he stepped forward into the lighter part of the room, and I could see that his face was pale to ghastliness—except his nose and the adjacent red patches on his cheeks, which stood out in grotesquely hideous contrast. Presently, however, he recovered a little and said:

“I really think—at least I hope—that you take an unnecessarily serious view of his condition. He has been like this before, you know.”

I felt pretty certain that he had not, but there was no use in discussing the question. I therefore replied, as I continued my efforts to rouse the patient:

“That may or may not be. But in any case there comes a last time; and it may have come now.”

“I hope not,” he said; “although I understand that these cases always end fatally sooner or later.”

“What cases?” I asked.

“I was referring to sleeping sickness; but perhaps you have formed some other opinion as to the nature of this dreadful complaint.”

I hesitated for a moment, and he continued: “As to your suggestion that his symptoms might be due to drugs, I think we may consider that as disposed of. He has been watched, practically without cessation since you came last, and, moreover, I have myself turned out the room and examined the bed and have not found a trace of any drug. Have you gone into the question of sleeping sickness?”

I looked at the man narrowly before answering, and distrusted him more than ever. But this was no time for reticence. My concern was with the patient and his present needs. After all, I was, as Thorndyke had said, a doctor, not a detective, and the circumstances called for straightforward speech and action on my part.

“I have considered that question,” I said, “and have come to a perfectly definite conclusion. His symptoms are not those of sleeping sickness. They are in my opinion undoubtedly due to morphine poisoning.”

“But my dear sir!” he exclaimed, “the thing is impossible! Haven’t I just told you that he has been watched continuously?”

“I can only judge by the appearances that I find,” I answered; and, seeing that he was about to offer fresh objections, I continued: “Don’t let us waste precious time in discussion, or Mr. Graves may be dead before we have reached a conclusion. If you will hurry them up about the coffee that I asked for some time ago, I will take the other necessary measures, and perhaps we may manage to pull him round.”

The rather brutal decision of my manner evidently daunted him. It must have been plain to him that I was not prepared to accept any explanation of the unconscious man’s condition other than that of morphine poisoning; whence the inference was pretty plain that the alternatives were recovery or an inquest. Replying stiffly that I “must do as I thought best,” he hurried from the room, leaving me to continue my efforts without further interruption.

For some time these efforts seemed to make no impression. The man lay as still and impassive as a corpse excepting for the slow, shallow and rather irregular breathing with its ominous accompanying rattle. But presently, by imperceptible degrees, signs of returning life began to make their appearance. A sharp slap on the cheek with the wet towel produced a sensible flicker of the eyelids; a similar slap on the chest was followed by a slight gasp. A pencil, drawn over the sole of the foot, occasioned a visible shrinking movement, and, on looking once more at the eyes, I detected a slight change that told me that the atropine was beginning to take effect.
This was very encouraging, and, so far, quite satisfactory, though it would have been premature to rejoice. I kept the patient carefully covered and maintained the process of gentle irritation, moving his limbs and shoulders, brushing his hair and generally bombarding his deadened senses with small but repeated stimuli. And under this treatment, the improvement continued so far that on my bawling a question into his ear he actually opened his eyes for an instant, though in another moment, the lids had sunk back into their former position.

Soon after this, Mr. Weiss re-entered the room, followed by Mrs. Schallibaum, who carried a small tray, on which were a jug of coffee, a jug of milk, a cup and saucer and a sugar basin.

“How do you find him now?” Mr. Weiss asked anxiously.

“I am glad to say that there is a distinct improvement,” I replied. “But we must persevere. He is by no means out of the wood yet.”

I examined the coffee, which looked black and strong and had a very reassuring smell, and, pouring out half a cupful, approached the bed.

“Now, Mr. Graves,” I shouted, “we want you to drink some of this.”

The flaccid eyelids lifted for an instant but there was no other response. I gently opened the unresisting mouth and ladled in a couple of spoonfuls of coffee, which were immediately swallowed; whereupon I repeated the proceeding and continued at short intervals until the cup was empty. The effect of the new remedy soon became apparent. He began to mumble and mutter obscurely in response to the questions that I bellowed at him, and once or twice he opened his eyes and looked dreamily into my face. Then I sat him up and made him drink some coffee from the cup, and, all the time, kept up a running fire of questions, which made up in volume of sound for what they lacked of relevancy.

Of these proceedings Mr. Weiss and his housekeeper were highly interested spectators, and the former, contrary to his usual practice, came quite close up to the bed, to get a better view.

“It is really a most remarkable thing,” he said, “but it almost looks as if you were right, after all. He is certainly much better. But tell me, would this treatment produce a similar improvement if the symptoms were due to disease?”

“No,” I answered, “it certainly would not.”

“Then that seems to settle it. But it is a most mysterious affair. Can you suggest any way in which he can have concealed a store of the drug?”

I stood up and looked him straight in the face; it was the first chance I had had of inspecting him by any but the feeblest light, and I looked at him very attentively. Now, it is a curious fact—though one that most persons must have observed—that there sometimes occurs a considerable interval between the reception of a visual impression and its complete transfer to the consciousness. A thing may be seen, as it were, unconsciously, and the impression consigned, apparently, to instant oblivion; and yet the picture may be subsequently revived by memory with such completeness that its details can be studied as though the object were still actually visible.

Something of this kind must have happened to me now. Preoccupied as I was, by the condition of the patient, the professional habit of rapid and close observation caused me to direct a searching glance at the man before me. It was only a brief glance—for Mr. Weiss, perhaps embarrassed by my keen regard of him, almost immediately withdrew into the shadow—and my attention seemed principally to be occupied by the odd contrast between the pallor of his face and the redness of his nose and by the peculiar stiff, bristly character of his eyebrows. But there was another fact, and a very curious one, that was observed by me subconsciously and instantly forgotten, to be revived later when I reflected on the events of the night. It was this:

As Mr. Weiss stood, with his head slightly turned, I was able to look through one glass of his spectacles at the wall beyond. On the wall was a framed print; and the edge of the frame, seen through the spectacle-glass, appeared quite unaltered and free from distortion, magnification or reduction, as if seen through plain window-glass; and yet the reflections of the candle-flame in the spectacles showed the flame upside down, proving conclusively that the glasses were concave on one surface at least. The strange phenomenon was visible only for a moment or two, and as it passed out of my sight it passed also out of my mind.

“No,” I said, replying to the last question; “I can think of no way in which he could have effectually hidden a store of morphine. Judging by the symptoms, he has taken a large dose, and, if he has been in the habit of consuming large quantities, his stock would be pretty bulky. I can offer no suggestion whatever.”

“I suppose you consider him quite out of danger now?”

“Oh, not at all. I think we can pull him round if we persevere, but he must not be allowed to sink back into a state of coma. We must keep him on the move until the effects of the drug have really passed off. If you will put him into his dressing-gown we will walk him up and down the room for a while.”

“But is that safe?” Mr. Weiss asked anxiously.

“Quite safe,” I answered. “I will watch his pulse carefully. The danger is in the possibility, or rather certainty, of a relapse if he is not kept moving.”

With obvious unwillingness and disapproval, Mr. Weiss produced a dressing-gown and together we invested the patient
in it. Then we dragged him, very limp, but not entirely unresisting, out of bed and stood him on his feet. He opened his eyes and blinked owlishly first at one and then at the other of us, and mumbled a few unintelligible words of protest; regardless of which, we thrust his feet into slippers and endeavoured to make him walk. At first he seemed unable to stand, and we had to support him by his arms as we urged him forward; but presently his trailing legs began to make definite walking movements, and, after one or two turns up and down the room, he was not only able partly to support his weight, but showed evidence of reviving consciousness in more energetic protests.

At this point Mr. Weiss astonished me by transferring the arm that he held to the housekeeper.

"If you will excuse me, doctor," said he, "I will go now and attend to some rather important business that I have had to leave unfinished. Mrs. Schallibaum will be able to give you all the assistance that you require, and will order the carriage when you think it safe to leave the patient. In case I should not see you again I will say 'good night.' I hope you won't think me very uncourteous."

He shook hands with me and went out of the room, leaving me, as I have said, profoundly astonished that he should consider any business of more moment than the condition of his friend, whose life, even now, was but hanging by a thread. However, it was really no concern of mine. I could do without him, and the resuscitation of this unfortunate half-dead man gave me occupation enough to engross my whole attention.

The melancholy progress up and down the room re-commenced, and with it the mumbled protests from the patient. As we walked, and especially as we turned, I caught frequent glimpses of the housekeeper's face. But it was nearly always in profile. She appeared to avoid looking me in the face, though she did so once or twice; and on each of these occasions her eyes were directed at me in a normal manner without any sign of a squint. Nevertheless, I had the impression that when her face was turned away from me she squinted. The "swivel eye"—the left—was towards me as she held the patient's right arm, and it was almost continuously turned in my direction, whereas I felt convinced that she was really looking straight before her, though, of course, her right eye was invisible to me. It struck me, even at the time, as an odd affair, but I was too much concerned about my charge to give it much consideration.

Meanwhile the patient continued to revive apace. And the more he revived, the more energetically did he protest against this wearisome perambulation. But he was evidently a polite gentleman, for, muddled as his faculties were, he managed to clothe his objections in courteous and even gracious forms of speech singularly out of agreement with the character that Mr. Weiss had given him.

"I thangyou," he mumbled thickly. "Ver' good take s'much trouble. Think I will lie down now." He looked wistfully at the bed, but I wheeled him about and marched him once more down the room. He submitted unresistingly, but as we again approached the bed he reopened the matter.

"S'quite s'efficient, thang you. Gebback to bed now. Much 'bliged frall your kindness"—here I turned him round—"no, really; m'feeling rather tired. Sh'like to lie down now, fyou'd be s'good."

"You must walk about a little longer, Mr. Graves," I said. "It would be very bad for you to go to sleep again."

He looked at me with a curious, dull surprise, and reflected awhile as if in some perplexity. Then he looked at me again and said:

"Thing, sir, you are mistake—mistaken me—mist—"

Here Mrs. Schallibaum interrupted sharply:

"The doctor thinks it's good for you to walk about. You've been sleeping too much. He doesn't want you to sleep any more just now."

"Don't wanter sleep; wanter lie down," said the patient.

"But you mustn't lie down for a little while. You must walk about for a few minutes more. And you'd better not talk. Just walk up and down."

"There's no harm in his talking," said I; "in fact it's good for him. It will help to keep him awake."

"I should think it would tire him," said Mrs. Schallibaum; "and it worries me to hear him asking to lie down when we can't let him."

She spoke sharply and in an unnecessarily high tone so that the patient could not fail to hear. Apparently he took in the very broad hint contained in the concluding sentence, for he trudged wearily and unsteadily up and down the room for some time without speaking, though he continued to look at me from time to time as if something in my appearance puzzled him exceedingly. At length his intolerable longing for repose overcame his politeness and he returned to the attack.

"Surely v' walked enough now. Feeling very tired. Am really. Would you be s'kind 's t'let me lie down few minutes?"

"Don't you think he might lie down for a little while?" Mrs. Schallibaum asked.

I felt his pulse, and decided that he was really becoming fatigued, and that it would be wiser not to overdo the exercise while he was so weak. Accordingly, I consented to his returning to bed, and turned him round in that direction; whereupon he tottered gleefully towards his resting-place like a tired horse heading for its stable.

As soon as he was tucked in, I gave him a full cup of coffee, which he drank with some avidity as if thirsty. Then I sat
down by the bedside, and, with a view to keeping him awake, began once more to ply him with questions.

“Does your head ache, Mr. Graves?” I asked.

“The doctor says ‘does your head ache?’” Mrs. Schallibaum squalled, so loudly that the patient started perceptibly.

“I heard him, m’dear girl,” he answered with a faint smile. “Not deaf you know. Yes. Head aches a good deal. But I thing this gentlem’s mistakes—”

“He says you are to keep awake. You mustn’t go to sleep again, and you are not to close your eyes.”

“All ri’ Pol’n. Keep’m open,” and he proceeded forthwith to shut them with an air of infinite peacefulness. I grasped his hand and shook it gently, on which he opened his eyes and looked at me sleepily. The housekeeper stroked his head, keeping her face half-turned from me—as she had done almost constantly, to conceal the squinting eye, as I assumed—and said:

“Need we keep you any longer, doctor? It is getting very late and you have a long way to go.”

I looked doubtfully at the patient. I was loath to leave him, distracting these people as I did. But I had my work to do on the morrow, with, perhaps, a night call or two in the interval, and the endurance even of a general practitioner has its limits.

“I think I heard the carriage some time ago,” Mrs. Schallibaum added.

I rose hesitatingly and looked at my watch. It had turned half-past eleven.

“You understand,” I said in a low voice, “that the danger is not over? If he is left now he will fall asleep, and in all human probability will never wake. You clearly understand that?”

“Yes, quite clearly. I promise you he shall not be allowed to fall asleep again.”

As she spoke, she looked me full in the face for a few moments, and I noted that her eyes had a perfectly normal appearance, without any trace whatever of a squint.

“Very well,” I said. “On that understanding I will go now; and I shall hope to find our friend quite recovered at my next visit.”

I turned to the patient, who was already dozing, and shook his hand heartily.

“Good-bye, Mr. Graves!” I said. “I am sorry to have to disturb your repose so much; but you must keep awake, you know. Won’t do to go to sleep.”

“Ver’ well,” he replied drowsily. “Sorry t’ give you all this trouble. L’ keep awake. But I think you’re mistak’n—”

“He says it’s very important that you shouldn’t go to sleep, and that I am to see that you don’t. Do you understand?”

“Yes, I un’stan’. But why does this gentlem’n—?”

“Now it’s of no use for you to ask a lot of questions,” Mrs. Schallibaum said playfully; “we’ll talk to you to-morrow. Good night, doctor. I’ll light you down the stairs, but I won’t come down with you, or the patient will be falling asleep again.”

Taking this definite dismissal, I retired, followed by a dreamily surprised glance from the sick man. The housekeeper held the candle over the balusters until I reached the bottom of the stairs, when I perceived through the open door along the passage a glimmer of light from the carriage lamps. The coachman was standing just outside, faintly illuminated by the very dim lamplight, and as I stepped into the carriage he remarked in his Scotch dialect that I “seemed to have been makin’ a nict of it.” He did not wait for any reply—none being in fact needed—but shut the door and locked it.

I lit my little pocket-lamp and hung it on the back cushion. I even drew the board and notebook from my pocket. But it seemed rather unnecessary to take a fresh set of notes, and, to tell the truth, I rather shirked the labour, tired as I was after my late exertions; besides, I wanted to think over the events of the evening, while they were fresh in my memory. Accordingly I put away the notebook, filled and lighted my pipe, and settled myself to review the incidents attending my second visit to this rather uncanny house.

Considered in leisurely retrospect, that visit offered quite a number of problems that called for elucidation. There was the patient’s condition, for instance. Any doubt as to the cause of his symptoms was set at rest by the effect of the antidotes. Mr. Graves was certainly under the influence of morphine, and the only doubtful question was how he had become so. That he had taken the poison himself was incredible. No morphinomaniac would take such a knock-down dose. It was practically certain that the poison had been administered by someone else, and, on Mr. Weiss’s own showing, there was no one but himself and the housekeeper who could have administered it. And to this conclusion all the other very queer circumstances pointed.

What were these circumstances? They were, as I have said, numerous, though many of them seemed trivial. To begin with, Mr. Weiss’s habit of appearing some time after my arrival and disappearing some time before my departure was decidedly odd. But still more odd was his sudden departure this evening on what looked like a mere pretext. That departure coincided in time with the sick man’s recovery of the power of speech. Could it be that Mr. Weiss was afraid that the half-conscious man might say something compromising to him in my presence? It looked rather like it. And yet he had gone away and left me with the patient and the housekeeper.
But when I came to think about it I remembered that Mrs. Schallibaum had shown some anxiety to prevent the patient from talking. She had interrupted him more than once, and had on two occasions broken in when he seemed to be about to ask me some question. I was “mistaken” about something. What was that something that he wanted to tell me?

It had struck me as singular that there should be no coffee in the house, but a sufficiency of tea. Germans are not usually tea-drinkers and they do take coffee. But perhaps there was nothing in this. Rather more remarkable was the invisibility of the coachman. Why could he not be sent to fetch the coffee, and why did not he, rather than the housekeeper, come to take the place of Mr. Weiss when the latter had to go away.

There were other points, too. I recalled the word that sounded like “Pol’n,” which Mr. Graves had used in speaking to the housekeeper. Apparently it was a Christian name of some kind; but why did Mr. Graves call the woman by her Christian name when Mr. Weiss addressed her formally as Mrs. Schallibaum? And, as to the woman herself: what was the meaning of that curious disappearing squint? Physically it presented no mystery. The woman had an ordinary divergent squint, and, like many people, who suffer from this displacement, could, by a strong muscular effort, bring the eyes temporarily into their normal parallel position. I had detected the displacement when she had tried to maintain the effort too long, and the muscular control had given way. But why had she done it? Was it only feminine vanity—mere sensitiveness respecting a slight personal disfigurement? It might be so; or there might be some further motive. It was impossible to say.

Turning this question over, I suddenly remembered the peculiarity of Mr. Weiss’s spectacles. And here I met with a real poser. I had certainly seen through those spectacles as clearly as if they had been plain window-glass; and they had certainly given an inverted reflection of the candle-flame like that thrown from the surface of a concave lens. Now they obviously could not be both flat and concave; but yet they had the properties peculiar to both flatness and concavity. And there was a further difficulty. If I could see objects unaltered through them, so could Mr. Weiss. But the function of spectacles is to alter the appearances of objects, by magnification, reduction or compensating distortion. If they leave the appearances unchanged they are useless. I could make nothing of it. After puzzling over it for quite a long time, I had to give it up; which I did the less unwillingly inasmuch as the construction of Mr. Weiss’s spectacles had no apparent bearing on the case.

On arriving home, I looked anxiously at the message-book, and was relieved to find that there were no further visits to be made. Having made up a mixture for Mr. Graves and handed it to the coachman, I raked the ashes of the surgery fire together and sat down to smoke a final pipe while I reflected once more on the singular and suspicious case in which I had become involved. But fatigue soon put an end to my meditations; and having come to the conclusion that the circumstances demanded a further consultation with Thorndyke, I turned down the gas to a microscopic blue spark and betook myself to bed.

IV. — THE OFFICIAL VIEW

I ROSE on the following morning still possessed by the determination to make some opportunity during the day to call on Thorndyke and take his advice on the now urgent question as to what I was to do. I use the word “urgent” advisedly; for the incidents of the preceding evening had left me with the firm conviction that poison was being administered for some purpose to my mysterious patient, and that no time must be lost if his life was to be saved. Last night he had escaped only by the narrowest margin—assuming him to be still alive—and it was only my unexpectedly firm attitude that had compelled Mr. Weiss to agree to restorative measures.

That I should be sent for again I had not the slightest expectation. If what I so strongly suspected was true, Weiss would call in some other doctor, in the hope of better luck, and it was imperative that he should be stopped before it was too late. This was my view, but I meant to have Thorndyke’s opinion, and act under his direction, but

“The best laid plans of mice and men
Gang aft agley.”

When I came downstairs and took a preliminary glance at the rough memorandum-book, kept by the bottle-boy, or, in his absence, by the housemaid, I stood aghast. The morning’s entries looked already like a sample page of the Post Office directory. The new calls alone were more than equal to an ordinary day’s work, and the routine visits remained to be added. Gloomily wondering whether the Black Death had made a sudden reappearance in England, I hurried to the dining-room and made a hasty breakfast, interrupted at intervals by the apparition of the bottle-boy to announce new messages.

The first two or three visits solved the mystery. An epidemic of influenza had descended on the neighbourhood, and I was getting not only our own normal work but a certain amount of overflow from other practices. Further, it appeared that a strike in the building trade had been followed immediately by a widespread failure of health among the bricklayers who were members of a certain benefit club; which accounted for the remarkable suddenness of the outbreak.

Of course, my contemplated visit to Thorndyke was out of the question. I should have to act on my own responsibility. But in the hurry and rush and anxiety of the work—for some of the cases were severe and even critical—I had no opportunity to consider any course of action, nor time to carry it out. Even with the aid of a hansom which I chartered, as Stillbury kept no carriage, I had not finished my last visit until near on midnight, and was then so spent with fatigue that I fell asleep over my postponed supper.

As the next day opened with a further increase of work, I sent a telegram to Dr. Stillbury at Hastings, whither he had
gone, like a wise man, to recruit after a slight illness. I asked for authority to engage an assistant, but the reply informed me that Stillbury himself was on his way to town; and to my relief, when I dropped in at the surgery for a cup of tea, I found him rubbing his hands over the open day-book.

“It’s an ill wind that blows nobody good,” he remarked cheerfully as we shook hands. “This will pay the expenses of my holiday, including you. By the way, you are not anxious to be off, I suppose?”

As a matter of fact, I was; for I had decided to accept Thorndyke’s offer, and was now eager to take up my duties with him. But it would have been shabby to leave Stillbury to battle alone with this rush of work or to seek the services of a strange assistant.

“I should like to get off as soon as you can spare me,” I replied, “but I’m not going to leave you in the lurch.”

“That’s a good fellow,” said Stillbury. “I knew you wouldn’t. Let us have some tea and divide up the work. Anything of interest going?”

There were one or two unusual cases on the list, and, as we marked off our respective patients, I gave him the histories in brief synopsis. And then I opened the subject of my mysterious experiences at the house of Mr. Weiss.

“There’s another affair that I want to tell you about; rather an unpleasant business.”

“Oh, dear!” exclaimed Stillbury. He put down his cup and regarded me with quite painful anxiety.

“It looks to me like an undoubted case of criminal poisoning,” I continued.

Stillbury’s face cleared instantly. “Oh, I’m glad it’s nothing more than that,” he said with an air of relief. “I was afraid, it was some confounded woman. There’s always that danger, you know, when a locum is young and happens—if I may say so, Jervis—to be a good-looking fellow. Let us hear about this case.”

I gave him a condensed narrative of my connection with the mysterious patient, omitting any reference to Thorndyke, and passing lightly over my efforts to fix the position of the house, and wound up with the remark that the facts ought certainly to be communicated to the police.

“Yes,” he admitted reluctantly, “I suppose you’re right. Deuced unpleasant though. Police cases don’t do a practice any good. They waste a lot of time, too; keep you hanging about to give evidence. Still, you are quite right. We can’t stand by and see the poor devil poisoned without making some effort. But I don’t believe the police will do anything in the matter.”

“Don’t you really?”

“No, I don’t. They like to have things pretty well cut and dried before they act. A prosecution is an expensive affair, so they don’t care to prosecute unless they are fairly sure of a conviction. If they fail they get hauled over the coals.”

“But don’t you think they would get a conviction in this case?”

“Not on your evidence, Jervis. They might pick up something fresh, but, if they didn’t they would fail. You haven’t got enough hard-baked facts to upset a capable defence. Still, that isn’t our affair. You want to put the responsibility on the police and I entirely agree with you.”

“There ought not to be any delay,” said I.

“There needn’t be. I shall look in on Mrs. Wackford and you have to see the Rummel children; we shall pass the station on our way. Why shouldn’t we drop in and see the inspector or superintendent?”

The suggestion met my views exactly. As soon as we had finished tea, we set forth, and in about ten minutes found ourselves in the bare and forbidding office attached to the station.

The presiding officer descended from a high stool, and, carefully laying down his pen, shook hands cordially.

“And what can I do for you gentlemen?” he asked, with an affable smile.

Stillbury proceeded to open our business.

“My friend here, Dr. Jervis, who has very kindly been looking after my work for a week or two, has had a most remarkable experience, and he wants to tell you about it.”

“Something in my line of business?” the officer inquired.

“That,” said I, “is for you to judge. I think it is, but you may think otherwise”; and hereupon, without further preamble, I plunged into the history of the case, giving him a condensed statement similar to that which I had already made to Stillbury.

He listened with close attention, jotting down from time to time a brief note on a sheet of paper; and, when I had finished, he wrote out in a black-covered notebook a short précis of my statement.

“I have written down here,” he said, “the substance of what you have told me. I will read the deposition over to you, and, if it is correct, I will ask you to sign it.”

He did so, and, when I had signed the document, I asked him what was likely to be done in the matter.

“I am afraid,” he replied, “that we can’t take any active measures. You have put us on our guard and we shall keep our
eyes open. But I think that is all we can do, unless we hear something further."

"But," I exclaimed, "don't you think that it is a very suspicious affair?"

"I do," he replied. "A very fishy business indeed, and you were quite right to come and tell us about it."

"It seems a pity not to take some measures," I said. "While you are waiting to hear something further, they may give the poor wretch a fresh dose and kill him."

"In which case we should hear something further, unless some fool of a doctor were to give a death certificate."

"But that is very unsatisfactory. The man ought not to be allowed to die."

"I quite agree with you, sir. But we've no evidence that he is going to die. His friends sent for you, and you treated him skilfully and left him in a fair way to recovery. That's all that we really know about it. Yes, I know," the officer continued as I made signs of disagreement, "you think that a crime is possibly going to be committed and that we ought to prevent it. But you overrate our powers. We can only act on evidence that a crime has actually been committed or is actually being attempted. Now we have no such evidence. Look at your statement, and tell me what you can swear to."

"I think I could swear that Mr. Graves had taken a poisonous dose of morphine."

"And who gave him that poisonous dose?"

"I very strongly suspect—"

"That's no good, sir," interrupted the officer. "Suspicion isn't evidence. We should want you to swear an information and give us enough facts to make out a primâ facie case against some definite person. And you couldn't do it. Your information amounts to this: that a certain person has taken a poisonous dose of morphine and apparently recovered. That's all. You can't swear that the names given to you are real names, and you can't give us any address or even any locality."

"I took some compass bearings in the carriage," I said. "You could locate the house, I think, without much difficulty."

The officer smiled faintly and fixed an abstracted gaze on the clock.

"You could, sir," he replied. "I have no doubt whatever that you could. I couldn't. But, in any case, we haven't enough to go upon. If you learn anything fresh, I hope you will let me know; and I am very much obliged to you for taking so much trouble in the matter. Good evening, sir. Good evening, Dr. Stillbury."

He shook hands with us both genially, and, accepting perforce this very polite but unmistakable dismissal, we took our departure.

Outside the station, Stillbury heaved a comfortable sigh. He was evidently relieved to find that no upheavals were to take place in his domain.

"I thought that would be their attitude," he said, "and they are quite right, you know. The function of law is to prevent crime, it is true; but prophylaxis in the sense in which we understand it is not possible in legal practice."

I assented without enthusiasm. It was disappointing to find that no precautionary measures were to be taken. However, I had done all that I could in the matter. No further responsibility lay upon me, and, as it was practically certain that I had seen and heard the last of Mr. Graves and his mysterious household, I dismissed the case from my mind. At the next corner Stillbury and I parted to go our respective ways; and my attention was soon transferred from the romance of crime to the realities of epidemic influenza.

The plethora of work in Dr. Stillbury's practice continued longer than I had bargained for. Day after day went by and still found me tramping the dingy streets of Kennington or scrambling up and down narrow stairways; turning in at night dead tired, or turning out half awake to the hideous jangle of the night bell.

It was very provoking. For months I had resisted Thorndyke's persuasion to give up general practice and join him. Not from lack of inclination, but from a deep suspicion that he was thinking of my wants rather than his own; that his was a charitable rather than a business proposal. Now that I knew this not to be the case, I was impatient to join him; and, as I trudged through the dreary thoroughfares of this superannuated suburb, with its once rustic villas and its faded gardens, my thoughts would turn enviously to the quiet dignity of the Temple and my friend's chambers in King's Bench Walk.

The closed carriage appeared no more; nor did any whisper either of good or evil reach me in connection with the mysterious house from which it had come. Mr. Graves had apparently gone out of my life for ever.

But if he had gone out of my life, he had not gone out of my memory. Often, as I walked my rounds, would the picture of that dimly-lit room rise unbidden. Often would I find myself looking once more into that ghastly face, so worn, so wasted and haggard, and yet so far from repellent. All the incidents of that last night would reconstitute themselves with a vividness that showed the intensity of the impression that they had made at the time. I would have gladly forgotten the whole affair, for every incident of it was fraught with discomfort. But it clung to my memory; it haunted me; and ever as it returned it bore with it the disquieting questions: Was Mr. Graves still alive? And, if he was not, was there really nothing which could have been done to save him?

Nearly a month passed before the practice began to show signs of returning to its normal condition. Then the daily lists became more and more contracted and the day's work proportionately shorter. And thus the term of my servitude came to an end. One evening, as we were writing up the day-book, Stillbury remarked:
“I almost think, Jervis, I could manage by myself now. I know you are only staying on for my sake.”
“T am staying on to finish my engagement, but I shan’t be sorry to clear out if you can do without me.”
“I think I can. When would you like to be off?”
“As soon as possible. Say to-morrow morning, after I have made a few visits and transferred the patients to you.”
“Very well,” said Stillbury. “Then I will give you your cheque and settle up everything to-night, so that you shall be free to go off when you like to-morrow morning.”

Thus ended my connection with Kennington Lane. On the following day at about noon, I found myself strolling across Waterloo Bridge with the sensations of a newly liberated convict and a cheque for twenty-five guineas in my pocket. My luggage was to follow when I sent for it. Now, unhampered even by a hand-bag, I joyfully descended the steps at the north end of the bridge and headed for King’s Bench Walk by way of the Embankment and Middle Temple Lane.

V. — JEFFREY BLACKMORE’S WILL

MY arrival at Thorndyke’s chambers was not unexpected, having been heralded by a premonitory post-card. The “oak” was open and an application of the little brass knocker of the inner door immediately produced my colleague himself and a very hearty welcome.

“At last,” said Thorndyke, “you have come forth from the house of bondage. I began to think that you had taken up your abode in Kennington for good.”

“I was beginning, myself, to wonder when I should escape. But here I am; and I may say at once that I am ready to shake the dust of general practice off my feet for ever—that is, if you are still willing to have me as your assistant.”

“Willing!” exclaimed Thorndyke, “Barkis himself was not more willing than I. You will be invaluable to me. Let us settle the terms of our comradeship forthwith, and to-morrow we will take measures to enter you as a student of the Inner Temple. Shall we have our talk in the open air and the spring sunshine?”

I agreed readily to this proposal, for it was a bright, sunny day and warm for the time of year—the beginning of April. We descended to the Walk and thence slowly made our way to the quiet court behind the church, where poor old Oliver Goldsmith lies, as he would surely have wished to lie, in the midst of all that had been dear to him in his chequered life. I need not record the matter of our conversation. To Thorndyke’s proposals I had no objections to offer but my own unworthiness and his excessive liberality. A few minutes saw our covenants fully agreed upon, and when Thorndyke had noted the points on a slip of paper, signed and dated it and handed it to me, the business was at an end.

“There,” my colleague said with a smile as he put away his pocket-book, “if people would only settle their affairs in that way, a good part of the occupation of lawyers would be gone. Brevity is the soul of wit; and the fear of simplicity is the beginning of litigation.”

“And now,” I said, “I propose that we go and feed. I will invite you to lunch to celebrate our contract.”

“My learned junior is premature,” he replied. “I had already arranged a little festivity—or rather had modified one that was already arranged. You remember Mr. Marchmont, the solicitor?”

“Yes.”

“He called this morning to ask me to lunch with him and a new client at the ‘Cheshire Cheese.’ I accepted and notified him that I should bring you.”

“Why the ‘Cheshire Cheese’?” I asked.

“Why not? Marchmont’s reasons for the selection were, first, that his client has never seen an old-fashioned London tavern, and second, that this is Wednesday and he, Marchmont, has a gluttonous affection for a really fine beef-steak pudding. You don’t object, I hope?”

“Oh, not at all. In fact, now that you mention it, my own sensations incline me to sympathize with Marchmont. I breakfasted rather early.”

“Then come,” said Thorndyke. “The assignation is for one o’clock, and, if we walk slowly, we shall just hit it off.”

We sauntered up Inner Temple Lane, and, crossing Fleet Street, headed sedately for the tavern. As we entered the quaint old-world dining-room, Thorndyke looked round and a gentleman, who was seated with a companion at a table in one of the little boxes or compartments, rose and saluted us.

“Let me introduce you to my friend Mr. Stephen Blackmore,” he said as we approached. Then, turning to his companion, he introduced us by our respective names.

“I engaged this box,” he continued, “so that we might be private if we wished to have a little preliminary chat; not that beef-steak pudding is a great help to conversation. But when people have a certain business in view, their talk is sure to drift towards it, sooner or later.”

Thorndyke and I sat down opposite the lawyer and his client, and we mutually inspected one another. Marchmont I
already knew; an elderly, professional-looking man, a typical solicitor of the old school; fresh-faced, precise, rather irascible, and conveying a not unpleasant impression of taking a reasonable interest in his diet. The other man was quite young, not more than five-and-twenty, and was a fine athletic-looking fellow with a healthy, out-of-door complexion and an intelligent and highly prepossessing face. I took a liking to him at the first glance, and so, I saw, did Thorndyke.

“You two gentlemen,” said Blackmore, addressing us, “seem to be quite old acquaintances. I have heard so much about you from my friend, Reuben Hornby.”

“Ahh!” exclaimed Marchmont, “that was a queer case—The Case of the Red Thumb Mark,” as the papers called it. It was an eye-opener to old-fashioned lawyers like myself. We’ve had scientific witnesses before—and bullied ’em properly, by Jove! when they wouldn’t give the evidence that we wanted. But the scientific lawyer is something new. His appearance in court made us all sit up, I can assure you.”

“I hope we shall make you sit up again,” said Thorndyke.

“You won’t this time,” said Marchmont. “The issues in this case of my friend Blackmore’s are purely legal; or rather, there are no issues at all. There is nothing in dispute. I tried to prevent Blackmore from consulting you, but he wouldn’t listen to reason. Here! Waiter! How much longer are we to be waiters? We shall die of old age before we get our victuals!”

The waiter smiled apologetically. “Yessir!” said he. “Coming now, sir.” And at this very moment there was borne into the room a Gargantuan pudding in a great bucket of a basin, which being placed on a three-legged stool was forthwith attacked ferociously by the white-clothed, white-capped carver. We watched the process—as did every one present—with an interest not entirely glutinous, for it added a pleasant touch to the picturesque old room, with its sanded floor, its homely, pew-like boxes, its high-backed settles and the friendly portrait of the “great lexicographer” that beamed down on us from the wall.

“This is a very different affair from your great, glittering modern restaurant,” Mr. Marchmont remarked.

“It is indeed,” said Blackmore, “and if this is the way in which our ancestors lived, it would seem that they had a better idea of comfort than we have.”

There was a short pause, during which Mr. Marchmont glared hungrily at the pudding; then Thorndyke said:

“So you refused to listen to reason, Mr. Blackmore?”

“Yes. You see, Mr. Marchmont and his partner had gone into the matter and decided that there was nothing to be done. Then I happened to mention the affair to Reuben Hornby, and he urged me to ask your advice on the case.”

“Like his impudence,” growled Marchmont, “to meddle with my client.”

“On which,” continued Blackmore, “I spoke to Mr. Marchmont and he agreed that it was worth while to take your opinion on the case, though he warned me to cherish no hopes, as the affair was not really within your specialty.”

“So you understand,” said Marchmont, “that we expect nothing. This is quite a forlorn hope. We are taking your opinion as a mere formality, to be able to say that we have left nothing untried.”

“That is an encouraging start,” Thorndyke remarked. “It leaves me unembarrassed by the possibility of failure. But meanwhile you are arousing in me a devouring curiosity as to the nature of the case. Is it highly confidential? Because if not, I would mention that Jervis has now joined me as my permanent colleague.”

“It isn’t confidential at all,” said Marchmont. “The public are in full possession of the facts, and we should be only too happy to put them in still fuller possession, through the medium of the Probate Court, if we could find a reasonable pretext. But we can’t.”

Here the waiter charged our table with the fussy rapidity of the overdue.

“Sorry to keep you waiting, sir. Rather early, sir. Wouldn’t like it underdone, sir.”

Marchmont inspected his plate critically and remarked:

“I sometimes suspect these oysters of being mussels; and I’ll swear the larks are sparrows.”

“Let us hope so,” said Thorndyke. “The lark is better employed ‘at Heaven’s gate singing’ than garnishing a beef-steak pudding. But you were telling us about your case.”

“So I was. Well it’s just a matter of—ale or claret? Oh, claret, I know. You despise the good old British John Barleycorn.”

“He that drinks beer thinks beer,” retorted Thorndyke. “But you were saying that it is just a matter of—?”

“A matter of a perverse testator and an ill-drawn will. A peculiarly irritating case, too, because the defective will replaces a perfectly sound one, and the intentions of the testator were—er—were—excellent ale, this. A little heady, perhaps, but sound. Better than your sour French wine, Thorndyke—were—er—were quite obvious. What he evidently desired was—mustard? Better have some mustard. No? Well, well! Even a Frenchman would take mustard. You can have no appreciation of flavour, Thorndyke, if you take your victuals in that crude, unseasoned state. And, talking of flavour, do you suppose that there is really any difference between that of a lark and that of a sparrow?”

Thorndyke smiled grimly. “I should suppose,” said he, “that they were indistinguishable; but the question could easily be put to the test of experiment.”
“That is true,” agreed Marchmont, “and it would really be worth trying, for, as you say, sparrows are more easily obtainable than larks. But, about this will. I was saying—er—now, what was I saying?”

“I understood you to say,” replied Thorndyke, “that the intentions of the testator were in some way connected with mustard. Isn’t that so, Jervis?”

“That was what I gathered,” said I.

Marchmont gazed at us for a moment with a surprised expression and then, laughing good-humouredly, fortified himself with a draught of ale.

“The moral of which is,” Thorndyke added, “that testamentary dispositions should not be mixed up with beef-steak pudding.”

“I believe you’re right, Thorndyke,” said the unabashed solicitor. “Business is business and eating is eating. We had better talk over our case in my office or your chambers after lunch.”

“Yes,” said Thorndyke, “come over to the Temple with me and I will give you a cup of coffee to clear your brain. Are there any documents?”

“I have all the papers here in my bag,” replied Marchmont; and the conversation—such conversation as is possible “when beards wag all” over the festive board—drifted into other channels.

As soon as the meal was finished and the reckoning paid, we trooped out of Wine Office Court, and, insinuating ourselves through the line of empty hansoms that, in those days, crawled in a continuous procession on either side of Fleet Street, betook ourselves by way of Mitre Court to King’s Bench Walk. There, when the coffee had been requisitioned and our chairs drawn up around the fire, Mr. Marchmont unloaded from his bag a portentous bundle of papers, and we addressed ourselves to the business in hand.

“Now,” said Marchmont, “let me repeat what I said before. Legally speaking, we have no case—not the ghost of one. But my client wished to take your opinion, and I agreed on the bare chance that you might detect some point that we had overlooked. I don’t think you will, for we have gone into the case very thoroughly, but still, there is the infinitesimal chance and we may as well take it. Would you like to read the two wills, or shall I first explain the circumstances?”

“I think,” replied Thorndyke, “a narrative of the events in the order of their occurrence would be most helpful. I should like to know as much as possible about the testator before I examine the documents.”

“Very well,” said Marchmont. “Then I will begin with a recital of the circumstances, which, briefly stated, are these: My client, Stephen Blackmore, is the son of Mr. Edward Blackmore, deceased. Edward Blackmore had two brothers who survived him, John, the elder, and Jeffrey, the younger. Jeffrey is the testator in this case.

“Some two years ago, Jeffrey Blackmore executed a will by which he made his nephew Stephen his executor and sole legatee; and a few months later he added a codicil giving two hundred and fifty pounds to his brother John.”

“What was the value of the estate?” Thorndyke asked.

“About three thousand five hundred pounds, all invested in Consols. The testator had a pension from the Foreign Office, on which he lived, leaving his capital untouched. Soon after having made his will, he left the rooms in Jermyn Street, where he had lived for some years, stored his furniture and went to Florence. From thence he moved on to Rome and then to Venice and other places in Italy, and so continued to travel about until the end of last September, when it appears that he returned to England, for at the beginning of October he took a set of chambers in New Inn, which he furnished with some of the things from his old rooms. As far as we can make out, he never communicated with any of his friends, excepting his brother, and the fact of his being in residence at New Inn or of his being in England at all became known to them only when he died.”

“Was this quite in accordance with his ordinary habits?” Thorndyke asked.

“I should say not quite,” Blackmore answered. “My uncle was a studious, solitary man, but he was not formerly a recluse. He was not much of a correspondent but he kept up some sort of communication with his friends. He used, for instance, to write to me sometimes, and, when I came down from Cambridge for the vacations, he had me to stay with him at his rooms.”

“Is there anything known that accounts for the change in his habits?”

“Yes, there is,” replied Marchmont. “We shall come to that presently. To proceed with the narrative: On the fifteenth of last March he was found dead in his chambers, and a more recent will was then discovered, dated the twelfth of November of last year. Now no change had taken place in the circumstances of the testator to account for the new will, nor was there any appreciable alteration in the disposition of the property. As far as we can make out, the new will was drawn with the idea of stating the intentions of the testator with greater exactness and for the sake of doing away with the codicil. The entire property, with the exception of two hundred and fifty pounds, was, as before, bequeathed to Stephen, but the separate items were specified, and the testator’s brother, John Blackmore, was named as the executor and residuary legatee.”

“I see,” said Thorndyke. “So that your client’s interest in the will would appear to be practically unaffected by the change.”
“Yes. There it is,” exclaimed the lawyer, slapping the table to add emphasis to his words. “That is the pity of it! If people who have no knowledge of law would only refrain from tinkering at their wills, what a world of trouble would be saved!”

“Oh, come!” said Thorndyke. “It is not for a lawyer to say that.”

“No, I suppose not,” Marchmont agreed. “Only, you see, we like the muddle to be made by the other side. But, in this case, the muddle is on our side. The change, as you say, seems to leave our friend Stephen’s interests unaffected. That is, of course, what poor Jeffrey Blackmore thought. But he was mistaken. The effect of the change is absolutely disastrous.”

“Indeed!”

“Yes. As I have said, no alteration in the testator’s circumstances had taken place at the time the new will was executed. But only two days before his death, his sister, Mrs. Edmund Wilson, died; and on her will being proved it appeared that she had bequeathed to him her entire personally, estimated at about thirty thousand pounds.”

“Heigho!” exclaimed Thorndyke. “What an unfortunate affair!”

“You are right,” said Mr. Marchmont; “it was a disaster. By the original will this great sum would have accrued to our friend Mr. Stephen, whereas now, of course, it goes to the residuary legatee, Mr. John Blackmore. And what makes it even more exasperating is the fact that this is obviously not in accordance with the wishes and intentions of Mr. Jeffrey, who clearly desired his nephew to inherit his property.”

“Yes,” said Thorndyke; “I think you are justified in assuming that. But do you know whether Mr. Jeffrey was aware of his sister’s intentions?”

“We think not. Her will was executed as recently as the third of September last, and it seems that there had been no communication between her and Mr. Jeffrey since that date. Besides, if you consider Mr. Jeffrey’s actions, you will see that they suggest no knowledge or expectation of this very important bequest. A man does not make elaborate dispositions in regard to three thousand pounds and then leave a sum of thirty thousand to be disposed of casually as the residue of the estate.”

“No,” Thorndyke agreed. “And, as you have said, the manifest intention of the testator was to leave the bulk of his property to Mr. Stephen. So we may take it as virtually certain that Mr. Jeffrey had no knowledge of the fact that he was a beneficiary under his sister’s will.”

“Yes,” said Mr. Marchmont, “I think we may take that as nearly certain.”

“With reference to the second will,” said Thorndyke, “I suppose there is no need to ask whether the document itself has been examined; I mean as to its being a genuine document and perfectly regular?”

Mr. Marchmont shook his head sadly.

“No,” he said, “I am sorry to say that there can be no possible doubt as to the authenticity and regularity of the document. The circumstances under which it was executed establish its genuineness beyond any question.”

“What were those circumstances?” Thorndyke asked.

“They were these: On the morning of the twelfth of November last, Mr. Jeffrey came to the porter’s lodge with a document in his hand. ‘This,’ he said, ‘is my will. I want you to witness my signature. Would you mind doing so, and can you find another respectable person to act as the second witness?’ Now it happened that a nephew of the porter’s, a painter by trade, was at work in the Inn. The porter went out and fetched him into the lodge and the two men agreed to witness the signature. ‘You had better read the will,’ said Mr. Jeffrey. ‘It is not actually necessary, but it is an additional safeguard and there is nothing of a private nature in the document.’ The two men accordingly read the document, and, when Mr. Jeffrey had signed it in their presence, they affixed their signatures; and I may add that the painter left the recognizable impressions of three greasy fingers.”

“And these witnesses have been examined?”

“Yes. They have both sworn to the document and to their own signatures, and the painter recognized his finger-marks.”

“That,” said Thorndyke, “seems to dispose pretty effectually of any question as to the genuineness of the will; and if, as I gather, Mr. Jeffrey came to the lodge alone, the question of undue influence is disposed of too.”

“Yes,” said Mr. Marchmont. “I think we must pass the will as absolutely flawless.”

“It strikes me as rather odd,” said Thorndyke, “that Jeffrey should have known so little about his sister’s intentions. Can you explain it, Mr. Blackmore?”

“I don’t think that it is very remarkable,” Stephen replied. “I knew very little of my aunt’s affairs and I don’t think my uncle Jeffrey knew much more, for he was under the impression that she had only a life interest in her husband’s property. And he may have been right. It is not clear what money this was that she left to my uncle. She was a very taciturn woman and made few confidences to anyone.”

“So that it is possible,” said Thorndyke, “that she, herself, may have acquired this money recently by some bequest?”

“It is quite possible,” Stephen answered.

“She died, I understand,” said Thorndyke, glancing at the notes that he had jotted down, “two days before Mr. Jeffrey. 
What date would that be?"

"Jeffrey died on the fourteenth of March," said Marchmont.

"So that Mrs. Wilson died on the twelfth of March?"

"That is so," Marchmont replied; and Thorndyke then asked:

"Did she die suddenly?"

"No," replied Stephen; "she died of cancer. I understand that it was cancer of the stomach."

"Do you happen to know," Thorndyke asked, "what sort of relations existed between Jeffrey and his brother John?"

"At one time," said Stephen, "I know they were not very cordial; but the breach may have been made up later, though I don't know that it actually was."

"I ask the question," said Thorndyke, "because, as I dare say you have noticed, there is, in the first will, some hint of improved relations. As it was originally drawn that will makes Mr. Stephen the sole legatee. Then, a little later, a codicil is added in favour of John, showing that Jeffrey had felt the necessity of making some recognition of his brother. This seems to point to some change in the relations, and the question arises: if such a change did actually occur, was it the beginning of a new and further improving state of feeling between the two brothers? Have you any facts bearing on that question?"

Marchmont pursed up his lips with the air of a man considering an unwelcome suggestion, and, after a few moments of reflection, answered:

"I think we must say 'yes' to that. There is the undeniable fact that, of all Jeffrey's friends, John Blackmore was the only one who knew that he was living in New Inn."

"Oh, John knew that, did he?"

"Yes, he certainly did; for it came out in the evidence that he had called on Jeffrey at his chambers more than once. There is no denying that. But, mark you!" Mr. Marchmont added emphatically, "that does not cover the inconsistency of the will. There is nothing in the second will to suggest that Jeffrey intended materially to increase the bequest to his brother."

"I quite agree with you, Marchmont. I think that is a perfectly sound position. You have, I suppose, fully considered the question as to whether it would be possible to set aside the second will on the ground that it fails to carry out the evident wishes and intentions of the testator?"

"Yes. My partner, Winwood, and I went into that question very carefully, and we also took counsel's opinion—Sir Horace Barnaby—and he was of the same opinion as ourselves; that the court would certainly uphold the will."

"I think that would be my own view," said Thorndyke, "especially after what you have told me. Do I understand that John Blackmore was the only person who knew that Jeffrey was in residence at New Inn?"

"The only one of his private friends. His bankers knew and so did the officials from whom he drew his pension."

"Of course he would have to notify his bankers of his change of address."

"Yes, of course. And à propos of the bank, I may mention that the manager tells me that, of late, they had noticed a slight change in the character of Jeffrey's signature—I think you will see the reason of the change when you hear the rest of his story. It was very trifling; not more than commonly occurs when a man begins to grow old, especially if there is some failure of eyesight."

"Was Mr. Jeffrey's eyesight failing?" asked Thorndyke.

"Yes, it was, undoubtedly," said Stephen. "He was practically blind in one eye and, in the very last letter that I ever had from him, he mentioned that there were signs of commencing cataract in the other."

"You spoke of his pension. He continued to draw that regularly?"

"Yes; he drew his allowance every month, or rather, his bankers drew it for him. They had been accustomed to do so when he was abroad, and the authorities seem to have allowed the practice to continue."

Thorndyke reflected a while, running his eye over the notes on the slips of paper in his hand, and Marchmont surveyed him with a malicious smile. Presently the latter remarked:

"Methinks the learned counsel is floored."

Thorndyke laughed. "It seems to me," he retorted, "that your proceedings are rather like those of the amiable individual who offered the bear a flint pebble, that he might crack it and extract the kernel. Your confounded will seems to offer no soft spot on which one could commence an attack. But we won't give up. We seem to have sucked the will dry. Let us now have a few facts respecting the parties concerned in it; and, as Jeffrey is the central figure, let us begin with him and the tragedy at New Inn that formed the starting-point of all this trouble."

VI. — JEFFREY BLACKMORE, DECEASED
HAVING made the above proposition, Thorndyke placed a fresh slip of paper on the blotting pad on his knee and looked inquiringly at Mr. Marchmont; who, in his turn, sighed and looked at the bundle of documents on the table.

"What do you want to know?" he asked a little wearily.

"Everything," replied Thorndyke. "You have hinted at circumstances that would account for a change in Jeffrey's habits and that would explain an alteration in the character of his signature. Let us have those circumstances. And, if I might venture on a suggestion, it would be that we take the events in the order in which they occurred or in which they became known."

"That's the worst of you, Thorndyke," Marchmont grumbled. "When a case has been squeezed out to the last drop, in a legal sense, you want to begin all over again with the family history of every one concerned and a list of his effects and household furniture. But I suppose you will have to be humoured; and I imagine that the best way in which to give you the information you want will be to recite the circumstances surrounding the death of Jeffrey Blackmore. Will that suit you?"

"Perfectly," replied Thorndyke; and thereupon Marchmont began:

"The death of Jeffrey Blackmore was discovered at about eleven o'clock in the morning of the fifteenth of March. It seems that a builder's man was ascending a ladder to examine a gutter on number 31, New Inn, when, on passing a second-floor window that was open at the top, he looked in and perceived a gentleman lying on a bed. The gentleman was fully clothed and had apparently lain down on the bed to rest; at least so the builder thought at the time, for he was merely passing the window on his way up, and, very properly, did not make a minute examination. But when, some ten minutes later, he came down and saw that the gentleman was still in the same position, he looked at him more attentively; and this is what he noticed—but perhaps we had better have it in his own words as he told the story at the inquest.

"When I came to look at the gentleman a bit more closely, it struck me that he looked rather queer. His face looked very white, or rather pale yellow, like parchment, and his mouth was open. He did not seem to be breathing. On the bed by his side was a brass object of some kind—I could not make out what it was—and he seemed to be holding some small metal object in his hand. I thought it rather a queer affair, so, when I came down I went across to the lodge and told the porter about it. The porter came across the square with me and I showed him the window. Then he told me to go up the stairs to Mr. Blackmore's chambers on the second pair and knock and keep on knocking until I got an answer. I went up and knocked and kept on knocking as loud as I could, but, though I fetched everybody out of all the other chambers in the house, I couldn't get any answer from Mr. Blackmore. So I went downstairs again and then Mr. Walker, the porter, sent me for a policeman.

"I went out and met a policeman just by Dane's Inn and told him about the affair, and he came back with me. He and the porter consulted together, and then they told me to go up the ladder and get in at the window and open the door of the chambers from the inside. So I went up; and as soon as I got in at the window I saw that the gentleman was dead. I went through the other room and opened the outer door and let in the porter and the policeman."

"That," said Mr. Marchmont, laying down the paper containing the depositions, "is the way in which poor Jeffrey Blackmore's death came to be discovered.

"The constable reported to his inspector and the inspector sent for the divisional surgeon, whom he accompanied to New Inn. I need not go into the evidence given by the police officers, as the surgeon saw all that they saw and his statement covers everything that is known about Jeffrey's death. This is what he says, after describing how he was sent for and arrived at the Inn:

"In the bedroom I found the body of a man between fifty and sixty years of age, which has since been identified in my presence as that of Mr. Jeffrey Blackmore. It was fully dressed and wore boots on which was a moderate amount of dry mud. It was lying on its back on the bed, which did not appear to have been slept in, and showed no sign of any struggle or disturbance. The right hand loosely grasped a hypodermic syringe containing a few drops of clear liquid which I have since analysed and found to be a concentrated solution of strophanthin.

"On the bed, close to the left side of the body, was a brass opium-pipe of a pattern which I believe is made in China. The bowl of the pipe contained a small quantity of charcoal, and a fragment of opium together with some ash, and there was on the bed a little ash which appeared to have dropped from the bowl when the pipe fell or was laid down. On the mantelshelf in the bedroom I found a small glass-stoppered jar containing about an ounce of solid opium, and another, larger jar containing wood charcoal broken up into small fragments. Also a bowl containing a quantity of ash with fragments of half-burned charcoal and a few minute particles of charred opium. By the side of the bowl were a knife, a kind of awl or pricker and a very small pair of tongs, which I believe to have been used for carrying a piece of lighted charcoal to the pipe.

"On the dressing-table were two glass tubes labelled "Hypodermic Tabloids: Strophanthin 1/500 grain," and a minute glass mortar and pestle, of which the former contained a few crystals which have since been analysed by me and found to be strophanthin.

"On examining the body, I found that it had been dead about twelve hours. There were no marks of violence or any abnormal condition excepting a single puncture in the right thigh, apparently made by the needle of the hypodermic syringe. The puncture was deep and vertical in direction as if the needle had been driven in through the clothing.

"I made a post-mortem examination of the body and found that death was due to poisoning by strophanthin, which appeared to have been injected into the thigh. The two tubes which I found on the dressing-table would each have
contained, if full, twenty tabloids, each tabloid representing one five-hundredth of a grain of strophanthin. Assuming that the whole of this quantity was injected the amount taken would be forty-five-hundredths, or about one twelfth of a grain. The ordinary medicinal dose of strophanthin is one five-hundredth of a grain.

"I also found in the body appreciable traces of morphine—the principal alkaloid of opium—from which I infer that the deceased was a confirmed opium-smoker. This inference was supported by the general condition of the body, which was ill-nourished and emaciated and presented all the appearances usually met with in the bodies of persons addicted to the habitual use of opium."

"That is the evidence of the surgeon. He was recalled later, as we shall see, but, meanwhile, I think you will agree with me that the facts testified to by him fully account, not only for the change in Jeffrey's habits—his solitary and secretive mode of life—but also for the alteration in his handwriting."

"Yes," agreed Thorndyke, "that seems to be so. By the way, what did the change in the handwriting amount to?"

"Very little," replied Marchmont. "It was hardly perceptible. Just a slight loss of firmness and distinctness; such a trifling change as you would expect to find in the handwriting of a man who had taken to drink or drugs, or anything that might impair the steadiness of his hand. I should not have noticed it, myself, but, of course, the people at the bank are experts, constantly scrutinizing signatures and scrutinizing them with a very critical eye."

"Is there any other evidence that bears on the case?" Thorndyke asked.

Marchmont turned over the bundle of papers and smiled grimly.

"My dear Thorndyke," he said, "none of this evidence has the slightest bearing on the case. It is all perfectly irrelevant as far as the will is concerned. But I know your little peculiarities and I am indulging you, as you see, to the top of your bent. The next evidence is that of the chief porter, a very worthy and intelligent man named Walker. This is what he says, after the usual preliminaries.

"I have viewed the body which forms the subject of this inquiry. It is that of Mr. Jeffrey Blackmore, the tenant of a set of chambers on the second floor of number thirty-one, New Inn. I have known the deceased nearly six months, and during that time have seen and conversed with him frequently. He took the chambers on the second of last October and came into residence at once. Tenants at New Inn have to furnish two references. The references that the deceased gave were his bankers and his brother, Mr. John Blackmore. I may say that the deceased was very well known to me. He was a quiet, pleasant-mannered gentleman, and it was his habit to drop in occasionally at the lodge and have a chat with me. I went into his chambers with him once or twice on some small matters of business and I noticed that there were always a number of books and papers on the table. I understood from him that he spent most of his time indoors engaged in study and writing. I know very little about his way of life. He had no laundress to look after his rooms, so I suppose he did his own house-work and cooking; but he told me that he took most of his meals outside, at restaurants or his club.

"Deceased impressed me as a rather melancholy, low-spirited gentleman. He was very much troubled about his eyesight and mentioned the matter to me on several occasions. He told me that he was practically blind in one eye and that the sight of the other was failing rapidly. He said that this afflicted him greatly, because his only pleasure in life was in the reading of books, and that if he could not read he should not wish to live. On another occasion he said that "to a blind man life was not worth living."

"On the twelfth of last November he came to the lodge with a paper in his hand which he said was his will"—But I needn't read that," said Marchmont, turning over the leaf, "I've told you how the will was signed and witnessed. We will pass on to the day of poor Jeffrey's death.

"On the fourteenth of March," the porter says, "at about half-past six in the evening, the deceased came to the Inn in a four-wheeled cab. That was the day of the great fog. I do not know if there was anyone in the cab with the deceased, but I think not, because he came to the lodge just before eight o'clock and had a little talk with me. He said that he had been overtaken by the fog and could not see at all. He was quite blind and had been obliged to ask a stranger to call a cab for him as he could not find his way through the streets. He then gave me a cheque for the rent. I reminded him that the rent was not due until the twenty-fifth, but he said he wished to pay it now. He also gave me some money to pay one or two small bills that were owing to some of the tradespeople—a milk-man, a baker and a stationer.

"This struck me as very strange, because he had always managed his business and paid the tradespeople himself. He told me that the fog had irritated his eye so that he could hardly read, and he was afraid he should soon be quite blind. He was very depressed; so much so that I felt quite uneasy about him. When he left the lodge, he went back across the square as if returning to his chambers. There was then no gate open excepting the main gate where the lodge is situated. That was the last time that I saw the deceased alive."

Mr. Marchmont laid the paper on the table. "That is the porter's evidence. The remaining depositions are those of Noble, the night porter, John Blackmore and our friend here, Mr. Stephen. The night porter had not much to tell. This is the substance of his evidence:

"I have viewed the body of the deceased and identify it as that of Mr. Jeffrey Blackmore. I knew the deceased well by sight and occasionally had a few words with him. I know nothing of his habits excepting that he used to sit up rather late. It is one of my duties to go round the Inn at night and call out the hours until one o'clock in the morning. When calling out "one o'clock" I often saw a light in the sitting-room of the deceased's chambers. On the night of the fourteenth instant, the
light was burning until past one o’clock, but it was in the bedroom. The light in the sitting-room was out by ten o’clock.’

“We now come to John Blackmore’s evidence. He says:

“I have viewed the body of the deceased and recognize it as that of my brother Jeffrey. I last saw him alive on the twenty-third of February, when I called at his chambers. He then seemed in a very despondent state of mind and told me that his eyesight was fast failing. I was aware that he occasionally smoked opium, but I did not know that it was a confirmed habit. I urged him, on several occasions, to abandon the practice. I have no reason to believe that his affairs were in any way embarrassed or that he had any reason for making away with himself other than his failing eyesight; but, having regard to his state of mind when I last saw him, I am not surprised at what has happened.’

“That is the substance of John Blackmore’s evidence, and, as to Mr. Stephen, his statement merely sets forth the fact that he had identified the body as that of his uncle Jeffrey. And now I think you have all the facts. Is there anything more that you want to ask me before I go, for I must really run away now?”

“I should like,” said Thorndyke, “to know a little more about the parties concerned in this affair. But perhaps Mr. Stephen can give me the information.”

“I expect he can,” said Marchmont; “at any rate, he knows more about them than I do; so I will be off. If you should happen to think of any way,” he continued, with a sly smile, “of upsetting that will, just let me know, and I will lose no time in entering a caveat. Good-bye! Don’t trouble to let me out.”

As soon as he was gone, Thorndyke turned to Stephen Blackmore.

“I am going,” he said, “to ask you a few questions which may appear rather trifling, but you must remember that my methods of inquiry concern themselves with persons and things rather than with documents. For instance, I have not gathered very completely what sort of person your uncle Jeffrey was. Could you tell me a little more about him?”

“What shall I tell you?” Stephen asked with a slightly embarrassed air.

“Well, begin with his personal appearance.”

“That is rather difficult to describe,” said Stephen. “He was a medium-sized man and about five feet seven—fair, slightly grey, clean-shaved, rather spare and slight, had grey eyes, wore spectacles and stooped a little as he walked. He was quiet and gentle in manner, rather yielding and irresolute in character, and his health was not at all robust though he had no infirmity or disease excepting his bad eyesight. His age was about fifty-five.”

“How came he to be a civil-service pensioner at fifty-five?” asked Thorndyke.

“Oh, that was through an accident. He had a nasty fall from a horse, and, being a rather nervous man, the shock was very severe. For some time after he was a complete wreck. But the failure of his eyesight was the actual cause of his retirement. It seems that the fall damaged his eyes in some way; in fact he practically lost the sight of one—the right—from that moment; and, as that had been his good eye, the accident left his vision very much impaired. So that he was at first given sick leave and then allowed to retire on a pension.”

Thorndyke noted these particulars and then said:

“Your uncle has been more than once referred to as a man of studious habits. Does that mean that he pursued any particular branch of learning?”

“Yes. He was an enthusiastic Oriental scholar. His official duties had taken him at one time to Yokohama and Tokio and at another to Bagdad, and while at those places he gave a good deal of attention to the languages, literature and arts of the countries. He was also greatly interested in Babylonian and Assyrian archaeology, and I believe he assisted for some time in the excavations at Birs Nimroud.”

“Indeed!” said Thorndyke. “This is very interesting. I had no idea that he was a man of such considerable attainments. The facts mentioned by Mr. Marchmont would hardly have led one to think of him as what he seems to have been: a scholar of some distinction.”

“I don’t know that Mr. Marchmont realized the fact himself,” said Stephen; “or that he would have considered it of any moment if he had. Nor, as far as that goes, do I. But, of course, I have no experience of legal matters.”

“You can never tell beforehand,” said Thorndyke, “what facts may turn out to be of moment, so that it is best to collect all you can get. By the way, were you aware that your uncle was an opium-smoker?”

“No, I was not. I knew that he had an opium-pipe which he brought with him when he came home from Japan; but I thought it was only a curio. I remember him telling me that he once tried a few puffs at an opium-pipe and found it rather pleasant, though it gave him a headache. But I had no idea he had contracted the habit; in fact, I may say that I was utterly astonished when the fact came out at the inquest.”

Thorndyke made a note of this answer, too, and said:

“I think that is all I have to ask you about your uncle Jeffrey. And now as to Mr. John Blackmore. What sort of man is he?”

“I am afraid I can’t tell you very much about him. Until I saw him at the inquest, I had not met him since I was a boy. But he is a very different kind of man from Uncle Jeffrey; different in appearance and different in character.”
“You would say that the two brothers were physically quite unlike, then?”

“Well,” said Stephen, “I don’t know that I ought to say that. Perhaps I am exaggerating the difference. I am thinking of Uncle Jeffrey as he was when I saw him last and of uncle John as he appeared at the inquest. They were very different then. Jeffrey was thin, pale, clean shaven, wore spectacles and walked with a stoop. John is a shade taller, a shade greyer, has good eyesight, a healthy, florid complexion, a brisk, upright carriage, is distinctly stout and wears a beard and moustache which are black and only very slightly streaked with grey. To me they looked as unlike as two men could, though their features were really of the same type; indeed, I have heard it said that, as young men, they were rather alike, and they both resembled their mother. But there is no doubt as to their difference in character. Jeffrey was quiet, serious and studious, whereas John rather inclined to what is called a fast life; he used to frequent race meetings, and, I think, gambled a good deal at times.”

“What is his profession?”

“That would be difficult to tell; he has so many; he is so very versatile. I believe he began life as an articled pupil in the laboratory of a large brewery, but he soon left that and went on the stage. He seems to have remained in ‘the profession’ for some years, touring about this country and making occasional visits to America. The life seemed to suit him and I believe he was decidedly successful as an actor. But suddenly he left the stage and blossomed out in connection with a bucket-shop in London.”

“And what is he doing now?”

“At the inquest he described himself as a stockbroker, so I presume he is still connected with the bucket-shop.”

Thorndyke rose, and taking down from the reference shelves a list of members of the Stock Exchange, turned over the leaves.

“Yes,” he said, replacing the volume, “he must be an outside broker. His name is not in the list of members of ‘the House.’ From what you tell me, it is easy to understand that there should have been no great intimacy between the two brothers, without assuming any kind of ill-feeling. They simply had very little in common. Do you know of anything more?”

“No. I have never heard of any actual quarrel or disagreement. My impression that they did not get on very well may have been, I think, due to the terms of the will, especially the first will. And they certainly did not seek one another’s society.”

“That is not very conclusive,” said Thorndyke. “As to the will, a thrifty man is not usually much inclined to bequeath his savings to a gentleman who may probably employ them in a merry little flutter on the turf or the Stock Exchange. And then there was yourself; clearly a more suitable subject for a legacy, as your life is all before you. But this is mere speculation and the matter is not of much importance, as far as we can see. And now, tell me what John Blackmore’s relations were with Mrs. Wilson. I gather that she left the bulk of her property to Jeffrey, her younger brother. Is that so?”

“Yes. She left nothing to John. The fact is that they were hardly on speaking terms. I believe John had treated her rather badly, or, at any rate, she thought he had. Mr. Wilson, her late husband, dropped some money over an investment in connection with the bucket-shop that I spoke of, and I think she suspected John of having let him in. She may have been mistaken, but you know what ladies are when they get an idea into their heads.”

“Did you know your aunt well?”

“No; very slightly. She lived down in Devonshire and saw very little of any of us. She was a taciturn, strong-minded woman; quite unlike her brothers. She seems to have resembled her father’s family.”

“You might give me her full name.”

“Julia Elizabeth Wilson. Her husband’s name was Edmund Wilson.”

“Thank you. There is just one more point. What has happened to your uncle’s chambers in New Inn since his death?”

“They have remained shut up. As all his effects were left to me, I have taken over the tenancy for the present to avoid having them disturbed. I thought of keeping them for my own use, but I don’t think I could live in them after what I have seen.”

“You have inspected them, then?”

“Yes; I have just looked through them. I went there on the day of the inquest.”

“Now tell me: as you looked through those rooms, what kind of impression did they convey to you as to your uncle’s habits and mode of life?”

Stephen smiled apologetically. “I am afraid,” said he, “that they did not convey any particular impression in that respect. I looked into the sitting-room and saw all his old familiar household gods, and then I went into the bedroom and saw the impression on the bed where his corpse had lain; and that gave me such a sensation of horror that I came away at once.”

“But the appearance of the rooms must have conveyed something to your mind,” Thorndyke urged.

“I am afraid it did not. You see, I have not your analytical eye. But perhaps you would like to look through them yourself? If you would, pray do so. They are my chambers now.”
“I think I should like to glance round them,” Thorndyke replied.

“Very well,” said Stephen. “I will give you my card now, and I will look in at the lodge presently and tell the porter to hand you the key whenever you like to look over the rooms.”

He took a card from his case, and, having written a few lines on it, handed it to Thorndyke.

“It is very good of you,” he said, “to take so much trouble. Like Mr. Marchmont, I have no expectation of any result from your efforts, but I am very grateful to you, all the same, for going into the case so thoroughly. I suppose you don’t see any possibility of upsetting that will—if I may ask the question?”

“At present,” replied Thorndyke, “I do not. But until I have carefully weighed every fact connected with the case—whether it seems to have any bearing or not—I shall refrain from expressing, or even entertaining, an opinion either way.”

Stephen Blackmore now took his leave; and Thorndyke, having collected the papers containing his notes, neatly punched a couple of holes in their margins and inserted them into a small file, which he slipped into his pocket.

“That,” said he, “is the nucleus of the body of data on which our investigations must be based; and I very much fear that it will not receive any great additions. What do you think, Jervis?”

“The case looks about as hopeless as a case could look,” I replied.

“That is what I think,” said he; “and for that reason I am more than ordinarily keen on making something of it. I have not much more hope than Marchmont has; but I shall squeeze the case as dry as a bone before I let go. What are you going to do? I have to attend a meeting of the board of directors of the Griffin Life Office.”

“Shall I walk down with you?”

“It is very good of you to offer, Jervis, but I think I will go alone. I want to run over these notes and get the facts of the case arranged in my mind. When I have done that, I shall be ready to pick up new matter. Knowledge is of no use unless it is actually in your mind, so that it can be produced at a moment’s notice. So you had better get a book and your pipe and spend a quiet hour by the fire while I assimilate the miscellaneous mental feast that we have just enjoyed. And you might do a little rumination yourself.”

With this, Thorndyke took his departure; and I, adopting his advice, drew my chair closer to the fire and filled my pipe. But I did not discover any inclination to read. The curious history that I had just heard, and Thorndyke’s evident determination to elucidate it further, disposed me to meditation. Moreover, as his subordinate, it was my business to occupy myself with his affairs. Wherefore, having stirred the fire and got my pipe well alight, I abandoned myself to the renewed consideration of the facts relating to Jeffrey Blackmore’s will.
THE surprise which Thorndyke’s proceedings usually occasioned, especially to lawyers, was principally due, I think, to my friend’s habit of viewing occurrences from an unusual standpoint. He did not look at things quite as other men looked at them. He had no prejudices and he knew no conventions. When other men were cocksure, Thorndyke was doubtful. When other men despaired, he entertained hopes; and thus it happened that he would often undertake cases that had been rejected contemptuously by experienced lawyers, and, what is more, would bring them to a successful issue.

Thus it had been in the only other case in which I had been personally associated with him—the so-called “Red Thumb Mark” case. There he was presented with an apparent impossibility; but he had given it careful consideration. Then, from the category of the impossible he had brought it to that of the possible; from the merely possible to the actually probable; from the probable to the certain; and in the end had won the case triumphantly.

Was it conceivable that he could make anything of the present case? He had not declined it. He had certainly entertained it and was probably thinking it over at this moment. Yet could anything be more impossible? Here was the case of a man making his own will, probably writing it out himself, bringing it voluntarily to a certain place and executing it in the presence of competent witnesses. There was no suggestion of any compulsion or even influence or persuasion. The testator was admittedly sane and responsible; and if the will did not give effect to his wishes—which, however, could not be proved—that was due to his own carelessness in drafting the will and not to any unusual circumstances. And the problem—which Thorndyke seemed to be considering—was how to set aside that will.

I reviewed the statements that I had heard, but turn them about as I would, I could get nothing out of them but confirmation of Mr. Marchmont’s estimate of the case. One fact that I had noted with some curiosity I again considered; that was Thorndyke’s evident desire to inspect Jeffrey Blackmore’s chambers. He had, it is true, shown no eagerness, but I had seen at the time that the questions which he put to Stephen were put, not with any expectation of eliciting information but for the purpose of getting an opportunity to look over the rooms himself.

I was still cogitating on the subject when my colleague returned, followed by the watchful Polton with the tea-tray, and I attacked him with:

“Well, Thorndyke,” I said, “I have been thinking about this Blackmore case while you have been gadding about.”

“And may I take it that the problem is solved?”

“No, I’m hanged if you may. I can make nothing of it.”

“Then you are in much the same position as I am.”

“But, if you can make nothing of it, why did you undertake it?”

“I only undertook to think about it,” said Thorndyke. “I never reject a case off-hand unless it is obviously fishy. It is surprising how difficulties, and even impossibilities, dwindle if you look at them attentively. My experience has taught me that the most unlikely case is, at least, worth thinking over.”

“By the way, why do you want to look over Jeffrey’s chambers? What do you expect to find there?”

“I have no expectations at all. I am simply looking for stray facts.”

“And all those questions that you asked Stephen Blackmore; had you nothing in your mind—no definite purpose?”

“No purpose beyond getting to know as much about the case as I can.”

“But,” I exclaimed, “do you mean that you are going to examine those rooms without any definite object at all?”

“I wouldn’t say that,” replied Thorndyke. “This is a legal case. Let me put an analogous medical case as being more within your present sphere. Supposing that a man should consult you, say, about a progressive loss of weight. He can give no explanation. He has no pain, no discomfort, no symptoms of any kind; in short, he feels perfectly well in every respect; but he is losing weight continuously. What would you do?”

“I should overhaul him thoroughly,” I answered.

“Why? What would you expect to find?”

“I don’t know that I should start by expecting to find anything in particular. But I should overhaul him organ by organ and function by function, and if I could find nothing abnormal I should have to give it up.”

“Exactly,” said Thorndyke. “And that is just my position and my line of action. Here is a case which is perfectly regular and straightforward excepting in one respect. It has a single abnormal feature. And for that abnormality there is nothing to account.

“Jeffrey Blackmore made a will. It was a well-drawn will and it apparently gave full effect to his intentions. Then he revoked that will and made another. No change had occurred in his circumstances or in his intentions. The provisions of the new will were believed by him to be identical with those of the old one. The new will differed from the old one only in having a defect in the drafting from which the first will was free, and of which he must have been unaware. Now why did he revoke the first will and replace it with another which he believed to be identical in its provisions? There is no answer to
that question. It is an abnormal feature in the case. There must be some explanation of that abnormality and it is my business to discover it. But the facts in my possession yield no such explanation. Therefore it is my purpose to search for new facts which may give me a starting-point for an investigation."

This exposition of Thorndyke's proposed conduct of the case, reasonable as it was, did not impress me as very convincing. I found myself coming back to Marchmont's position, that there was really nothing in dispute. But other matters claimed our attention at the moment, and it was not until after dinner that my colleague reverted to the subject.

"How should you like to take a turn round to New Inn this evening?" he asked.

"I should have thought," said I, "that it would be better to go by daylight. Those old chambers are not usually very well illuminated."

"That is well thought of," said Thorndyke. "We had better take a lamp with us. Let us go up to the laboratory and get one from Polton."

"There is no need to do that," said I. "The pocket-lamp that you lent me is in my overcoat pocket. I put it there to return it to you."

"Did you have occasion to use it?" he asked.

"Yes. I paid another visit to the mysterious house and carried out your plan. I must tell you about it later."

"Do. I shall be keenly interested to hear all about your adventures. Is there plenty of candle left in the lamp?"

"Oh yes. I only used it for about an hour."

"Then let us be off," said Thorndyke; and we accordingly set forth on our quest; and, as we went, I reflected once more on the apparent vagueness of our proceedings. Presently I reopened the subject with Thorndyke.

"I can't imagine," said I, "that you have absolutely nothing in view. That you are going to this place with no defined purpose whatever."

"I did not say exactly that," replied Thorndyke. "I said that I was not going to look for any particular thing or fact. I am going in the hope that I may observe something that may start a new train of speculation. But that is not all. You know that an investigation follows a certain logical course. It begins with the observation of the conspicuous facts. We have done that. The facts were supplied by Marchmont. The next stage is to propose to oneself one or more provisional explanations or hypotheses. We have done that, too—or, at least I have, and I suppose you have."

"I haven't," said I. "There is Jeffrey's will, but why he should have made the change I cannot form the foggiest idea. But I should like to hear your provisional theories on the subject."

"You won't hear them at present. They are mere wild conjectures. But to resume: what do we do next?"

"Go to New Inn and rake over the deceased gentleman's apartments."

Thorndyke smilingly ignored my answer and continued—

"We examine each explanation in turn and see what follows from it; whether it agrees with all the facts and leads to the discovery of new ones, or, on the other hand, disagrees with some facts or leads us to an absurdity. Let us take a simple example.

"Suppose we find scattered over a field a number of large masses of stone, which are entirely different in character from the rocks found in the neighbourhood. The question arises, how did those stones get into that field? Three explanations are proposed. One: that they are the products of former volcanic action; two: that they were brought from a distance by human agency; three: that they were carried thither from some distant country by icebergs. Now each of those explanations involves certain consequences. If the stones are volcanic, then they were once in a state of fusion. But we find that they are unaltered limestone and contain fossils. Then they are not volcanic. If they were borne by icebergs, then they were once part of a glacier and some of them will probably show the flat surfaces with parallel scratches which are found on glacier-borne stones. We examine them and find the characteristic scratched surfaces. Then they have probably been brought to this place by icebergs. But this does not exclude human agency, for they might have been brought by men to this place from some other where the icebergs had deposited them. A further comparison with other facts would be needed.

"So we proceed in cases like this present one. Of the facts that are known to us we invent certain explanations. From each of those explanations we deduce consequences; and if those consequences agree with new facts, they confirm the explanation, whereas if they disagree they tend to disprove it. But here we are at our destination."

We turned out of Wych Street into the arched passage leading into New Inn, and, halting at the half-door of the lodge, perceived a stout, purple-faced man crouching over the fire, coughing violently. He held up his hand to intimate that he was fully occupied for the moment, and we accordingly waited for his paroxysm to subside. At length he turned towards us, wiping his eyes, and inquired our business.

"Mr. Stephen Blackmore," said Thorndyke, "has given me permission to look over his chambers. He said that he would mention the matter to you."

"So he has, sir," said the porter; "but he has just taken the key himself to go to the chambers. If you walk across the Inn you'll find him there; it's on the farther side; number thirty-one, second floor."
We made our way across to the house indicated, the ground floor of which was occupied by a solicitor’s offices and was distinguished by a good-sized brass plate. Although it had now been dark some time there was no light on the lower stairs, but we encountered on the first-floor landing a man who had just lit the lamp there. Thorndyke halted to address him.

“Can you tell me who occupies the chambers on the third floor?”

“The third floor has been empty about three months,” was the reply.

“We are going up to look at the chambers on the second floor,” said Thorndyke. “Are they pretty quiet?”

“Quiet!” exclaimed the man. “Lord bless you the place is like a cemetery for the deaf and dumb. There’s the solicitors on the ground floor and the architects on the first floor. They both clear out about six, and when they’re gone the house is as empty as a blown hegg. I don’t wonder poor Mr. Blackmore made away with his-self. Livin’ up there all alone, it must have been like Robinson Crusoe without no man Friday and not even a blooming goat to talk to. Quiet! It’s quiet enough, if that’s what you want. Wouldn’t be no good to me.”

With a contemptuous shake of the head, he turned and retired down the next flight, and, as the echoes of his footsteps died away we resumed our ascent.

“So it would appear,” Thorndyke commented, “that when Jeffrey Blackmore came home that last evening, the house was empty.”

Arrived on the second-floor landing, we were confronted by a solid-looking door on the lintel of which the deceased man’s name was painted in white lettering which still looked new and fresh. Thorndyke knocked at the door, which was at once opened by Stephen Blackmore.

“I haven’t wasted any time before taking advantage of your permission, you see,” my colleague said as we entered.

“No, indeed,” said Stephen; “you are very prompt. I have been rather wondering what kind of information you expect to gather from an inspection of these rooms.”

Thorndyke smiled genially, amused, no doubt, by the similarity of Stephen’s remarks to those of mine which he had so recently criticized.

“A man of science, Mr. Blackmore,” he said, “expects nothing. He collects facts and keeps an open mind. As to me, I am a mere legal Autolycus, a snapper-up of unconsidered trifles of evidence. When I have accumulated a few facts, I arrange them, compare them and think about them. Sometimes the comparison yields new matter and sometimes it doesn’t; but in any case, believe me, it is a capital error to decide beforehand what data are to be sought for.”

“Yes, I suppose that is so,” said Stephen; “though, to me, it almost looks as if Mr. Marchmont was right; that there is nothing to investigate.”

“You should have thought of that before you consulted me,” laughed Thorndyke. “As it is, I am engaged to look into the case and I shall do so; and, as I have said, I shall keep an open mind until I have all the facts in my possession.”

He glanced round the sitting-room, which we had now entered, and continued:

“These are fine, dignified old rooms. It seems a sin to have covered up all this oak panelling and that carved cornice and mantel with paint. Think what it must have been like when the beautiful figured wood was exposed.”

“It would be very dark,” Stephen observed.

“Yes,” Thorndyke agreed, “and I suppose we care more for light and less for beauty than our ancestors did. But now, tell me; looking round these rooms, do they convey to you a similar impression to that which the old rooms did? Have they the same general character?”

“Not quite, I think. Of course the rooms in Jermyn Street were in a different kind of house, but beyond that, I seem to feel a certain difference; which is rather odd, seeing that the furniture is the same. But the old rooms were more cosy, more homelike. I find something rather bare and cheerless, I was almost going to say squalid, in the look of these chambers.”

“That is rather what I should have expected,” said Thorndyke. “The opium habit alters a man’s character profoundly; and, somehow, apart from the mere furnishing, a room reflects in some subtle way, but very distinctly, the personality of its occupant, especially when that occupant lives a solitary life. Do you see any evidences of the activities that used to occupy your uncle?”

“Not very much,” replied Stephen. “But the place may not be quite as he left it. I found one or two of his books on the table and put them back in the shelves, but I found no manuscript or notes such as he used to make. I noticed, too, that his ink-slab which he used to keep so scrupulously clean is covered with dry smears and that the stick of ink is all cracked at the end, as if he had not used it for months. It seems to point to a great change in his habits.”

“What used he to do with Chinese ink?” Thorndyke asked.

“He corresponded with some of his native friends in Japan, and he used to write in the Japanese character even if they understood English. That was what he chiefly used the Chinese ink for. But he also used to copy the inscriptions from these things.” Here Stephen lifted from the mantelpiece what looked like a fossil Bath bun, but was actually a clay tablet covered with minute indented writing.
“Your uncle could read the cuneiform character, then?”

“Yes; he was something of an expert. These tablets are, I believe, leases and other legal documents from Eridu and other Babylonian cities. He used to copy the inscriptions in the cuneiform writing and then translate them into English. But I mustn’t stay here any longer as I have an engagement for this evening. I just dropped in to get these two volumes—Thornton’s History of Babylonia, which he once advised me to read. Shall I give you the key? You’d better have it and leave it with the porter as you go out.”

He shook hands with us and we walked out with him to the landing and stood watching him as he ran down the stairs. Glancing at Thorndyke by the light of the gas lamp on the landing, I thought I detected in his impassive face that almost imperceptible change of expression to which I have already alluded as indicating pleasure or satisfaction.

“You are looking quite pleased with yourself,” I remarked.

“I am not displeased,” he replied calmly. “Autolycus has picked up a few crumbs; very small ones, but still crumbs. No doubt his learned junior has picked up a few likewise?”

I shook my head—and inwardly suspected it of being rather a thick head.

“I did not perceive anything in the least degree significant in what Stephen was telling you,” said I. “It was all very interesting, but it did not seem to have any bearing on his uncle’s will.”

“I was not referring only to what Stephen has told us, although that was, as you say, very interesting. While he was talking I was looking about the room, and I have seen a very strange thing. Let me show it to you.”

He linked his arm in mine and, walking me back into the room, halted opposite the fire-place.

“There,” said he, “look at that. It is a most remarkable object.”

I followed the direction of his gaze and saw an oblong frame enclosing a large photograph of an inscription in the weird and cabalistic arrow-head character. I looked at it in silence for some seconds and then, somewhat disappointed, remarked:

“I don’t see anything very remarkable in it, under the circumstances. In any ordinary room it would be, I admit; but Stephen has just told us that his uncle was something of an expert in cuneiform writing.”

“Exactly,” said Thorndyke. “That is my point. That is what makes it so remarkable.”

“I don’t follow you at all,” said I. “That a man should hang upon his wall an inscription that is legible to him does not seem to me at all out of the way. It would be much more singular if he should hang up an inscription that he could not read.”

“No doubt,” replied Thorndyke. “But you will agree with me that it would be still more singular if a man should hang upon his wall an inscription that he could read—and hang it upside down.”

I stared at Thorndyke in amazement.

“Do you mean to tell me,” I exclaimed, “that that photograph is really upside down?”

“I do indeed,” he replied.

“But how do you know? Have we here yet another Oriental scholar?”

Thorndyke chuckled. “Some fool,” he replied, “has said that ‘a little knowledge is a dangerous thing.’ Compared with
much knowledge, it may be; but it is a vast deal better than no knowledge. Here is a case in point. I have read with very keen interest the wonderful history of the decipherment of the cuneiform writing, and I happen to recollect one or two of the main facts that seemed to me to be worth remembering. This particular inscription is in the Persian cuneiform, a much more simple and open form of the script than the Babylonian or Assyrian; in fact, I suspect that this is the famous inscription from the gateway at Persepolis—the first to be deciphered; which would account for its presence here in a frame. Now this script consists, as you see, of two kinds of characters; the small, solid, acutely pointed characters which are known as wedges, and the larger, more obtuse characters, somewhat like our government broad arrows, and called arrow-heads. The names are rather unfortunate, as both forms are wedge-like and both resemble arrow-heads. The script reads from left to right, like our own writing, and unlike that of the Semitic peoples and the primitive Greeks; and the rule for the placing of the characters is that all the ‘wedges’ point to the right or downwards and the arrow-head forms are open towards the right. But if you look at this photograph you will see that all the wedges point upwards to the left and that the arrow-head characters are open towards the left. Obviously the photograph is upside down.”

“But,” I exclaimed, “this is really most mysterious. What do you suppose can be the explanation?”

“I think,” replied Thorndyke, “that we may perhaps get a suggestion from the back of the frame. Let us see.”

He disengaged the frame from the two nails on which it hung, and, turning it round, glanced at the back; which he then presented for my inspection. A label on the backing paper bore the words, “J. Budge, Frame-maker and Gilder, 16, Gt. Anne Street, W.C.”

“Well?” I said, when I had read the label without gathering from it anything fresh.

“The label, you observe, is the right way up as it hangs on the wall.”

“So it is,” I rejoined hastily, a little annoyed that I had not been quicker to observe so obvious a fact. “I see your point. You mean that the frame-maker hung the thing upside down and Jeffrey never noticed the mistake?”

“That is a perfectly sound explanation,” said Thorndyke. “But I think there is something more. You will notice that the label is an old one; it must have been on some years, to judge by its dingy appearance, whereas the two mirror-plates look to me comparatively new. But we can soon put that matter to the test, for the label was evidently stuck on when the frame was new, and if the plates were screwed on at the same time, the wood that they cover will be clean and new-looking.”

He drew from his pocket a “combination” knife containing, among other implements, a screw-driver, with which he carefully extracted the screws from one of the little brass plates by which the frame had been suspended from the nails.

“You see,” he said, when he had removed the plate and carried the photograph over to the gasjet, “the wood covered by the plate is as dirty and time-stained as the rest of the frame. The plates have been put on recently.”

“And what are we to infer from that?”

“Well, since there are no other marks of plates or rings upon the frame, we may safely infer that the photograph was never hung up until it came to these rooms.”

“Yes, I suppose we may. But what then? What inference does that lead to?”

Thornodyke reflected for a few moments and I continued:

“It is evident that this photograph suggests more to you than it does to me. I should like to hear your exposition of its bearing on the case, if it has any.”

“Whether or no it has any real bearing on the case,” Thornodyke answered, “it is impossible for me to say at this stage. I told you that I had proposed to myself one or two hypotheses to account for and explain Jeffrey Blackmore’s will, and I may say that the curious misplacement of this photograph fits more than one of them. I won’t say more than that, because I think it would be profitable to you to work at this case independently. You have all the facts that I have and you shall have a copy of my notes of Marchmont’s statement of the case. With this material you ought to be able to reach some conclusion. Of course neither of us may be able to make anything of the case—it doesn’t look very hopeful at present—but whatever happens, we can compare notes after the event and you will be the richer by so much experience of actual investigation. But I will start you off with one hint, which is this: that neither you nor Marchmont seem to appreciate in the least the very extraordinary nature of the facts that he communicated to us.”

“I thought Marchmont seemed pretty much alive to the fact that it was a very queer will.”

“So he did,” agreed Thorndyke. “But that is not quite what I mean. The whole set of circumstances, taken together and in relation to one another, impressed me as most remarkable; and that is why I am giving so much attention to what looks at first sight like such a very unpromising case. Copy out my notes, Jervis, and examine the facts critically. I think you will see what I mean. And now let us proceed.”

He replaced the brass plate and having reinserted the screws, hung up the frame, and proceeded to browse slowly round the room, stopping now and again to inspect the Japanese colour-prints and framed photographs of buildings and other objects of archaeological interest that formed the only attempts at wall-decoration. To one of the former he drew my attention.

“These things are of some value,” he remarked. “Here is one by Utamaro—that little circle with the mark over it is his signature—and you notice that the paper is becoming spotted in places with mildew. The fact is worth noting in more than
one connection.”

I accordingly made a mental note and the perambulation continued.

“You observe that Jeffrey used a gas-stove, instead of a coal fire, no doubt to economize work, but perhaps for other reasons. Presumably he cooked by gas, too; let us see.”

We wandered into the little cupboard-like kitchen and glanced round. A ring-burner on a shelf, a kettle, a frying-pan and a few pieces of crockery were its sole appointments. Apparently the porter was correct in his statement as to Jeffrey’s habits.

Returning to the sitting-room, Thorndyke resumed his inspection, pulling out the table drawers, peering inquisitively into cupboards and bestowing a passing glance on each of the comparatively few objects that the comfortless room contained.

“I have never seen a more characterless apartment,” was his final comment. “There is nothing that seems to suggest any kind of habitual activity on the part of the occupant. Let us look at the bedroom.”

We passed through into the chamber of tragic memories, and, when Thorndyke had lit the gas, we stood awhile looking about us in silence. It was a bare, comfortless room, dirty, neglected and squalid. The bed appeared not to have been remade since the catastrophe, for an indentation still marked the place where the corpse had lain, and even a slight powdering of ash could still be seen on the shabby counterpane. It looked to me a typical opium-smoker’s bedroom.

“Well,” Thorndyke remarked at length, “there is character enough here—of a kind. Jeffrey Blackmore would seem to have been a man of few needs. One could hardly imagine a bedroom in which less attention seemed to have been given to the comfort of the occupant.”

He looked about him keenly and continued: “The syringe and the rest of the lethal appliances and material have been taken away, I see. Probably the analyst did not return them. But there are the opium-pipe and the jar and the ash-bowl, and I presume those are the clothes that the undertakers removed from the body. Shall we look them over?”

He took up the clothes which lay, roughly folded, on a chair and held them up, garment by garment.

“These are evidently the trousers,” he remarked, spreading them out on the bed. “Here is a little white spot on the middle of the thigh which looks like a patch of small crystals from a drop of the solution. Just light the lamp, Jervis, and let us examine it with a lens.”

I lit the lamp, and when we had examined the spot minutely and identified it as a mass of minute crystals, Thorndyke asked:

“What do you make of those creases? You see there is one on each leg.”

“It looks as if the trousers had been turned up. But if they have been they must have been turned up about seven inches. Poor Jeffrey couldn’t have had much regard for appearances, for they would have been right above his socks. But perhaps the creases were made in undressing the body.”

“That is possible,” said Thorndyke: “though I don’t quite see how it would have happened. I notice that his pockets seem to have been emptied—no, wait; here is something in the waistcoat pocket.”

He drew out a shabby, pigskin card-case and a stump of lead pencil, at which latter he looked with what seemed to me much more interest than was deserved by so commonplace an object.

“The cards, you observe,” said he, “are printed from type, not from a plate. I would note that fact. And tell me what you make of that.”

He handed me the pencil, which I examined with concentrated attention, helping myself even with the lamp and my pocket lens. But even with these aids I failed to discover anything unusual in its appearance. Thorndyke watched me with a mischievous smile, and, when I had finished, inquired:

“Well; what is it?”

“Confound you!” I exclaimed. “It’s a pencil. Any fool can see that, and this particular fool can’t see any more. It’s a wretched stump of a pencil, villainously cut to an abominably bad point. It is coloured dark red on the outside and was stamped with some name that began with C—O—Co-operative Stores, perhaps.”

“Now, my dear Jervis,” Thorndyke protested, “don’t begin by confusing speculation with fact. The letters which remain are C—O. Note that fact and find out what pencils there are which have inscriptions beginning with those letters. I am not going to help you, because you can easily do this for yourself. And it will be good discipline even if the fact turns out to mean nothing.”

At this moment he stepped back suddenly, and, looking down at the floor, said:

“Give me the lamp, Jervis, I’ve trodden on something that felt like glass.”

I brought the lamp to the place where he had been standing, close by the bed, and we both knelt on the floor, throwing the light of the lamp on the bare and dusty boards. Under the bed, just within reach of the foot of a person standing close by, was a little patch of fragments of glass. Thorndyke produced a piece of paper from his pocket and delicately swept the
little fragments on to it, remarking:

“By the look of things, I am not the first person who has trodden on that object, whatever it is. Do you mind holding the lamp while I inspect the remains?”

I took the lamp and held it over the paper while he examined the little heap of glass through his lens.

“Well,” I asked. “What have you found?”

“That is what I am asking myself,” he replied. “As far as I can judge by the appearance of these fragments, they appear to be portions of a small watch-glass. I wish there were some larger pieces.”

“Perhaps there are,” said I. “Let us look about the floor under the bed.”

We resumed our groping about the dirty floor, throwing the light of the lamp on one spot after another. Presently, as we moved the lamp about, its light fell on a small glass bead, which I instantly picked up and exhibited to Thorndyke.

“Is this of any interest to you?” I asked.

Thorndyke took the bead and examined it curiously.

“It is certainly,” he said, “a very odd thing to find in the bedroom of an old bachelor like Jeffrey, especially as we know that he employed no woman to look after his rooms. Of course, it may be a relic of the last tenant. Let us see if there are any more.”

We renewed our search, crawling under the bed and throwing the light of the lamp in all directions over the floor. The result was the discovery of three more beads, one entire bugle and the crushed remains of another, which had apparently been trodden on. All of these, including the fragments of the bugle that had been crushed, Thorndyke placed carefully on the paper, which he laid on the dressing-table the more conveniently to examine our find.

“I am sorry,” said he, “that there are no more fragments of the watch-glass, or whatever it was. The broken pieces were evidently picked up, with the exception of the one that I trod on, which was an isolated fragment that had been overlooked.

As to the beads, judging by their number and the position in which we found some of them—that crushed bugle, for instance—they must have been dropped during Jeffrey's tenancy and probably quite recently.”

“What sort of garment do you suppose they came from?” I asked.

“They may have been part of a beaded veil or the trimming of a dress, but the grouping rather suggests to me a tag of bead fringe. The colour is rather unusual.”

“I thought they looked like black beads.”

“So they do by this light, but I think that by daylight we shall find them to be a dark, reddish-brown. You can see the colour now if you look at the smaller fragments of the one that is crushed.”

He handed me his lens, and, when I had verified his statement, he produced from his pocket a small tin box with a closely-fitting lid in which he deposited the paper, having first folded it up into a small parcel.

“We will put the pencil in too,” said he; and, as he returned the box to his pocket he added: “you had better get one of these little boxes from Polton. If is often useful to have a safe receptacle for small and fragile articles.”

He folded up and replaced the dead man’s clothes as we had found them. Then, observing a pair of shoes standing by the wall, he picked them up and looked them over thoughtfully, paying special attention to the backs of the soles and the fronts of the heels.

“I suppose we may take it,” said he, “that these are the shoes that poor Jeffrey wore on the night of his death. At any rate there seem to be no others. He seems to have been a fairly clean walker. The streets were shockingly dirty that day, as I remember most distinctly. Do you see any slippers? I haven’t noticed any.”

He opened and peeped into a cupboard in which an overcoat surmounted by a felt hat hung from a peg like an attenuated suicide; he looked in all the corners and into the sitting-room, but no slippers were to be seen.

“Our friend seems to have had surprisingly little regard for comfort,” Thorndyke remarked. “Think of spending the winter evenings in damp boots by a gas fire!”

“Perhaps the opium-pipe compensated,” said I; “or he may have gone to bed early.”

“But he did not. The night porter used to see the light in his rooms at one o’clock in the morning. In the sitting-room, too, you remember. But he seems to have been in the habit of reading in bed—or perhaps smoking—for here is a candlestick with the remains of a whole dynasty of candles in it. As there is gas in the room, he couldn’t have wanted the candle to undress by. He used stearine candles, too; not the common paraffin variety. I wonder why he went to that expense.”

“Perhaps the smell of the paraffin candle spoiled the aroma of the opium,” I suggested; to which Thorndyke made no reply but continued his inspection of the room, pulling out the drawer of the washstand—which contained a single, worn-out nail-brush—and even picking up and examining the dry and cracked cake of soap in the dish.

“He seems to have had a fair amount of clothing,” said Thorndyke, who was now going through the chest of drawers,
“though, by the look of it, he didn’t change very often, and the shirts have a rather yellow and faded appearance. I wonder how he managed about his washing. Why, here are a couple of pairs of boots in the drawer with his clothes! And here is his stock of candles. Quite a large box—though nearly empty now—of stearine candles, six to the pound.”

He closed the drawer and cast another inquiring look round the room.

“I think we have seen all now, Jervis,” he said, “unless there is anything more that you would like to look into?”

“No,” I replied. “I have seen all that I wanted to see and more than I am able to attach any meaning to. So we may as well go.”

I blew out the lamp and put it in my overcoat pocket, and, when we had turned out the gas in both rooms, we took our departure.

As we approached the lodge, we found our stout friend in the act of retiring in favour of the night porter. Thorndyke handed him the key of the chambers, and, after a few sympathetic inquiries, about his health—which was obviously very indifferent—said:

“Let me see; you were one of the witnesses to Mr. Blackmore’s will, I think?”

“I was, sir,” replied the porter.

“And I believe you read the document through before you witnessed the signature?”

“I did, sir.”

“Did you read it aloud?”

“Aloud, sir! Lor’ bless you, no, sir! Why should I? The other witness read it, and, of course, Mr. Blackmore knew what was in it, seeing that it was in his own handwriting. What should I want to read it aloud for?”

“No, of course you wouldn’t want to. By the way, I have been wondering how Mr. Blackmore managed about his washing.”

The porter evidently regarded this question with some disfavour, for he replied only with an interrogative grunt. It was, in fact, rather an odd question.

“Did you get it done for him,” Thorndyke pursued.

“No, certainly not, sir. He got it done for himself. The laundry people used to deliver the basket here at the lodge, and Mr. Blackmore used to take it in with him when he happened to be passing.”

“It was not delivered at his chambers, then?”

“No, sir. Mr. Blackmore was a very studious gentleman and he didn’t like to be disturbed. A studious gentleman would naturally not like to be disturbed.”

Thorndyke cordially agreed with these very proper sentiments and finally wished the porter “good night.” We passed out through the gateway into Wych Street, and, turning our faces eastward towards the Temple, set forth in silence, each thinking his own thoughts. What Thorndyke’s were I cannot tell, though I have no doubt that he was busily engaged in piecing together all that he had seen and heard and considering its possible application to the case in hand.

As to me, my mind was in a whirl of confusion. All this searching and examining seemed to be the mere flogging of a dead horse. The will was obviously a perfectly valid and regular will and there was an end of the matter. At least, so it seemed to me. But clearly that was not Thorndyke’s view. His investigations were certainly not purposeless; and, as I walked by his side trying to conceive some purpose in his actions, I only became more and more mystified as I recalled them one by one, and perhaps most of all by the cryptic questions that I had just heard him address to the equally mystified porter.

VIII. — THE TRACK CHART

AS Thorndyke and I arrived at the main gateway of the Temple and he swung round into the narrow lane, it was suddenly borne in on me that I had made no arrangements for the night. Events had followed one another so continuously and each had been so engrossing that I had lost sight of what I may call my domestic affairs.

“We seem to be heading for your chambers, Thorndyke,” I ventured to remark. “It is a little late to think of it, but I have not yet settled where I am to put up to-night.”

“My dear fellow,” he replied, “you are going to put up in your own bedroom which has been waiting in readiness for you ever since you left it. Polton went up and inspected it as soon as you arrived. I take it that you will consider my chambers yours until such time as you may join the benedictine majority and set up a home for yourself.”

“That is very handsome of you,” said I. “You didn’t mention that the billet you offered was a resident appointment.”

“Rooms and commons included,” said Thorndyke; and when I protested that I should at least contribute to the costs of living he impatiently waved the suggestion away. We were still arguing the question when we reached our chambers—as I
will now call them—and a diversion was occasioned by my taking the lamp from my pocket and placing it on the table.

“Ah,” my colleague remarked, “that is a little reminder. We will put it on the mantelpiece for Polton to collect and you shall give me a full account of your further adventures in the wilds of Kennington. That was a very odd affair. I have often wondered how it ended.”

He drew out his two arm-chairs up to the fire, put on some more coal, placed the tobacco jar on the table exactly equidistant from the two chairs, and settled himself with the air of a man who is anticipating an agreeable entertainment.

I filled my pipe, and, taking up the thread of the story where I had broken off on the last occasion, began to outline my later experiences. But he brought me up short.

“Don’t be sketchy, Jervis. To be sketchy is to be vague. Detail, my child, detail is the soul of induction. Let us have all the facts. We can sort them out afterwards.”

I began afresh in a vein of the extremest circumstantiality. With deliberate malice I loaded a prolix narrative with every triviality that a fairly retentive memory could rake out of the half-forgotten past. I cudgelled my brains for irrelevant incidents. I described with the minutest accuracy things that had not the faintest significance. I drew a vivid picture of the carriage inside and out; I painted a lifelike portrait of the horse, even going into particulars of the harness—which I was surprised to find that I had noticed. I described the furniture of the dining-room and the cobwebs that had hung from the ceiling; the auction-ticket on the chest of drawers, the rickety table and the melancholy chairs. I gave the number per minute of the patient’s respirations and the exact quantity of coffee consumed on each occasion, with an exhaustive description of the cup from which it was taken; and I left no personal details unconsidered, from the patient’s finger-nails to the roseate pimples on Mr. Weiss’s nose.

But my tactics of studied prolixity were a complete failure. The attempt to fatigue Thorndyke’s brain with superabundant detail was like trying to surfeit a pelican with whitebait. He consumed it all with calm enjoyment and asked for more; and when, at last, I did really begin to think that I had bored him a little, he staggered me by reading over his notes and starting a brisk cross-examination to elicit fresh facts! And the most surprising thing of all was that when I had finished I seemed to know a great deal more about the case than I had ever known before.

“It was a very remarkable affair,” he observed, when the cross-examination was over—leaving me somewhat in the condition of a cider-apple that has just been removed from a hydraulic press—“a very suspicious affair with a highly unsatisfactory end. I am not sure that I entirely agree with your police officer. Nor do I fancy that some of my acquaintances at Scotland Yard would have agreed with him.”

“Do you think I ought to have taken any further measures?” I asked uneasily.

“No; I don’t see how you could. You did all that was possible under the circumstances. You gave information, which is all that a private individual can do, especially if he is an overworked general practitioner. But still, an actual crime is the affair of every good citizen. I think we ought to take some action.”

“You think there really was a crime, then?”

“What else can one think? What do you think about it yourself?”

“I don’t like to think about it at all. The recollection of that corpse-like figure in that gloomy bedroom has haunted me ever since I left the house. What do you suppose has happened?”

Thorndyke did not answer for a few seconds. At length he said gravely:

“I am afraid, Jervis, that the answer to that question can be given in one word.”

“Murder?” I asked with a slight shudder.

He nodded, and we were both silent for a while.

“The probability,” he resumed after a pause, “that Mr. Graves is alive at this moment seems to me infinitesimal. There was evidently a conspiracy to murder him, and the deliberate, persistent manner in which that object was being pursued points to a very strong and definite motive. Then the tactics adopted point to considerable forethought and judgment. They are not the tactics of a fool or an ignoramus. We may criticize the closed carriage as a tactical mistake, calculated to arouse suspicion, but we have to weigh it against its alternative.”

“What is that?”

“Well, consider the circumstances. Suppose Weiss had called you in in the ordinary way. You would still have detected the use of poison. But now you could have located your man and made inquiries about him in the neighbourhood. You would probably have given the police a hint and they would almost certainly have taken action, as they would have had the means of identifying the parties. The result would have been fatal to Weiss. The closed carriage invited suspicion, but it was a great safeguard. Weiss’s method’s were not so unsound after all. He is a cautious man, but cunning and very persistent. And he could be bold on occasion. The use of the blinded carriage was a decidedly audacious proceeding. I should put him down as a gambler of a very discreet, courageous and resourceful type.”

“Which all leads to the probability that he has pursued his scheme and brought it to a successful issue.”

“I am afraid it does. But—have you got your notes of the compass bearings?”
“The book is in my overcoat pocket with the board. I will fetch them.”

I went into the office, where our coats hung, and brought back the notebook with the little board to which it was still attached by the rubber band. Thorndyke took them from me, and, opening the book, ran his eye quickly down one page after another. Suddenly he glanced at the clock.

“It is a little late to begin,” said he, “but these notes look rather alluring. I am inclined to plot them out at once. I fancy, from their appearance, that they will enable us to locate the house without much difficulty. But don’t let me keep you up if you are tired. I can work them out by myself.”

“You won’t do anything of the kind,” I exclaimed. “I am as keen on plotting them as you are, and, besides, I want to see how it is done. It seems to be a rather useful accomplishment.”

“It is,” said Thorndyke. “In our work, the ability to make a rough but reliable sketch survey is often of great value. Have you ever looked over these notes?”

“No. I put the book away when I came in and have never looked at it since.”

“It is a quaint document. You seem to be rich in railway bridges in those parts, and the route was certainly none of the most direct, as you noticed at the time. However, we will plot it out and then we shall see exactly what it looks like and whither it leads us.”

He retired to the laboratory and presently returned with a T-square, a military protractor, a pair of dividers and a large drawing-board on which was pinned a sheet of cartridge paper.

“Now,” said he, seating himself at the table with the board before him, “as to the method. You started from a known position and you arrived at a place the position of which is at present unknown. We shall fix the position of that spot by applying two factors, the distance that you travelled and the direction in which you were moving. The direction is given by the compass; and, as the horse seems to have kept up a remarkably even pace, we can take time as representing distance. You seem to have been travelling at about eight miles an hour, that is, roughly, a seventh of a mile in one minute. So if, on our chart, we take one inch as representing one minute, we shall be working with a scale of about seven inches to the mile.”

“That doesn’t sound very exact as to distance,” I objected.

“It isn’t. But that doesn’t matter much. We have certain landmarks, such as these railway arches that you have noted, by which the actual distance can be settled after the route is plotted. You had better read out the entries, and, opposite each, write a number for reference, so that we need not confuse the chart by writing details on it. I shall start near the middle of the board, as neither you nor I seem to have the slightest notion what your general direction was.”

I laid the open notebook before me and read out the first entry:

“Eight fifty-eight. West by South. Start from home. Horse thirteen hands.”

“You turned round at once, I understand,” said Thorndyke, “so we draw no line in that direction. The next is—?”

“Eight fifty-eight minutes, thirty seconds, East by North; and the next is ‘Eight fifty-nine, North-east.’”

“Then you travelled east by north about a fifteenth of a mile and we shall put down half an inch on the chart. Then you turned north-east. How long did you go on?”

“Exactly a minute. The next entry is ‘Nine. West north-west.’”

“Then you travelled about the seventh of a mile in a north-easterly direction and we draw a line an inch long at an angle of forty-five degrees to the right of the north and south line. From the end of that we carry a line at an angle of fifty-six and a quarter degrees to the left of the north and south line, and so on. The method is perfectly simple, you see.”

“Perfectly; I quite understand it now.”

I went back to my chair and continued to read out the entries from the notebook while Thorndyke laid off the lines of direction with the protractor, taking out the distances with the dividers from a scale of equal parts on the back of the instrument. As the work proceeded, I noticed, from time to time, a smile of quiet amusement spread over my colleague’s keen, attentive face, and at each new reference to a railway bridge he chuckled softly.

“What, again!” he laughed, as I recorded the passage of the fifth or sixth bridge. “It’s like a game of croquet. Go on. What is the next?”

I went on reading out the notes until I came to the final one:

Thorndyke ruled off the last line, remarking: “Then your covered way is on the south side of a street which bears north-east. So we complete our chart. Just look at your route, Jervis.”

He held up the board with a quizzical smile and I stared in astonishment at the chart. The single line, which represented the route of the carriage, zigzagged in the most amazing manner, turning, re-turning and crossing itself repeatedly, evidently passing more than once down the same thoroughfares and terminating at a comparatively short distance from its commencement.
“Why!” I exclaimed, the “rascal must have lived quite near to Stillbury’s house!”

Thorndyke measured with the dividers the distance between the starting and arriving points of the route and took it off from the scale.

“Five-eighths of a mile, roughly,” he said. “You could have walked it in less than ten minutes. And now let us get out the ordnance map and see if we can give to each of those marvellously erratic lines ‘a local habitation and a name.’”

He spread the map out on the table and placed our chart by its side.

“I think,” said he, “you started from Lower Kennington Lane?”

“Yes, from this point,” I replied, indicating the spot with a pencil.

“Then,” said Thorndyke, “if we swing the chart round twenty degrees to correct the deviation of the compass, we can compare it with the ordnance map.”

He set off with the protractor an angle of twenty degrees from the north and south line and turned the chart round to that extent. After closely scrutinizing the map and the chart and comparing the one with the other, he said:

“By mere inspection it seems fairly easy to identify the thoroughfares that correspond to the lines of the chart. Take the part that is near your destination. At nine twenty-one you passed under a bridge, going westward. That would seem to be Glasshouse Street. Then you turned south, apparently along the Albert Embankment, where you heard the tug’s whistle. Then you heard a passenger train start on your left; that would be Vauxhall Station. Next you turned round due east and passed under a large railway bridge, which suggests the bridge that carries the Station over Upper Kennington Lane. If that is so, your house should be on the south side of Upper Kennington Lane, some three hundred yards from the bridge. But we may as well test our inferences by one or two measurements.”

“How can you do that if you don’t know the exact scale of the chart?”

“I will show you,” said Thorndyke. “We shall establish the true scale and that will form part of the proof.”

He rapidly constructed on the upper blank part of the paper, a proportional diagram consisting of two intersecting lines with a single cross-line.

“This long line,” he explained, “is the distance from Stillbury’s house to the Vauxhall railway bridge as it appears on the chart; the shorter cross-line is the same distance taken from the ordnance map. If our inference is correct and the chart is reasonably accurate, all the other distances will show a similar proportion. Let us try some of them. Take the distance from Vauxhall bridge to the Glasshouse Street bridge.”
He made the two measurements carefully, and, as the point of the dividers came down almost precisely in the correct place on the diagram, he looked up at me.

“Considering the roughness of the method by which the chart was made, I think that is pretty conclusive, though, if you look at the various arches that you passed under and see how nearly they appear to follow the position of the South-Western Railway line, you hardly need further proof. But I will take a few more proportional measurements for the satisfaction of proving the case by scientific methods before we proceed to verify our conclusions by a visit to the spot.”

He took off one or two more distances, and on comparing them with the proportional distances on the ordnance map, found them in every case as nearly correct as could be expected.

“Yes,” said Thorndyke, laying down the dividers, “I think we have narrowed down the locality of Mr. Weiss’s house to a few yards in a known street. We shall get further help from your note of nine twenty-three thirty, when records a patch of newly laid macadam extending up to the house.”

“That new macadam will be pretty well smoothed down by now,” I objected.

“Not so very completely,” answered Thorndyke. “It is only a little over a month ago, and there has been very little wet weather since. It may be smooth, but it will be easily distinguishable from the old.”

“And do I understand that you propose to go and explore the neighbourhood?”
“Undoubtedly I do. That is to say, I intend to convert the locality of this house into a definite address; which, I think, will now be perfectly easy, unless we should have the bad luck to find more than one covered way. Even then, the difficulty would be trifling.”

“And when you have ascertained where Mr. Weiss lives? What then?”

“That will depend on circumstances. I think we shall probably call at Scotland Yard and have a little talk with our friend Mr. Superintendent Miller; unless, for any reason, it seems better to look into the case ourselves.”

“When is this voyage of exploration to take place?”

Thorndyke considered this question, and, taking out his pocket-book, glanced through his engagements.

“It seems to me,” he said, “that to-morrow is a fairly free day. We could take the morning without neglecting other business. I suggest that we start immediately after breakfast. How will that suit my learned friend?”

“My time is yours,” I replied; “and if you choose to waste it on matters that don’t concern you, that’s your affair.”

“Then we will consider the arrangement to stand for to-morrow morning, or rather, for this morning, as I see that it is past twelve.”

With this Thorndyke gathered up the chart and instruments and we separated for the night.

IX. — THE HOUSE OF MYSTERY

HALF-PAST nine on the following morning found us spinning along the Albert Embankment in a hansom to the pleasant tinkle of the horse’s bell. Thorndyke appeared to be in high spirits, though the full enjoyment of the matutinal pipe precluded fluent conversation. As a precaution, he had put my notebook in his pocket before starting, and once or twice he took it out and looked over its pages; but he made no reference to the object of our quest, and the few remarks that he uttered would have indicated that his thoughts were occupied with other matters.

Arrived at Vauxhall Station, we alighted and forthwith made our way to the bridge that spans Upper Kennington Lane near its junction with Harleyford Road.

“Here is our starting point,” said Thorndyke. “From this place to the house is about three hundred yards—say four hundred and twenty paces—and at about two hundred paces we ought to reach our patch of new road-metal. Now, are you ready? If we keep step we shall average our stride.”

We started together at a good pace, stepping out with military regularity and counting aloud as we went. As we told out the hundred and ninety-fourth pace I observed Thorndyke nod towards the roadway a little ahead, and, looking at it attentively as we approached, it was easy to see by the regularity of surface and lighter colour, that it had recently been re-metalled.

Having counted out the four hundred and twenty paces, we halted, and Thorndyke turned to me with a smile of triumph.

“Not a bad estimate, Jervis,” said he. “That will be your house if I am not much mistaken. There is no other mews or private roadway in sight.”

He pointed to a narrow turning some dozen yards ahead, apparently the entrance to a mews or yard and closed by a pair of massive wooden gates.

“Yes,” I answered, “there can be no doubt that this is the place; but, by Jove!” I added, as we drew nearer, “the nest is empty! Do you see?”

I pointed to a bill that was stuck on the gate, bearing, as I could see at this distance, the inscription “To Let.”

“Here is a new and startling, if not altogether unexpected, development,” said Thorndyke, as we stood gazing at the bill; which set forth that “these premises, including stabling and workshops,” were “to be let on lease or otherwise,” and referred inquiries to Messrs. Ryebody Brothers, house-agents and valuers, Upper Kennington Lane. “The question is, should we make a few inquiries of the agent, or should we get the keys and have a look at the inside of the house? I am inclined to do both, and the latter first, if Messrs. Ryebody Brothers will trust us with the keys.”

We proceeded up the lane to the address given, and, entering the office, Thorndyke made his request—somewhat to the surprise of the clerk; for Thorndyke was not quite the kind of person whom one naturally associates with stabling and workshops. However, there was no difficulty, but as the clerk sorted out the keys from a bunch hanging from a hook, he remarked:

“I expect you will find the place in a rather dirty and neglected condition. The house has not been cleaned yet; it is just as it was left when the brokers took away the furniture.”

“Was the last tenant sold up, then?” Thorndyke asked.

“Oh, no. He had to leave rather unexpectedly to take up some business in Germany.”

“I hope he paid his rent,” said Thorndyke.
“Oh, yes. Trust us for that. But I should say that Mr. Weiss—that was his name—was a man of some means. He seemed to have plenty of money, though he always paid in notes. I don’t fancy he had a banking account in this country. He hadn’t been here more than about six or seven months and I imagine he didn’t know many people in England, as he paid us a cash deposit in lieu of references when he first came.”

“I think you said his name was Weiss. It wouldn’t be H. Weiss by any chance?”

“I believe it was. But I can soon tell you.” He opened a drawer and consulted what looked like a book of receipt forms. “Yes; H Weiss. Do you know him, sir?”

“I knew a Mr. H. Weiss some years ago. He came from Bremen, I remember.”

“This Mr. Weiss has gone back to Hamburg,” the clerk observed.

“Oh,” said Thorndyke, “then it would seem not to be the same. My acquaintance was a fair man with a beard and a decidedly red nose and he wore spectacles.”

“That’s the man. You’ve described him exactly,” said the clerk, who was apparently rather easily satisfied in the matter of description.

“Dear me,” said Thorndyke; “what a small world it is. Do you happen to have a note of his address in Hamburg?”

“I haven’t,” the clerk replied. “You see we’ve done with him, having got the rent, though the house is not actually surrendered yet. Mr Weiss’s housekeeper still has the front-door key. She doesn’t start for Hamburg for a week or so, and meanwhile she keeps the key so that she can call every day and see if there are any letters.”

“Indeed,” said Thorndyke. “I wonder if he still has the same housekeeper.”

“This lady is a German,” replied the clerk, “with a regular jaw-twisting name. Sounded like Shallybang.”

“Schallibaum. That is the lady. A fair woman with hardly any eyebrows and a pronounced cast in the left eye.”

“Now that’s very curious, sir,” said the clerk. “It’s the same name, and this is a fair woman with remarkably thin eyebrows, I remember, now that you mention it but it can’t be the same person. I have only seen her a few times and then only just for a minute or so; but I’m quite certain she had no cast in her eye. So, you see, sir, she can’t be the same person. You can dye your hair or you can wear a wig or you can paint your face; but a squint is a squint. There’s no faking a swivel eye.”

Thorndyke laughed softly. “I suppose not; unless, perhaps, some one might invent an adjustable glass eye. Are these the keys?”

“Yes, sir. The large one belongs to the wicket in the front gate. The other is the latch-key belonging to the side door. Mrs. Shallybang has the key of the front door.”

“Thank you,” said Thorndyke. He took the keys, to which a wooden label was attached, and we made our way back towards the house of mystery, discussing the clerk’s statements as we went.

“A very communicable young gentleman, that,” Thorndyke remarked. “He seemed quite pleased to relieve the monotony of office work with a little conversation. And I am sure I was very delighted to indulge him.”

“He hadn’t much to tell, all the same,” said I.

Thorndyke looked at me in surprise. “I don’t know what you would have, Jervis, unless you expect casual strangers to present you with a ready-made body of evidence, fully classified, with all the inferences and implications stated. It seemed to me that he was a highly instructive young man.”

“What did you learn from him?” I asked.

“Oh, come, Jervis,” he protested; “is that a fair question, under our present arrangement? However, I will mention a few points. We learn that about six or seven months ago, Mr. H. Weiss dropped from the clouds into Kennington Lane and that he has now ascended from Kennington Lane into the clouds. That is a useful piece of information. Then we learn that Mrs. Schallibaum has remained in England; which might be of little importance if it were not for a very interesting corollary that it suggests.”

“What is that?”

“I must leave you to consider the facts at your leisure; but you will have noticed the ostensible reason for her remaining behind. She is engaged in putting up the one gaping joint in their armour. One of them has been indiscreet enough to give this address to some correspondent—probably a foreign correspondent. Now, as they obviously wish to leave no tracks, they cannot give their new address to the Post Office to have their letters forwarded, and, on the other hand, a letter left in the box might establish such a connection as would enable them to be traced. Moreover, the letter might be of a kind that they would not wish to fall into the wrong hands. They would not have given this address excepting under some peculiar circumstances.”

“No, I should think not, if they took this house for the express purpose of committing a crime in it.”

“Exactly. And then there is one other fact that you may have gathered from our young friend’s remarks.”
“What is that?”

“That a controllable squint is a very valuable asset to a person who wishes to avoid identification.”

“Yes, I did note that. The fellow seemed to think that it was absolutely conclusive.”

“And so would most people; especially in the case of a squint of that kind. We can all squint towards our noses, but no normal person can turn his eyes away from one another. My impression is that the presence or absence, as the case might be, of a divergent squint would be accepted as absolute disproof of identity. But here we are.”

He inserted the key into the wicket of the large gate, and, when we had stepped through into the covered way, he locked it from the inside.

“Why have you locked us in?” I asked, seeing that the wicket had a latch.

“Because,” he replied, “if we now hear any one on the premises we shall know who it is. Only one person besides ourselves has a key.”

His reply startled me somewhat. I stopped and looked at him.

“That is a quaint situation, Thorndyke. I hadn’t thought of it. Why she may actually come to the house while we are here; in fact, she may be in the house at this moment.”

“I hope not,” said he. “We don’t particularly want Mr. Weiss to be put on his guard, for I take it, he is a pretty wide-awake gentleman under any circumstances. If she does come, we had better keep out of sight. I think we will look over the house first. That is of the most interest to us. If the lady does happen to come while we are here, she may stay to show us over the place and keep an eye on us. So we will leave the stables to the last.”

We walked down the entry to the side door at which I had been admitted by Mrs. Schallibaum on the occasion of my previous visits. Thorndyke inserted the latch-key, and, as soon as we were inside, shut the door and walked quickly through into the hall, whither I followed him. He made straight for the front door, where, having slipped up the catch of the lock, he began very attentively to examine the letter-box. It was a somewhat massive wooden box, fitted with a lock of good quality and furnished with a wire grille through which one could inspect the interior.

“We are in luck, Jervis,” Thorndyke remarked. “Our visit has been most happily timed. There is a letter in the box.”

“Well,” I said, “we can’t let it out; and if we could, it would be hardly justifiable.”

“I don’t know,” he replied, “that I am prepared to assent off-hand to either of those propositions; but I would rather not tamper with another person’s letter, even if that person should happen to be a murderer. Perhaps we can get the information we want from the outside of the envelope.”

He produced from his pocket a little electric lamp fitted with a bull’s-eye, and, pressing the button, threw a beam of light in through the grille. The letter was lying on the bottom of the box face upwards, so that the address could easily be read.

“Herrn Dr. H. Weiss,” Thorndyke read aloud. “German stamp, postmark apparently Darmstadt. You notice that the ‘Herrn Dr.’ is printed and the rest written. What do you make of that?”

“I don’t quite know. Do you think he is really a medical man?”

“Perhaps we had better finish our investigation, in case we are disturbed, and discuss the bearings of the facts afterwards. The name of the sender may be on the flap of the envelope. If it is not, I shall pick the lock and take out the letter. Have you got a probe about you?”

“Yes; by force of habit I am still carrying my pocket case.”

I took the little case from my pocket and extracting from it a jointed probe of thickish silver wire, screwed the two halves together and handed the completed instrument to Thorndyke; who passed the slender rod through the grille and adroitly turned the letter over.

“Ha!” he exclaimed with deep satisfaction, as the light fell on the reverse of the envelope, “we are saved from the necessity of theft—or rather, unauthorized borrowing—‘Johann Schnitzler, Darmstadt.’ That is all that we actually want. The German police can do the rest if necessary.”

He handed me back my probe, pocketed his lamp, released the catch of the lock on the door, and turned away along the dark, musty-smelling hall.

“Do you happen to know the name of Johann Schnitzler?” he asked.

I replied that I had no recollection of ever having heard the name before.

“Neither have I,” said he; “but I think we may form a pretty shrewd guess as to his avocation. As you saw, the words ‘Herrn Dr.’ were printed on the envelope, leaving the rest of the address to be written by hand. The plain inference is that he is a person who habitually addresses letters to medical men, and as the style of the envelope and the lettering—which is printed, not embossed—is commercial, we may assume that he is engaged in some sort of trade. Now, what is a likely trade?”

“He might be an instrument maker or a drug manufacturer; more probably the latter, as there is an extensive drug and
chemical industry in Germany, and as Mr. Weiss seemed to have more use for drugs than instruments."

"Yes, I think you are right; but we will look him up when we get home. And now we had better take a glance at the bedroom; that is, if you can remember which room it was."

"It was on the first floor," said I, "and the door by which I entered was just at the head of the stairs."

We ascended the two flights, and, as we reached the landing, I halted.

"This was the door," I said, and was about to turn the handle when Thorndyke caught me by the arm.

"One moment, Jervis," said he. "What do you make of this?"

He pointed to a spot near the bottom of the door where, on close inspection, four good-sized screw-holes were distinguishable. They had been neatly stopped with putty and covered with knotting, and were so nearly the colour of the grained and varnished woodwork as to be hardly visible.

"Evidently," I answered, "there has been a bolt there, though it seems a queer place to fix one."

"Not at all," replied Thorndyke. "If you look up you will see that there was another at the top of the door, and, as the lock is in the middle, they must have been highly effective. But there are one or two other points that strike one. First, you will notice that the bolts have been fixed on quite recently, for the paint that they covered is of the same grimy tint as that on the rest of the door. Next, they have been taken off, which, seeing that they could hardly have been worth the trouble of removal, seems to suggest that the person who fixed them considered that their presence might appear remarkable, while the screw-holes, which have been so skilfully and carefully stopped, would be less conspicuous.

"Then, they are on the outside of the door—an unusual situation for bedroom bolts—and were of considerable size. They were long and thick."

"I can see, by the position of the screw-holes, that they were long; but how do you arrive at their thickness?"

"By the size of the counter-holes in the jamb of the door. These holes have been very carefully filled with wooden plugs covered with knotting; but you can make out their diameter, which is that of the bolts, and which is decidedly out of proportion for an ordinary bedroom door. Let me show you a light."

He flashed his lamp into the dark corner, and I was able to see distinctly the portentously large holes into which the bolts had fitted, and also to note the remarkable neatness with which they had been plugged.

"There was a second door, I remember," said I. "Let us see if that was guarded in a similar manner."

We strode through the empty room, awakening dismal echoes as we trod the bare boards, and flung open the other door. At top and bottom, similar groups of screw-holes showed that this also had been made secure, and that these bolts had been of the same very substantial character as the others.

Thorndyke turned away from the door with a slight frown.

"If we had any doubts," said he, "as to what has been going on in this house, these traces of massive fastenings would be almost enough to settle them."

"They might have been there before Weiss came," I suggested. "He only came about seven months ago and there is no date on the screw-holes."

"That is quite true. But when, with their recent fixture, you couple the facts that they have been removed, that very careful measures have been taken to obliterate the traces of their presence, and that they would have been indispensable for the commission of the crime that we are almost certain was being committed here, it looks like an excess of caution to seek other explanations."

"But," I objected, "if the man, Graves, was really imprisoned, could not he have smashed the window and called for help?"

"The window looks out on the yard, as you see; but I expect it was secured too."

He drew the massive, old-fashioned shutters out of their recess and closed them.

"Yes, here we are." He pointed to four groups of screw-holes at the corners of the shutters, and, once more producing his lamp, narrowly examined the insides of the recesses into which the shutters folded.

"The nature of the fastening is quite evident," said he. "An iron bar passed right across at the top and bottom and was secured by a staple and padlock. You can see the mark the bar made in the recess when the shutters were folded. When these bars were fixed and padlocked and the bolts were shot, this room was as secure, for a prisoner unprovided with tools, as a cell in Newgate."

We looked at one another for awhile without speaking; and I fancy that if Mr. H. Weiss could have seen our faces he might have thought it desirable to seek some retreat even more remote than Hamburg.

"It was a diabolical affair, Jervis," Thorndyke said at length, in an ominously quiet and even gentle tone. "A sordid, callous, cold-blooded crime of a type that is to me utterly unforgivable and incapable of extenuation. Of course, it may have failed. Mr. Graves may even now be alive. I shall make it my very especial business to ascertain whether he is or not. And if
he is not, I shall take it to myself as a sacred duty to lay my hand on the man who has compassed his death.”

I looked at Thorndyke with something akin to awe. In the quiet unemotional tone of his voice, in his unruffled manner and the stony calm of his face, there was something much more impressive, more fateful, than there could have been in the fiercest threats or the most passionate denunciations. I felt that in those softly spoken words he had pronounced the doom of the fugitive villain.

He turned away from the window and glanced round the empty room. It seemed that our discovery of the fastenings had exhausted the information that it had to offer.

“It is a thousand pities,” I remarked, “that we were unable to look round before they moved out the furniture. We might have found some clue to the scoundrel’s identity.”

“Yes,” replied Thorndyke; “there isn’t much information to be gathered here, I am afraid. I see they have swept up the little litter from the floor and poked it under the grate. We will turn that over, as there seems to be nothing else, and then look at the other rooms.”

He raked out the little heap of rubbish with his stick and spread it out on the hearth. It certainly looked unpromising enough, being just such a rubbish heap as may be swept up in any untidy room during a move. But Thorndyke went through it systematically, examining each item attentively, even to the local tradesmen’s bills and empty paper bags, before laying them aside. Another rake of his stick scattered the bulky masses of crumpled paper and brought into view an object which he picked up with some eagerness. It was a portion of a pair of spectacles, which had apparently been trodden on, for the side-bar was twisted and bent and the glass was shattered into fragments.

“This ought to give us a hint,” said he. “It will probably have belonged either to Weiss or Graves, as Mrs. Schallibaum apparently did not wear glasses. Let us see if we can find the remainder.”

We both groped carefully with our sticks amongst the rubbish, spreading it out on the hearth and removing the numerous pieces of crumpled paper. Our search was rewarded by the discovery of the second eye-piece of the spectacles, of which the glass was badly cracked but less shattered than the other. I also picked up two tiny sticks at which Thorndyke looked with deep interest before laying them on the mantelshelf.

“We will consider them presently,” said he. “Let us finish with the spectacles first. You see that the left eye-glass is a concave cylindrical lens of some sort. We can make out that much from the fragments that remain, and we can measure the curvature when we get them home, although that will be easier if we can collect some more fragments and stick them together. The right eye is plain glass; that is quite evident. Then these will have belonged to your patient, Jervis. You said that the tremulous iris was in the right eye, I think?”

“Yes,” I replied. “These will be his spectacles, without doubt.”

“They are peculiar frames,” he continued. “If they were made in this country, we might be able to discover the maker. But we must collect as many fragments of glass as we can.”

Once more we searched amongst the rubbish and succeeded, eventually, in recovering some seven or eight small fragments of the broken spectacle-glasses, which Thorndyke laid on the mantelshelf beside the little sticks.

“By the way, Thorndyke,” I said, taking up the latter to examine them afresh, “what are these things? Can you make anything of them?”

He looked at them thoughtfully for a few moments and then replied:

“I don’t think I will tell you what they are. You should find that out for yourself, and it will be well worth your while to do so. They are rather suggestive objects under the circumstances. But notice their peculiarities carefully. Both are portions of some smooth, stout reed. There is a long, thin stick—about six inches long—and a thicker piece only three inches in length. The longer piece has a little scrap of red paper stuck on at the end; apparently a portion of a label of some kind with an ornamental border. The other end of the stick has been broken off. The shorter, stouter stick has had its central cavity artificially enlarged so that it fits over the other to form a cap or sheath. Make a careful note of those facts and try to think what they probably mean; what would be the most likely use for an object of this kind. When you have ascertained that, you will have learned something new about this case. And now, to resume our investigations. Here is a very suggestive thing.” He picked up a small, wide-mouthed bottle and, holding it up for my inspection, continued: “Observe the fly sticking to the inside, and the name on the label, ‘Fox, Russell Street, Covent Garden.’

“I don’t know Mr. Fox.”

“Then I will inform you that he is a dealer in the materials for ‘make-up,’ theatrical or otherwise, and will leave you to consider the bearing of this bottle on our present investigation. There doesn’t seem to be anything else of interest in this El Dorado excepting that screw, which you notice is about the size of those with which the bolts were fastened on the doors. I don’t think it is worth while to unstop any of the holes to try it; we should learn nothing fresh.”

He rose, and, having kicked the discarded rubbish back under the grate, gathered up his gleanings from the mantelpiece, carefully bestowing the spectacles and the fragments of glass in the tin box that he appeared always to carry in his pocket, and wrapping the larger objects in his handkerchief.

“A poor collection,” was his comment, as he returned the box and handkerchief to his pocket, “and yet not so poor as I
had feared. Perhaps, if we question them closely enough, these unconsidered trifles may be made to tell us something worth learning after all. Shall we go into the other room?"

We passed on to the landing and into the front room, where, guided by experience, we made straight for the fireplace. But the little heap of rubbish there contained nothing that even Thorndyke's inquisitive eye could view with interest. We wandered disconsolately round the room, peering into the empty cupboards and scanning the floor and the corners by the skirting, without discovering a single object or relic of the late occupants. In the course of my perambulations I halted by the window and was looking down into the street when Thorndyke called to me sharply:

"Come away from the window, Jervis! Have you forgotten that Mrs. Schallibaum may be in the neighbourhood at this moment?"

As a matter of fact I had entirely forgotten the matter, nor did it now strike me as anything but the remotest of possibilities. I replied to that effect.

"I don’t agree with you," Thorndyke rejoined. "We have heard that she comes here to look for letters. Probably she comes every day, or even oftener. There is a great deal at stake, remember, and they cannot feel quite as secure as they would wish. Weiss must have seen what view you took of the case and must have had some uneasy moments thinking of what you might do. In fact, we may take it that the fear of you drove them out of the neighbourhood, and that they are mighty anxious to get that letter and cut the last link that binds them to this house."

"I suppose that is so," I agreed; "and if the lady should happen to pass this way and should see me at the window and recognize me, she would certainly smell a rat."

"A rat!" exclaimed Thorndyke. "She would smell a whole pack of foxes, and Mr. H. Weiss would be more on his guard than ever. Let us have a look at the other rooms; there is nothing here."

We went up to the next floor and found traces of recent occupation in one room only. The garrets had evidently been unused, and the kitchen and ground-floor rooms offered nothing that appeared to Thorndyke worth noting. Then we went out by the side door and down the covered way into the yard at the back. The workshops were fastened with rusty padlocks that looked as if they had not been disturbed for months. The stables were empty and had been tentatively cleaned out, the coach-house was vacant, and presented no traces of recent use excepting a half-bald spoke-brush. We returned up the covered way and I was about to close the side door, which Thorndyke had left ajar, when he stopped me.

"We'll have another look at the hall before we go," said he; and, walking softly before me, he made his way to the front door, where, producing his lamp, he threw a beam of light into the letter-box.

"Any more letters?" I asked.

"Any more!" he repeated. "Look for yourself."

I stooped and peered through the grille into the lighted interior; and then I uttered an exclamation.

The box was empty.

Thorndyke regarded me with a grim smile. "We have been caught on the hop, Jervis, I suspect," said he.

"It is queer," I replied. "I didn't hear any sound of the opening or closing of the door; did you?"

"No; I didn't hear any sound; which makes me suspect that she did. She would have heard our voices and she is probably keeping a sharp look-out at this very moment. I wonder if she saw you at the window. But whether she did or not, we must go very warily. Neither of us must return to the Temple direct, and we had better separate when we have returned the keys and I will watch you out of sight and see if anyone is following you. What are you going to do?"

"If you don't want me, I shall run over to Kensington and drop in to lunch at the Hornbys'. I said I would call as soon as I had an hour or so free."

"Very well. Do so; and keep a look-out in case you are followed. I have to go down to Guildford this afternoon. Under the circumstances, I shall not go back home, but send Polton a telegram and take a train at Vauxhall and change at some small station where I can watch the platform. Be as careful as you can. Remember that what you have to avoid is being followed to any place where you are known, and, above all, revealing your connection with number Five A, King's Bench Walk."

Having thus considered our immediate movements, we emerged together from the wicket, and locking it behind us, walked quickly to the house-agents', where an opportune office-boy received the keys without remark. As we came out of the office, I halted irresolutely and we both looked up and down the lane.

"There is no suspicious looking person in sight at present," Thorndyke said, and then asked: "Which way do you think of going?"

"It seems to me," I replied, "that my best plan would be to take a cab or an omnibus so as to get out of the neighbourhood as quickly as possible. If I go through Ravensden Street into Kennington Park Road, I can pick up an omnibus that will take me to the Mansion House, where I can change for Kensington. I shall go on the top so that I can keep a look-out for any other omnibus or cab that may be following."

"Yes," said Thorndyke, "that seems a good plan. I will walk with you and see that you get a fair start."

We walked briskly along the lane and through Ravensden Street to the Kennington Park Road. An omnibus was
approaching from the south at a steady jog-trot and we halted at the corner to wait for it. Several people passed us in different directions, but none seemed to take any particular notice of us, though we observed them rather narrowly, especially the women. Then the omnibus crawled up. I sprang on the foot-board and ascended to the roof, where I seated myself and surveyed the prospect to the rear. No one else got on the omnibus—which had not stopped—and no cab or other passenger vehicle was in sight. I continued to watch Thorndyke as he stood sentinel at the corner, and noted that no one appeared to be making any effort to overtake the omnibus. Presently my colleague waved his hand to me and turned back towards Vauxhall, and I, having satisfied myself once more that no pursuing cab or hurrying foot-passenger was in sight, decided that our precautions had been unnecessary and settled myself in a rather more comfortable position.

X. — THE HUNTER HUNTED

The omnibus of those days was a leisurely vehicle. Its ordinary pace was a rather sluggish trot, and in a thickly populated thoroughfare its speed was further reduced by frequent stoppages. Bearing these facts in mind, I gave an occasional backward glance as we jogged northward, though my attention soon began to wander from the rather remote possibility of pursuit to the incidents of our late exploration.

It had not been difficult to see that Thorndyke was very well pleased with the results of our search, but excepting the letter—which undoubtedly opened up a channel for further inquiry and possible identification—I could not perceive that any of the traces that we had found justified his satisfaction. There were the spectacles, for instance. They were almost certainly the pair worn by Mr. Graves. But what then? It was exceedingly improbable that we should be able to discover the maker of them, and if we were, it was still more improbable that he would be able to give us any information that would help us. Spectacle-makers are not usually on confidential terms with their customers.

As to the other objects, I could make nothing of them. The little sticks of reed evidently had some use that was known to Thorndyke and furnished, by inference, some kind of information about Weiss, Graves, or Mrs. Schallibaum. But I had never seen anything like them before and they conveyed nothing whatever to me. Then the bottle that had seemed so significant to Thorndyke was to me quite uninforming. It did, indeed, suggest that some member of the household might be connected with the stage, but it gave no hint as to which one. Certainly that person was not Mr. Weiss, whose appearance was as remote from that of an actor as could well be imagined. At any rate, the bottle and its label gave me no more useful hint than it might be worth while to call on Mr. Fox and make inquiries; and something told me very emphatically that this was not what it had conveyed to Thorndyke.

These reflections occupied me until the omnibus, having rumbled over London Bridge and up King William Street, joined the converging streams of traffic at the Mansion House. Here I got down and changed to an omnibus bound for Kensington; on which I travelled westward pleasantly enough, looking down into the teeming streets and whiling away the time by meditating upon the very agreeable afternoon that I promised myself, and considering how far my new arrangement with Thorndyke would justify me in entering into certain domestic engagements of a highly interesting kind.

What might have happened under other circumstances it is impossible to tell and useless to speculate; the fact is that my journey ended in a disappointment. I arrived, all agog, at the familiar house in Endsley Gardens only to be told by a sympathetic housemaid that the family was out; that Mrs. Hornby had gone into the country and would not be home until night, and—which mattered a good deal more to me—that her niece, Miss Juliet Gibson, had accompanied her.

Now a man who drops into lunch without announcing his intention or previously ascertaining those of his friends has no right to quarrel with fate if he finds an empty house. Thus philosophically I reflected as I turned away from the house in profound discontent, demanding of the universe in general why Mrs. Hornby need have perversely chosen my first free day to go gadding into the country, and above all, why she must needs spirit away the fair Juliet. This was the crowning misfortune (for I could have endured the absence of the elder lady with commendable fortitude), and since I could not immediately return to the Temple it left me a mere waif and stray for the time being.

Instinct—of the kind that manifests itself especially about one o’clock in the afternoon—impelled me in the direction of Brompton Road, and finally landed me at a table in a large restaurant apparently adjusted to the needs of ladies who had come from a distance to engage in the feminine sport of shopping. Here, while waiting for my lunch, I sat idly scanning the morning paper and wondering what I should do with the rest of the day; and presently it chanced that my eye caught the announcement of a matinée at the theatre in Sloane Square. It was quite a long time since I had been at a theatre, and, as the play—light comedy—seemed likely to satisfy my most critical taste, I decided to devote the afternoon to reviving my acquaintance with the drama. Accordingly as soon as my lunch was finished, I walked down the Brompton Road, stepped on to an omnibus, and was duly deposited at the door of the theatre. A couple of minutes later I found myself occupying an excellent seat in the second row of the pit, oblivious alike of my recent disappointment and of Thorndyke’s words of warning.

I am not an enthusiastic play-goer. To dramatic performances I am disposed to assign nothing further than the modest function of furnishing entertainment. I do not go to a theatre to be instructed or to have my moral outlook elevated. But, by way of compensation, I am not difficult to please. To a simple play, adjusted to my primitive taste, I can bring a certain bucolic appreciation that enables me to extract from the performance the maximum of enjoyment; and when, on this occasion, the final curtain fell and the audience rose, I rescued my hat from its insecure resting-place and turned to go with the feeling that I had spent a highly agreeable afternoon.
Emerging from the theatre, borne on the outgoing stream, I presently found myself opposite the door of a tea-shop. Instinct—the five o’clock instinct this time—guided me in; for we are creatures of habit, especially of the tea habit. The unoccupied table to which I drifted was in a shady corner not very far from the pay-desk; and here I had been seated less than a minute when a lady passed me on her way to the farther table. The glimpse that I caught of her as she approached—it was but a glimpse, since she passed behind me—showed that she was dressed in black, that she wore a beaded veil and hat, and in addition to the glass of milk and the bun that she carried, she was encumbered by an umbrella and a small basket, apparently containing some kind of needlework. I must confess that I gave her very little attention at the time, being occupied in anxious speculation as to how long it would be before the fact of my presence would impinge on the consciousness of the waitress.

The exact time by the clock on the wall was three minutes and a quarter, at the expiration of which an anaemic young woman sauntered up to the table and bestowed on me a glance of sullen interrogation, as if mutely demanding what the devil I wanted. I humbly requested that I might be provided with a pot of tea; whereupon she turned on her heel (which was a good deal worn down on the offside) and reported my conduct to a lady behind a marble-topped counter.

It seemed that the counter lady took a lenient view of the case, for in less than four minutes the waitress returned and gloomily deposited on the table before me a tea-pot, a milk-jug, a cup and saucer, a jug of hot water, and a small pool of milk. Then she once more departed in dudgeon.

I had just given the tea in the pot a preliminary stir and was about to pour out the first cup when I felt some one bump lightly against my chair and heard something rattle on the floor. I turned quickly and perceived the lady, whom I had seen enter, stooping just behind my chair. It seemed that having finished her frugal meal she was on her way out when she had dropped the little basket that I had noticed hanging from her wrist; which basket had promptly disgorged its entire contents on the floor.

Now every one must have noticed the demon of agility that seems to enter into an inanimate object when it is dropped, and the apparently intelligent malevolence with which it discovers, and rolls into, the most inaccessible places. Here was a case in point. This particular basket had contained materials for Oriental bead-work; and no sooner had it reached the floor than each item of its contents appeared to become possessed of a separate and particular devil impelling it to travel at headlong speed to some remote and unapproachable corner as distant as possible from its fellows.

As the only man—and almost the only person—near, the duty of salvage-agent manifestly devolved upon me; and down I went, accordingly, on my hands and knees, regardless of a nearly new pair of trousers, to grope under tables, chairs and settles in reach of the scattered treasure. A ball of the thick thread or twine I recovered from a dark and dirty corner after a brief interview with the sharp corner of a settle, and a multitude of the large beads with which this infernal industry is carried on I gathered from all parts of the compass, coming forth at length (quadrupedly) with a double handful of the treasure-trove and a very lively appreciation of the resistant qualities of a cast-iron table-stand when applied to the human cranium.

The owner of the lost and found property was greatly distressed by the accident and the trouble it had caused me; in fact she was quite needlessly agitated about it. The hand which held the basket into which I poured the rescued trash trembled visibly, and the brief glance that I bestowed on her as she murmured her thanks and apologies—with a very slight foreign accent—showed me that she was excessively pale. That much I could see plainly in spite of the rather dim light in this part of the shop and the beaded veil that covered her face; and I could also see that she was a rather remarkable looking woman, with a great mass of harsh, black hair and very broad black eyebrows that nearly met above her nose and contrasted strikingly with the dead white of her skin. But, of course, I did not look at her intently. Having returned her property and received her acknowledgments, I resumed my seat and left her to go on her way.

I had once more grasped the handle of the tea-pot when I made a rather curious discovery. At the bottom of the tea-cup lay a single lump of sugar. To the majority of persons it would have meant nothing. They would have assumed that they had dropped it in and forgotten it and would have proceeded to pour out the tea. But it happened that, at this time, I did not take sugar in my tea; whence it followed that the lump had not been put in by me. Assuming, therefore, that it had been carelessly dropped in by the waitress, I turned it out on the table, filled the cup, added the milk, and took a tentative draught to test the temperature.

The cup was yet at my lips when I chanced to look into the mirror that faced my table. Of course it reflected the part of the shop that was behind me, including the cashier’s desk; at which the owner of the basket now stood paying for her refreshment. Between her and me was a gas chandelier which cast its light on my back but full on her face; and her veil notwithstanding, I could see that she was looking at me steadily; was, in fact, watching me intently and with a very curious expression—an expression of expectancy mingled with alarm. But this was not all. As I returned her intent look—which I could do unobserved, since my face, reflected in the mirror, was in deep shadow—I suddenly perceived that that steady gaze engaged her right eye only; the other eye was looking sharply towards her left shoulder. In short, she had a divergent squint of the left eye.

I put down my cup with a thrill of amazement and a sudden surging up of suspicion and alarm. An instant’s reflection reminded me that when she had spoken to me a few moments before, both her eyes had looked into mine without the slightest trace of a squint. My thoughts flew back to the lump of sugar, to the unguarded milk-jug and the draught of tea that I had already swallowed; and, hardly knowing what I intended, I started to my feet and turned to confront her. But as I rose, she snatched up her change and darted from the shop. Through the glass door, I saw her spring on to the foot-board
of a passing hansom and give the driver some direction. I saw the man whip up his horse, and, by the time I reached the door, the cab was moving off swiftly towards Sloane Street.

I stood irresolute. I had not paid and could not run out of the shop without making a fuss, and my hat and stick were still on the rail opposite my seat. The woman ought to be followed, but I had no fancy for the task. If the tea that I had swallowed was innocuous, no harm was done and I was rid of my pursuer. So far as I was concerned, the incident was closed. I went back to my seat, and picking up the lump of sugar which still lay on the table where I had dropped it, put it carefully in my pocket. But my appetite for tea was satisfied for the present. Moreover it was hardly advisable to stay in the shop lest some fresh spy should come to see how I fared. Accordingly I obtained my check, handed it in at the cashier’s desk and took my departure.

All this time, it will be observed, I had been taking it for granted that the lady in black had followed me from Kensington to this shop; that, in fact, she was none other than Mrs. Schallibaum. And, indeed, the circumstances had rendered the conclusion inevitable. In the very instant when I had perceived the displacement of the left eye, complete recognition had come upon me. When I had stood facing the woman, the brief glance at her face had conveyed to me something dimly reminiscent of which I had been but half conscious and had instantly forgotten. But the sight of that characteristic squint had at once revived and explained it. That the woman was Mrs. Schallibaum I now felt no doubt whatever.

Nevertheless, the whole affair was profoundly mysterious. As to the change in the woman’s appearance, there was little in that. The coarse, black hair might be her own, dyed, or it might be a wig. The eyebrows were made-up; it was a simple enough proceeding and made still more simple by the beaded veil. But how did she come to be there at all? How did she happen to be made-up in this fashion at this particular time? And, above all, how came she to be provided with a lump of what I had little doubt was poisoned sugar?

I turned over the events of the day, and the more I considered them the less comprehensible they appeared. No one had followed the omnibus either on foot or in a vehicle, as far as I could see; and I had kept a careful look-out, not only at starting but for some considerable time after. Yet, all the time, Mrs. Schallibaum must have been following. But how? If she had known that I was intending to travel by the omnibus she might have gone to meet it and entered before I did. But she could not have known: and moreover she did not meet the omnibus, for we watched its approach from some considerable distance. I considered whether she might not have been concealed in the house and overheard me mention my destination to Thorndyke. But this failed to explain the mystery, since I had mentioned no address beyond “Kensington.” I had, indeed, mentioned the name of Mrs. Hornby, but the supposition that my friends might be known by name to Mrs. Schallibaum, or even that she might have looked the name up in the directory, presented a probability too remote to be worth entertaining.

But, if I reached no satisfactory conclusion, my cogitations had one useful effect; they occupied my mind to the exclusion of that unfortunate draught of tea. Not that I had been seriously uneasy after the first shock. The quantity that I had swallowed was not large—the tea being hotter than I cared for—and I remembered that, when I had thrown out the lump of sugar, I had turned the cup upside down on the table; so there could have been nothing solid left in it. And the lump of sugar was in itself reassuring, for it certainly would not have been used in conjunction with any less conspicuous but more incriminating form of poison. That lump of sugar was now in my pocket, reserved for careful examination at my leisure; and I reflected with a faint grin that it would be a little disconcerting if it should turn out to contain nothing but sugar after all.

On leaving the tea-shop, I walked up Sloane Street with the intention of doing what I ought to have done earlier in the day. I was going to make perfectly sure that no spy was dogging my footsteps. But for my ridiculous confidence I could have done so quite easily before going to Endsley Gardens; and now, made wiser by a startling experience, I proceeded with systematic care. It was still broad daylight—for the lamps in the tea-shop had been rendered necessary only by the faulty construction of the premises and the dullness of the afternoon—and in an open space I could see far enough for complete safety. Arriving at the top of Sloane Street, I crossed Knightsbridge, and, entering Hyde Park, struck out towards the Serpentine. Passing along the eastern shore, I entered one of the long paths that lead towards the Marble Arch and strode along it at such a pace as would make it necessary for any pursuer to hurry in order to keep me in sight. Half-way across the great stretch of turf, I halted for a few moments and noted the few people who were coming in my direction. Then I turned sharply to the left and headed straight for the Victoria Gate, but again, half-way, I turned off among a clump of trees, and, standing behind the trunk of one of them, took a fresh survey of the people who were moving along the paths. All were at a considerable distance and none appeared to be coming my way.

I now moved cautiously from one tree to another and passed through the wooded region to the south, crossed the Serpentine bridge at a rapid walk and hurrying along the south shore left the Park by Apsley House. From hence I walked at the same rapid pace along Piccadilly, insinuating myself among the crowd with the skill born of long acquaintance with the London streets, crossed amidst the seething traffic at the Circus, darted up Windmill Street and began to zigzag amongst the narrow streets and courts of Soho. Crossing the Seven Dials and Drury Lane I passed through the multitudinous back-streets and alleys that then filled the area south of Lincoln’s Inn, came out by Newcastle Street, Holywell Street and Half-Moon Alley into the Strand, which I crossed immediately, ultimately entering the Temple by Devereux Court.

Even then I did not relax my precautions. From one court to another I passed quickly, loitering in those dark entries and unexpected passages that are known to so few but the regular Templars, and coming out into the open only at the last where the wide passage of King’s Bench Walk admits of no evasion. Half-way up the stairs, I stood for some time in the
shadow, watching the approaches from the staircase window; and when, at length, I felt satisfied that I had taken every precaution that was possible, I inserted my key and let myself into our chambers.

Thorndyke had already arrived, and, as I entered, he rose to greet me with an expression of evident relief.

"I am glad to see you, Jervis," he said. "I have been rather anxious about you."

"Why?" I asked.

"For several reasons. One is that you are the sole danger that threatens these people—as far as they know. Another is that we made a most ridiculous mistake. We overlooked a fact that ought to have struck us instantly. But how have you fared?"

"Better than I deserved. That good lady stuck to me like a burr—at least I believe she did."

"I have no doubt she did. We have been caught napping finely, Jervis."

"How?"

"We'll go into that presently. Let us hear about your adventures first."

I gave him a full account of my movements from the time when we parted to that of my arrival home, omitting no incident that I was able to remember and, as far as I could, reconstituting my exceedingly devious homeward route.

"Your retreat was masterly," he remarked with a broad smile. "I should think that it would have utterly defeated any pursuer; and the only pity is that it was probably wasted on the desert air. Your pursuer had by that time become a fugitive. But you were wise to take these precautions, for, of course, Weiss might have followed you."

"But I thought he was in Hamburg?"

"Did you? You are a very confiding young gentleman, for a budding medical jurist. Of course we don't know that he is not; but the fact that he has given Hamburg as his present whereabouts establishes a strong presumption that he is somewhere else. I only hope that he has not located you, and, from what you tell me of your later methods, I fancy that you would have shaken him off even if he had started to follow you from the tea-shop."

"I hope so too. But how did that woman manage to stick to me in that way? What was the mistake we made?"

Thorndyke laughed grimly. "It was a perfectly asinine mistake, Jervis. You started up Kennington Park Road on a leisurely, jog-trotting omnibus, and neither you nor I remembered what there is underneath Kennington Park Road."

"Underneath!" I exclaimed, completely puzzled for the moment. Then, suddenly realizing what he meant, "Of course!" I exclaimed. "Idiot that I am! You mean the electric railway?"

"Yes. That explains everything. Mrs. Schallibaum must have watched us from some shop and quietly followed us up the lane. There were a good many women about and several were walking in our direction. There was nothing to distinguish her from the others unless you had recognized her, which you would hardly have been able to do if she had worn a veil and kept at a fair distance. At least I think not."

"No," I agreed, "I certainly should not. I had only seen her in a half-dark room. In outdoor clothes and with a veil, I should never have been able to identify her without very close inspection. Besides there was the disguise or make-up."

"Not at that time. She would hardly come disguised to her own house, for it might have led to her being challenged and asked who she was. I think we may take it that there was no actual disguise, although she would probably wear a shady hat and a veil; which would have prevented either of us from picking her out from the other women in the street."

"And what do you think happened next?"

"I think that she simply walked past us—probably on the other side of the road—as we stood waiting for the omnibus, and turned up Kennington Park Road. She probably guessed that we were waiting for the omnibus and walked up the road in the direction in which it was going. Presently the omnibus would pass her, and there were you in full view on top keeping a vigilant look-out in the wrong direction. Then she would quicken her pace a little and in a minute or two would arrive at the Kennington Station of the South London Railway. In a minute or two more she would be in one of the electric trains whirling along under the street on which your omnibus was crawling. She would get out at the Borough Station, or she might take a more risky chance and go on to the Monument; but in any case she would wait for your omnibus, hail it and get inside. I suppose you took up some passengers on the way?"

"Oh dear, yes. We were stopping every two or three minutes to take up or set down passengers; and most of them were women."

"Very well; then we may take it that when you arrived at the Mansion House, Mrs. Schallibaum was one of your inside passengers. It was a rather quaint situation, I think."

"Yes, confound her! What a couple of noodles she must have thought us!"

"No doubt. And that is the one consoling feature in the case. She will have taken us for a pair of absolute greenhorns. But to continue. Of course she travelled in your omnibus to Kensington—you ought to have gone inside on both occasions, so that you could see every one who entered and examine the inside passengers; she will have followed you to Endsley Gardens and probably noted the house you went to. Thence she will have followed you to the restaurant and may even have lunched there."
"It is quite possible," said I. "There were two rooms and they were filled principally with women."

"Then she will have followed you to Sloane Street, and, as you persisted in riding outside, she could easily take an inside place in your omnibus. As to the theatre, she must have taken it as a veritable gift of the gods; an arrangement made by you for her special convenience."

"Why?"

"My dear fellow! consider. She had only to follow you in and see you safely into your seat and there you were, left till called for. She could then go home, make up for her part; draw out a plan of action, with the help, perhaps, of Mr. Weiss, provide herself with the necessary means and appliances and, at the appointed time, call and collect you."

"That is assuming a good deal," I objected. "It is assuming, for instance, that she lives within a moderate distance of Sloane Square. Otherwise it would have been impossible."

"Exactly. That is why I assume it. You don't suppose that she goes about habitually with lumps of prepared sugar in her pocket. And if not, then she must have got that lump from somewhere. Then the beads suggest a carefully prepared plan, and, as I said just now, she can hardly have been made-up when she met us in Kennington Lane. From all of which it seems likely that her present abode is not very far from Sloane Square."

"At any rate," said I, "it was taking a considerable risk. I might have left the theatre before she came back."

"Yes," Thorndyke agreed. "But it is like a woman to take chances. A man would probably have stuck to you when once he had got you off your guard. But she was ready to take chances. She chanced the railway, and it came off; she chanced your remaining in the theatre, and that came off too. She calculated on the probability of your getting tea when you came out, and she hit it off again. And then she took one chance too many; she assumed that you probably took sugar in your tea, and she was wrong."

"We are taking it for granted that the sugar was prepared," I remarked.

"Yes. Our explanation is entirely hypothetical and may be entirely wrong. But it all hangs together, and if we find any poisonous matter in the sugar, it will be reasonable to assume that we are right. The sugar is the Experimentum Crucis. If you will hand it over to me, we will go up to the laboratory and make a preliminary test or two."

I took the lump of sugar from my pocket and gave it to him, and he carried it to the gas-burner, by the light of which he examined it with a lens.

"I don't see any foreign crystals on the surface," said he; "but we had better make a solution and go to work systematically. If it contains any poison we may assume that it will be some alkaloid, though I will test for arsenic too. But a man of Weiss's type would almost certainly use an alkaloid, on account of its smaller bulk and more ready solubility. You ought not to have carried this loose in your pocket. For legal purposes that would seriously interfere with its value as evidence. Bodies that are suspected of containing poison should be carefully isolated and preserved from contact with anything that might lead to doubt in the analysis. It doesn't matter much to us, as this analysis is only for our own information and we can satisfy ourselves as to the state of your pocket. But bear the rule in mind another time."

We now ascended to the laboratory, where Thorndyke proceeded at once to dissolve the lump of sugar in a measured quantity of distilled water by the aid of gentle heat.

"Before we add any acid," said he, "or introduce any fresh matter, we will adopt the simple preliminary measure of tasting the solution. The sugar is a disturbing factor, but some of the alkaloids and most mineral poisons excepting arsenic have a very characteristic taste."

He dipped a glass rod in the warm solution and applied it gingerly to his tongue.

"Ha!" he exclaimed, as he carefully wiped his mouth with his handkerchief, "simple methods are often very valuable. There isn't much doubt as to what is in that sugar. Let me recommend my learned brother to try the flavour. But be careful. A little of this will go a long way."

He took a fresh rod from the rack, and, dipping it in the solution, handed it to me. I cautiously applied it to the tip of my tongue and was immediately aware of a peculiar tingling sensation accompanied by a feeling of numbness.

"Well," said Thorndyke; "what is it?"

"Aconite," I replied without hesitation.

"Yes," he agreed; "aconite it is, or more probably aconitine. And that, I think, gives us all the information we want. We need not trouble now to make a complete analysis, though I shall have a quantitative examination made later. You note the intensity of the taste and you see what the strength of the solution is. Evidently that lump of sugar contained a very large dose of the poison. If the sugar had been dissolved in your tea, the quantity that you drank would have contained enough aconitine to lay you out within a few minutes; which would account for Mrs. Schallibaum's anxiety to get clear of the premises. She saw you drink from the cup, but I imagine she had not seen you turn the sugar out."

"No, I should say not, to judge by her expression. She looked terrified. She is not as hardened as her rascally companion."

"Which is fortunate for you, Jervis. If she had not been in such a fluster, she would have waited until you had poured out
your tea, which was what she probably meant to do, or have dropped the sugar into the milk-jug. In either case you would have got a poisonous dose before you noticed anything amiss."

"They are a pretty pair, Thorndyke," I exclaimed. "A human life seems to be no more to them than the life of a fly or a beetle."

"No; that is so. They are typical poisoners of the worst kind; of the intelligent, cautious, resourceful kind. They are a standing menace to society. As long as they are at large, human lives are in danger, and it is our business to see that they do not remain at large a moment longer than is unavoidable. And that brings us to another point. You had better keep indoors for the next few days."

"Oh, nonsense," I protested. "I can take care of myself."

"I won't dispute that," said Thorndyke, "although I might. But the matter is of vital importance and we can't be too careful. Yours is the only evidence that could convict these people. They know that and will stick at nothing to get rid of you—for by this time they will almost certainly have ascertained that the tea-shop plan has failed. Now your life is of some value to you and to another person whom I could mention; but apart from that, you are the indispensable instrument for ridding society of these dangerous vermin. Moreover, if you were seen abroad and connected with these chambers, they would get the information that their case was really being investigated in a businesslike manner. If Weiss has not already left the country he would do so immediately, and if he has, Mrs. Schallibaum would join him at once, and we might never be able to lay hands on them. You must stay indoors, out of sight, and you had better write to Miss Gibson and ask her to warn the servants to give no information about you to anyone."

"And how long," I asked, "am I to be held on parole?"

"Not long, I think. We have a very promising start. If I have any luck, I shall be able to collect all the evidence I want in about a week. But there is an element of chance in some of it which prevents me from giving a date. And it is just possible that I may have started on a false track. But that I shall be able to tell you better in a day or two."

"And I suppose," I said gloomily, "I shall be out of the hunt altogether?"

"Not at all," he replied. "You have got the Blackmore case to attend to. I shall hand you over all the documents and get you to make an orderly digest of the evidence. You will then have all the facts and can work out the case for yourself. Also I shall ask you to help Polton in some little operations which are designed to throw light into dark places and which you will find both entertaining and instructive."

"Supposing Mrs. Hornby should propose to call and take tea with us in the gardens?" I suggested.

"And bring Miss Gibson with her?" Thorndyke added dryly. "No, Jervis, it would never do. You must make that quite clear to her. It is more probable than not that Mrs. Schallibaum made a careful note of the house in Endsley Gardens, and as that would be the one place actually known to her, she and Weiss—if he is in England—would almost certainly keep a watch on it. If they should succeed in connecting that house with these chambers, a few inquiries would show them the exact state of the case. No; we must keep them in the dark if we possibly can. We have shown too much of our hand already. It is hard on you, but it cannot be helped."

"Oh, don't think I am complaining," I exclaimed. "If it is a matter of business, I am as keen as you are. I thought at first that you were merely considering the safety of my vile body. When shall I start on my job?"

"To-morrow morning. I shall give you my notes on the Blackmore case and the copies of the will and the depositions, from which you had better draw up a digest of the evidence with remarks as to the conclusions that it suggests. Then there are our gleanings from New Inn to be looked over and considered; and with regard to this case, we have the fragments of a pair of spectacles which had better be put together into a rather more intelligible form in case we have to produce them in evidence. That will keep you occupied for a day or two, together with some work appertaining to other cases. And now let us dismiss professional topics. You have not dined and neither have I, but I dare say Polton has made arrangements for some sort of meal. We will go down and see."

We descended to the lower floor, where Thorndyke's anticipations were justified by a neatly laid table to which Polton was giving the finishing touches.

XI. — THE BLACKMORE CASE REVIEWED

ONE of the conditions of medical practice is the capability of transferring one's attention at a moment's notice from one set of circumstances to another equally important but entirely unrelated. At each visit on his round, the practitioner finds himself concerned with a particular, self-contained group of phenomena which he must consider at the moment with the utmost concentration, but which he must instantly dismiss from his mind as he moves on to the next case. It is a difficult habit to acquire; for an important, distressing or obscure case is apt to take possession of the consciousness and hinder the exercise of attention that succeeding cases demand; but experience shows the faculty to be indispensable, and the practitioner learns in time to forget everything but the patient with whose condition he is occupied at the moment.

My first morning's work on the Blackmore case showed me that the same faculty is demanded in legal practice; and it also showed me that I had yet to acquire it. For, as I looked over the depositions and the copy of the will, memories of the
mysterious house in Kennington Lane continually intruded into my reflections, and the figure of Mrs. Schallibau, white-faced, terrified, expectant, haunted me continually.

In truth, my interest in the Blackmore case was little more than academic, whereas in the Kennington case I was one of the parties and was personally concerned. To me, John Blackmore was but a name, Jeffrey but a shadowy figure to which I could assign no definite personality, and Stephen himself but a casual stranger. Mr. Graves, on the other hand, was a real person. I had seen him amidst the tragic circumstances that had probably heralded his death, and had brought away with me, not only a lively recollection of him, but a feeling of profound pity and concern as to his fate. The villain Weiss, too, and the terrible woman who aided,abetted and, perhaps, even directed him, lived in my memory as vivid and dreadful realities. Although I had uttered no hint to Thorndyke, I lamented inwardly that I had not been given some work—if there was any to do—connected with this case, in which I was so deeply interested, rather than with the dry, purely legal and utterly bewildering case of Jeffrey Blackmore's will.

Nevertheless, I stuck loyally to my task. I read through the depositions and the will—without getting a single glimmer of fresh light on the case—and I made a careful digest of all the facts. I compared my digest with Thorndyke's notes—of which I also made a copy—and found that, brief as they were, they contained several matters that I had overlooked. I also drew up a brief account of our visit to New Inn, with a list of the objects that we had observed or collected. And then I addressed myself to the second part of my task, the statement of my conclusions from the facts set forth.

It was only when I came to make the attempt that I realized how completely I was at sea. In spite of Thorndyke's recommendation to study Marchmont's statement as it was summarized in those notes which I had copied, and of his hint that I should find in that statement something highly significant, I was borne irresistibly to one conclusion, and one only—and the wrong one at that, as I suspected: that Jeffrey Blackmore's will was a perfectly regular, sound and valid document.

I tried to attack the validity of the will from various directions, and failed every time. As to its genuineness, that was obviously not in question. There seemed to me only two conceivable respects in which any objection could be raised, viz. the competency of Jeffrey to execute a will and the possibility of undue influence having been brought to bear on him.

With reference to the first, there was the undoubted fact that Jeffrey was addicted to the opium habit, and this might, under some circumstances, interfere with a testator's competency to make a will. But had any such circumstances existed in this case? Had the drug habit produced such mental changes in the deceased as would destroy or weaken his judgment? There was not a particle of evidence in favour of any such belief. Up to the very end he had managed his own affairs, and, if his habits of life had undergone a change, they were still the habits of a perfectly sane and responsible man.

The question of undue influence was more difficult. If it applied to any person in particular, that person could be none other than John Blackmore. Now it was an undoubted fact that, of all Jeffrey's acquaintances, his brother John was the only one who knew that he was in residence at New Inn. Moreover John had visited him there more than once. It was therefore possible that influence might have been brought to bear on the deceased. But there was no evidence that it had. The fact that the deceased man's only brother should be the one person who knew where he was living was not a remarkable one, and it had been satisfactorily explained by the necessity of Jeffrey's finding a reference on applying for the chambers. And against the theory of undue influence was the fact that the testator had voluntarily brought his will to the lodge and executed it in the presence of entirely disinterested witnesses.

In the end I had to give up the problem in despair, and, abandoning the documents, turned my attention to the facts elicited by our visit to New Inn.

What had we learned from our exploration? It was clear that Thorndyke had picked up some facts that had appeared to him important. But important in what respect? The only possible issue that could be raised was the validity or otherwise of Jeffrey Blackmore's will; and since the validity of that will was supported by positive evidence of the most incontestable kind, it seemed that nothing that we had observed could have any real bearing on the case at all.

But this, of course, could not be. Thorndyke was no dreamer nor was he addicted to wild speculation. If the facts observed by us seemed to him to be relevant to the case, I was prepared to assume that they were relevant, although I could not see their connection with it. And, on this assumption, I proceeded to examine them afresh.

Now, whatever Thorndyke might have observed on his own account, I had brought away from the dead man's chambers only a single fact; and a very extraordinary fact it was. The cuneiform inscription was upside down. That was the sum of the evidence that I had collected; and the question was, What did it prove? To Thorndyke it conveyed some deep significance. What could that significance be?

The inverted position was not a mere temporary accident, as it might have been if the frame had been stood on a shelf or support. It was hung on the wall, and the plates screwed on the frame showed that its position was permanent and that it had never hung in any other. That it could have been hung up by Jeffrey himself was clearly inconceivable. But allowing that it had been fixed in its present position by some workman when the new tenant moved in, the fact remained that there it had hung, presumably for months, and that Jeffrey Blackmore, with his expert knowledge of the cuneiform character, had never noticed that it was upside down; or, if he had noticed it, that he had never taken the trouble to have it altered.

What could this mean? If he had noticed the error but had not troubled to correct it, that would point to a very singular state of mind, an inertness and indifference remarkable even in an opium-smoker. But assuming such a state of mind, I could not see that it had any bearing on the will, excepting that it was rather inconsistent with the tendency to make fussy and needless alterations which the testator had actually shown. On the other hand, if he had not noticed the inverted
position of the photograph he must have been nearly blind or quite idiotic; for the photograph was over two feet long and the characters large enough to be read easily by a person of ordinary eyesight at a distance of forty or fifty feet. Now he obviously was not in a state of dementia, whereas his eyesight was admittedly bad; and it seemed to me that the only conclusion deductable from the photograph was that it furnished a measure of the badness of the deceased man’s vision—that it proved him to have been verging on total blindness.

But there was nothing startling new in this. He had, himself, declared that he was fast losing his sight. And again, what was the bearing of his partial blindness on the will? A totally blind man cannot draw up his will at all. But if he has eyesight sufficient to enable him to write out and sign a will, mere defective vision will not lead him to muddle the provisions. Yet something of this kind seemed to be in Thorndyke’s mind, for now I recalled the question that he had put to the porter: “When you read the will over in Mr. Blackmore’s presence, did you read it aloud?” That question could have but one significance. It implied a doubt as to whether the testator was fully aware of the exact nature of the document that he was signing. Yet, if he was able to write and sign it, surely he was able also to read it through, to say nothing of the fact that, unless he was demented, he must have remembered what he had written.

Thus, once more, my reasoning only led me into a blind alley at the end of which was the will, regular and valid and fulfilling all the requirements that the law imposed. Once again I had to confess myself beaten and in full agreement with Mr. Marchmont that “there was no case”; that “there was nothing in dispute.” Nevertheless, I carefully fixed in the pocket file that Thorndyke had given me the copy that I had made of his notes, together with the notes on our visit to New Inn, and the few and unsatisfactory conclusions at which I had arrived; and this brought me to the end of my first morning in my new capacity.

“And how,” Thorndyke asked as we sat at lunch, “has my learned friend progressed? Does he propose that we advise Mr. Marchmont to enter a caveat?”

“I’ve read all the documents and boiled all the evidence down to a stiff jelly; and I am in a worse fog than ever.”

“There seems to be a slight mixture of metaphors in my learned friend’s remarks. But never mind the fog, Jervis. There is a certain virtue in fog. It serves, like a picture frame, to surround the essential with a neutral zone that separates it from the irrelevant.”

“That is a very profound observation, Thorndyke,” I remarked ironically.

“I was just thinking so myself,” he rejoined.

“And if you could contrive to explain what it means—”

“Oh, but that is unreasonable. When one throws off a subtly philosophic obiter dictum one looks to the discerning critic to supply the meaning. By the way, I am going to introduce you to the gentle art of photography this afternoon. I am getting the loan of all the cheques that were drawn by Jeffrey Blackmore during his residence at New Inn—there are only twenty-three of them, all told—and I am going to photograph them.”

“I shouldn’t have thought the bank people would have let them go out of their possession.”

“They are not going to. One of the partners, a Mr. Britton, is bringing them here himself and will be present while the photographs are being taken; so they will not go out of his custody. But, all the same, it is a great concession, and I should not have obtained it but for the fact that I have done a good deal of work for the bank and that Mr. Britton is more or less a personal friend.”

“By the way, how comes it that the cheques are at the bank? Why were they not returned to Jeffrey with the pass-book in the usual way?”

“I understand from Britton,” replied Thorndyke, “that all Jeffrey’s cheques were retained by the bank at his request. When he was travelling he used to leave his investment securities and other valuable documents in his bankers’ custody, and, as he has never applied to have them returned, the bankers still have them and are retaining them until the will is proved, when they will, of course, hand over everything to the executors.”

“What is the object of photographing these cheques?” I asked.

“There are several objects. First, since a good photograph is practically as good as the original, when we have the photographs we practically have the cheques for reference. Then, since a photograph can be duplicated indefinitely, it is possible to perform experiments on it which involve its destruction; which would, of course, be impossible in the case of original cheques.”

“But the ultimate object, I mean. What are you going to prove?”

“You are incorrigible, Jervis,” he exclaimed. “How should I know what I am going to prove? This is an investigation. If I knew the result beforehand, I shouldn’t want to perform the experiment.”

He looked at his watch, and, as we rose from the table, he said:

“If we have finished, we had better go up to the laboratory and see that the apparatus is ready. Mr. Britton is a busy man, and, as he is doing us a great service, we mustn’t keep him waiting when he comes.”

We ascended to the laboratory, where Polton was already busy inspecting the massively built copying camera which—
with the long, steel guides on which the easel or copy-holder travelled—took up the whole length of the room on the side opposite to that occupied by the chemical bench. As I was to be inducted into the photographic art, I looked at it with more attention than I had ever done before.

"We've made some improvements since you were here last, sir," said Polton, who was delicately lubricating the steel guides. "We've fitted these steel runners instead of the blackheaded wooden ones that we used to have. And we've made two scales instead of one. Hallo! That's the downstairs bell. Shall I go sir?"

"Perhaps you'd better," said Thorndyke. "It may not be Mr. Britton, and I don't want to be caught and delayed just now."

However, it was Mr. Britton, a breezy alert-looking middle-aged man, who came in escorted by Polton and shook our hands cordially, having been previously warned of my presence. He carried a small but solid hand-bag, to which he clung tenaciously up to the very moment when its contents were required for use.

"So that is the camera," said he, running an inquisitive eye over the instrument. "Very fine one, too; I am a bit of a photographer myself. What is that graduation on the side-bar?"

"Those are the scales," replied Thorndyke, "that shows the degree of magnification or reduction. The pointer is fixed to the easel and travels with it, of course, showing the exact size of the photograph. When the pointer is opposite the photograph will be identical in size with the object photographed; when it points to, say, \( \times 6 \), the photograph will be six times as long as the object, or magnified thirty-six times superficially, whereas if the pointer is at \( \div 6 \), the photograph will be a sixth of the length of the object, or one thirty-sixth superficial."

"Why are there two scales?" Mr. Britton asked.

"There is a separate scale for each of the two lenses that we principally use. For great magnification or reduction a lens of comparatively short focus must be used, but, as a long-focus lens gives a more perfect image, we use one of very long focus—thirty-six inches—for copying the same size or for slight magnification or reduction."

"Are you going to magnify these cheques?" Mr. Britton asked.

"Not in the first place," replied Thorndyke. "For convenience and speed I am going to photograph them half-size, so that six cheques will go on one whole plate. Afterwards we can enlarge from the negatives as much as we like. But we should probably enlarge only the signatures in any case."

The precious bag was now opened and the twenty-three cheques brought out and laid on the bench in a consecutive series in the order of their dates. They were then fixed by tapes—to avoid making pin-holes in them—in batches of six to small drawing boards, each batch being so arranged that the signatures were towards the middle. The first board was clamped to the easel, the latter was slid along its guides until the pointer stood at \( \div 2 \) on the long-focus scale and Thorndyke proceeded to focus the camera with the aid of a little microscope that Polton had made for the purpose. When Mr. Britton and I had inspected the exquisitely sharp image on the focusing-screen through the microscope, Polton introduced the plate and made the first exposure, carrying the dark-slide off to develop the plate while the next batch of cheques was being fixed in position.

In his photographic technique, as in everything else, Polton followed as closely as he could the methods of his principal and instructor; methods characterized by that unhurried precision that leads to perfect accomplishment. When the first negative was brought forth, dripping, from the dark-room, it was without spot or stain, scratch or pin-hole; uniform in colour and of exactly the required density. The six cheques shown on it—ridiculously small in appearance, though only reduced to half-length—looked as clear and sharp as fine engravings; though, to be sure, my opportunity for examining them was rather limited, for Polton was uncommonly careful to keep the wet plate out of reach and so safe from injury.

"Well," said Mr. Britton, when, at the end of the séance, he returned his treasures to the bag, "you have now got twenty-three of our cheques, to all intents and purposes. I hope you are not going to make any unlawful use of them—must tell our cashiers to keep a bright look-out; and"—here he lowered his voice impressively and addressed himself to me and Polton—"you understand that this is a private matter between Dr. Thorndyke and me. Of course, as Mr. Blackmore is dead, there is no reason why his cheques should not be photographed for legal purposes; but we don't want it talked about; nor, I think, does Dr. Thorndyke."

"Certainly not," Thorndyke agreed emphatically; "but you need not be uneasy, Mr. Britton. We are very uncommunicative people in this establishment."

As my colleague and I escorted our visitor down the stairs, he returned to the subject of the cheques.

"I don't understand what you want them for," he remarked. "There is no question turning on signatures in the case of Blackmore deceased, is there?"

"I should say not," Thorndyke replied rather evasively.

"I should say very decidedly not," said Mr. Britton, "if I understood Marchmont aright. And, even if there were, let me tell you, these signatures that you have got wouldn't help you. I have looked them over very closely—and I have seen a few signatures in my time, you know. Marchmont asked me to glance over them as a matter of form, but I don't believe in matters of form; I examined them very carefully. There is an appreciable amount of variation; a very appreciable amount. But under the variation one can trace the personal character (which is what matters); the subtle, indescribable quality that makes it recognizable to the expert eye as Jeffrey Blackmore's writing. You understand me. There is such a quality, which
remains when the coarser characteristics vary; just as a man may grow old, or fat, or bald, or may take to drink, and become quite changed; and yet, through it all, he preserves a certain something which makes him recognizable as a member of a particular family. Well, I find that quality in all those signatures, and so will you, if you have had enough experience of handwriting. I thought it best to mention it in case you might be giving yourself unnecessary trouble."

"It is very good of you," said Thorndyke, "and I need not say that the information is of great value, coming from such a highly expert source. As a matter of fact, your hint will be of great value to me."

He shook hands with Mr. Britton, and, as the latter disappeared down the stairs, he turned into the sitting-room and remarked:

"There is a very weighty and significant observation, Jervis. I advise you to consider it attentively in all its bearings."

"You mean the fact that these signatures are undoubtedly genuine?"

"I meant, rather, the very interesting general truth that is contained in Britton's statement; that physiognomy is not a mere matter of facial character. A man carries his personal trademark, not in his face only, but in his nervous system and muscles—giving rise to characteristic movements and gait; in his larynx—producing an individual voice; and even in his mouth, as shown by individual peculiarities of speech and accent. And the individual nervous system, by means of these characteristic movements, transfers its peculiarities to inanimate objects that are the products of such movements; as we see in pictures, in carving, in musical execution and in handwriting. No one has ever painted quite like Reynolds or Romney; no one has ever played exactly like Liszt or Paganini; the pictures or the sounds produced by them, were, so to speak, an extension of the physiognomy of the artist. And so with handwriting. A particular specimen is the product of a particular set of motor centres in an individual brain."

"These are very interesting considerations, Thorndyke," I remarked; "but I don't quite see their present application. Do you mean them to bear in any special way on the Blackmore case?"

"I think they do bear on it very directly. I thought so while Mr. Britton was making his very illuminating remarks."

"I don't see how. In fact I cannot see why you are going into the question of the signatures at all. The signature on the will is admittedly genuine, and that seems to me to dispose of the whole affair."

"My dear Jervis," said he, "you and Marchmont are allowing yourselves to be obsessed by a particular fact—a very striking and weighty fact, I will admit, but still, only an isolated fact. Jeffrey Blackmore executed his will in a regular manner, complying with all the necessary formalities and conditions. In the face of that single circumstance you and Marchmont would 'chuck up the sponge,' as the old pugilists expressed it. Now that is a great mistake. You should never allow yourself to be bullied and browbeaten by a single fact."

"But, my dear Thorndyke!" I protested, "this fact seems to be final. It covers all possibilities—unless you can suggest any other that would cancel it."

"I could suggest a dozen," he replied. "Let us take an instance. Supposing Jeffrey executed this will for a wager; that he immediately revoked it and made a fresh will, that he placed the latter in the custody of some person and that that person has suppressed it."

"Surely you do not make this suggestion seriously!" I exclaimed.

"Certainly I do not," he replied with a smile. "I merely give it as an instance to show that your final and absolute fact is really only conditional on there being no other fact that cancels it."

"Do you think he might have made a third will?"

"It is obviously possible. A man who makes two wills may make three or more; but I may say that I see no present reason for assuming the existence of another will. What I want to impress on you is the necessity of considering all the facts instead of bumping heavily against the most conspicuous one and forgetting all the rest. By the way, here is a little problem for you. What was the object of which these are the parts?"

He pushed across the table a little cardboard box, having first removed the lid. In it were a number of very small pieces of broken glass, some of which had been cemented together by their edges.

"These, I suppose," said I, looking with considerable curiosity at the little collection, "are the pieces of glass that we picked up in poor Blackmore's bedroom?"

"Yes. You see that Polton has been endeavouring to reconstitute the object, whatever it was; but he has not been very successful, for the fragments were too small and irregular and the collection too incomplete. However, here is a specimen, built up of six small pieces, which exhibits the general character of the object fairly well."

He picked out the little irregularly shaped object and handed it to me; and I could not but admire the neatness with which Polton had joined the tiny fragments together.

I took the little "restoration," and, holding it up before my eyes, moved it to and fro as I looked through it at the window.

"It was not a lens," I pronounced eventually.

"No," Thorndyke agreed, "it was not a lens."
“And so cannot have been a spectacle-glass. But the surface was curved—one side convex and the other concave—and the little piece that remains of the original edge seems to have been ground to fit a bezel or frame. I should say that these are portions of a watch-glass.”

“That is Polton’s opinion,” said Thorndyke, “and I think you are both wrong.”

“What do you say to the glass of a miniature or locket?”

“That is rather more probable, but it is not my view.”

“What do you think it is?” I asked. But Thorndyke was not to be drawn.

“I am submitting the problem for solution by my learned friend,” he replied with an exasperating smile, and then added: “I don’t say that you and Polton are wrong; only that I don’t agree with you. Perhaps you had better make a note of the properties of this object, and consider it at your leisure when you are ruminating on the other data referring to the Blackmore case.”

“My ruminations,” I said, “always lead me back to the same point.”

“But you mustn’t let them,” he replied. “Shuffle your data about. Invent hypotheses. Never mind if they seem rather wild. Don’t put them aside on that account. Take the first hypothesis that you can invent and test it thoroughly with your facts. You will probably have to reject it, but you will be certain to have learned something new. Then try again with a fresh one. You remember what I told you of my methods when I began this branch of practice and had plenty of time on my hands?”

“I am not sure that I do.”

“Well, I used to occupy my leisure in constructing imaginary cases, mostly criminal, for the purpose of study and for the acquirement of experience. For instance, I would devise an ingenious fraud and would plan it in detail, taking every precaution that I could think of against failure or detection, considering, and elaborately providing for, every imaginable contingency. For the time being, my entire attention was concentrated on it, making it as perfect and secure and undetectable as I could with the knowledge and ingenuity at my command. I behaved exactly as if I were proposing actually to carry it out, and my life or liberty depended on its success—excepting that I made full notes of every detail of the scheme. Then when my plans were as complete as I could make them, and I could think of no way in which to improve them, I changed sides and considered the case from the standpoint of detection. I analysed the case, I picked out its inherent and unavoidable weaknesses, and, especially, I noted the respects in which a fraudulent proceeding of a particular kind differed from the bona fide proceeding that it simulated. The exercise was invaluable to me. I acquired as much experience from those imaginary cases as I should from real ones, and in addition, I learned a method which is the one that I practise to this day.”

“Do you mean that you still invent imaginary cases as mental exercises?”

“No; I mean that, when I have a problem of any intricacy, I invent a case which fits the facts and the assumed motives of one of the parties. Then I work at that case until I find whether it leads to elucidation or to some fundamental disagreement. In the latter case I reject it and begin the process over again.”

“Doesn’t that method sometimes involve a good deal of wasted time and energy?” I asked.

“No; because each time that you fail to establish a given case, you exclude a particular explanation of the facts and narrow down the field of inquiry. By repeating the process, you are bound, in the end, to arrive at an imaginary case which fits all the facts. Then your imaginary case is the real case and the problem is solved. Let me recommend you to give the method a trial.”

I promised to do so, though with no very lively expectations as to the result, and with this, the subject was allowed, for the present, to drop.

XII. — THE PORTRAIT

THE state of mind which Thorndyke had advised me to cultivate was one that did not come easily. However much I endeavoured to shuffle the facts of the Blackmore case, there was one which inevitably turned up on the top of the pack. The circumstances surrounding the execution of Jeffrey Blackmore’s will intruded into all my cogitations on the subject with hopeless persistency. That scene in the porter’s lodge was to me what King Charles’s head was to poor Mr. Dick. In the midst of my praiseworthy efforts to construct some intelligible scheme of the case, it would make its appearance and reduce my mind to instant chaos.

For the next few days, Thorndyke was very much occupied with one or two civil cases, which kept him in court during the whole of the sitting; and when he came home, he seemed indisposed to talk on professional topics. Meanwhile, Polton worked steadily at the photographs of the signatures, and, with a view to gaining experience, I assisted him and watched his methods.

In the present case, the signatures were enlarged from their original dimensions—rather less than an inch and a half in length—to a length of four and a half inches; which rendered all the little peculiarities of the handwriting surprisingly distinct and conspicuous. Each signature was eventually mounted on a slip of card bearing a number and the date of the
cheque from which it was taken, so that it was possible to place any two signatures together for comparison. I looked over the whole series and very carefully compared those which showed any differences, but without discovering anything more than might have been expected in view of Mr. Britton’s statement. There were some trifling variations, but they were all very much alike, and no one could doubt, on looking at them, that they were all written by the same hand.

As this, however, was apparently not in dispute, it furnished no new information. Thorndyke’s object—for I felt certain that he had something definite in his mind—must be to test something apart from the genuineness of the signatures. But what could that something be? I dared not ask him, for questions of that kind were anathema, so there was nothing for it but to lie low and see what he would do with the photographs.

The whole series was finished on the fourth morning after my adventure at Sloane Square, and the pack of cards was duly delivered by Polton when he brought in the breakfast tray. Thorndyke took up the pack somewhat with the air of a whist player, and, as he ran through them, I noticed that the number had increased from twenty-three to twenty-four.

“The additional one,” Thorndyke explained, “is the signature to the first will, which was in Marchmont’s possession. I have added it to the collection as it carries us back to an earlier date. The signature of the second will presumably resembles those of the cheques drawn about the same date. But that is not material, or, if it should become so, we could claim to examine the second will.”

He laid the cards out on the table in the order of their dates and slowly ran his eye down the series. I watched him closely and ventured presently to ask:

“Do you agree with Mr. Britton as to the general identity of character in the whole set of signatures?”

“Yes,” he replied. “I should certainly have put them down as being all the signatures of one person. The variations are very slight. The later signatures are a little stiffer, a little more shaky and indistinct, and the B’s and k’s are both appreciably different from those in the earlier ones. But there is another fact which emerges when the whole series is seen together, and it is so striking and significant a fact, that I am astonished at its not having been remarked on by Mr. Britton.”

“Indeed!” said I, stooping to examine the photographs with fresh interest; “what is that?”

“It is a very simple fact and very obvious, but yet, as I have said, very significant. Look carefully at number one, which is the signature of the first will, dated three years ago, and compare it with number three, dated the eighteenth of September last year.”

“They look to me identical,” said I, after a careful comparison.

“So they do to me,” said Thorndyke. “Neither of them shows the change that occurred later. But if you look at number two, dated the sixteenth of September, you will see that it is in the later style. So is number four, dated the twenty-third of September; but numbers five and six, both at the beginning of October, are in the earlier style, like the signature of the will. Thereafter all the signatures are in the new style; but, if you compare number two, dated the sixteenth of September with number twenty-four, dated the fourteenth of March of this year—the day of Jeffrey’s death—you see that they exhibit no difference. Both are in the ‘later style,’ but the last shows no greater change than the first. Don’t you consider these facts very striking and significant?”

I reflected a few moments, trying to make out the deep significance to which Thorndyke was directing my attention—and not succeeding very triumphantly.

“You mean,” I said, “that the occasional reversions to the earlier form convey some material suggestion?”

“Yes; but more than that. What we learn from an inspection of this series is this: that there was a change in the character of the signature; a very slight change, but quite recognizable. Now that change was not gradual or insidious nor was it progressive. It occurred at a certain definite time. At first there were one or two reversions to the earlier form, but after number six the new style continued to the end; and you notice that it continued without any increase in the change and without any variation. There are no intermediate forms. Some of the signatures are in the ‘old style’ and some in the ‘new,’ but there are none that are half and half. So that, to repeat: We have here two types of signature, very much alike, but distinguishable. They alternate, but do not merge into one another to produce intermediate forms. The change occurs abruptly, but shows no tendency to increase as time goes on; it is not a progressive change. What do you make of that, Jervis?”

“It is very remarkable,” I said, poring over the cards to verify Thorndyke’s statements. “I don’t quite know what to make of it. If the circumstances admitted of the idea of forgery, one would suspect the genuineness of some of the signatures. But they don’t—at any rate, in the case of the later will, to say nothing of Mr. Britton’s opinion on the signatures.”

“Still,” said Thorndyke, “there must be some explanation of the change in the character of the signatures, and that explanation cannot be the failing eyesight of the writer; for that is a gradually progressive and continuous condition, whereas the change in the writing is abrupt and intermittent.”

I considered Thorndyke’s remark for a few moments; and then a light—though not a very brilliant one—seemed to break on me.

“I think I see what you are driving at,” said I. “You mean that the change in the writing must be associated with some new condition affecting the writer, and that that condition existed intermittently?”
Thorndyke noded approvingly, and I continued:

“The only intermittent condition that we know of is the effect of opium. So that we might consider the clearer signatures to have been made when Jeffrey was in his normal state, and the less distinct ones after a bout of opium-smoking.”

“That is perfectly sound reasoning,” said Thorndyke. “What further conclusion does it lead to?”

“It suggests that the opium habit had been only recently acquired, since the change was noticed only about the time he went to live at New Inn; and, since the change in the writing is at first intermittent and then continuous, we may infer that the opium-smoking was at first occasional and later became a confirmed habit.”

“Quite a reasonable conclusion and very clearly stated,” said Thorndyke. “I don’t say that I entirely agree with you, or that you have exhausted the information that these signatures offer. But you have started in the right direction.”

“I may be on the right road,” I said gloomily; “but I am stuck fast in one place and I see no chance of getting any farther.”

“But you have a quantity of data,” said Thorndyke. “You have all the facts that I had to start with, from which I constructed the hypothesis that I am now busily engaged in verifying. I have a few more data now, for ‘as money makes money’ so knowledge begats knowledge, and I put my original capital out to interest. Shall we tabulate the facts that are in our joint possession and see what they suggest?”

I grasped eagerly at the offer, though I had conned over my notes again and again.

Thorndyke produced a slip of paper from a drawer, and, uncapping his fountain-pen, proceeded to write down the leading facts, reading each aloud as soon as it was written.

“1. The second will was unnecessary since it contained no new matter, expressed no new intentions and met no new conditions, and the first will was quite clear and efficient.

“2. The evident intention of the testator was to leave the bulk of his property to Stephen Blackmore.

“3. The second will did not, under existing circumstances, give effect to this intention, whereas the first will did.

“4. The signature of the second will differs slightly from that of the first, and also from what had hitherto been the testator’s ordinary signature.

“And now we come to a very curious group of dates, which I will advise you to consider with great attention.

“5. Mrs. Wilson made her will at the beginning of September last year, without acquainting Jeffrey Blackmore, who seems to have been unaware of the existence of this will.

“6. His own second will was dated the twelfth of November of last year.

“7. Mrs. Wilson died of cancer on the twelfth of March this present year.

“8. Jeffrey Blackmore was last seen alive on the fourteenth of March.

“9. His body was discovered on the fifteenth of March.

“10. The change in the character of his signature began about September last year and became permanent after the middle of October.

“You will find that collection of facts repay careful study, Jervis, especially when considered in relation to the further data:

“11. That we found in Blackmore’s chambers a framed inscription of large size, hung upside down, together with what appeared to be the remains of a watch-glass and a box of stearine candles and some other objects.”

He passed the paper to me and I pored over it intently, focusing my attention on the various items with all the power of my will. But, struggle as I would, no general conclusion could be made to emerge from the mass of apparently disconnected facts.

“Well?” Thorndyke said presently, after watching with grave interest my unavailing efforts; “what do you make of it?”

“Nothing!” I exclaimed desperately, slapping the paper down on the table. “Of course, I can see that there are some queer coincidences. But how do they bear on the case? I understand that you want to upset this will; which we know to have been signed without compulsion or even suggestion in the presence of two respectable men, who have sworn to the identity of the document. That is your object, I believe?”

“Certainly it is.”

“Then I am hanged if I see how you are going to do it. Not, I should say, by offering a group of vague coincidences that would muddle any brain but your own.”

Thorndyke chuckled softly but pursued the subject no farther.

“Put that paper in your file with your other notes,” he said, “and think it over at your leisure. And now I want a little help from you. Have you a good memory for faces?”

“Fairly good, I think. Why?”
“Because I have a photograph of a man whom I think you may have met. Just look at it and tell me if you remember the face.”

He drew a cabinet size photograph from an envelope that had come by the morning’s post and handed it to me.

“I have certainly seen this face somewhere,” said I, taking the portrait over to the window to examine it more thoroughly, “but I can’t, at the moment, remember where.”

“Try,” said Thorndyke. “If you have seen the face before, you should be able to recall the person.”

I looked intently at the photograph, and the more I looked, the more familiar did the face appear. Suddenly the identity of the man flashed into my mind and I exclaimed in astonishment:

“It can’t be that poor creature at Kennington, Mr. Graves?”

“I think it can,” replied Thorndyke, “and I think it is. But could you swear to the identity in a court of law?”

“It is my firm conviction that the photograph is that of Mr. Graves. I would swear to that.”

“No man ought to swear to more,” said Thorndyke. “Identification is always a matter of opinion or belief. The man who will swear unconditionally to identity from memory only is a man whose evidence should be discredited. I think your sworn testimony would be sufficient.”

It is needless to say that the production of this photograph filled me with amazement and curiosity as to how Thorndyke had obtained it. But, as he replaced it impassively in its envelope without volunteering any explanation, I felt that I could not question him directly. Nevertheless, I ventured to approach the subject in an indirect manner.

“Did you get any information from those Darmstadt people?” I asked.

“Schnitzler? Yes. I learned, through the medium of an official acquaintance, that Dr. H. Weiss was a stranger to them; that they knew nothing about him excepting that he had ordered from them, and been supplied with, a hundred grammes of pure hydrochlorate of morphine.”

“All at once?”

“No. In separate parcels of twenty-five grammes each.”

“Is that all you know about Weiss?”

“It is all that I actually know; but it is not all that I suspect—on very substantial grounds. By the way, what did you think of the coachman?”

“I don’t know that I thought very much about him. Why?”

“You never suspected that he and Weiss were one and the same person?”

“No. How could they be? They weren’t in the least alike. And one was a Scotchman and the other a German. But perhaps you know that they were the same?”

“I only know what you have told me. But considering that you never saw them together, that the coachman was never available for messages or assistance when Weiss was with you; that Weiss always made his appearance some time after you arrived, and disappeared some time before you left; it has seemed to me that they might have been the same person.”

“I should say it was impossible. They were so very different in appearance. But supposing that they were the same; would the fact be of any importance?”

“It would mean that we could save ourselves the trouble of looking for the coachman. And it would suggest some inferences, which will occur to you if you think the matter over. But being only a speculative opinion, at present, it would not be safe to infer very much from it.”

“You have rather taken me by surprise,” I remarked. “It seems that you have been working at this Kennington case, and working pretty actively I imagine, whereas I supposed that your entire attention was taken up by the Blackmore affair.”

“It doesn’t do,” he replied, “to allow one’s entire attention to be taken up by any one case. I have half a dozen others—minor cases, mostly—to which I am attending at this moment. Did you think I was proposing to keep you under lock and key indefinitely?”

“Well, no. But I thought the Kennington case would have to wait its turn. And I had no idea that you were in possession of enough facts to enable you to get any farther with it.”

“But you knew all the very striking facts of the case, and you saw the further evidence that we extracted from the empty house.”

“Do you mean those things that we picked out from the rubbish under the grate?”

“Yes. You saw those curious little pieces of reed and the pair of spectacles. They are lying in the top drawer of that cabinet at this moment, and I should recommend you to have another look at them. To me they are most instructive. The pieces of reed offered an extremely valuable suggestion, and the spectacles enabled me to test that suggestion and turn it into actual information.”
“Unfortunately,” said I, “the pieces of reed convey nothing to me. I don’t know what they are or of what they have formed a part.”

“I think,” he replied, “that if you examine them with due consideration, you will find their use pretty obvious. Have a good look at them and the spectacles too. Think over all that you know of that mysterious group of people who lived in that house, and see if you cannot form some coherent theory of their actions. Think, also, if we have not some information in our possession by which we might be able to identify some of them, and infer the identity of the others. You will have a quiet day, as I shall not be home until the evening; set yourself this task. I assure you that you have the material for identifying—or rather for testing the identity of—at least one of those persons. Go over your material systematically, and let me know in the evening what further investigations you would propose.”

“Very well,” said I. “It shall be done according to your word. I will addle my brain afresh with the affair of Mr. Weiss and his patient, and let the Blackmore case rip.”

“There is no need to do that. You have a whole day before you. An hour’s really close consideration of the Kennington case ought to show you what your next move should be, and then you could devote yourself to the consideration of Jeffrey Blackmore’s will.”

With this final piece of advice, Thorndyke collected the papers for his day’s work, and, having deposited them in his brief bag, took his departure, leaving me to my meditations.
XIII. — THE STATEMENT OF SAMUEL WILKINS

AS soon as I was alone, I commenced my investigations with a rather desperate hope of eliciting some startling and unsuspected facts. I opened the drawer and taking from it the two pieces of reed and the shattered remains of the spectacles, laid them on the table. The repairs that Thorndyke had contemplated in the case of the spectacles, had not been made. Apparently they had not been necessary. The battered wreck that lay before me, just as we had found it, had evidently furnished the necessary information; for, since Thorndyke was in possession of a portrait of Mr. Graves, it was clear that he had succeeded in identifying him so far as to get into communication with some one who had known him intimately.

The circumstance should have been encouraging. But somehow it was not. What was possible to Thorndyke was, theoretically, possible to me—or to anyone else. But the possibility did not realize itself in practice. There was the personal equation. Thorndyke’s brain was not an ordinary brain. Facts of which his mind instantly perceived the relation remained to other people unconnected and without meaning. His powers of observation and rapid inference were almost incredible, as I had noticed again and again, and always with undiminished wonder. He seemed to take in everything at a single glance and in an instant to appreciate the meaning of everything that he had seen.

Here was a case in point. I had myself seen all that he had seen, and, indeed, much more; for I had looked on the very people and witnessed their actions, whereas he had never set eyes on any of them. I had examined the little handful of rubbish that he had gathered up so carefully, and would have flung it back under the grate without a qualm. Not a glimmer of light had I perceived in the cloud of mystery, nor even a hint of the direction in which to seek enlightenment. And yet Thorndyke had, in some incomprehensible manner, contrived to piece together facts that I had probably not even observed, and that so completely that he had already, in these few days, narrowed down the field of inquiry to quite a small area.

From these reflections I returned to the objects on the table. The spectacles, as things of which I had some expert knowledge, were not so profound a mystery to me. A pair of spectacles might easily afford good evidence for identification: that I perceived clearly enough. Not a ready-made pair, picked up casually at a shop, but a pair constructed by a skilled optician to remedy a particular defect of vision and to fit a particular face. And such were the spectacles before me. The build of the frames was peculiar; the existence of a cylindrical lens—which I could easily make out from the remaining fragments—showed that one glass had been cut to a prescribed shape and almost certainly ground to a particular formula, and also that the distance between centres must have been carefully secured. Hence these spectacles had an individual character. But it was manifestly impossible to inquire of all the spectacle-makers in Europe—for the glasses were not necessarily made in England. As confirmation the spectacles might be valuable; as a starting-point they were of no use at all.

From the spectacles I turned to the pieces of reed. These were what had given Thorndyke his start. Would they give me a leading hint too? I looked at them and wondered what it was that they had told Thorndyke. The little fragment of the red paper label had a dark-brown or thin black border ornamented with a fret-pattern, and on it I detected a couple of tiny points of gold like the dust from leaf-gilding. But I learned nothing from that. Then the shorter piece of reed was artificially hallowed to fit on the longer piece. Apparently it formed a protective sheath or cap. But what did it protect? Presumably a point or edge of some kind. Could this be a pocket-knife of any sort, such as a small stencil-knife? No; the material was too fragile for a knife-handle. It could not be an etching-needle for the same reason; and it was not a surgical appliance—at least it was not like any surgical instrument that was known to me.

I turned it over and over and cudgelled my brains; and then I had a brilliant idea. Was it a reed pen of which the point had been broken off? I knew that reed pens were still in use by draughtsmen of decorative leanings with an affection for the “fat line.” Could any of our friends be draughtsmen? This seemed the most probable solution of the difficulty, and the more I thought about it the more likely it seemed. Draughtsmen usually sign their work intelligibly, and even when they use a device instead of a signature their identity is easily traceable. Could it be that Mr. Graves, for instance, was an illustrator, and that Thorndyke had established his identity by looking through the works of all the well-known thick-line draughtsmen?

This problem occupied me for the rest of the day. My explanation did not seem quite to fit Thorndyke’s description of his methods; but I could think of no other. I turned it over during my solitary lunch; I meditated on it with the aid of several pipes in the afternoon; and having refreshed my brain with a cup of tea, I went forth to walk in the Temple gardens—which I was permitted to do without breaking my parole—to think it out afresh.

The result was disappointing. I was basing my reasoning on the assumption that the pieces of reed were parts of a particular appliance, appertaining to a particular craft; whereas they might be the remains of something quite different, appertaining to a totally different craft or to no craft at all. And in no case did they point to any known individual or indicate any but the vaguest kind of search. After pacing the pleasant walks for upwards of two hours, I at length turned back towards our chambers, where I arrived as the lamp-lighter was just finishing his round.

My fruitless speculations had left me somewhat irritable. The lighted windows that I had noticed as I approached had given me the impression that Thorndyke had returned. I had intended to press him for a little further information. When, therefore, I let myself into our chambers and found, instead of my colleague, a total stranger—and only a back view at that
—I was disappointed and annoyed.

The stranger was seated by the table, reading a large document that looked like a lease. He made no movement when I entered, but when I crossed the room and wished him “Good evening,” he half rose and bowed silently. It was then that I first saw his face, and a mighty start he gave me. For one moment I actually thought he was Mr. Weiss, so close was the resemblance, but immediately I perceived that he was a much smaller man.

I sat down nearly opposite and stole an occasional furtive glance at him. The resemblance to Weiss was really remarkable. The same flaxen hair, the same ragged beard and a similar red nose, with the patches of *acne rosacea* spreading to the adjacent cheeks. He wore spectacles, too, through which he took a quick glance at me now and again, returning immediately to his document.

After some moments of rather embarrassing silence, I ventured to remark that it was a mild evening; to which he assented with a sort of Scotch “Hm—hm” and nodded slowly. Then came another interval of silence, during which I speculated on the possibility of his being a relative of Mr. Weiss and wondered what the deuce he was doing in our chambers.

“Have you an appointment with Dr. Thorndyke?” I asked, at length.

He bowed solemnly, and by way of reply—in the affirmative, as I assumed—emitted another “hm—hm.”

I looked at him sharply, a little nettled by his lack of manners; whereupon he opened out the lease so that it screened his face, and as I glanced at the back of the document, I was astonished to observe that it was shaking rapidly.

The fellow was actually laughing! What I found in my simple question to cause him so much amusement I was totally unable to imagine. But there it was. The tremulous movements of the document left me in no possible doubt that he was for some reason convulsed with laughter.

It was extremely mysterious. Also, it was rather embarrassing. I took out my pocket file and began to look over my notes. Then the document was lowered and I was able to get another look at the stranger’s face. He was really extraordinarily like Weiss. The shaggy eyebrows, throwing the eye-sockets into shadow, gave him, in conjunction with the spectacles, the same owlish, solemn expression that I had noticed in my Kennington acquaintance; and which, by the way, was singularly out of character with the frivolous behaviour that I had just witnessed.

From time to time as I looked at him, he caught my eye and instantly averted his own, turning rather red. Apparently he was a shy, nervous man, which might account for his giggling; for I have noticed that shy or nervous people have a habit of smiling inopportune and even giggling when embarrassed by meeting an over-steady eye. And it seemed my own eye had this disconcerting quality, for even as I looked at him, the document suddenly went up again and began to shake violently.

I stood it for a minute or two, but, finding the situation intolerably embarrassing, I rose, and brusquely excusing myself, went up to the laboratory to look for Polton and inquire at what time Thorndyke was expected home. To my surprise, however, on entering, I discovered Thorndyke himself just finishing the mounting of a microscopical specimen.

“Did you know that there is some one below waiting to see you?” I asked.

“Is it anyone you know?” he inquired.

“No,” I answered. “It is a red-nosed, sniggering fool in spectacles. He has got a lease or a deed or some other sort of document which he has been using to play a sort of idiotic game of Peep-Bo! I couldn’t stand him, so I came up here.”

Thorndyke laughed heartily at my description of his client.

“What are you laughing at?” I asked sourly; at which he laughed yet more heartily and added to the aggravation by wiping his eyes.

“Our friend seems to have put you out,” he remarked.

“He put me out literally. If I had stayed much longer I should have punched his head.”

“In that case,” said Thorndyke, “I am glad you didn’t stay. But come down and let me introduce you.”

“No, thank you. I’ve had enough of him for the present.”

“But I have a very special reason for wishing to introduce you. I think you will get some information from him that will interest you very much; and you needn’t quarrel with a man for being of a cheerful disposition.”

“Cheerful be hanged!” I exclaimed. “I don’t call a man cheerful because he behaves like a gibbering idiot.”

To this Thorndyke made no reply but a broad and appreciative smile, and we descended to the lower floor. As we entered the room, the stranger rose, and, glancing in an embarrassed way from one of us to the other, suddenly broke out into an undeniable snigger. I looked at him sternly, and Thorndyke, quite unmoved by his indecorous behaviour, said in a grave voice:

“Let me introduce you, Jervis; though I think you have met this gentleman before.”

“I think not,” I said stiffly.

“Oh yes, you have, sir,” interposed the stranger; and, as he spoke, I started; for the voice was uncommonly like the
familiar voice of Polton.

I looked at the speaker with sudden suspicion. And now I could see that the flaxen hair was a wig; that the beard had a decidedly artificial look, and that the eyes that beamed through the spectacles were remarkably like the eyes of our factotum. But the blotty face, the bulbous nose and the shaggy, overhanging eyebrows were alien features that I could not reconcile with the personality of our refined and aristocratic-looking little assistant.

“Is this a practical joke?” I asked.

“No,” replied Thorndyke; “it is a demonstration. When we were talking this morning it appeared to me that you did not realize the extent to which it is possible to conceal identity under suitable conditions of light. So I arranged, with Polton’s rather reluctant assistance, to give you ocular evidence. The conditions are not favourable—which makes the demonstration more convincing. This is a very well-lighted room and Polton is a very poor actor; in spite of which it has been possible for you to sit opposite him for several minutes and look at him, I have no doubt, very attentively, without discovering his identity. If the room had been lighted only with a candle, and Polton had been equal to the task of supporting his make-up with an appropriate voice and manner, the deception would have been perfect.”

“I can see that he has a wig on, quite plainly,” said I.

“Yes; but you would not in a dimly lighted room. On the other hand, if Polton were to walk down Fleet Street at mid-day in this condition, the make-up would be conspicuously evident to any moderately observant passer-by. The secret of making up consists in a careful adjustment to the conditions of light and distance in which the make-up is to be seen. That in use on the stage would look ridiculous in an ordinary room; that which would serve in an artificially lighted room would look ridiculous out of doors by daylight.”

“Is any effective make-up possible out of doors in ordinary daylight?” I asked.

“Oh, yes,” replied Thorndyke. “But it must be on a totally different scale from that of the stage. A wig, and especially a beard or moustache, must be joined up at the edges with hair actually stuck on the skin with transparent cement and carefully trimmed with scissors. The same applies to eyebrows; and alterations in the colour of the skin must be carried out much more subtly. Polton’s nose has been built up with a small covering of toupée-paste, the pimples on the cheeks produced with little particles of the same material; and the general tinting has been done with grease-paint with a very light scumble of powder colour to take off some of the shine. This would be possible in outdoor make-up, but it would have to be done with the greatest care and delicacy; in fact, with what the art-critics call ‘reticence.’ A very little make-up is sufficient and too much is fatal. You would be surprised to see how little paste is required to alter the shape of the nose and the entire character of the face.”

At this moment there came a loud knock at the door; a single, solid dab of the knocker which Polton seemed to recognize, for he ejaculated:

“Good lord, sir! That’ll be Wilkins, the cabman! I’d forgotten all about him. Whatever’s to be done?”

He stared at us in ludicrous horror for a moment or two, and then, snatching off his wig, beard and spectacles, poked them into a cupboard. But his appearance was now too much even for Thorndyke—who hastily got behind him—for he had now resumed his ordinary personality—but with a very material difference.

“Oh, it’s nothing to laugh at, sir,” he exclaimed indignantly as I crammed my handkerchief into my mouth. “Somebody’s got to let him in, or he’ll go away.”

“Yes; and that won’t do,” said Thorndyke. “But don’t worry, Polton. You can step into the office. I’ll open the door.”

Polton’s presence of mind, however, seemed to have entirely forsaken him, for he only hovered irresolutely in the wake of his principal. As the door opened, a thick and husky voice inquired:

“Gent of the name of Polton live here?”

“Yes, quite right,” said Thorndyke. “Come in. Your name is Wilkins, I think?”

“That’s me, sir,” said the voice; and in response to Thorndyke’s invitation, a typical “growler” cabman of the old school, complete even to imbricated cape and dangling badge, stalked into the room, and glancing round with a mixture of embarrassment and defiance, suddenly fixed on Polton’s nose a look of devouring curiosity.

“Here you are, then,” Polton remarked nervously.

“Yus,” replied the cabman in a slightly hostile tone. “Here I am. What am I wanted to do? And where’s this here Mr. Polton?”

“I am Mr. Polton,” replied our abashed assistant.

“Well, it’s the other Mr. Polton what I want,” said the cabman, with his eyes still riveted on the olfactory prominence.

“There isn’t any other Mr. Polton,” our subordinate replied irritably. “I am the—er—person who spoke to you in the shelter.”

“Are you though?” said the manifestly incredulous cabby. “I shouldn’t have thought it; but you ought to know. What do you want me to do?”
“We want you,” said Thorndyke, “to answer one or two questions. And the first one is, Are you a teetotaller?” The question being illustrated by the production of a decanter, the cabman’s dignity relaxed somewhat.

“I ain’t bigoted,” said he.

“Then sit down and mix yourself a glass of grog. Soda or plain water?”

“May as well have all the entries,” replied the cabman, sitting down and grasping the decanter with the air of a man who means business. “Per’aps you wouldn’t mind squirtin’ out the soda, sir, bein’ more used to it.”

While these preliminaries were being arranged, Polton silently slipped out of the room, and when our visitor had fortified himself with a gulp of the uncommonly stiff mixture, the examination began.

“Your name, I think, is Wilkins?” said Thorndyke.

“That’s me, sir. Samuel Wilkins is my name.”

“Your occupation?”

“Is a very tryin’ one and not paid for as it deserves. I drives a cab, sir; a four-wheeled cab is what I drives; and a very poor job it is.”

“Do you happen to remember a very foggy day about a month ago?”

“Do I not, sir! A regler sneezer that was! Wednesday, the fourteenth of March. I remember the date because my benefit society came down on me for arrears that morning.”

“Will you tell us what happened to you between six and seven in the evening of that day?”

“I will, sir,” replied the cabman, emptying his tumbler by way of bracing himself up for the effort. “A little before six I was waiting on the arrival side of the Great Northern Station, King’s Cross, when I see a gentleman and a lady coming out. The gentleman he looks up and down and then he sees me and walks up to the cab and opens the door and helps the lady in. Then he says to me: ‘Do you know New Inn?’ he says. That’s what he says to me what was born and brought up in White Horse Alley, Drury Lane.”

“Get inside,’ says I.

“Well,’ says he, ‘you drive in through the gate in Wych Street,’ he says, as if he expected me to go in by Houghton Street and down the steps, ‘and then,’ he says, ‘you drive nearly to the end and you’ll see a house with a large brass plate at the corner of the doorway. That’s where we want to be set down,’ he says, and with that he nips in and pulls up the windows and off we goes.

“It took us a full half-hour to get to New Inn through the fog, for I had to get down and lead the horse part of the way. As I drove in under the archway, I saw it was half-past six by the clock in the porter’s lodge. I drove down nearly to the end of the inn and drew up opposite a house where there was a big brass plate by the doorway. It was number thirty-one. Then the gent crawls out and hands me five bob—two ‘arf-crowns—and then he helps the lady out, and away they waddles to the doorway and I see them start up the stairs very slow—regler Pilgrim’s Progress. And that was the last I see of ’em.”

Thorndyke wrote down the cabman’s statement verbatim together with his own questions, and then asked:

“Can you give us any description of the gentleman?”

“The gent,” said Wilkins, was a very respectable-looking gent, though he did look as if he’d had a drop of something short, and small blame to him on a day like that. But he was all there, and he knew what was the proper fare for a foggy evening, which is more than some of ’em do. He was a elderly gent, about sixty, and he wore spectacles, but he didn’t seem to be able to see much through ’em. He was a funny ’un to look at; as round in the back as a turtle and he walked with his head stuck forward like a goose.”

“What made you think he had been drinking?”

“Well, he wasn’t as steady as he might have been on his pins. But he wasn’t drunk, you know. Only a bit wobbly on the plates.”

“And the lady; what was she like?”

“I couldn’t see much of her because her head was wrapped up in a sort of woollen veil. But I should say she wasn’t a chicken. Might have been about the same age as the gent, but I couldn’t swear to that. She seemed a trifle rickety on the pins too; in fact they were a rum-looking couple. I watched ’em tottering across the pavement and up the stairs, hanging on to each other, him peering through his blinkers and she trying to see through her veil, and I thought it was a jolly good job they’d got a nice sound cab and a steady driver to bring ’em safe home.”

“How was the lady dressed?”

“Can’t rightly say, not being a hexpert. Her head was done up in this here veil like a pudden in a cloth and she had a small hat on. She had a dark brown mantle with a fringe of beads round it and a black dress; and I noticed when she got into the cab at the station that one of her stockings looked like the bellows of a concertina. That’s all I can tell you.”

Thorndyke wrote down the last answer, and, having read the entire statement aloud, handed the pen to our visitor.
“If that is all correct,” he said, “I will ask you to sign your name at the bottom.”

“Do you want me to swear an affidavit that it’s all true?” asked Wilkins.

“No, thank you,” replied Thorndyke. “We may have to call you to give evidence in court, and then you’ll be sworn; and you’ll also be paid for your attendance. For the present I want you to keep your own counsel and say nothing to anybody about having been here. We have to make some other inquiries and we don’t want the affair talked about.”

“I see, sir,” said Wilkins, as he laboriously traced his signature at the foot of the statement; “you don’t want the other parties for to ogle your lay. All right, sir; you can depend on me. I’m fly, I am.”

“Thank you, Wilkins,” said Thorndyke. “And now what are we to give you for your trouble in coming here?”

“I’ll leave the fare to you, sir. You know what the information’s worth; but I should think ‘arf a thick-un wouldn’t hurt you.”

Thorndyke laid on the table a couple of sovereigns, at the sight of which the cabman’s eyes glistened.

“We have your address, Wilkins,” said he. “If we want you as a witness we shall let you know, and if not, there will be another two pounds for you at the end of a fortnight, provided you have not let this little interview leak out.”

Wilkins gathered up the spoils gleefully. “You can trust me, sir,” said he, “for to keep my mouth shut. I knows which side my bread’s buttered. Good night, gentlemen all.”

With this comprehensive salute he moved towards the door and let himself out.

“Well, Jervis; what do you think of it?” Thorndyke asked, as the cabman’s footsteps faded away in a creaky diminuendo.

“I don’t know what to think. This woman is a new factor in the case and I don’t know how to place her.”

“Not entirely new,” said Thorndyke. “You have not forgotten those beads that we found in Jeffrey’s bedroom, have you?”

“No, I had not forgotten them, but I did not see that they told us much excepting that some woman had apparently been in his bedroom at some time.”

“That, I think, is all that they did tell us. But now they tell us that a particular woman was in his bedroom at a particular time, which is a good deal more significant.”

“Yes. It almost looks as if she must have been there when he made away with himself.”

“It does, very much.”

“By the way, you were right about the colours of those beads, and also about the way they were used.”

“As to their use, that was a mere guess; but it has turned out to be correct. It was well that we found the beads, for, small as is the amount of information they give, it is still enough to carry us a stage further.”

“How so?”

“I mean that the cabman’s evidence tells us only that this woman entered the house. The beads tell us that she was in the bedroom; which, as you say, seems to connect her to some extent with Jeffrey’s death. Not necessarily, of course. It is only a suggestion; but a rather strong suggestion under the peculiar circumstances.”

“Even so,” said I, “this new fact seems to me so far from clearing up the mystery, only to add to it a fresh element of still deeper mystery. The porter’s evidence at the inquest could leave no doubt that Jeffrey contemplated suicide, and his preparations pointedly suggest this particular night as the time selected by him for doing away with himself. Is not that so?”

“Certainly. The porter’s evidence was very clear on that point.”

“Then I don’t see where this woman comes in. It is obvious that her presence at the inn, and especially in the bedroom, on this occasion and in these strange, secret circumstances, has a rather sinister look; but yet I do not see in what way she could have been connected with the tragedy. Perhaps, after all, she has nothing to do with it. You remember that Jeffrey went to the lodge about eight o’clock, to pay his rent, and chatted for some time with the porter. That looks as if the lady had already left.”

“Yes,” said Thorndyke. “But, on the other hand, Jeffrey’s remarks to the porter with reference to the cab do not quite agree with the account that we have just heard from Wilkins. Which suggests—as does Wilkins’s account generally—some secrecy as to the lady’s visit to his chambers.”

“Do you know who the woman was?” I asked.

“No, I don’t know,” he replied. “I have a rather strong suspicion that I can identify her, but I am waiting for some further facts.”

“Is your suspicion founded on some new matter that you have discovered, or is it deducible from facts that are known to me?”

“I think,” he replied, “that you know practically all that I know, although I have, in one instance, turned a very strong suspicion into a certainty by further inquiries. But I think you ought to be able to form some idea as to who this lady
probably was."

―But no woman has been mentioned in the case at all."

"No; but I think you should be able to give this lady a name, notwithstanding."

"Should I? Then I begin to suspect that I am not cut out for medico-legal practice, for I don't see the faintest glimmer of a suggestion."

Thorndyke smiled benevolently. "Don't be discouraged, Jervis," said he. "I expect that when you first began to go round the wards, you doubted whether you were cut out for medical practice. I did. For special work one needs special knowledge and an acquired faculty for making use of it. What does a second year's student make of a small thoracic aneurysm? He knows the anatomy of the chest; he begins to know the normal heart sounds and areas of dullness; but he cannot yet fit his various items of knowledge together. Then comes the experienced physician and perhaps makes a complete diagnosis without any examination at all, merely from hearing the patient speak or cough. He has the same facts as the student, but he has acquired the faculty of instantly connecting an abnormality of function with its correleated anatomical change. It is a matter of experience. And, with your previous training, you will soon acquire the faculty. Try to observe everything. Let nothing escape you. And try constantly to find some connection between facts and events that seem to be unconnected. That is my advice to you; and with that we will put away the Blackmore case for the present and consider our day's work at an end."

XIV. — THORNDYKE LAYS THE MINE

THE information supplied by Mr. Samuel Wilkins, so far from dispelling the cloud of mystery that hung over the Blackmore case, only enveloped it in deeper obscurity, so far as I was concerned. The new problem that Thorndyke offered for solution was a tougher one than any of the others. He proposed that I should identify and give a name to this mysterious woman. But how could I? No woman, excepting Mrs. Wilson, had been mentioned in connection with the case. This new dramatis persona had appeared suddenly from nowhere and straightway vanished without leaving a trace, excepting the two or three beads that we had picked up in Jeffrey's room.

Nor was it in the least clear what part, if any, she had played in the tragedy. The facts still pointed as plainly to suicide as before her appearance. Jeffrey's repeated hints as to his intentions, and the very significant preparations that he had made, were enough to negative any idea of foul play. And yet the woman's presence in the chambers at that time, the secret manner of her arrival and her precautions against recognition, strongly suggested some kind of complicity in the dreadful event that followed.

But what complicity is possible in the case of suicide? The woman might have furnished him with the syringe and the poison, but it would not have been necessary for her to go to his chambers for that purpose. Vague ideas of persuasion and hypnotic suggestion floated through my brain; but the explanations did not fit the case and the hypnotic suggestion of crime is not very convincing to the medical mind. Then I thought of blackmail in connection with some disgraceful secret; but though this was a more hopeful suggestion, it was not very probable, considering Jeffrey's age and character.

And all these speculations failed to throw the faintest light on the main question: "Who was this woman?"

A couple of days passed, during which Thorndyke made no further reference to the case. He was, most of the time, away from home, though how he was engaged I had no idea. What was rather more unusual was that Polton seemed to have deserted the laboratory and taken to outdoor pursuits. I assumed that he had seized the opportunity of leaving me in charge, and I dimly surmised that he was acting as Thorndyke's private inquiry agent, as he seemed to have done in the case of Samuel Wilkins.

On the evening of the second day Thorndyke came home in obviously good spirits, and his first proceedings aroused my expectant curiosity. He went to a cupboard and brought forth a box of Trichinopoly cheroots. Now the Trichinopoly cheroot was Thorndyke's one dissipation, to be enjoyed only on rare and specially festive occasions; which, in practice, meant those occasions on which he had scored some important point or solved some unusually tough problem. Wherefore I watched him with lively interest.

"It's a pity that the 'Trichy' is such a poisonous beast," he remarked, taking up one of the cheroots and sniffing at it delicately. "There is no other cigar like it, to a really abandoned smoker." He laid the cigar back in the box and continued: "I think I shall treat myself to one after dinner to celebrate the occasion."

"What occasion?" I asked.

"The completion of the Blackmore case. I am just going to write to Marchmont advising him to enter a caveat."

"Do you mean to say that you have discovered a flaw in the will, after all?"

"A flaw!" he exclaimed. "My dear Jervis, that second will is a forgery."

I stared at him in amazement; for his assertion sounded like nothing more or less than arrant nonsense.

"But the thing is impossible, Thorndyke," I said. "Not only did the witnesses recognize their own signatures and the painter's greasy finger-marks, but they had both read the will and remembered its contents."
“Yes; that is the interesting feature in the case. It is a very pretty problem. I shall give you a last chance to solve it. Tomorrow evening we shall have to give a full explanation, so you have another twenty-four hours in which to think it over. And, meanwhile, I am going to take you to my club to dine. I think we shall be pretty safe there from Mrs. Schallibaum.”

He sat down and wrote a letter, which was apparently quite a short one, and having addressed and stamped it, prepared to go out.

“Come,” said he, “let us away to the gay and festive scenes and halls of dazzling light.” We will lay the mine in the Fleet Street pillar box. I should like to be in Marchmont’s office when it explodes.”

“I expect, for that matter,” said I, “that the explosion will be felt pretty distinctly in these chambers.”

“I expect so, too,” replied Thorndyke; “and that reminds me that I shall be out all day to-morrow, so, if Marchmont calls, you must do all that you can to persuade him to come round after dinner and bring Stephen Blackmore, if possible. I am anxious to have Stephen here, as he will be able to give us some further information and confirm certain matters of fact.”

I promised to exercise my utmost powers of persuasion on Mr. Marchmont which I should certainly have done on my own account, being now on the very tip-toe of curiosity to hear Thorndyke’s explanation of the unthinkable conclusion at which he had arrived—and the subject dropped completely; nor could I, during the rest of the evening, induce my colleague to reopen it even in the most indirect or allusive manner.

Our explanations in respect of Mr. Marchmont were fully realized; for, on the following morning, within an hour of Thorndyke’s departure from our chambers, the knocker was plied with more than usual emphasis, and, on my opening the door, I discovered the solicitor in company with a somewhat older gentleman. Mr. Marchmont appeared somewhat out of humour, while his companion was obviously in a state of extreme irritation.

“How d’you do, Dr. Jervis?” said Marchmont as he entered at my invitation. “Your friend, I suppose, is not in just now?”

“No; and he will not be returning until the evening.”

“Hm; I’m sorry. We wished to see him rather particularly. This is my partner, Mr. Winwood.”

The latter gentleman bowed stiffly and Marchmont continued:

“We have had a letter from Dr. Thorndyke, and it is, I may say, a rather curious letter; in fact, a very singular letter indeed.”

“It is the letter of a madman!” growled Mr. Winwood.

“No, no, Winwood; nothing of the kind. Control yourself, I beg you. But really, the letter is rather incomprehensible. It relates to the will of the late Jeffrey Blackmore—you know the main facts of the case; and we cannot reconcile it with those facts.”

“This is the letter,” exclaimed Mr. Winwood, dragging the document from his wallet and slapping it down on the table. “If you are acquainted with the case, sir, just read that, and let us hear what you think.”

I took up the letter and read aloud:

“JEFFREY BLACKMORE, DECD.

DEAR MR. MARCHMONT,—

I have gone into this case with great care and have now no doubt that the second will is a forgery. Criminal proceedings will, I think, be inevitable, but meanwhile it would be wise to enter a caveat.

“If you could look in at my chambers to-morrow evening we could talk the case over; and I should be glad if you could bring Mr. Stephen Blackmore; whose personal knowledge of the events and the parties concerned would be of great assistance in clearing up obscure details.

“I am,

“Yours sincerely,

“JOHN EVELYN THORNDYKE

“C.F. MARCHMONT, ESQ.”

“Well!” exclaimed Mr. Winwood, glaring ferociously at me, “what do you think of the learned counsel’s opinion?”

“I knew that Thorndyke was writing to you to this effect,” I replied, “but I must frankly confess that I can make nothing of it. Have you acted on his advice?”

“Certainly not!” shouted the irascible lawyer. “Do you suppose that we wish to make ourselves the laughing-stock of the courts? The thing is impossible—ridiculously impossible!”
“It can’t be that, you know,” I said, a little stiffly, for I was somewhat nettled by Mr. Winwood’s manner, “or Thorndyke would not have written this letter. The conclusion looks as impossible to me as it does to you; but I have complete confidence in Thorndyke. If he says that the will is a forgery, I have no doubt that it is a forgery.”

“But how the deuce can it be?” roared Winwood. “You know the circumstances under which the will was executed.”

“Yes; but so does Thorndyke. And he is not a man who overlooks important facts. It is useless to argue with me. I am in a complete fog about the case myself. You had better come in this evening and talk it over with him as he suggests.”

“It is very inconvenient,” grumbled Mr. Winwood. “We shall have to dine in town.”

“Yes,” said Marchmont, “but it is the only thing to be done. As Dr. Jervis says, we must take it that Thorndyke has something solid to base his opinion on. He doesn’t make elementary mistakes. And, of course, if what he says is correct, Mr. Stephen’s position is totally changed.”

“Bah!” exclaimed Winwood, “he has found a mare’s nest, I tell you. Still, I agree that the explanation should be worth hearing.”

“You mustn’t mind Winwood,” said Marchmont, in an apologetic undertone; “he’s a peppery old fellow with a rough tongue, but he doesn’t mean any harm.” Which statement Winwood assented to—or dissented from; for it was impossible to say which—by a prolonged growl.

“We shall expect you then,” I said, “about eight to-night, and you will try to bring Mr. Stephen with you?”

“Yes,” replied Marchmont; “I think we can promise that he shall come with us. I have sent him a telegram asking him to attend.”

With this the two lawyers took their departure, leaving me to meditate upon my colleague’s astonishing statement; which I did, considerably to the prejudice of other employment. That Thorndyke would be able to justify the opinion that he had given, I had no doubt whatever; but yet there was no denying that his proposition was what Mr. Dick Swiveller would call “a staggerer.”

When Thorndyke returned, I informed him of the visit of our two friends, and acquainted him with the sentiments that they had expressed; whereat he smiled with quiet amusement.

“I thought,” he remarked, “that letter would bring Marchmont to our door before long. As to Winwood, I have never met him, but I gather that he is one of those people whom you ‘mustn’t mind.’ In a general way, I object to people who tacitly claim exemption from the ordinary rules of conduct that are held to be binding on their fellows. But, as he promises to give us what the variety artists call ‘an extra turn,’ we will make the best of him and give him a run for his money.”

Here Thorndyke smiled mischievously—I understood the meaning of that smile later in the evening—and asked: “What do you think of the affair yourself?”

“I have given it up,” I answered. “To my paralysed brain, the Blackmore case is like an endless algebraical problem propounded by an insane mathematician.”

Thorndyke laughed at my comparison, which I flatter myself was a rather apt one.

“Come and dine,” said he, “and let us crack a bottle, that our hearts may not turn to water under the frown of the disdainful Winwood. I think the old ‘Bell’ in Holborn will meet our present requirements better than the club. There is something jovial and roystering about an ancient tavern; but we must keep a sharp lookout for Mrs. Schallibaum.”

Thereupon we set forth; and, after a week’s close imprisonment, I once more looked upon the friendly London streets, the cheerfully lighted shop windows and the multitudes of companionable strangers who moved unceasingly along the pavements.

XV. — THORNDYKE EXPLODES THE MINE

WE had not been back in our chambers more than a few minutes when the little brass knocker on the inner door rattled out its summons. Thorndyke himself opened the door, and, finding our three expected visitors on the threshold, he admitted them and closed the “oak.”

“We have accepted your invitation, you see,” said Marchmont, whose manner was now a little flurried and uneasy, “This is my partner, Mr. Winwood; you haven’t met before, I think. Well, we thought we should like to hear some further particulars from you, as we could not quite understand your letter.”

“My conclusion, I suppose,” said Thorndyke, “was a little unexpected?”

“It was more than that, sir,” exclaimed Winwood. “It was absolutely irreconcilable either with the facts of the case or with common physical possibilities.”

“At the first glance,” Thorndyke agreed, “it would probably have that appearance.”

“It has that appearance still to me,” said Winwood, growing suddenly red and wrathful, “and I may say that I speak as a solicitor who was practising in the law when you were an infant in arms. You tell us, sir, that this will is a forgery; this will,
which was executed in broad daylight in the presence of two unimpeachable witnesses who have sworn, not only to their signatures and the contents of the document, but to their very finger-marks on the paper. Are those finger-marks forgeries, too? Have you examined and tested them?"

"I have not," replied Thorndyke. "The fact is they are of no interest to me, as I am not disputing the witnesses' signatures."

At this, Mr. Winwood fairly danced with irritation.

"Marchmont!" he exclaimed fiercely, "you know this good gentleman, I believe. Tell me, is he addicted to practical jokes?"

"Now, my dear Winwood," groaned Marchmont, "I pray you—I beg you to control yourself. No doubt—"

"But confound it!" roared Winwood, "you have, yourself, heard him say that the will is a forgery, but that he doesn't dispute the signatures; which," concluded Winwood, banging his fist down on the table, "is damned nonsense."

"May I suggest," interposed Stephen Blackmore, "that we came here to receive Dr. Thorndyke's explanation of his letter. Perhaps it would be better to postpone any comments until we have heard it."

"Undoubtedly, undoubtedly," said Marchmont. "Let me entreat you, Winwood, to listen patiently and refrain from interruption until we have heard our learned friend's exposition of the case."

"Oh, very well," Winwood replied sulkily; "I'll say no more."

He sank into a chair with the manner of a man who shuts himself up and turns the key; and so remained—excepting when the internal pressure approached bursting-point—throughout the subsequent proceedings, silent, stony and impassive, like a seated statue of Obstination.

"I take it," said Marchmont, "that you have some new facts that are not in our possession?"

"Yes," replied Thorndyke; "we have some new facts, and we have made some new use of the old ones. But how shall I lay the case before you? Shall I state my theory of the sequence of events and furnish the verification afterwards? Or shall I retrace the actual course of my investigations and give you the facts in the order in which I obtained them myself, with the inferences from them?"

"I almost think," said Mr. Marchmont, "that it would be better if you would put us in possession of the new facts. Then, if the conclusions that follow from them are not sufficiently obvious, we could hear the argument. What do you say, Winwood?"

Mr. Winwood roused himself for an instant, barked out the one word "Facts," and shut himself up again with a snap.

"You would like to have the new facts by themselves?" said Thorndyke.

"If you please. The facts only, in the first place, at any rate."

"Very well," said Thorndyke; and here I caught his eye with a mischievous twinkle in it that I understood perfectly; for I had most of the facts myself and realized how much these two lawyers were likely to extract from them. Winwood was going to "have a run for his money," as Thorndyke had promised.

My colleague, having placed on the table by his side a small cardboard box and the sheets of notes from his file, glanced quickly at Mr. Winwood and began:

"The first important new facts came into my possession on the day on which you introduced the case to me. In the evening, after you left, I availed myself of Mr. Stephen's kind invitation to look over his uncle's chambers in New Inn. I wished to do so in order to ascertain, if possible, what had been the habits of the deceased during his residence there. When I arrived with Dr. Jervis, Mr. Stephen was in the chambers, and I learned from him that his uncle was an Oriental scholar of some position and that he had a very thorough acquaintance with the cuneiform writing. Now, while I was talking with Mr. Stephen I made a very curious discovery. On the wall over the fire-place hung a large framed photograph of an ancient Persian inscription in the cuneiform character; and that photograph was upside down."

"Upside down!" exclaimed Stephen. "But that is really very odd."

"Very odd indeed," agreed Thorndyke, "and very suggestive. The way in which it came to be inverted is pretty obvious and also rather suggestive. The photograph had evidently been in the frame some years but had apparently never been hung up before."

"It had not," said Stephen, "though I don't know how you arrived at the fact. It used to stand on the mantelpiece in his old rooms in Jermyn Street."

"Well," continued Thorndyke, "the frame-maker had pasted his label on the back of the frame, and as this label hung the right way up, it appeared as if the person who fixed the photograph on the wall had adopted it as a guide."

"It is very extraordinary," said Stephen. "I should have thought the person who hung it would have asked Uncle Jeffrey which was the right way up; and I can't imagine how on earth it could have hung all those months without his noticing it. He must have been practically blind."

Here Marchmont, who had been thinking hard, with knitted brows, suddenly brightened up.
"I see your point," said he. "You mean that if Jeffrey was as blind as that, it would have been possible for some person to substitute a false will, which he might sign without noticing the substitution."

"That wouldn't make the will a forgery," growled Winwood. "If Jeffrey signed it, it was Jeffrey's will. You could contest it if you could prove the fraud. But he said: 'This is my will,' and the two witnesses read it and have identified it."

"Did they read it aloud?" asked Stephen.

"No, they did not," replied Thorndyke.

"Can you prove substitution?" asked Marchmont.

"I haven't asserted it," answered Thorndyke, "My position is that the will is a forgery."

"But it is not," said Winwood.

"We won't argue it now," said Thorndyke. "I ask you to note the fact that the inscription was upside down. I also observed on the walls of the chambers some valuable Japanese colour-prints on which were recent damp-spots. I noted that the sitting-room had a gas-stove and that the kitchen contained practically no stores or remains of food and hardly any traces of even the simplest cooking. In the bedroom I found a large box that had contained a considerable stock of hard stearine candles, six to the pound, and that was now nearly empty. I examined the clothing of the deceased. On the soles of the boots I observed dried mud, which was unlike that on my own and Jervis's boots, from the gravelly square of the inn. I noted a crease on each leg of the deceased man's trousers as if they had been turned up half-way to the knee; and in the waistcoat pocket I found the stump of a 'Contango' pencil. On the floor of the bedroom, I found a portion of an oval glass somewhat like that of a watch or locket, but ground at the edge to a double bevel. Dr. Jervis and I also found one or two beads and a bugle, all of dark brown glass."

Here Thorndyke paused, and Marchmont, who had been gazing at him with growing amazement, said nervously:

"Are all the observations that I made at New Inn."

The two lawyers looked at one another and Stephen Blackmore stared fixedly at a spot on the hearth-rug. Then Mr. Winwood's face contorted itself into a sour, lopsided smile.

"You might have observed a good many other things, sir," said he, "if you had looked. If you had examined the doors, you would have noted that they had hinges and were covered with paint; and, if you had looked up the chimney you might have noted that it was black inside."

"Now, now, Winwood," protested Marchmont in an agony of uneasiness as to what his partner might say next, "I must really beg you—er—to refrain from—what Mr. Winwood means, Dr. Thorndyke, is that—er—we do not quite perceive the relevancy of these—ah—observations of yours."

"Probably not," said Thorndyke, "but you will perceive their relevancy later. For the present, I will ask you to note the facts and bear them in mind, so that you may be able to follow the argument when we come to that.

"The next set of data I acquired on the same evening, when Dr. Jervis gave me a detailed account of a very strange adventure that befell him. I need not burden you with all the details, but I will give you the substance of his story."

He then proceeded to recount the incidents connected with his visits to Mr. Graves, dwelling on the personal peculiarities of the parties concerned and especially of the patient, and not even forgetting the very singular spectacles worn by Mr. Weiss. He also explained briefly the construction of the chart, presenting the latter for the inspection of his hearers. To this recital our three visitors listened in utter bewilderment, as, indeed did I also; for I could not conceive in what way my adventures could possibly be related to the affairs of the late Mr. Blackmore. This was manifestly the view taken by Mr. Marchmont, for, during a pause in which the chart was handed to him, he remarked somewhat stiffly:

"I am assuming, Dr. Thorndyke, that the curious story you are telling us has some relevance to the matter in which we are interested."

"You are quite correct in your assumption," replied Thorndyke. "The story is very relevant indeed, as you will presently be convinced."

"Thank you," said Marchmont, sinking back once more into his chair with a sigh of resignation.

"A few days ago," pursued Thorndyke, "Dr. Jervis and I located, with the aid of this chart, the house to which he had been called. We found that the late tenant had left somewhat harrily and that the house was to let; and, as no other kind of investigation was possible, we obtained the keys and made an exploration of the premises."

Here he gave a brief account of our visit and the conditions that we observed, and was proceeding to furnish a list of the articles that we had found under the grate, when Mr. Winwood started from his chair.

"Really, sir!" he exclaimed, "this is too much! Have I come here, at great personal inconvenience, to hear you read the inventory of a dust-heap?"

Thorndyke smiled benevolently and caught my eye, once more, with a gleam of amusement.

"Sit down, Mr. Winwood," he said quietly. "You came here to learn the facts of the case, and I am giving them to you."
Please don’t interrupt needlessly and waste time.”

Winwood stared at him ferociously for several seconds; then, somewhat disconcerted by the unruffled calm of his manner, he uttered a snort of defiance, sat down heavily and shut himself up again.

“We will now,” Thorndyke continued, with unmoved serenity, “consider these relics in more detail, and we will begin with this pair of spectacles. They belonged to a person who was near-sighted and astigmatic in the left eye and almost certainly blind in the right. Such a description agrees entirely with Dr. Jervis’s account of the sick man.”

He paused for the moment, and then, as no one made any comment, proceeded:

“We next come to these little pieces of reed, which you, Mr. Stephen, will probably recognize as the remains of a Japanese brush, such as is used for writing in Chinese ink or for making small drawings.”

Again he paused, as though expecting some remark from his listeners; but no one spoke, and he continued:

“Then there is this bottle with the theatrical wig-maker’s label on it, which once contained cement such as is used for fixing on false beards, moustaches or eyebrows.”

He paused once more and looked round expectantly at his audience, none of whom, however, volunteered any remark.

“Do none of these objects that I have described and shown you, seem to have any significance for us?” he asked, in a tone of some surprise.

“They convey nothing to me,” said Mr. Marchmont, glancing at his partner, who shook his head like a restive horse.

“Nor to you, Mr. Stephen?”

“No,” replied Stephen. “Under the existing circumstances they convey no reasonable suggestion to me.”

Thorndyke hesitated as if he were half inclined to say something more; then, with a slight shrug, he turned over his notes and resumed:

“The next group of new facts is concerned with the signatures of the recent cheques. We have photographed them and placed them together for the purpose of comparison and analysis.”

“I am not prepared to question the signatures,” said Winwood. “We have had a highly expert opinion, which would override ours in a court of law even if we differed from it; which I think we do not.”

“Yes,” said Marchmont; “that is so. I think we must accept the signatures, especially as that of the will has been proved, beyond any question” to be authentic.”

“Very well,” agreed Thorndyke; “we will pass over the signatures. Then we have some further evidence in regard to the spectacles, which serves to verify our conclusions respecting them.”

“Perhaps,” said Marchmont, “we might pass over that, too, as we do not seem to have reached any conclusions.”

“As you please,” said Thorndyke. “It is important, but we can reserve it for verification. The next item will interest you more, I think. It is the signed and witnessed statement of Samuel Wilkins, the driver of the cab in which the deceased came home to the inn on the evening of his death.”

My colleague was right. An actual document, signed by a tangible witness, who could be put in the box and sworn, brought both lawyers to a state of attention; and when Thorndyke read out the cabman’s evidence, their attention soon quickened into undisguised astonishment.

“But this is a most mysterious affair,” exclaimed Marchmont. “Who could this woman have been, and what could she have been doing in Jeffrey’s chambers at this time? Can you throw any light on it, Mr. Stephen?”

“No, indeed I can’t,” replied Stephen. “It is a complete mystery to me. My uncle Jeffrey was a confirmed old bachelor, and, although he did not dislike women, he was far from partial to their society, wrapped up as he was in his favourite studies. To the best of my belief, he had not a single female friend. He was not on intimate terms even with his sister, Mrs. Wilson.”

“Very remarkable,” mused Marchmont; “most remarkable. But, perhaps, you can tell us, Dr. Thorndyke, who this woman was?”

“I think,” replied Thorndyke, “that the next item of evidence will enable you to form an opinion for yourselves. I only obtained it yesterday, and, as it made my case quite complete, I wrote off to you immediately. It is the statement of Joseph Ridley, another cabman, and unfortunately, a rather dull, unobservant fellow, unlike Wilkins. He has not much to tell us, but what little he has is highly instructive. Here is the statement, signed by the deponent and witnessed by me:

“My name is Joseph Ridley. I am the driver of a four-wheeled cab. On the fourteenth of March, the day of the great fog, I was waiting at Vauxhall Station, where I had just set down a fare. About five o’clock a lady came and told me to drive over to Upper Kennington Lane to take up a passenger. She was a middle-sized woman. I could not tell what her age was, or what she was like, because her head was wrapped up in a sort of knitted, woollen veil to keep out the fog. I did not notice how she was dressed. She got into the cab and I led the horse over to Upper Kennington Lane and a little way up the lane, until the lady tapped at the front, window for me to stop.
“She got out of the cab and told me to wait. Then she went away and disappeared in the fog. Presently a lady and gentleman came from the direction in which she had gone. The lady looked like the same lady, but I won’t answer to that. Her head was wrapped up in the same kind of veil or shawl, and I noticed that she had on a dark coloured mantle with bead fringe on it.

“The gentleman was clean shaved and wore spectacles, and he stooped a good deal. I can’t say whether his sight was good or bad. He helped the lady into the cab and told me to drive to the Great Northern Station, King’s Cross. Then he got in himself and I drove off. I got to the station about a quarter to six and the lady and gentleman got out. The gentleman paid my fare and they both went into the station. I did not notice anything unusual about either of them. Directly after they had gone, I got a fresh fare and drove away.’

“That,” Thorndyke concluded, “is Joseph Ridley’s statement; and I think it will enable you to give a meaning to the other facts that I have offered for your consideration.”

“I am not so sure about that,” said Marchmont. “It is all exceedingly mysterious. Your suggestion is, of course, that the woman who came to New Inn in the cab was Mrs. Schallibaum!”

“Not at all,” replied Thorndyke. “My suggestion is that the woman was Jeffrey Blackmore.”

There was deadly silence for a few moments. We were all absolutely thunderstruck, and sat gaping at Thorndyke in speechless-astonishment. Then—Mr. Winwood fairly bounced out of his chair.

“But—my—good—sir!” he screeched. “Jeffrey Blackmore was with her at the time!”

“Naturally,” replied Thorndyke, “my suggestion implies that the person who was with her was not Jeffrey Blackmore.”

“But he was!” bawled Winwood. “The porter saw him!”

“The porter saw a person whom he believed to be Jeffrey Blackmore. I suggest that the porter’s belief was erroneous.”

“Well,” snapped Winwood, “perhaps you can prove that it was. I don’t see how you are going to; but perhaps you can.”

He subsided once more into his chair and glared defiantly at Thorndyke.

“You seemed,” said Stephen, “to suggest some connection between the sick man, Graves, and my uncle. I noted it at the time, but put it aside as impossible. Was I right. Did you mean to suggest any connection?”

“I suggest something more than a connection. I suggest identity. My position is that the sick man, Graves, was your uncle.”

“From Dr. Jervis’s description,” said Stephen, “this man must have been very like my uncle. Both were blind in the right eye and had very poor vision with the left; and my uncle certainly used brushes of the kind that you have shown us, when writing in the Japanese character, for I have watched him and admired his skill; but—”

“But,” said Marchmont, “there is the insuperable objection that, at the very time when this man was lying sick in Kennington Lane, Mr. Jeffrey was living at New Inn.”

“What evidence is there of that?” asked Thorndyke.

“Evidence!” Marchmont exclaimed impatiently. “Why, my dear sir—”

He paused suddenly, and, leaning forward, regarded Thorndyke with a new and rather startled expression.

“You mean to suggest—” he began.

“I suggest that Jeffrey Blackmore never lived at New Inn at all.”

For the moment, Marchmont seemed absolutely paralysed by astonishment.

“This is an amazing proposition!” he exclaimed, at length. “Yet the thing is certainly not impossible, for, now that you recall the fact, I realize that no one who had known him previously—excepting his brother, John—ever saw him at the inn. The question of identity was never raised.”

“Excepting,” said Mr. Winwood, “in regard to the body; which was certainly that of Jeffrey Blackmore.”

“Yes, yes. Of course,” said Marchmont. “I had forgotten that for the moment. The body was identified beyond doubt. You don’t dispute the identity of the body, do you?”

“Certainly not,” replied Thorndyke.

Here Mr. Winwood grasped his hair with both hands and stuck his elbows on his knees, while Marchmont drew forth a large handkerchief and mopped his forehead. Stephen Blackmore looked from one to the other expectantly, and finally said:

“If I might make a suggestion, it would be that, as Dr. Thorndyke has shown us the pieces now of the puzzle, he should be so kind as to put them together for our information.”

“Yes,” agreed Marchmont, “that will be the best plan. Let us have the argument, Doctor, and any additional evidence that you possess.”

“The argument,” said Thorndyke, “will be a rather long one, as the data are so numerous, and there are some points in
YOU may have wondered,” Thorndyke commenced, when he had poured out the coffee and handed round the cups, “what induced me to undertake the minute investigation of so apparently simple and straightforward a case. Perhaps I had better explain that first and let you see what was the real starting-point of the inquiry.

“When you, Mr. Marchmont and Mr. Stephen, introduced the case to me, I made a very brief précis of the facts as you presented them, and of these there were one or two which immediately attracted my attention. In the first place, there was the will. It was a very strange will. It was perfectly unnecessary. It contained no new matter; it expressed no changed intentions; it met no new circumstances, as known to the testator. In short it was not really a new will at all, but merely a repetition of the first one, drafted in different and less suitable language. It differed only in introducing a certain ambiguity from which the original was free. It created the possibility that, in certain circumstances, not known to or anticipated by the testator, John Blackmore might become the principal beneficiary, contrary to the obvious wishes of the testator.

“The next point that impressed me was the manner of Mrs. Wilson’s death. She died of cancer. Now people do not die suddenly and unexpectedly of cancer. This terrible disease stands almost alone in that it marks out its victim months in advance. A person who has an incurable cancer is a person whose death may be predicted with certainty and its date fixed within comparatively narrow limits.

“And now observe the remarkable series of coincidences that are brought into light when we consider this peculiarity of the disease. Mrs. Wilson died on the twelfth of March of this present year. Mr. Jeffrey’s second will was signed on the twelfth of November of last year; at a time, that is to say, when the existence of cancer must have been known to Mrs. Wilson’s doctor, and might have been known to any of her relatives who chose to inquire after her.

“Then you will observe that the remarkable change in Mr. Jeffrey’s habits coincides in the most singular way with the same events. The cancer must have been detectable as early as September of last year; about the time, in fact, at which Mrs. Wilson made her will. Mr. Jeffrey went to the inn at the beginning of October. From that time his habits were totally changed, and I can demonstrate to you that a change—not a gradual, but an abrupt change—took place in the character of his signature.

“In short, the whole of this peculiar set of circumstances—the change in Jeffrey’s habits, the change in his signature, and the execution of his strange will—came into existence about the time when Mrs. Wilson was first known to be suffering from cancer.

“This struck me as a very suggestive fact.

“Then there is the extraordinarily opportune date of Mr. Jeffrey’s death. Mrs. Wilson died on the twelfth of March. Mr. Jeffrey was found dead on the fifteenth of March, having apparently died on the fourteenth, on which day he was seen alive. If he had died only three days sooner, he would have predeceased Mrs. Wilson, and her property would never have devolved on him at all; while, if he had lived only a day or two longer, he would have learned of her death and would certainly have made a new will or codicil in his nephew’s favour.

“Circumstances, therefore, conspired in the most singular manner in favour of John Blackmore.

“But there is yet another coincidence. Jeffrey’s body was found, by the merest chance, the day after his death. But it might have remained undiscovered for weeks, or even months; and if it had, it would have been impossible to fix the date of his death. Then Mrs. Wilson’s next of kin would certainly have contested John Blackmore’s claim—and probably with success—on the ground that Jeffrey died before Mrs. Wilson. But all this uncertainty is provided for by the circumstance that Mr. Jeffrey paid his rent personally—and prematurely—to the porter on the fourteenth of March, thus establishing beyond question the fact that he was alive on that date; and yet further, in case the porter’s memory should be untrustworthy or his statement doubted, Jeffrey furnished a signed and dated document—the cheque—which could be produced in a court to furnish incontestable proof of survival.

“To sum up this part of the evidence. Here was a will which enabled John Blackmore to inherit the fortune of a man who, almost certainly, had no intention of bequeathing it to him. The wording of that will seemed to be adjusted to the peculiarities of Mrs. Wilson’s disease; and the death of the testator occurred under a peculiar set of circumstances which seemed to be exactly adjusted to the wording of the will. Or, to put it in another way: the wording of the will and the time, the manner and the circumstances of the testator’s death, all seemed to be precisely adjusted to the fact that the approximate date of Mrs. Wilson’s death was known some months before it occurred.

“Now you must admit that this compound group of coincidences, all conspiring to a single end—the enrichment of John Blackmore—has a very singular appearance. Coincidences are common enough in real life; but we cannot accept too many at a time. My feeling was that there were too many in this case and that I could not accept them without searching inquiry.”

Thorndyke paused, and Mr. Marchmont, who had listened with close attention, nodded, as he glanced at his silent partner.

“You have stated the case with remarkable clearness,” he said; “and I am free to confess that some of the points that you
have raised had escaped my notice."

"My first idea," Thordyke resumed, "was that John Blackmore, taking advantage of the mental enfeeblement produced by the opium habit, had dictated this will to Jeffrey. It was then that I sought permission to inspect Jeffrey’s chambers; to learn what I could about him and to see for myself whether they presented the dirty and disorderly appearance characteristic of the regular opium-smoker’s den. But when, during a walk into the City, I thought over the case, it seemed to me that this explanation hardly met the facts. Then I endeavoured to think of some other explanation; and looking over my notes I observed two points that seemed worth considering. One was that neither of the witnesses to the will was really acquainted with Jeffrey Blackmore; both being strangers who had accepted his identity on his own statement. The other was that no one who had previously known him, with the single exception of his brother John, had ever seen Jeffrey at the inn.

"What was the import of these two facts? Probably they had none. But still they suggested the desirability of considering the question: Was the person who signed the will really Jeffrey Blackmore? The contrary supposition—that some one had personated Jeffrey and forged his signature to a false will—seemed wildly improbable, especially in view of the identification of the body; but it involved no actual impossibility; and it offered a complete explanation of the, otherwise inexplicable, coincidences that I have mentioned.

"I did not, however, for a moment, think that this was the true explanation, but I resolved to bear it in mind, to test it when the opportunity arose, and consider it by the light of any fresh facts that I might acquire.

"The new facts came sooner than I had expected. That same evening I went with Dr. Jervis to New Inn and found Mr. Stephen in the chambers. By him I was informed that Jeffrey was a learned Orientalist, with a quite expert knowledge of the cuneiform writing; and even as he was telling me this, I looked over his shoulder and saw a cuneiform inscription hanging on the wall upside down.

"Now, of this there could be only one reasonable explanation. Disregarding the fact that no one would screw the suspension plates on a frame without ascertaining which was the right way up, and assuming it to be hung up inverted, it was impossible that the misplacement could have been overlooked by Jeffrey. He was not blind, though his sight was defective. The frame was thirty inches long and the individual characters nearly an inch in length—about the size of the D 18 letters of Snellen’s test-types, which can be read by a person of ordinary sight at a distance of fifty-five feet. There was, I repeat, only one reasonable explanation; which was that the person who had inhabited those chambers was not Jeffrey Blackmore.

"This conclusion received considerable support from a fact which I observed later, but mention in this place. On examining the soles of the shoes taken from the dead man’s feet, I found only the ordinary mud of the streets. There was no trace of the peculiar gravelly mud that adhered to my own boots and Jervis’s, and which came from the square of the inn. Yet the porter distinctly stated that the deceased, after paying the rent, walked back towards his chambers across the square; the mud of which should, therefore, have been conspicuous on his shoes.

"Thus, in a moment, a wildly speculative hypothesis had assumed a high degree of probability.

"When Mr. Stephen was gone, Jervis and I looked over the chambers thoroughly; and then another curious fact came to light. On the wall were a number of fine Japanese colour-prints, all of which showed recent damp-spots. Now, apart from the consideration that Jeffrey, who had been at the trouble and expense of collecting these valuable prints, would hardly have allowed them to rot on his walls, there arose the question: How came they to be damp? There was a gas stove in the room, and a gas stove has at least the virtue of preserving a dry atmosphere. It was winter weather, when the stove would naturally be pretty constantly alight. How came the walls to be so damp? The answer seemed to be that the stove had not been constantly alight, but had been lighted only occasionally. This suggestion was borne out by a further examination of the rooms. In the kitchen there were practically no stores and hardly any arrangements even for simple bachelor cooking; the bedroom offered the same suggestion; the soap in the wash-stand was shrivelled and cracked; there was no cast-off linen, and the shirts in the drawers, though clean, had the peculiar yellowish, faded appearance that linen acquires when long out of use. In short, the rooms had the appearance of not having been lived in at all, but only visited at intervals.

"Against this view, however, was the statement of the night porter that he had often seen a light in Jeffrey’s sitting-room at one o’clock in the morning, with the apparent implication that it was then turned out. Now a light may be left in an empty room, but its extinction implies the presence of some person to extinguish it; unless some automatic device be adopted for putting it out at a given time. Such a device—the alarm movement of a clock, for instance, with a suitable attachment—is a simple enough matter, but my search of the rooms failed to discover anything of the kind. However, when looking over the drawers in the bedroom, I came upon a large box that had held a considerable quantity of hard stearine candles. There were only a few left, but a flat candlestick with numerous wick-ends in its socket accounted for the remainder.

"These candles seemed to dispose of the difficulty. They were not necessary for ordinary lighting, since gas was laid on in all three rooms. For what purpose, then, were they used, and in such considerable quantities? I subsequently obtained some of the same brand—Price’s stearine candles, six to the pound—and experimented with them. Each candle was seven and a quarter inches in length, not counting the cone at the top, and I found that they burned in still air at the rate of a fraction over one inch in an hour. We may say that one of these candles would burn in still air a little over six hours. It would thus be possible for the person who inhabited these rooms to go away at seven o’clock in the evening and leave a light which would burn until past one in the morning and then extinguish itself. This, of course, was only surmise, but it
destroyed the significance of the night porter's statement.

“But, if the person who inhabited these chambers was not Jeffrey, who was he?

“The answer to that question seemed plain enough. There was only one person who had a strong motive for perpetrating a fraud of this kind, and there was only one person to whom it was possible. If this person was not Jeffrey, he must have been very like Jeffrey; sufficiently like for the body of the one to be mistaken for the body of the other. For the production of Jeffrey's body was an essential part of the plan and must have been contemplated from the first. But the only person who fulfills the conditions is John Blackmore.

“We have learned from Mr. Stephen that John and Jeffrey, though very different in appearance in later years, were much alike as young men. But when two brothers who are much alike as young men, become unlike in later life, we shall find that the unlikeness is produced by superficial differences and that the essential likeness remains. Thus, in the present case, Jeffrey was clean shaved, had bad eyesight, wore spectacles and stooped as he walked; John wore a beard and moustache, had good eyesight, did not wear spectacles and had a brisk gait and upright carriage. But supposing John to shave off his beard and moustache, to put on spectacles and to stoop in his walk, these conspicuous but superficial differences would vanish and the original likeness reappear.

“There is another consideration. John had been an actor and was an actor of some experience. Now, any person can, with some care and practice, make up a disguise; the great difficulty is to support that disguise by a suitable manner and voice. But to an experienced actor this difficulty does not exist. To him, personation is easy; and, moreover, an actor is precisely the person to whom the idea of disguise and impersonation would occur.

“There is a small item bearing on this point, so small as to be hardly worth calling evidence, but just worth noting. In the pocket of the waistcoat taken from the body of Jeffrey I found the stump of a 'Contango' pencil; a pencil that is sold for the use of stock dealers and brokers. Now John was an outside broker and might very probably have used such a pencil, whereas Jeffrey had no connection with the stock markets and there is no reason why he should have possessed a pencil of this kind. But the fact is merely suggestive; it has no evidential value.

“A more important inference is to be drawn from the collected signatures. I have remarked that the change in the signature occurred abruptly, with one or two alterations of manner, last September, and that there are two distinct forms with no intermediate varieties. This is, in itself, remarkable and suspicious. But a remark made by Mr. Britton furnishes a really valuable piece of evidence on the point we are now considering. He admitted that the character of the signature had undergone a change, but observed that the change did not affect the individual or personal character of the writing. This is very important; for handwriting is, as it were, an extension of the personality of the writer. And just as a man to some extent snares his personality with his near blood-relations in the form of family resemblances, so his handwriting often shows a subtle likeness to that of his near relatives. You must have noticed, as I have, how commonly the handwriting of one brother resembles that of another, and in just this peculiar and subtle way. The inference, then, from Mr. Britton's statement is, that if the signature of the will was forged, it was probably forged by a relative of the deceased. But the only relative in question is his brother John.

“All the facts, therefore, pointed to John Blackmore as the person who occupied these chambers, and I accordingly adopted that view as a working hypothesis.”

“But this was all pure speculation,” objected Mr. Winwood.

“Not speculation,” said Thorndyke. “Hypothesis. It was ordinary inductive reasoning such as we employ in scientific research. I started with the purely tentative hypothesis that the person who signed the will was not Jeffrey Blackmore. I assumed this; and I may say that I did not believe it at the time, but merely adopted it as a proposition that was worth testing. I accordingly tested it, 'Yes?' or 'No?' with each new fact; but as each new fact said 'Yes,' and no fact said definitely 'No,' its probability increased rapidly by a sort of geometrical progression. The probabilities multiplied into one another. It is a perfectly sound method, for one knows that if a hypothesis be true, it will lead one, sooner or later, to a crucial fact by which its truth can be demonstrated.

“To resume our argument. We have now set up the proposition that John Blackmore was the tenant of New Inn and that he was personating Jeffrey. Let us reason from this and see what it leads to.

“If the tenant of New Inn was John, then Jeffrey must be elsewhere, since his concealment at the inn was clearly impossible. But he could not have been far away, for he had to be producible at short notice whenever the death of Mrs. Wilson should make the production of his body necessary. But if he was producible, his person must have been in the possession or control of John. He could not have been at large, for that would have involved the danger of his being seen and recognized. He could not have been in any institution or place where he would be in contact with strangers. Then he must be in some sort of confinement. But it is difficult to keep an adult in confinement in an ordinary house. Such a proceeding would involve great risk of discovery and the use of violence which would leave traces on the body, to be observed and commented on at the inquest. What alternative method could be suggested?

“The most obvious method is that of keeping the prisoner in such a state of debility as would confine him to his bed. But such debility could be produced by only starvation, unsuitable food, or chronic poisoning. Of these alternatives, poisoning is much more exact, more calculable in its effect and more under control. The probabilities, then, were in favour of chronic poisoning.
"Having reached this stage, I recalled a singular case which Jervis had mentioned to me and which seemed to illustrate this method. On our return home I asked him for further particulars, and he then gave me a very detailed description of the patient and the circumstances. The upshot was rather startling. I had looked on his case as merely illustrative, and wished to study it for the sake of the suggestions that it might offer. But when I had heard his account, I began to suspect that there was something more than mere parallelism of method. It began to look as if his patient, Mr. Graves, might actually be Jeffrey Blackmore.

"The coincidences were remarkable. The general appearance of the patient tallied completely with Mr. Stephen’s description of his uncle Jeffrey. The patient had a tremulous iris in his right eye and had clearly suffered from dislocation of the crystalline lens. But from Mr. Stephen’s account of his uncle’s sudden loss of sight in the right eye after a fall, I judged that Jeffrey had also suffered from dislocation of the lens and therefore had a tremulous iris in the right eye. The patient, Graves, evidently had defective vision in his left eye, as proved by the marks made behind his ears by the hooked side-bars of his spectacles; for it is only on spectacles that are intended for constant use that we find hooked side-bars. But Jeffrey had defective vision in his left eye and wore spectacles constantly. Lastly, the patient Graves was suffering from chronic morphine poisoning, and morphine was found in the body of Jeffrey.

"Once more, it appeared to me that there were too many coincidences.

"The question as to whether Graves and Jeffrey were identical admitted of fairly easy disproof; for if Graves was still alive, he could not be Jeffrey. It was an important question and I resolved to test it without delay. That night, Jervis and I plotted out the chart, and on the following morning we located the house. But it was empty and to let. The birds had flown, and we failed to discover whither they had gone.

"However, we entered the house and explored. I have told you about the massive bolts and fastenings that we found on the bedroom doors and window, showing that the room had been used as a prison. I have told you of the objects that we picked out of the dust-heap under the grate. Of the obvious suggestion offered by the Japanese brush and the bottle of ‘spirit gum’ or cement, I need not speak now; but I must trouble you with some details concerning the broken spectacles. For here we had come upon the crucial fact to which, as I have said, all sound inductive reasoning brings one sooner or later.

"The spectacles were of a rather peculiar pattern. The frames were of the type invented by Mr. Stopford of Moorfields and known by his name. The right eye-piece was fitted with plain glass, as is usual in the case of a blind, or useless, eye. It was very much shattered, but its character was obvious. The glass of the left eye was much thicker and fortunately less damaged, so that I was able accurately to test its refraction.

"When I reached home, I laid the pieces of the spectacles together, measured the frames very carefully, tested the left eye-glass, and wrote down a full description such as would have been given by the surgeon to the spectacle-maker. Here it is, and I will ask you to note it carefully.

"Spectacles for constant use. Steel frame, Stopford’s pattern, curl sides, broad bridge with gold lining. Distance between centres, 6.2 centimetres; extreme length of side-bars, 13.3 centimetres.

"Right eye plain glass.

| Left eye | -5.75 D. spherical |
|          | -3.25 D. cylindrical, axis 35°. |

"The spectacles, you see, were of a very distinctive character and seemed to offer a good chance of identification. Stopford’s frames are, I believe, made by only one firm of opticians in London, Parry & Cuxton of Regent Street. I therefore wrote to Mr. Cuxton, who knows me, asking him if he had supplied spectacles to the late Jeffrey Blackmore, Esq.—here is a copy of my letter—and if so, whether he would mind letting me have a full description of them, together with the name of the optician who prescribed them.

"He replied in this letter, which is pinned to the copy of mine, that, about four years ago, he supplied a pair of glasses to Mr. Jeffrey Blackmore, and described them thus: The spectacles were for constant use and had steel frames of Stopford’s pattern with curl sides, the length of the side-bars including the curled ends being 13.3 cm. The bridge was broad with a gold lining-plate, shaped as shown by the enclosed tracing from the diagram on the prescription. Distance between centres 6.2 cm.

"Right eye plain glass.

| Left eye | -5.75 D. spherical |
|          | -3.25 D. cylindrical, axis 35°. |

"The spectacles were prescribed by Mr. Hindley of Wimpole Street.’

"You see that Mr. Cuxton’s description is identical with mine. However, for further confirmation, I wrote to Mr. Hindley, asking certain questions, to which he replied thus:
“You are quite right. Mr. Jeffrey Blackmore had a tremulous iris in his right eye (which was practically blind), due to dislocation of the lens. The pupils were rather large; certainly not contracted.’

“Here, then, we have three important facts. One is that the spectacles found by us at Kennington Lane were undoubtedly Jeffrey’s; for it is as unlikely that there exists another pair of spectacles exactly identical with those as that there exists another face exactly like Jeffrey’s face. The second fact is that the description of Jeffrey tallies completely with that of the sick man, Graves, as given by Dr. Jervis; and the third is that when Jeffrey was seen by Mr. Hindley, there was no sign of his being addicted to the taking of morphine. The first and second facts, you will agree, constitute complete identification.”

“Yes,” said Marchmont; “I think we must admit the identification as being quite conclusive, though the evidence is of a kind that is more striking to the medical than to the legal mind.”

“You will not have that complaint to make against the next item of evidence,” said Thorndyke. “It is after the lawyer’s own heart, as you shall hear. A few days ago I wrote to Mr. Stephen asking him if he possessed a recent photograph of his uncle Jeffrey. He had one, and he sent it to me by return. This portrait I showed to Dr. Jervis and asked him if he had ever seen the person it represented. After examining it attentively, without any hint whatever from me, he identified it as the portrait of the sick man, Graves.”

“Indeed!” exclaimed Marchmont. “This is most important. Are you prepared to swear to the identity, Dr. Jervis?”

“I have not the slightest doubt,” I replied, “that the portrait is that of Mr. Graves.”

“Excellent!” said Marchmont, rubbing his hands gleefully; “this will be much more convincing to a jury. Pray go on, Dr. Thorndyke.”

“That,” said Thorndyke, “completes the first part of my investigation. We had now reached a definite, demonstrable fact; and that fact, as you see, disposed at once of the main question—the genuineness of the will. For if the man at Kennington Lane was Jeffrey Blackmore, then the man at New Inn was not. But it was the latter who had signed the will. Therefore the will was not signed by Jeffrey Blackmore; that is to say, it was a forgery. The case was complete for the purposes of the civil proceedings; the rest of my investigations had reference to the criminal prosecution that was inevitable. Shall I proceed, or is your interest confined to the will?”

“Hang the will!” exclaimed Stephen. “I want to hear how you propose to lay hands on the villain who murdered poor old uncle Jeffrey—for I suppose he did murder him?”

“I think there is no doubt of it,” replied Thorndyke.

“Then,” said Marchmont, “we will hear the rest of the argument, if you please.”

“Very well,” said Thorndyke. “As the evidence stands, we have proved that Jeffrey Blackmore was a prisoner in the house in Kennington Lane and that some one was personating him at New Inn. That some one, we have seen, was, in all probability, John Blackmore. We now have to consider the man Weiss. Who was he? and can we connect him in any way with New Inn?

“We may note in passing that Weiss and the coachman were apparently one and the same person. They were never seen together. When Weiss was present, the coachman was not available even for so urgent a service as the obtaining of an antidote to the poison. Weiss always appeared some time after Jervis’s arrival and disappeared some time before his departure, in each case sufficiently long to allow of a change of disguise. But we need not labour the point, as it is not of primary importance

“To return to Weiss. He was clearly heavily disguised, as we see by his unwillingness to show himself even by the light of a candle. But there is an item of positive evidence on this point which is important from having other bearings. It is furnished by the spectacles worn by Weiss, of which you have heard Jervis’s description. These spectacles had very peculiar optical properties. When you looked through them they had the properties of plain glass; when you looked at them they had the appearance of lenses. But only one kind of glass possesses these properties; namely, that which, like an ordinary watch-glass, has curved, parallel surfaces. But for what purpose could a person wear ‘watch-glass’ spectacles? Clearly, not to assist his vision. The only alternative is disguise.

“The properties of these spectacles introduce a very curious and interesting feature into the case. To the majority of persons, the wearing of spectacles for the purpose of disguise or personation, seems a perfectly simple and easy proceeding. But, to a person of normal eyesight, it is nothing of the kind. For, if he wears spectacles suited for long sight he cannot see distinctly through them at all; while, if he wears concave, or near sight, glasses, the effort to see through them produces such strain and fatigue that his eyes become disabled altogether. On the stage the difficulty is met by using spectacles of plain window-glass, but in real life this would hardly do; the ‘property’ spectacles would be detected at once and give rise to suspicion.

“The personator is therefore in this dilemma: if he wears actual spectacles, he cannot see through them; if he wears sham spectacles of plain glass, his disguise will probably be detected. There is only one way out of the difficulty, and that not a very satisfactory one; but Mr. Weiss seems to have adopted it in lieu of a better. It is that of using watch-glass spectacles such as I have described.

“Now, what do we learn from these very peculiar glasses? In the first place they confirm our opinion that Weiss was wearing a disguise. But, for use in a room so very dimly lighted, the ordinary stage spectacles would have answered quite
well. The second inference is, then, that these spectacles were prepared to be worn under more trying conditions of light—out of doors, for instance. The third inference is that Weiss was a man with normal eyesight; for otherwise he could have worn real spectacles suited to the state of his vision.

“These are inferences by the way, to which we may return. But these glasses furnish a much more important suggestion. On the floor of the bedroom at New Inn I found some fragments of glass which had been trodden on. By joining one or two of them together, we have been able to make out the general character of the object of which they formed parts. My assistant—who was formerly a watch-maker—judged that object to be the thin crystal glass of a lady’s watch, and this, I think, was Jervis’s opinion. But the small part which remains of the original edge furnishes proof in two respects that this was not a watch-glass. In the first place, on taking a careful tracing of this piece of the edge, I found that its curve was part of an ellipse; but watch-glasses, nowadays, are invariably circular. In the second place, watch-glasses are ground on the edge to a single bevel to snap into the bezel or frame; but the edge of this object was ground to a double bevel, like the edge of a spectacle-glass, which fits into a groove in the frame and is held by the side-bar screw. The inevitable inference was that this was a spectacle-glass. But, if so, it was part of a pair of spectacles identical in properties with those worn by Mr. Weiss.

“The importance of this conclusion emerges when we consider the exceptional character of Mr. Weiss’s spectacles. They were not merely peculiar or remarkable; they were probably unique. It is exceedingly likely that there is not in the entire world another similar pair of spectacles. Whence the finding of these fragments of glass in the bedroom establishes a considerable probability that Mr. Weiss was, at some time, in the chambers at New Inn.

“And now let us gather up the threads of this part of the argument. We are inquiring into the identity of the man Weiss. Who was he?

“In the first place, we find him committing a secret crime from which John Blackmore alone will benefit. This suggests the *prima-facie* probability that he was John Blackmore.

“Then we find that he was a man of normal eyesight who was wearing spectacles for the purpose of disguise. But the tenant of New Inn, whom we have seen to be, almost certainly, John Blackmore—and whom we will, for the present, assume to have been John Blackmore—was a man with normal eyesight who wore spectacles for disguise.

“John Blackmore did not reside at New Inn, but at some place within easy reach of it. But Weiss resided at a place within easy reach of New Inn.

“John Blackmore must have had possession and control of the person of Jeffrey. But Weiss had possession and control of the person of Jeffrey.

“Weiss wore spectacles of a certain peculiar and probably unique character. But portions of such spectacles were found in the chambers at New Inn.

“The overwhelming probability, therefore, is that Weiss and the tenant of New Inn were one and the same person; and that that person was John Blackmore.”

“That,” said Mr. Winwood, “is a very plausible argument. But, you observe, sir, that it contains an undistributed middle term.”

Thorndyke smiled genially. I think he forgave Winwood everything for that remark.

“You are quite right, sir,” he said. “It does. And, for that reason, the demonstration is not absolute. But we must not forget, what logicians seem occasionally to overlook: that the ‘undistributed middle,’ while it interferes with absolute proof, may be quite consistent with a degree of probability that approaches very near to certainty. Both the Bertillon system and the English fingerprint system involve a process of reasoning in which the middle term is undistributed. But the great probabilities are accepted in practice as equivalent to certainties.”

Mr. Winwood grunted a grudging assent, and Thorndyke resumed:

“We have now furnished fairly conclusive evidence on three heads: we have proved that the sick man, Graves, was Jeffrey Blackmore; that the tenant of New Inn was John Blackmore; and that the man Weiss was also John Blackmore. We now have to prove that John and Jeffrey were together in the chambers at New Inn on the night of Jeffrey’s death.

“We know that two persons, and two persons only, came from Kennington Lane to New Inn. But one of those persons was the tenant of New Inn—that is, John Blackmore. Who was the other? Jeffrey is known by us to have been at Kennington Lane. His body was found on the following morning in the room at New Inn. No third person is known to have come from Kennington Lane; no third person is known to have arrived at New Inn. The inference, by exclusion, is that the second person—the woman—was Jeffrey.

“Again; Jeffrey had to be brought from Kennington to the inn by John. But John was personating Jeffrey and was made up to resemble him very closely. If Jeffrey were undisguised the two men would be almost exactly alike; which would be very noticeable in any case and suspicious after the death of one of them. Therefore Jeffrey would have to be disguised in some way; and what disguise could be simpler and more effective than the one that I suggest was used?

“Again; it was unavoidable that some one—the cabman—should know that Jeffrey was not alone when he came to the inn that night. If the fact had leaked out and it had become known that a man had accompanied him to his chambers, some suspicion might have arisen, and that suspicion would have pointed to John, who was directly interested in his brother’s
death. But if it had transpired that Jeffrey was accompanied by a woman, there would have been less suspicion, and that suspicion would not have pointed to John Blackmore.

"Thus all the general probabilities are in favour of the hypothesis that this woman was Jeffrey Blackmore. There is, however, an item of positive evidence that strongly supports this view. When I examined the clothing of the deceased, I found on the trousers a horizontal crease on each leg as if the trousers had been turned up half-way to the knees. This appearance is quite understandable if we suppose that the trousers were worn under a skirt and were turned up so that they should not be accidentally seen. Otherwise it is quite incomprehensible."

"Is it not rather strange," said Marchmont, "that Jeffrey should have allowed himself to be dressed up in this remarkable manner?"

"I think not," replied Thorndyke. "There is no reason to suppose that he knew how he was dressed. You have heard Jervis's description of his condition; that of a mere automaton. You know that without his spectacles he was practically blind, and that he could not have worn them since we found them at the house in Kennington Lane. Probably his head was wrapped up in the veil, and the skirt and mantle put on afterwards; but, in any case, his condition rendered him practically devoid of will power. That is all the evidence I have to prove that the unknown woman was Jeffrey. It is not conclusive but it is convincing enough for our purpose, seeing that the case against John Blackmore does not depend upon it."

"Your case against him is on the charge of murder, I presume?" said Stephen.

"Undoubtedly. And you will notice that the statements made by the supposed Jeffrey to the porter, hinting at suicide, are now important evidence. By the light of what we know, the announcement of intended suicide becomes the announcement of intended murder. It conclusively disproves what it was intended to prove; that Jeffrey died by his own hand."

"Yes, I see that," said Stephen, and then after a pause he asked: "Did you identify Mrs. Schallibaum? You have told us nothing about her."

"I have considered her as being outside the case as far as I am concerned," replied Thorndyke. "She was an accessory; my business was with the principal. But, of course, she will be swept up in the net. The evidence that convicts John Blackmore will convict her. I have not troubled about her identity. If John Blackmore is married, she is probably his wife. Do you happen to know if he is married?"

"Yes; but Mrs. John Blackmore is not much like Mrs. Schallibaum, excepting that she has a cast in the left eye. She is a dark woman with very heavy eyebrows."

"That is to say that she differs from Mrs. Schallibaum in those peculiarities that can be artificially changed and resembles her in the one feature that is unchangeable. Do you know if her Christian name happens to be Pauline?"

"Yes, it is. She was a Miss Pauline Hagenbeck, a member of an American theatrical company. What made you ask?"

"The name which Jervis heard poor Jeffrey struggling to pronounce seemed to me to resemble Pauline more than any other name."

"There is one little point that strikes me," said Marchmont. "Is it not rather remarkable that the porter should have noticed no difference between the body of Jeffrey and the living man whom he knew by sight, and who must, after all, have been distinctly different in appearance?"

"I am glad you raised that question," Thorndyke replied, "for that very difficulty presented itself to me at the beginning of the case. But on thinking it over, I decided that it was an imaginary difficulty, assuming, as we do, that there was a good deal of resemblance between the two men. Put yourself in the porter's place and follow his mental processes. He is informed that a dead man is lying on the bed in Mr. Blackmore's rooms. Naturally, he assumes that the dead man is Mr. Blackmore—who, by the way, had hinted at suicide only the night before. With this idea he enters the chambers and sees a man a good deal like Mr. Blackmore and wearing Mr. Blackmore's clothes, lying on Mr. Blackmore's bed. The idea that the body could be that of some other person has never entered his mind. If he notes any difference of appearance he will put that down to the effects of death; for every one knows that a man dead looks somewhat different from the same man alive. I take it as evidence of great acuteness on the part of John Blackmore that he should have calculated so cleverly, not only the mental process of the porter, but the erroneous reasoning which every one would base on the porter's conclusions. For, since the body was actually Jeffrey's, and was identified by the porter as that of his tenant, it has been assumed by every one that no question was possible as to the identity of Jeffrey Blackmore and the tenant of New Inn."

There was a brief silence, and then Marchmont asked:
"May we take it that we have now heard all the evidence?"

"Yes," replied Thorndyke. "That is my case."

"Have you given information to the police?" Stephen asked eagerly.

"Yes. As soon as I had obtained the statement of the cabman, Ridley, and felt that I had enough evidence to secure a conviction, I called at Scotland Yard and had an interview with the Assistant Commissioner. The case is in the hands of Superintendent Miller of the Criminal Investigation Department, a most acute and energetic officer. I have been expecting to hear that the warrant has been executed, for Mr. Miller is usually very punctilious in keeping me informed of the progress of the cases to which I introduce him. We shall hear to-morrow, no doubt."
“And, for the present,” said Marchmont, “the case seems to have passed out of our hands.”

“I shall enter a caveat, all the same,” said Mr. Winwood.

“That doesn’t seem very necessary,” Marchmont objected. “The evidence that we have heard is amply sufficient to ensure a conviction and there will be plenty more when the police go into the case. And a conviction on the charges of forgery and murder would, of course, invalidate the second will.”

“I shall enter a caveat, all the same,” repeated Mr. Winwood.

As the two partners showed a disposition to become heated over this question, Thorndyke suggested that they might discuss it at leisure by the light of subsequent events. Acting on this hint—for it was now close upon midnight—our visitors prepared to depart; and were, in fact, just making their way towards the door when the bell rang. Thorndyke flung open the door, and, as he recognized his visitor, greeted him with evident satisfaction.

“Ha! Mr. Miller; we were just speaking of you. These gentlemen are Mr. Stephen Blackmore and his solicitors, Mr. Marchmont and Mr. Winwood. You know Dr. Jervis, I think.”

The officer bowed to our friends and remarked:

“I am just in time, it seems. A few minutes more and I should have missed these gentlemen. I don’t know what you’ll think of my news.”

“You haven’t let that villain escape, I hope,” Stephen exclaimed.

“Well,” said the Superintendent, “he is out of my hands and yours too; and so is the woman. Perhaps I had better tell you what has happened.”

“If you would be so kind,” said Thorndyke, motioning the officer to a chair.

The superintendent seated himself with the manner of a man who has had a long and strenuous day, and forthwith began his story.

“As soon as we had your information, we procured a warrant for the arrest of both parties, and then I went straight to their flat with Inspector Badger and a sergeant. There we learned from the attendant that they were away from home and were not expected back until to-day about noon. We kept a watch on the premises, and this morning, about the time appointed, a man and a woman, answering to the description, arrived at the flat. We followed them in and saw them enter the lift, and we were going to get into the lift too, when the man pulled the rope, and away they went. There was nothing for us to do but run up the stairs, which we did as fast as we could race; but they got to their landing first, and we were only just in time to see them nip in and shut the door. However, it seemed that we had them safe enough, for there was no dropping out of the windows at that height; so we sent the sergeant to get a locksmith to pick the lock or force the door, while we kept on ringing the bell.

“About three minutes after the sergeant left, I happened to look out of the landing window and saw a hansom pull up opposite the flats. I put my head out of the window, and, hang me if I didn’t see our two friends getting into the cab. It seems that there was a small lift inside the flat communicating with the kitchen, and they had slipped down it one at a time.

“Well, of course, we raced down the stairs like acrobats, but by the time we got to the bottom the cab was off with a fine start. We ran out into Victoria Street, and there we could see it half-way down the street and going like a chariot race. We managed to pick up another hansom and told the cabby to keep the other one in sight, and away we went like the very deuce; along Victoria Street and Broad Sanctuary, across Parliament Square, over Westminster Bridge and along York Road; we kept the other beggar in sight, but we couldn’t gain an inch on him. Then we turned into Waterloo Station, and, as we were driving up the slope we met another hansom coming down; and when the cabby kissed his hand and smiled at us, we guessed that he was the sportsman we had been following.

“But there was no time to ask questions. It is an awkward station with a lot of different exits, and it looked a good deal as if our quarry had got away. However, I took a chance. I remembered that the Southampton express was due to start about this time, and I took a short cut across the lines and made for the platform that it starts from. Just as Badger and I got to the end, about thirty yards from the rear of the train, we saw a man and a woman running in front of us. Then the guard blew his whistle and the train began to move. The man and the woman managed to scramble into one of the rear compartments and Badger and I raced up the platform like mad. A porter tried to head us off, but Badger capsized him and we both sprinted harder than ever, and just hopped on the foot-board of the guard’s van as the train began to get up speed. The guard couldn’t risk putting us off, so he had to let us into his van, which suited us exactly, as we could watch the train on both sides from the look-out. And we did watch, I can tell you; for our friend in front had seen us. His head was out of the window as we climbed on to the foot-board.

“However, nothing happened until we stopped at Southampton West. There, I need not say, we lost no time in hopping out, for we naturally expected our friends to make a rush for the exit. But they didn’t. Badger watched the platform, and I kept a look-out to see that they didn’t slip away across the line from the off-side. But still there was no sign of them. Then I walked up the train to the compartment which I had seen them enter. And there they were, apparently fast asleep in the corner by the off-side window, the man leaning back with his mouth open and the woman resting against him with her head on his shoulder. She gave me quite a turn when I went in to look at them, for she had her eyes half-closed and seemed
to be looking round at me with a most horrible expression; but I found afterwards that the peculiar appearance of looking round was due to the cast in her eye."

"They were dead, I suppose?" said Thorndyke.

"Yes, sir. Stone dead; and I found these on the floor of the carriage."

He held up two tiny yellow glass tubes, each labelled "Hypodermic tabloids. Aconitine Nitrate gr. 1/640."

"Ha!" exclaimed Thorndyke, "this fellow was well up in alkaloidal poisons, it seems; and they appear to have gone about prepared for emergencies. These tubes each contained twenty tabloids, a thirty-second of a grain altogether, so we may assume that about twelve times the medicinal dose was swallowed. Death must have occurred in a few minutes, and a merciful death too."

"A more merciful death than they deserved," exclaimed Stephen, "when one thinks of the misery and suffering that they inflicted on poor old uncle Jeffrey. I would sooner have had them hanged."

"It's better as it is, sir," said Miller. "There is no need, now, to raise any questions in detail at the inquest. The publicity of a trial for murder would have been very unpleasant for you. I wish Dr. Jervis had given the tip to me instead of to that confounded, over-cautious—but there, I mustn't run down my brother officers: and it's easy to be wise after the event.

"Good night, gentlemen. I suppose this accident disposes of your business as far as the will is concerned?"

"I suppose it does," agreed Mr. Winwood. "But I shall enter a caveat, all the same."

---

THE END
A SILENT WITNESS

I — THE BEGINNING OF THE MYSTERY

THE history upon which I am now embarking abounds in incidents so amazing that, as I look back on them, a something approaching to scepticism contends with my vivid recollections and makes me feel almost apologetic in laying them before the reader. Some of them indeed are so out of character with the workaday life in which they happened that they will appear almost incredible; but none is more fraught with mystery than the experience that befell me on a certain September night in the last year of my studentship and ushered in the rest of the astounding sequence.

It was past eleven o’clock when I let myself out of my lodgings at Gospel Oak; a dark night, cloudy and warm and rather inclined to rain. But, despite the rather unfavourable aspect of the weather, I turned my steps away from the town, and walking briskly up the Highgate Road, presently turned into Millfield Lane. This was my favourite walk and the pretty winding lane, meandering so pleasantly from Lower Highgate to the heights of Hampstead, was familiar to me under all its aspects.

On sweet summer mornings when the cuckoos called from the depths of Ken Wood, when the path was spangled with golden sunlight, and saucy squirrels played hide and seek in the shadows under the elms (though the place was within
earshot of Westminster and within sight of the dome of St. Paul’s); on winter days when the Heath wore its mantle of white and the ring of gliding steel came up from the skaters on the pond below; on August evenings, when I would come suddenly on sequestered lovers (to our mutual embarrassment) and hurry by with ill-feigned unconsciousness. I knew all its phases and loved them all. Even its name was delightful, carrying the mind back to those more rustic days when the wits foregathered at the Old Flask Tavern and John Constable tramped through this very lane with his colour-box slung over his shoulder.

It was very dark after I had passed the lamp at the entrance to the lane. Very silent and solitary too. Not a soul was stirring at this hour, for the last of the lovers had long since gone home and the place was little frequented even in the daytime. The elms brooded over the road, shrouding it in shadows of palpable black, and their leaves whispered secretly in the soft night breeze. But the darkness, the quiet and the solitude were restful after the long hours of study and the glare of the printed page, and I strolled on past the ghostly pond and the little thatched cottage, now wrapped in silence and darkness, with a certain wistful regret that I must soon look my last on them. For I had now passed all my examinations but the final “Fellowship,” and must soon be starting my professional career in earnest.

Presently a light rain began to fall. Foreseeing that I should have to curtail my walk, I stepped forward more briskly, and, passing between the posts, entered the narrowest and most secluded part of the lane. But now the rain suddenly increased, and a squall of wind drove it athwart the path. I drew up in the shelter of one of the tall oak fences by which the lane is here inclosed, and waited for the shower to pass. And as I stood with my back to the fence, pensively filling my pipe, I became for the first time sensible of the utter solitude of the place.

I looked about me and listened. The lane was darker here than elsewhere; a mere trench between the high fences. I could dimly see the posts at the entrance and a group of large elms over-shadowing them. In the other direction, where the lane doubled sharply upon itself, was absolute, inky blackness, save where a faint glimmer from the wet ground showed the corner of the fence and a projecting stump or tree-root jutting out from the corner and looking curiously like a human foot with the toes pointed upward.

The rain fell steadily with a soft, continuous murmur; the leaves of the elm-trees whispered together and answered the falling rain. The Scotch pines above my head stirred in the breeze with a sound like the surge of the distant sea. The voices of Nature, hushed and solemn, oblivious of man like the voices of the wilderness; and over all and through all, a profound, enveloping silence.

I drew up closer to the fence and shivered slightly, for the night was growing chill. It seemed a little lighter now in the narrow, trench-like lane; not that the sky was less murky but because the ground was now flooded with water. The posts stood out less vaguely against the background of wet road, and the odd-looking stump by the corner was almost distinct. And again it struck me as looking curiously like a foot—a booted foot with the toe pointing upwards.

The chime of a church clock sounded across the Heath, a human voice, this, penetrating the desolate silence. Then, after an interval, the solemn boom of Big Ben came up faintly from the sleeping city.

Midnight! and time for me to go home. It was of no use to wait for the rain to cease. This was no passing shower, but a steady drizzle that might last till morning. I re-lit my pipe, turned up my collar, and prepared to plunge into the rain. And as I stepped out, the queer-looking stump caught my eye once more. It was singularly like a foot; and it was odd, too, that I had never noticed it before in my many rambles through the lane.

A sudden, childish curiosity impelled me to see what it really was before I went, and the next moment I was striding sharply up the sodden path. Of course, I expected the illusion to vanish as I approached. But it did not. The resemblance increased as I drew nearer, and I hurried forward with something more than curiosity.

It was a foot! I realized it with a shock while I was some paces away; and, as I reached the corner, I came upon the body of a man lying in the sharp turn of the path; and the limp, sprawling posture, with one leg doubled under, told its tale at a glance.

I laid my finger on his wrist. It was clammy and cold, and not a vestige of a pulse could I detect. I struck a wax match and held it to his face. The eyes were wide-open and filmy, staring straight up into the reeking sky. The dilated pupils were insensitive to the glare of the match, the eyeballs insensitive to the touch of my finger.

Beyond all doubt the man was dead.

But how had he died? Had he simply fallen dead from some natural cause, or had he been murdered? There was no obvious injury, and no sign of blood. All that the momentary glimmer of the match showed was that his clothes were shiny with the wet; a condition that might easily, in the weak light, mask a considerable amount of bleeding.

When the match went out, I stood for some moments looking down on the prostrate figure as it lay with the rain beating down on the upturned face, professional interest contending with natural awe of the tragic presence. The former prompted me to ascertain without delay the cause of death; and, indeed, I was about to make a more thorough search for some injury or wound when something whispered to me that it is not well to be alone at midnight in a solitary place with a dead man—perchance a murdered man. Had there been any sign of life, my duty would have been clear. As it was, I must act for the best with a due regard to my own safety. And, reaching this conclusion, I turned away, with a last glance at the motionless figure and set forth homeward at a rapid pace.

As I turned out of Millfield Lane into Highgate Rise I perceived a policeman on the opposite side of the road standing
under a tree, where the light from a lamp fell on his shining tarpaulin cape. I crossed the road, and, as he civilly touched his helmet, I said: "I am afraid there is something wrong up the lane, Constable; I have just seen the body of a man lying on the pathway."

The constable woke up very completely. "Do you mean a dead man, sir?" he asked.

“Yes, he is undoubtedly dead,” I replied.

"Whereabouts did you see the body?” enquired the constable.

"In the narrow part of the lane, just by the stables of Mansfield House."

"That's some distance from here,” said the constable. “You had better come with me and report at the station. You're sure the man was dead, sir?"

“Yes, I have no doubt about it. I am a medical man,” I added, with some pride (I had been a medical man about three months, and the sensation was still a novel one).

"Oh, are you, sir?” said the officer, with a glance at my half-fledged countenance; “then, I suppose you examined the body?"

“Sufficiently to make sure that the man was dead, but I did not stay to ascertain the cause of death.”

As we talked, the constable swung along down the hill, without hurry, but at a pace that gave me very ample exercise, and I caught his eye from time to time, travelling over my person with obvious professional interest. When we had nearly reached the bottom of the hill, there appeared suddenly on the wet road ahead, a couple of figures in waterproof capes.

"Ha!” said the constable, “this is fortunate. Here is the inspector and the sergeant. That will save us the walk to the station.”

He accosted the officers as they approached and briefly related what I had told him. "You are sure the man was dead, sir?” said the inspector, scrutinizing me narrowly; “but, there, we needn't stay here to discuss that. You run down, Sergeant, and get a stretcher and bring it along as quickly as you can. I must trouble you, sir, to come with me and show me where the body is. Lend the gentleman your cape, sergeant; you can get another at the station.”

I accepted the stout cape thankfully, for the rain still fell with steady persistency, and set forth with the inspector to retrace my steps. And as we splashed along through the deep gloom of the lane, the officer ppled me with judicious questions. "How long did you think the man had been dead?” he asked.

"Not long, I should think. The body was still quite limp.”

“Did you meet or see anyone in the lane?”

"Not a soul,” I answered.

He considered my answers for some time, and then came the question that I had been expecting. "How came you to be in the lane at this time of night?”

"I was taking a walk,” I replied, "as I do nearly every night. I usually finish my evening's reading about eleven, and then I have some supper and take a walk before going to bed, and I take my walk most commonly in Millfield Lane. Some of your men must remember having met me.”

This explanation seemed to satisfy him for he pursued the subject no farther, and we trudged on for awhile in silence. At length, as we passed through the posts into the narrow part of the lane, the inspector asked: “We're nearly there, aren't we?”

"Yes,” I replied: “the body is lying in the bend just ahead.”

I peered into the darkness in search of the foot that had first attracted my notice, but was not yet able to distinguish it. Nor, to my surprise, could I make it out as we approached more nearly; and when we reached the corner, I stopped short in utter amazement.

The body had vanished! "What's the matter?” asked the inspector. "I thought this was the place you meant.”

"So it is,” I answered. "This is the place where the body was lying; here, across the path, with one foot projecting round the corner. Someone must have carried it away.”

The inspector looked at me sharply for a moment. "Well, it isn't here now,” said he, "and if it has been taken away, it must have been taken along towards Hampstead Lane. We'd better go and see.” Without waiting for a reply, he started off along the lane at a smart double and I followed.
We pursued the windings of the lane until we emerged into the road by the lodge gates, without discovering any traces of the missing corpse or meeting any person, and then we turned back and retraced our steps; and as we, once more, approached the crook in the lane where I had seen the body, we heard a quick, measured tramp. “Here comes the sergeant with the stretcher,” observed the inspector; “and he might have saved himself the trouble.” Once more the officer glanced at me sharply, and this time with unmistakable suspicion. “There’s no body here, Robson,” he said, as the sergeant came up, accompanied by two constables carrying a stretcher. “It seems to have disappeared.”

“Disappeared!” exclaimed the sergeant, bestowing on me a look of extreme disfavour; “that’s a rum go, sir. How could it have disappeared?”

“Ahh! that’s the question!” said the inspector. “And another question is, was it ever here? Are you prepared to make a sworn statement on the subject, sir?”

“Certainly I am,” I replied.

“Then,” said the inspector, “we will take it that there was a body here. Put down that stretcher. There is a gap in the fence farther along. We will get through there and search the meadow.”

The bearers stood the stretcher up against a tree and we all proceeded up the lane to the place where the observant inspector had noticed the opening in the fence. The gravel, though sodden with the wet, took but the faintest impressions of the feet that trod it, and, though the sergeant and the two constables threw the combined light of their lanterns on the ground, we were only able to make out very faintly the occasional traces of our own footsteps.

We scrutinized the break in the fence and the earth around with the utmost minuteness, but could detect no sign of anyone having passed through. The short turf of the meadow, on which I had seen sheep grazing in the daytime, was not calculated to yield traces of anyone passing over it, and no traces of any kind were discoverable. When we had searched the meadow thoroughly and without result, we came back into the lane and followed its devious course to the “kissing-gate” at the Hampstead Lane entrance. And still there was no sign of anything unusual. True, there were obscure foot-prints in the soft gravel by the turnstile, but they told us nothing; we could not even be sure that they had not been made by ourselves on our previous visit. In short, the net result of our investigations was that the body had vanished and left no trace. “It’s a very extraordinary affair,” said the inspector, in a tone of deep discontent, as we walked back. “The body of a full-grown man isn’t the sort of thing you can put in your pocket and stroll off with without being noticed, even at midnight. Are you perfectly sure the man was really dead and not in a faint?”

“I feel no doubt whatever that he was dead,” I replied.

“With all respect to you, sir,” said the sergeant, “I think you must be mistaken. I think the man must have been in a dead faint, and after you came away, the rain must have revived him so that he was able to get up and walk away.”

“I don’t think so,” said I, though with less conviction; for, after all, it was not absolutely impossible that I should have been mistaken, since I had discovered no mortal injury, and the sergeant’s suggestion was an eminently reasonable one.

“What sized man was he?” the inspector asked.

“That I couldn’t say,” I answered. “It is not easy to judge the height of a man when he is lying down and the light was excessively dim. But I should say he was not a tall man and rather slight in build.”

“Could you give us any description of him?”

“He was an elderly man, about sixty, I should think, and he appeared to be a clergyman or a priest, for he wore a Roman collar with a narrow, dark stripe up the front. He was clean shaven, and, I think, wore a clerical suit of black. A tall hat was lying on the ground close by and a walking-stick which looked like a malacca, but I couldn’t see it very well as he had fallen on it and most of it was hidden.”

“And you saw all this by the light of one wax match,” said the inspector. “You made pretty good use of your eyes, sir.”

“A man isn’t much use in my profession if he doesn’t,” I replied, rather stiffly.

“No, that’s true,” the inspector agreed. “Well, I must ask you to give us the full particulars at the station, and we shall see if anything fresh turns up. I’m sorry to keep you hanging about in the wet, but it can’t be helped.”

“Of course it can’t,” said I, and we trudged on in silence until we reached the station, which looked quite cheerful and homelike despite the grim blue lamp above the doorway. “Well, Doctor,” said the inspector, when he had read over my statement and I had affixed my signature, “if anything turns up, you’ll hear from us. But I doubt if we shall hear anything more of this. Dead or alive, the man seems to have vanished completely. Perhaps the sergeant’s right after all, and your dead man is at this moment comfortably tucked up in bed. Good-night, Doctor, and thank you for all the trouble you have taken.”

By the time that I reached my lodgings I was tired out and miserably cold; so cold that I was fain to brew myself a jorum of hot grog in my shaving pot. As a natural result, I fell fast asleep as soon as I got to bed and slept on until the autumn sunshine poured in through the slats of the Venetian blind.

II — THE FINDING OF THE RELIQUARY
I AWOKE on the following morning to a dim consciousness of something unusual, and, as my wits returned with the rapidity that is natural to the young and healthy, the surprising events of the previous night reconstituted themselves and once more set a-going the train of speculation. Vividly I saw with my mind’s eye the motionless figure lying limp and inert with the pitiless rain beating down on it; the fixed pupils, the insensitive eyeballs, the pulseless wrist and the sprawling posture. And again I saw the streaming path, void of its dreadful burden, the suspicious inspector, the incredulous sergeant; and the unanswerable questions formulated themselves anew.

Had I, after all, mistook a living man for a dead body? It was in the highest degree improbable, and yet it was not impossible. Or had the body been spirited away without leaving a trace? That also was highly improbable and yet, not absolutely impossible. The two contending improbabilities cancelled one another. Each was as unlikely as the other.

I turned the problem over again and again as I shaved and took my bath. I pondered upon it over a late and leisurely breakfast. But no conclusion emerged from these reflections. The man, living or dead, had been lying motionless in the lane all the time that I was sheltering, and probably for some time before. In the interval of my absence he had vanished. These were actual facts despite the open incredulity of the police. How he had come there, what had occasioned his death or insensibility, how he had disappeared and whither he had gone; were questions to which no answer seemed possible.

The fatigue of the previous night had left me somewhat indolent. There was no occasion for me to go to the hospital today. It was vacation time; the school was closed; the teaching staff were mostly away, and there was little doing in the wards. I decided to take a holiday and spend a quiet day rambling about the Heath, and, having formed this resolution, I filled my pipe, slipped a sketch-book into my pocket, and set forth.

Automatically my feet turned towards Millfield Lane. It was, as I have said, my usual walk, and on this morning, with last night’s recollections fresh in my mind, it was natural that I should take my way thither.

Very different was the aspect of the lane this morning from that which I had last looked upon. The gloom and desolation of the night had given place to the golden sunshine of a lovely autumn day. The elms, clothed already in the sober livery of the waning year, sighed with pensive reminiscence of the summer that was gone; the ponds repeated the warm blue of the sky; and the lane itself was a vista of flickering sunlight and cool, reposeful shadow.

The narrow continuation beyond the posts was wrapped as always, in a sombre shade, save where a gleam of yellow light streamed through a chink between the boards of the fence. I made my way straight to the spot where the body had lain and stooped over it, examining each pebble with the closest scrutiny. But not a trace remained. The hard, gravelly soil retained no impress either of the body or even of our footsteps; and as for the stain of blood, if there had ever been any, it would have been immediately removed by the falling rain, for the ground here had a quite appreciable slope and must have been covered last night by a considerable flowing stream.

I went on to the break in the fence—it was on the right-hand side of the path—and was at once discouraged by the aspect of the ground; for even our rough tramplings had left hardly a trace behind. After an aimless walk across the meadow, now occupied by a flock of sheep, I returned to the lane and walked slowly back past the place where I had sheltered from the rain. And then it was that I discovered the first hint of any clue to the mystery. I had retraced my steps some little distance past the spot where I had seen the body, when my eye was attracted by a darkish streak on the upper part of the high fence. I was quite faint and not at all noticeable on the weather-stained oak, but it chanced to catch my eye and I stopped to examine it. The fence which bore it was the opposite one to that in which the break occurred, and, since I had sheltered under it, the side of it which looked towards the lane must have been the lee side and thus less exposed to the rain.

I looked at the stain attentively. It extended from the top of the fence—which was about seven feet high—half-way to the ground, fading away gradually in all directions. The colour was a dull brown, and the appearance very much that of blood which had run down a wet surface. The board which bore the stain was traversed by a vertical crack near one edge, so that I was able to break off a small piece without much difficulty; and on examining that portion of the detached piece which had formed the side of the crack, I found it covered with a brownish-red, shiny substance, which I felt little doubt was dried blood, here protected by the crack and so less altered by contact with water.

Naturally, my next proceeding was to scrutinize very carefully the ground immediately beneath the stain. At the foot of the fence, a few tussocks of grass and clumps of undergrown weeds struggled for life in the deep shade. The latter certainly had, on close examination, the appearance of having been trodden on, though it was not very evident. But while I was considering an undoubted bruise on the stalk of a little dead-nettle, my eye caught the glint of some bright object among the leaves. I picked it out eagerly and held it up to look at it; and a very curious object it was; evidently an article of jewellery of some kind, but quite unlike anything I had ever seen before. It appeared to be a little elongated, gold case, with eight sides and terminating at either end in a blunt octagonal pyramid with a tiny ring at its apex, so that it seemed to have been part of a necklace. Of the eight flat sides, six were ornamented with sunk quatrefoils, four on each side; the other two sides were plain except that each had a row of letters engraved on it—A.M.D.G on one side, and S.V.D.P on the other. There was no hall-mark and, as far as I could see, no means of opening the little case. It seemed to have been suspended by a thin silk cord, a portion of which remained attached to one ring and showed a frayed end where it had broken or chafed through.

I wrapped the little object and the detached fragment of the fence in my handkerchief (for I had broken off the latter with the idea of testing it chemically for blood-pigment), and then resumed my investigations. The appearances suggested that the body had been lifted over the fence, and the question arose, What was on the other side? I listened attentively for a few seconds, and then, hearing no sound of footsteps, I grasped the top of the fence, gave a good spring and hoisting myself up,
sat astride and looked about me. The fence skirted the margin of a small lake much overgrown with weeds, amidst which I could see a couple of waterhens making off in alarm at my appearance, and beyond the lake rose the dark mass of Ken Wood. The ground between the fence and the lake was covered with high, reedy grass, which, immediately below my perch, bore very distinct impressions of feet, and an equally distinct set of tracks led away towards the wood—or from the wood to the fence; it was impossible to say which. But in any case, as there were no other tracks, it was certain that the person who made them had climbed over the fence. I dropped down on the grass and, having examined the ground attentively without discovering anything fresh, set off to follow the tracks.

For some distance they continued through high grass in which the impressions were very distinct: then they entered the wood, and here also, in the soft humus, lightly sprinkled with fallen leaves, the footprints were deep and easy to follow. But presently they struck a path, and, as they did not reappear on the farther side, it was evident that the unknown person had proceeded along it. The path was an old one, well made of hard gravel, and, where it passed through the deeper shade of the wood, was covered with velvety moss and grey-green lichen; on which I made out with some difficulty, the imprints of feet. But these were no longer distinct; they did not form a connected track; nor was it possible to distinguish them from the footprints of other persons who might have passed along the path. Even these I soon lost where I had halted irresolutely under a noble beech that rose from a fantastic coil of roots, and was considering how, if at all, I should next proceed, when, there appeared round a curve of the path a man in cord breeches and gaiters, evidently a keeper. He touched his hat civilly and ventured to enquire my business. "I am afraid I have no business here at all," I replied, for I did not think it expedient to tell him what had brought me into the wood. "I suppose I am trespassing."

"Well, sir, it is private property," he rejoined, "and being so near London we have to be rather particular. Perhaps you would like me to show you the way out on to the Heath."

I accepted his offer with many thanks for his courteous method of ejecting a trespasser, and we walked together through the beautiful woodland until the path terminated at a rustic turnstile. "That will be your way, sir," he said, as he let me out, indicating a track that led down to the Vale of Health.

I thanked him once more and then asked: "Is that a private house or does it belong to your estate?" I pointed to a small house or large cottage that stood within a fenced enclosure not far from the edge of the wood.

"That, sir," he replied, "was formerly a keeper's lodge. It is now let for a short term to an artist gentleman who is making some pictures of the Heath, but I expect it will be pulled down before long, as there is some talk of the County Council taking over that piece of land to add to the public grounds. Good-morning, sir," and the keeper, with a parting salute, turned back into the wood.

As I took my way homeward by the Highgate Ponds I meditated on the relation of my new discoveries to the mystery of the preceding night. It was a strange affair, and sinister withal.

That the tracks led from the lane to the wood and not from the wood to the lane, I felt firmly convinced; and equally so that the body of the unknown priest or clergyman had undoubtedly been spirited away. But whither had it been carried? Presumably to some sequestered spot in the wood. And what better hiding-place could be found? There, buried in the soft leaf-mould, it might lie undiscovered for centuries, covered only the deeper as each succeeding autumn shed its russet burden on the unknown grave.

And what, I wondered, was the connection between this mysterious tragedy and the queer little object that I had picked up? Perhaps there was none. Its presence at that particular spot might be nothing but a coincidence. I took it from my handkerchief and examined it afresh. It was a very curious object. As to its use or meaning, I could only form vague surmises. Perhaps it was some kind of locket, enclosing a wisp of hair; the hair perhaps of some dead child or wife or husband or even lover. It was impossible to say. Of course, this question could be settled by taking it to pieces, but I was loth to injure the pretty little bauble; besides it was not mine. In fact, I felt that I ought to notify publicly that I had found it, though the circumstances did not make this very advisable. But if it had any connection with the tragedy, what was the nature of that connection? Had it dropped from the dead man or from the murderer—as I assumed the other man to be? Either was equally possible, though the two possibilities had very different values.

Then the question arose as to what course I should pursue. Clearly it would be my duty to inform the police of the mark on the fence and the tracks through the grass. But should I hand over the mysterious trinket to them? It seemed the correct thing to do, and yet there might after all be no connection between it and the crime. In the end I left the matter to be decided by the attitude of the police themselves.

I called at the station on my way home and furnished the inspector with an account of my new discoveries; of which he made a careful note, assuring me that the affair should be looked into. But his manner expressed frank disbelief, and was even a trifle hostile; and his emphatic request that I would abstain from mentioning the matter to anyone left me in no doubt that he regarded both my communications as wild delusions if not as a deliberate hoax. Consequently, though I frequently reproached myself afterwards with the omission, I said nothing about the trinket, and when I left the station I carried it in my pocket.

No communication on the subject of this mysterious affair ever reached me from the police. That they did actually make some perfunctory investigations, I learned later, as will appear in this narrative. But they gave no publicity to the affair and they sought no further information from me. For my own part, I could, naturally, never forget so strange an experience; but time and the multitudinous interests of my opening life tended to push it farther into the background of memory, and
there it might have remained for ever had not subsequent events drawn it once more from its obscurity.

III — “WHO IS SYLVIA?”

THE winter session had commenced at the hospital, but at Hampstead the month of October had set in with something like a return to summer. It is true that the trees had lost something of their leafy opulence, and that here and there, amidst the sober green, patches of russet and gold had made their appearance, as if Nature’s colour-orchestra were tuning up for the final symphony. But, meanwhile, the sun shone brightly and with a genial heat, and if, day by day, he fell farther from the zenith, there was nothing to show it but the lengthening noonday shadows, the warmer blue of the sky and the more rosy tint of the clouds that sailed across it.

Other and more capable pens than mine have set forth the charm of autumn and the beauties of Hampstead—queen of suburbs of the world’s metropolis; therefore will I refrain, and only note, as relevant to the subject, the fact that on many a day, when the work of the hospital was in full swing, I might have been seeing truant very agreeably on the inexhaustible Heath or in the lanes and fields adjacent thereto. In truth, I was taking the final stage of my curriculum rather lazily, having worked hard enough in the earlier years, and being still too young by several months to be admitted to the fellowship of the College of Surgeons; promising myself that when the weather broke I would settle down in earnest to the winter’s work.

I have mentioned that Millfield Lane was one of my favourite haunts; indeed, from my lodgings, it was the most direct route to the Heath, and I passed along it almost daily; and never, now, without my thoughts turning back to that rainy night when I had found the dead—or unconscious—man lying across the narrow footway. One morning, as I passed the spot, it occurred to me to make a drawing of the place in my sketch-book, that I might have some memorial of that strange adventure. The pictorial possibilities of the lane just here were not great, but by taking my stand at the turn, on the very spot where I had seen the body lying, I was able to arrange a simple composition which was satisfactory enough.

I am no artist. A neat and intelligible drawing is the utmost that I can produce. But even this modest degree of achievement may be very useful, as I had discovered many a time in the wards or laboratories—indeed, I have often been surprised that the instructors of our youth attach such small value to the power of graphic expression; and it came in usefully now, though in a way that was unforeseen and not fully appreciated at the moment. I had dealt adequately with the fence, the posts, the tree-trunks and other well-defined forms and was beginning a less successful attack on the foliage, when I heard a light, quick step approaching from Hampstead Lane. Intuition—if there is such a thing—fitted the foot-step with a personality, and, for once in a way, was right; as the newcomer reached the sharp bend of the path, I saw a girl of about my own age, simply and serviceably dressed and carrying a pochade box and a small camp-stool. She was not an entire stranger to me. I had met her often in the lane and on the Heath—so often in fact that we had developed that profound unconsciousness of one another’s existence that almost amounts to recognition—and had wondered vaguely who she was and what sort of work she did on the panels in that mysterious box.

As I drew back to make way for her, she brushed past, with a single, quick, inquisitive glance at my sketchbook, and went on her way, looking very much alive and full of business. I watched her as she tripped down the lane and passed between the posts out into the sunlight beyond, to vanish behind the trunks of the elms; then I returned to my sketch and my struggles to express foliage with a touch somewhat less suggestive of a birch-broom.

When I had finished my drawing, I sauntered on rather aimlessly, speculating for the hundredth time on the meaning of those discoveries of mine in this very lane. Was it possible that the man whom I had seen was not dead, but merely insensible? I could not believe it. The whole set of circumstances—the aspect of the body, the blood-stain on the fence, the tracks through the high grass and the mysterious gold trinket—were opposed to any such belief. Yet, on the other hand, one would think that a man could not disappear unnoticed. This was no tramp or nameless vagrant. He was a clergyman or a priest, a man who would be known to a great number of persons and whose disappearance must surely be observed at once and be the occasion of very stringent enquiries. But no enquiries had apparently been made. I had seen no notice in the papers of any missing cleric, and clearly the police had heard nothing or they would have looked me up. The whole affair was enveloped in the profoundest mystery. Dead or alive, the man had vanished utterly; and whether he was dead or alive, the mystery was equally beyond solution.

These reflections brought me, almost unconsciously, to another of my favourite walks; the pretty footpath from the Heath to Temple Fortune. I had crossed the stile and stepped off the path to survey the pleasant scene, when my eye was attracted by a number of streaks of alien colour on the leaves of a burdock. Stooping down, I perceived that they were smears of oil-paint, and inferred that someone had cleaned a palette on the herbage; an inference that was confirmed a moment later by what looked like the handle of a brush projecting from a clump of nettles. When I drew it out, however, it proved to be not a brush, but a very curious knife with a blade shaped like a diminutive and attenuated trowel; evidently a painting-knife and also evidently home-made, at least in part, for the tang had been thrust into a short, stout brush-handle and secured with a whipping of waxed thread. I dropped it into my outside breast pocket and went on my way, wondering if by chance it might have been dropped by my fair acquaintance; and the thought was still in my mind when its object hove in sight. Turning a bend in the path, I came on her quite suddenly, perched on her little camp-stool in the shadow of the hedge, with the open sketching-book on her knees, working away with an industry and concentration that seemed to rebuke my own idleness. Indeed, she was so much engrossed with her occupation that she did not notice me until I stepped off the path and approached with the knife in my hand. “I wonder,” said I, holding it out and raising my cap, “if this
happens to be your property. I picked it up just now among the nettles near the barn.”

She took the knife from me and looked at it inquisitively. “No,” she replied, “it isn’t mine, but I think I know whose it is. I suspect it belongs to an artist who has been doing a good deal of work about the Heath. You may have seen him.”

“T have seen several artists working about here during the summer. What was this one like?”

“Well,” she answered with a smile, “he was like an artist. Very much like. Quite the orthodox get up. Wide brimmed hat, rather long hair and a ragged beard. And he wore sketching-spectacles—half-moon-shaped things, you know—and kid gloves—which were not quite so orthodox.”

“Very inconvenient, I should think.”

“Not so very. I work in gloves myself in the cold weather or if the midges are very troublesome. You soon get used to the feel of them; and the man I am speaking of wouldn’t find them in the way at all because he works almost entirely with painting-knives. That is what made me think that this knife was probably his. He had several, I know, and very skilfully he used them, too.”

“You have seen his work, then?”

“Well,” she admitted, “I’m afraid I descended once or twice to play the ‘snooper’. You see, his method of handling interested me.”

“May I ask what a ‘snooper’ is?” I enquired.

“Don’t you know? It’s a student’s slang name for the kind of person who makes some transparent pretext for coming off the path and passing behind you to get a look at your picture by false pretences.”

For an instant there flashed into my mind the suspicion that she was administering a quiet “backhander”, and I rejoined hastily: “I hope you are not including me in the genus ‘snooper’.”

She laughed softly. “It did sound rather like it. But I’ll give you the benefit of the doubt in consideration of your finding the knife—which you had better keep in trust for the owner.”

“Won’t you keep it? You know the probable owner by sight and I don’t; and meanwhile you might experiment with it yourself.”

“Very well,” she replied, dropping it into her brush-tray, “I’ll keep it for the present at any rate.”

There was a brief pause, and then I ventured to remark, “That looks a very promising sketch of yours. And how well the subject comes.”

“I’m glad you like it,” she replied, quite simply, viewing her work with her head on one side. “I want it to turn out well, because it’s a commission, and commissions for small-oil paintings are rare and precious.”

“Do you find small oil pictures very difficult to dispose of?” I asked.

“Not difficult. Impossible, as a rule. But I don’t try now. I copy my oil sketches in water-colour, with modifications to suit the market.”

Again there was a pause; and, as her brush wandered towards the palette, it occurred to me that I had stayed as long as good manners permitted. Accordingly, I raised my cap, and, having expressed the hope that I had not greatly hindered her, prepared to move away. “Oh, not at all,” she answered; “and thank you for the knife, though it isn’t mine—or, at any rate, wasn’t. Good-morning.”

With this and a pleasant smile and a little nod, she dismissed me; and once more I went my idle and meditative way.

It had been quite a pleasant little adventure. There is always something rather interesting in making the acquaintance of a person whom one has known some time by sight but who is otherwise an unknown quantity. The voice, the manner, and the little revelations of character, which confirm or contradict previous impressions, are watched with interest as they develop themselves and fill in, one by one, the blank spaces of the total personality. I had, as I have said, often met this industrious maiden in my walks and had formed the opinion that she looked a rather nice girl; an opinion that was probably influenced by her unusual good looks and graceful carriage. And a rather nice girl she had turned out to be; very dignified and self-possessed, but quite simple and frank—though, to be sure, her gracious reception of me had probably been due to my sketch-book; she had taken me for a kindred spirit. She had a pleasant voice and a faultless accent, with just a hint of the fine lady in her manner; but I liked her none the less for that. And her name was a pretty name, too, if I had guessed it correctly; for, on the inside of the lid of her box, which was partly uncovered by the upright panel, I had read the letters “Syl”. The panel hid the rest, but the name could hardly be other than Sylvia; and what more charming and appropriate name could be bestowed upon a comely young lady who spent her days amidst the woods and fields of my beloved Hampstead?

Regaling myself with this somewhat small beer, I sauntered on along the grassy lane, between hedgerows that in the summer had been spangled with wild roses and that were now gay with the big, oval berries, sleek and glossy and scarlet, like overgrown beads of red coral; away, across the fields to Golder’s Green and thence by Millfield Lane, back to my lodgings at Gospel Oak, and to my landlady, Mrs. Blunt, who had a few plaintive words to say respecting the disastrous effects of unpunctuality—and the resulting prolonged heat—on mutton cutlets and fried potatoes.
It had been an idle morning and apparently void of significant events; but yet, when I look back on it, I see a definite thread of causation running through its simple happenings, and I realize that, all unthinking, I had strung on one more bead to the chaplet of my destiny.

IV — SEPTIMUS MADDOCK, DECEASED

IT was getting well on into November when I strolled one afternoon into the hospital museum, not with any specific object but rather vaguely in search of something to do. During the last few days I had developed a slight revival of industry—which had coincided, oddly enough, with a marked deterioration of the weather—and, pathology being my weakest point, the museum had seemed to call me (though not very loudly, I fear) to browse amongst its multitudinous jars and dry preparations.

There was only one person in the great room; but he was a very important person; being none other than our lecturer on Medical Jurisprudence, Dr. John Thorndyke. He was seated at a small table whereon was set out a collection of jars and a number of large photographs, of which he appeared to be making a catalogue; but intent as he was on his occupation, he looked up as I entered and greeted me with a genial smile. "What do you think of my little collection, Jardine?" he asked, as I approached deferentially. Before replying, I ran a vaguely enquiring eye over the group of objects on the table and was mighty little enlightened thereby. It was certainly a queer collection. There was a flat jar which contained a series of five differently-coloured mice, another with a similar series of three rats, a human foot, a hand—manifestly deformed—a series of four fowls' heads and a number of photographs of plants. "It looks," I replied, at length, "like what the auctioneers would call a miscellaneous lot."

"Yes," Dr. Thorndyke agreed, "it is a miscellaneous collection in a sense. But there is a connecting idea. It illustrates certain phenomena of inheritance which were discovered and described by Mendel."

"I daresay not," said Thorndyke, "though he published his results before you were born. But the importance of his discoveries is only now beginning to be appreciated."

"I suppose," said I, "the subject is too large and complex for a short explanation to be possible."

"The subject is a large one, of course," he replied; "but, put in a nutshell, Mendel's great discovery amounts to this; that, whereas certain characters are inherited only partially and fade off gradually in successive generations, certain other characters are inherited completely and pass unchanged from generation to generation. To take a couple of illustrative cases: If a negro marries a European, the offspring are mulattoes—forms intermediate between the negro and the European. If a mulatto marries a European, the offspring are quadroons—another intermediate form; and the next generation gives us the octeroon—intermediate again between the quadroon and the European. And so, from generation to generation, the negro character gradually fades away and finally disappears. But there are other characters which are inherited entire or not at all, and such characters appear in pairs which are positive or negative to one another. Sex is a case in point. A male marries a female and the offspring are either male or female, never intermediate. The sex-character of only one parent is inherited, and it is inherited completely. The characters of maleness or femaleness pass down unchanged through the ages with no tendency to diminish or to shade off into one another. That is a case of Mendelian inheritance."

I ran my eyes over the collection and they presently lighted on the rather abnormal-looking foot, hanging, white and shrivelled in the clear spirit. I lifted the jar from the table and then, noticing for the first time, that the foot had a supernumerary toe, I enquired what point the specimen illustrated. "That six-toed foot," Thorndyke replied, "is an example of a deformity that is transmitted unchanged for an indefinite number of generations. This brachydaectyly hand is another instance. The brachydactyly reappears in the offspring either completely or not at all. There are no intermediate conditions."

He picked up the jar, and, having wiped the glass with a duster, exhibited the hand which was suspended within; and a strange-looking hand it was; broad and stumpy, like the hand of a mole. "There seem to be only two joints to each finger," I said. "Yes. The fingers are all thumbs, and the thumb is only a demi-thumb. A joint is suppressed in each digit."

"It must make the hand very clumsy and useless," I remarked.

"So one would think. It isn't exactly the type of hand for a Liszt or a Paganini. And yet we mustn't assume too much. I once saw an armless man copying pictures in the Luxembourg, and copying them very well, too. He held his brush with his toes; and he was so handy with his feet that he not only painted really dextrously, but managed to take his hat off to a lady with quite a fine flourish. So you see, Jardine, it is not the hand that matters, but rather the brain that actuates it. A very indifferent hand will serve if the motor centres are of the right sort."

He replaced the jar on the table, and then, after a short pause, turning quickly to me, he asked: "What are you doing at present, Jardine?"

"Principally idling, sir," I replied.

"And not a bad thing to do either," he rejoined with a smile, "if you do it thoroughly and don't keep it up too long. How would you like to take charge of a practice for a week or so?"
“I don’t know that I should particularly care to, sir,” I answered.

“Why not? It would be a useful experience and would bring you useful knowledge; knowledge that you have got to acquire sooner or later. Hospital conditions, you know, are not normal conditions.

“General practice is normal medical practice, and the sooner you get to know the conditions of the great world the better for you. If you stick to the wards too long you will get to be like the nurses; who seem to think that,

“All the world’s a hospital, And men and women only patients.”

I reflected for a few moments. It was perfectly true. I was a qualified medical man, and yet of the ordinary routine of private practice I had not the faintest knowledge. To me, all sick people were either in-patients or out-patients. “Had you any particular practice in your mind, sir?” I asked.

“Yes. I met one of our old students just now. He is at his wit’s end to find a locum tenens. He has to go away to-night or to-morrow morning, but he can’t get anyone to look after his work. Won’t you go to his relief? It’s an easy practice, I believe.”

I turned the question over in my mind and finally decided to try the venture. “That’s right,” said Dr. Thorndyke. “You’ll help a professional brother, at any rate, and pick up a little experience. Our friend’s name is Batson, and he lives in Jacob Street, Hampstead Road. I’ll write it down.”

He handed me a slip of paper with the address on it and wished me success; and I started at once from the hospital, already quite elated, as is the way of the youthful, at the prospect of a new experience.

Dr. Batson’s establishment in Jacob Street was modest to the verge of dinginess. But Jacob Street, itself, was dingy, and so was the immediate neighbourhood; a district of tall, grimy houses that might easily have seen better days. However, Dr. Batson himself was spruce enough and in excellent spirits at my arrival, as was evident when he bounced into the room with a jovial greeting, bringing in with him a faint aroma of sherry. “Delighted to see you, Doctor!” he exclaimed in his large brisk voice (that “doctor” was a diplomatic hit on his part. They don’t call newly-qualified men “doctor” at the hospital.) “I met Thorndyke this morning and told him of my predicament. A busy man is the Great Unraveller, but never too busy to do a kindness to his friends. Can you take over to-night?”

“I could,” said I.

“Then do. I want particularly to be off by the eight-thirty from Liverpool Street. Drop in and have some grub about six-thirty; I shall have polished off the day’s work by then and you’ll just come in for the evening consultations.”

“Are there any cases that you will want me to see with you?” I asked.

“Oh, no,” Batson replied, rather airily I thought. “They’re all plain sailing. There’s a typhoid, he’s doing well—fourth week; and there’s a tonsilitis and a psoas abscess—that’s rather tedious, but still, it’s improving—and an old woman with a liver. You won’t have any difficulty with them. There’s only one queer case; a heart.”

“Valvular?” I asked.

“No, not valvular; I can tell you that much. I know what it isn’t, but I’m hanged if I know what it is. Chappie complains of pain, shortness of breath, faintness and so on, but I can’t find anything to account for it. Heart-sounds all right, pulse quite good, no dropy, no nothing. Seems like malingering, but I don’t see why he should mangle. I think I’ll get you to drop in this evening and have a look at him.”

“Are you keeping him in bed?” I asked.

“Yes,” said Batson, “I am now; not that his general condition seems to demand it. But he has had one or two fainting attacks, and yesterday he must needs fall down flop in his bedroom when there was nobody there, and, by way of making things more comfortable, he drops his medicine bottle and falls on the fragments. He might have killed himself, you know,” Batson added in an aggrieved tone; “as it was, a long splinter from the bottom of the bottle stuck into his back and made quite a deep little wound. So I’ve kept him in bed since, out of harm’s way; and there he is, deuced sorry for himself but, as far as I can make out, without a single tangible symptom.”

“No facial signs? Nothing unusual in his colour or expression.”

Batson laughed and tapped his gold-rimmed spectacles. “Ah! There you are! When you’ve got minus five D and some irregular astigmatism and a pair of glasses that don’t correct it, all human beings look pretty much alike; a trifle sketchy, don’t you know. I didn’t see anything unusual in his face, but you might. Time will show. Now you cut along and fetch your traps, and I’ll skip round and polish off the sufferers.”

He launched me into the outer greyness of Jacob Street and bounced off in the direction of Cumberland Market, leaving me to pursue my way to my lodgings at Gospel Oak.

As I threaded the teeming streets of Camden Town I meditated on the new experience that was opening to me, and, with youthful egotism, I already saw myself making a brilliant diagnosis of an obscure heart case. Also I reflected with some surprise on the calm view that Batson took of his defective eyesight. A certain type of painter, as I had observed, finds in semi-blindness a valuable gift which helps him to eliminate trivial detail and to impart a noble breadth of effect to his pictures; but to a doctor no such self-delusion would seem possible. Visual acuteness is the most precious item in his
equipment.

I crammed into a large Gladstone bag the bare necessaries for a week's stay, together with a few indispensable instruments, and then mounted the jingling horse-tram of those pre-electric days, which, in due course, deposited me at the end of Jacob Street, Hampstead Road. Dr. Batson had not returned from his round when I arrived, but a few minutes later he burst into the surgery humming an air from the Mikado. "Ha! Here you are then! Punctual to the minute!" He hung his hat on a peg, laid his visiting-list on the desk of the dispensing counter and began to compound medicine with the speed of a prestidigitateur, talking volubly all the time. "That's for the old woman with the liver, Mrs. Mudge, Cumberland Market, you'll see her prescription in the day book. S'pose you don't know how to wrap up a bottle of medicine. Better watch me. This is the way." He slapped the bottle down on a square of cut paper, gave a few dextrous twiddles of his fingers and held out for my inspection a little white parcel like the mummy-case of a deceased medicine bottle. "It's quite easy when you've had a little practice," he said, deftly sticking the ends down with sealing-wax, "but you'll make a frightful mucker of it at first." Which prophecy was duly fulfilled that very evening.

"What time had I better see that heart case?" I asked.

"Oh, you won't have to see it at all. Man's dead. Message left half an hour go. Pity, isn't it? I should have liked to hear what you thought of him. Must have been fatty heart. I'll write out the certificate while I think of it. Maggie! Where's that note that Mrs. Samway left?"

The question was roared out vaguely through the open door to a servant of unknown whereabouts, and resulted in the appearance of a somewhat scraggy housemaid bearing an opened note. "Here we are," said Batson, snatching the note out of its envelope and opening the book of certificate forms; "Septimus Maddock was the chappie's name, age fifty-one, address 23, Gayton Street, cause of death—that's just what I should like to know—primary cause, secondary causes—I wish these infernal government clerks had got something better to do than fill printed forms with silly conundrums. I shall put "Morbus Cordis"; that ought to be enough for them. Mrs. Samway—that's his landlady, you know—will probably call for the certificate during the evening."

"Aren't you going to inspect the body?" I asked.

"Lord, no! Why should I! It isn't necessary, you know. I'm not an undertaker. Wish I was. Dead people good deal more profitable than live ones."

"But surely," I exclaimed, "the death ought to be verified. Why the man may not be dead at all."

"I know," said Batson, scribbling away like a minor poet, "but that isn't my business. Business of the Law. Law wastes your time with a heap of silly questions that don't matter and leaves out the question that does. Asks exact time when I last saw him alive, which doesn't matter a hang, and doesn't ask whether I saw him dead. Bumble was right. Law's an ass."

"But still," I persisted, "leaving the legal requirements out of consideration, oughtn't you for your own sake, and as a public duty, to verify the death? Supposing the man were not really dead?"

"That would be awkward for him," said Batson, "and awkward for me, too, if he came to life before they buried him. But it doesn't really happen in real life. Premature burial only occurs in novels."

His easy-going confidence jarred on me considerably. How could he, or anyone else, know what happened? "I don't see how you arrive at that," I objected. "It could only be proved by wholesale disinterment. And the fact remains that, if you don't verify a reported death you have no security against premature burial—or even cremation."

Batson started up and stared at me, his wide-open, pale-blue eyes looking ridiculously small through his deep, concave spectacles. "By Jove!" he exclaimed, "I am glad you mentioned that—about cremation, I mean, because that is what will probably happen. I witnessed the chappie's will a couple of days ago, and I remember now that one of the clauses stipulated that his body should be cremated. So I shall have to verify the death for the purpose of the cremation certificate. We'd better pop round and see him at once."

With characteristic impulsiveness he sprang to his feet, snatched his hat from its peg, and started forth, leaving me to follow. "Beastly nuisance, these special regulations," said Batson, as he ambled briskly up the street. "Give a lot of trouble and cause a lot of delay."

"Isn't the ordinary death certificate sufficient in a case of cremation?" I asked.

"For purposes of law it is, though there is some talk of new legislation on the subject, but the Company are a law unto themselves. They have made the most infernally stringent regulations, and, as there is no crematorium near London excepting the one at Woking, you have to abide by their rules. And that reminds me—" here Batson halted and scowled at me ferociously through his spectacles.

"Reminds you?" I repeated.

"That they require a second death certificate, signed by a man with certain special qualifications." He stood awhile frowning and muttering under his breath and then suddenly turned and bounced off in a new direction. "Going to catch the other chappie and take him with us," he explained, as he darted out into the Hampstead Road. "Be off my mind then. A fellow named O'Connor, Assistant Physician to the North London Hospital. He'll do if we can catch him at home. If not, you'll have to manage him."
Batson looked at his watch—holding it within four inches of his nose—and broke into a trot as we entered a quiet square. Halfway up he halted at a door which bore a modest brass plate inscribed “Dr. O’Connor,” and seizing the bell-knob, worked it vigorously in and out as if it were the handle of an air-pump. “Doctor in?” he demanded briskly of a startled housemaid; and, without waiting for an answer, he darted into the hall, down the whole length of which he staggered, executing a sort of sword-dance, having caught his toe on an unobserved door-mat.

The doctor was in and he shortly appeared in evening dress with an overcoat on his arm, and apparently in as great a hurry as Batson himself. “Won’t it do to-morrow?” he asked, when Batson had explained his difficulties and the service required.

“Myself quite well,” said Batson persuasively; “won’t take a minute and then I can go away in peace.”

“Very well,” said O’Connor, wriggling into his overcoat. “You go along and I’ll follow in a few minutes. I’ve got to look in on a patient on my way up west, and I shall be late for my appointment as it is. Write the address on my card, here.”

He held out a card to my principal, and when the latter had scribbled the address on it, he bustled out and vanished up the square. Batson followed at the same headlong speed, and, again overlooking the mat, came out on the pavement like an ill-started sprinter.

Gayton Street, at which we shortly arrived, was a grey and dingy side-street exactly like a score of others in the same locality, and Number 23 differed from the rest of the seedy-looking houses in no respect save that it was perhaps a shade more dingy. The door was opened in answer to Batson’s indecorously brisk knock by a woman—or perhaps I should say a lady—who at once admitted us and to whom Batson began, without preface, to explain the situation. “I got your note, Mrs. Samway. Was going to bring my friend, here, round to see the patient. Very unfortunate affair. Very sad. Unexpected, too. Didn’t seem particularly bad yesterday. What time did it happen?”

“I can’t say exactly,” was the reply. “He seemed quite comfortable when I looked in on him the last thing at night, but when I went in about seven this morning he was dead. I should have let you know sooner, but I was expecting you to call.”

“H’m, yes,” said Batson, “very unfortunate. By the way, Mr. Maddock desired that his remains should be cremated, I think?"

“Yes, so my husband tells me. He is the executor of the will, you remember, in the absence of any relatives. All Mr. Maddock’s relations seem to be in America.”

“Have you got the certificate forms?” asked Batson.

“Yes. My husband got all the papers from the undertaker this afternoon.”

“Very well, Mrs. Samway, then we’ll just take a look at the body—have to certify that I’ve seen it, you know.”

Mrs. Samway ushered us into a sitting-room where she had apparently been working alone, for an unfinished mourning garment of some kind lay on the table. Leaving us here, she went away and presently returned with a sheaf of papers and a lighted candle, when we rose and followed her to a back room on the ground floor. It was a smallish room, sparsely furnished, with heavy curtains drawn across the window, and by one wall a bed, on which was a motionless figure covered by a sheet.

Our conductress stood the candlestick on a table by the bed and stepped back to make way for Batson, who drew back the sheet and looked down on the body in his peering, near-sighted fashion. The deceased seemed to be a rather frail-looking man of about fifty, but, beyond the fact that he was clean shaven, I could form very little idea of his appearance, since, in addition to the usual bandage under the chin to close the mouth, a tape had been carried round the head to secure a couple of pads of cotton wool over the eyes to keep the eyelids closed.

As Batson applied his stethoscope to the chest of the dead man, I glanced at our hostess not without interest. Mrs. Samway was an unusual-looking woman, and I thought her decidedly handsome though not attractive to me personally. She seemed to be about thirty, rather over the medium height and of fine Junoesque proportions, with a small head very gracefully set on the shoulders. Her jet-black hair, formally parted in the middle, was brought down either side of the forehead in wavy, but very smooth, masses and gathered behind in a neat, precisely-plaited coil. The general effect reminded me of the so-called “Clytie,” having the same reposefulness though not the gentleness and softness of that lovely head. But the most remarkable feature of this woman was the colour of her eyes, which were of the palest grey or hazel that I have ever seen; so pale in fact that they told as spots of light, like the eyes of some lemurs or those of a cat seen in the dusk; a peculiarity that imparted a curiously intense and penetrating quality to her glance.

I had just noted these particulars when Batson, having finished his examination, held out the stethoscope to me. “May as well listen, as you’re here,” said he, and, turning to our hostess, he added: “Let us see those papers, Mrs. Samway.”

As he stepped over to the table, I took his place on a chair by the bedside and proceeded to make an examination. It was, of course, only a matter of form, for the man was obviously dead; but having insisted so strongly on the necessity of verifying the death I had to make a show of becoming sceptic. Accordingly I tested, both by touch and with the stethoscope, the region of the heart. Needless to say, no heart-sounds were to be distinguished, nor any signs of pulsation; indeed, the very first touch of my hand on the chilly surface of the chest was enough to banish any doubt. No living body could be so entirely destitute of animal heat.

I laid down the stethoscope and looked reflectively at the dead man, lying so still and rigid, with his bandaged jaws and
blindfolded eyes, and speculated vaguely on his personality when alive and on the hidden disease that had so suddenly cut him off from the land of the living; and insensibly—by habit I suppose—my fingers strayed to his clammy, pulseless wrist. The sleeve of his night-shirt was excessively long, almost covering the fingers, and I had to turn it back to reach the spot where the pulse would normally be felt. In doing this, I moved the dead hand slightly and then became aware of a well-marked rigor mortis, or death stiffening in the arm of the corpse; a condition which I ought to have observed sooner.

At this moment, happening to look up, I caught the eye of Mrs. Samway fixed on me with a very remarkable expression. She was leaning over Batson as he filled up the voluminous certificate, but had evidently been watching me, and the expression of her pale, catlike eyes left no doubt in my mind that she strongly resented my proceedings. In some confusion, and accusing myself of some failure in outward decorum, I hastily drew down the dead man’s sleeve and rose from the bedside. “You noticed, I suppose,” said I, “that there is fairly well-marked rigor mortis?”

“I didn’t,” said Batson, “but if you did it’ll do as well. Better mention it to O’Connor when he comes. He ought to be here now.”

“What is O’Connor?” asked Mrs. Samway.

“Oh, he is the doctor who is going to sign the confirmatory certificate.”

Again a gleam of unmistakable anger flashed from our hostess’ eyes as she demanded: “Then who is this gentleman?”

“This is Dr. Humphrey Jardine,” said Batson. “Pologize for not introducing him before. Dr. Jardine is taking my practice while I’m away. I’m off to-night for about a week.”

Mrs. Samway withered me with a baleful glance of her singular eyes, and remarked stiffly: “I don’t quite see why you brought him here.”

She turned her back on me, and I decided that Mrs. Samway was somewhat of a Tartar; though, to be sure, my presence was a distinct intrusion. I was about to beat a retreat when Batson’s apologies were interrupted by a noisy rat-tat at the street door. “Ah, here’s O’Connor,” said Batson, and, as Mrs. Samway went out to open the door, he added: “Seem to have put our foot in it, though I don’t see why she need have been so peppery about it. And O’Connor needn’t have banged at the door like that, with death in the house. He’ll get into trouble if he doesn’t look out.”

Our colleague’s manner was certainly not ingratiating. He burst into the room with his watch in his hand protesting that he was three minutes late already, and, he added, “if there is one thing that I detest, it’s being late at dinner. Got the forms?”

“Yes,” replied Batson, “here they are. That’s my certificate on the front page. Yours is overleaf.”

Dr. O’Connor glanced rapidly down the long table of questions, muttering discontentedly. “Made careful external examination? H’m. ‘Have you made a post mortem?’ No, of course, I haven’t. What an infernal rigmarole! If cremation ever becomes general there’ll be no time for anything but funerals. Who nursed the deceased?”

“I did,” said Mrs. Samway. “My husband relieved me occasionally, but nearly all the nursing was done by me. My name is Letitia Samway.”

“Was the deceased a relation of yours?”

“No; only a friend. He lived with us for a time in Paris and came to England with us.”

“What was his occupation?”

“He was nominally a dealer in works of art. Actually he was a man of independent means.”

“Have you any pecuniary interest in his death?”

“He has left us about seventy pounds. My husband is the executor of the will.”

“I see. Well, I’d better have a few words with you outside, Batson, before I make my examination. It’s all a confounded farce, but we must go through the proper forms, I suppose.”

“Yes, by all means,” said Batson. “Don’t leave any loop-hole for queries or objections.” He rose and accompanied O’Connor out into the hall, whence the sound of hurried muttering came faintly through the door.

As soon as we were alone, I endeavoured to make my peace with Mrs. Samway by offering apologies for my intrusion into the house of mourning. “For the time being,” I concluded, “I am Dr. Batson’s assistant, and, as he seemed to wish me to come with him, I came without considering that my presence might be objected to. I hope you will forgive me.”

My humility appeared entirely to appease her; in a moment her stiff and forbidding manner melted into one that was quite gracious and she rewarded me with a smile that made her face really charming. “Of course,” she said, “it was silly of me to be so cantankerous and rude, too. But it did look a little callous, you know, when I saw you playing with his poor, dead hand; so you must make allowances.” She smiled again, very prettily, and at this moment my two colleagues re-entered the room. “Now, then,” said O’Connor, “let us see the body and then we shall have finished.”

He strode over to the bed, and, turning back the sheet, made a rapid inspection of the corpse. “Ridiculous farce,” he muttered. “Looks all right. Would, in any case though. Parcel of red tape. What’s the good of looking at the outside of a body? Post mortem’s the only thing that’s any use. What’s this piece of tape-plaster on the back?”
“Oh,” said Batson, “that is a little cut that he made by falling on a broken bottle. I stuck the plaster on because you can’t get a bandage to hold satisfactorily on the back. Besides, he didn’t want a bandage constricting his chest.”

“No, of course not,” O’Connor agreed. “Well, it’s all regular and straightforward. Give me the form and I’ll fill it up and sign it.” He seated himself at the table, looked once more at his watch, groaned aloud and began to write furiously. “The Egyptians weren’t such bad judges, after all,” he remarked as he laid down the pen and rose from his chair. “Embalmings may have been troublesome, but when it was done it was done for good. The deceased was always accessible for reference in case of a dispute, and all this red tape was saved. Good-night, Mrs. Samway.” He buttoned up his coat and bustled off, and a minute or so later we followed.

“By jove!” exclaimed Batson, “this business has upset my arrangements finely. I shall have to buck up if I’m going to catch my train. There’s all the medicine to be made up and sent out yet, to say nothing of dinner. But dinner will have to wait until the business is all settled up. Don’t you hurry, Jardine. I’ll just run on and get to work.” He broke into an elephantine trot and soon disappeared round a corner, and, when I arrived at the surgery, I found him posting up the day-book with the speed of a parliamentary reporter.

Batson’s dexterity with medicine-bottles and wrapping paper filled me with admiration and despair. I made a futile effort to assist, but in the end, he snatched away the crumpled paper in which I was struggling to ensathe a bottle, dropped it into the waste-paper basket, snatched up a clean sheet and—slap! bang! in the twinkling of an eye, he had transformed the bottle into a neat, little white parcel as a conjuror changes a cocked hat into a guinea-pig. It was wonderful.

My host was a cheerful soul, but restless. He got up from the table no less than six times to pack some article that he had just thought of; and after dinner, when I accompanied him to his bedroom, I saw him empty his trunk no less than three times to make sure that he had forgotten nothing. He quite worried me. Your over-quick man is apt to wear out other people’s nerves more than his own. I began to look anxiously at the clock, and felt a real relief when the maid came to announce that the cab was at the door. “Well, good-bye, Doctor!” he sang out cheerily, shaking my hand through the open window of the cab. “Don’t forget to keep the stock-bottles filled up. Saves a world of trouble. And don’t take too long on your rounds. Ta! ta!”

The cab rattled away and I went back into the house, a full-blown general practitioner.

V — THE LETHAL CHAMBER

A YOUNG and newly-qualified doctor, emerging for the first time into private practice, is apt to be somewhat surprised and disconcerted by the new conditions. Accustomed to the exclusively professional and scientific atmosphere of the hospital, the sudden appearance of the personal element as the predominant factor rather takes him aback. He finds himself in a new and unexpected position. No longer a mere, impersonal official, a portion of a great machine, he is the paid servant of his patients: who are not always above letting him feel the conditions of his service. The hospital patient, drilled into a certain respectful submissiveness by the discipline of the wards, has given place to an employer, usually critical, sometimes truculent and occasionally addicted to a disagreeable frankness of speech.

The locum tenens, moreover, is peculiarly susceptible to these conditions, especially if, as in my case, his appearance is youthful. Patients resent the substitution of a stranger for the familiar medical attendant and are at no great pains to disguise the fact. The “old woman with the liver” (to adopt Batson’s pellucid phrase) hinted that I was rather young, adding encouragingly that I should get the better of that in time; while the more morose typhoid bluntly informed me that he hadn’t bargained for being attended by a medical student.

Taken as a whole, I found private practice disappointing and soon began to wish myself back in the wards and to sigh for my quiet, solitary rambles on Hampstead Heath.

Still, there were rifts in the cloud. Some of the patients appreciated the interest that I took in their cases, evidently contrastiing it with the rather casual attitude of my principal, and some were positively friendly. But, in general, my reception was such as to make me slightly apprehensive whenever a new patient appeared.

On the fourth evening after Batson’s departure, Mrs. Samway was announced and I prepared myself for the customary snub. But I was mistaken. Nothing could be more gracious than her manner towards me, though the object of her visit occasioned me some embarrassment. “I have called, Dr. Jardine,” she said, “to ask you if you could let me the account for poor Mr. Maddock. My husband is the executor, you know, and, as we shall be going back to Paris quite shortly, he wants to get everything settled up.”

I was in rather a quandary. Of the financial side of practice I was absolutely ignorant and I thought it best to say so.

“But,” I added, “Dr. Batson will be back on Friday evening, if you can wait so long.”

“Oh, that will do quite well,” she replied, “but don’t forget to tell him that we want the account at once.”

I promised not to forget, and then remarked that she would, no doubt, be glad to be back in Paris. “No,” she answered, “I shall be rather sorry. Of course Camden Town is not a very attractive neighbourhood, but it is close to the heart of London; and then there are some delightful places near and quite accessible. There is Highgate, for instance.”

“Yes; but it is getting very much built over, isn’t it?”
"Unfortunately it is; but yet there are some very pleasant places left. The old village is still charming. So quaint and old world. And then there is Hampstead. What could be more delightful than the Heath? But perhaps you don’t know Hampstead?"

"Oh, yes I do," said I; "my rooms are at Gospel Oak, quite near the Heath, and I think I know every nook and corner of the neighbourhood. I am pinning for a stroll on the Heath at this very moment."

"I daresay you are," she said sympathetically. "This is a depressing neighbourhood if you can’t get away from it. We found it very dismal, at first, after Paris."

"Do you live in Paris?" I asked.

"Not permanently," she replied. "But we spend a good deal of time there. My husband is a dealer in works of art, so he has to travel about a good deal. That is how we came to know Mr. Maddock."

"He was a dealer too, wasn’t he?" I enquired.

"Yes, in a way. But he had means of his own and his dealing was a mere excuse for collecting things that he was not going to keep. He had a passion for buying, and then he used to sell the things in order to buy more. But I am afraid I am detaining you with my chatter?"

"No, not at all," I said eagerly, only too glad to have an intelligent, educated person to talk to; "you are the last caller, and I hope I have finished my work’s day."

Accordingly she stayed quite a long time, chatting on a variety of subjects and finally on that of cremation. "I daresay," she said, "it is more sanitary and wholesome than burial, but there is something rather dreadful about it. Perhaps it is because we are not accustomed to the idea."

"Did you go to the funeral?" I asked.

"Yes. Mr. Maddock had no friends in England but my husband and me, so we both went. It was very solemn and awesome. The coffin was laid on the catafalque while a short service was read, and then two metal doors opened and it was passed through out of our sight. We waited some time and presently they brought us a little terra-cotta urn with just a handful or two of white ash in it. That was all that was left of our poor friend Septimus Maddock. Don’t you think it is rather dreadful?"

"Death is always rather dreadful," I answered. "But when we look at the ashes of a dead person, we realize the total destruction of the body; whereas the grave keeps its secrets. If we could look down through the earth and see the changes that are taking place, we should probably find the slow decay more shocking than the swift consumption by fire. Fortunately we cannot. But we know that the final result is the same in both."

Mrs. Samway shuddered slightly, and drew her wraps more closely about her. "Yes," she said with a faint sigh; "the same end awaits us all—but it is better not to think about it."

We were both silent for awhile. I sat with my gaze bent rather absentley on the case-book before me, turning over her last somewhat gloomy utterance, until, chance to look up, I found her pale, penetrating eyes fixed on me with the same strange intentness that I had noticed when she had looked at me as I sat by the body of Maddock. As she met my glance, she looked down quickly but without confusion, and with a return to her habitual reposefulness.

Half-unconsciously I returned her scrutiny. She was a remarkable-looking woman. A beautiful woman, too, but of a type that is, in our time and country, rare: an ancient or barbaric type in which womanly beauty and grace are joined to manifest physical strength. I felt that some unusual racial mixture spoke in her inconsistent colouring; her clear, pink skin, her pale eyes and the jet-black hair that rippled down either side of her low forehead in little crumpy waves, as regular and formal as the “archaic curls” of early Greek sculpture.

But predominant over all other qualities was that of strength. Full and plump, soft and almost ultra-feminine, lissom and flexible in every pose and movement, yet, to me, the chief impression that her appearance suggested was strength—sheer, muscular strength; not the rigid bull-dog strength of a strong man, but the soft and supple strength of a leopard. I looked at her as she sat almost lingly in her chair, with her head on one side, her hands resting in her lap and a beautiful, soft, womanly droop of the shoulders; and I felt that she could have started up in an instant, active, strong, formidable, like a roused panther.

I was going on, I think, to make comparisons between her and that other woman who was wont to trip so daintily down Millfield Lane, when she raised her eyes slowly to mine; and suddenly she blushed scarlet. “Am I a very remarkable-looking person, Dr. Jardine?” she asked quietly, as if answering my thoughts.

The rebuke was well merited. For an instant a paltry compliment fluttered on my lips; but I swallowed it down. She wasn’t that kind of woman. "I am afraid I have been staring you out of countenance, Mrs. Samway," I said apologetically.

"Hardly that," she replied with a smile; "but you certainly were looking at me very attentively."

"Well," I said, recovering myself; "after all, a cat may look at a king, you know."

She laughed softly—a very pretty, musical laugh—and rose, still blushing warmly. "And," she retorted, "by the same reasoning, you think a king may look at a cat. Very well, Dr. Jardine. Good-night."
She held out her hand; a beautifully-shaped hand, though rather large—but, as I have said, she was not a small woman; and as it clasped mine, though the pressure was quite gentle, it conveyed, like her appearance, an impression of abundant physical strength.

I accompanied her to the door and watched her as she walked up the dingy street with an easy, erect, undulating gait; even as might have walked those women who are portrayed for the wonder of all time on the ivory-toned marble of the Parthenon frieze. I followed with my eyes the dignified, graceful figure until it vanished round the corner, and then went back to the consulting-room dimly wondering why a woman of such manifest beauty and charm should offer little attraction to me.

Batson’s practice, among its other drawbacks, suffered from a deadly lack of professional interest. Whether this was its normal condition, or whether his patients had got wind of me and called in other and more experienced practitioners, I know not; but certainly, after the stirring work of the hospital, the cases that I had to deal with seemed very small beer. Hence the prospect of a genuine surgical case came as a grateful surprise and I hailed it with enthusiasm.

It was on the day before Batson’s expected return that I received the summons; which was delivered to me in a dirty envelope as I sat by the bedside of the last patient on my list. “Is the messenger waiting?” I asked, tearing open the envelope.

“No, Doctor. He just handed in the note and went off. He seemed to be in a hurry.”

I ran my eye over the message, scrawled in a rather illiterate hand on a sheet of common notepaper, and read:

“SIR,

“Will you please come at once to the Mineral Water Works in Norton Street. One of our men has injured himself rather badly.

“Yours truly,

“J. PARKER.

“P.S.—He is bleeding a good deal, so please come quick.”

The postscript gave a very necessary piece of information. An injury which bled would require certain dressings and surgical appliances over and above those contained in my pocket case; and to obtain these I should have to take Batson’s house on the way. Slipping the note into my pocket, I wished my patient a hasty adieu and strode off at a swinging pace in the direction of Jacob Street.

The housemaid, Maggie, helped me to find the dressings and pack the bag—for she was a handy, intelligent girl though no beauty; and meanwhile I questioned her as to the whereabouts of Norton Street and the mineral water factory. “Oh, I know the place well enough, sir,” said she, “though I didn’t know the works were open. Norton Street is only a few minutes’ walk from here. It’s quite close to Gayton Street, in fact these works are just at the back of the Samway’s house. You go up to the corner by the market and take the second on the right and then—”

“Look here, Maggie,” I interrupted, “you’d better come and show me the way, as you know the place. There’s no time to waste on fumbling for the right turning.”

“Very well, sir,” she replied, and the bag being now packed with all necessary instruments and dressings, we set forth together. “Is this a large factory?” I asked, as she trotted by my side, to the astonished admiration of Jacob Street, and the neighbourhood in general.

“No, sir,” she replied. “It’s quite a small place. The last people went bankrupt and the works were empty and to let for a long time. I thought they were still to let, but I suppose somebody has taken them and started the business afresh. It’s round here.”

She piloted me round a corner into a narrow bystreet, near the end of which she halted at the gate of a yard or mews. Above the entrance was a weather-beaten board bearing the inscription, “International Mineral Water Company” and a half-defaced printed bill offering the premises to let; and at the side was a large bell-pull. A vigorous tug at the latter set a bell jangling within, and, as Maggie tripped away up the street, a small wicket in the gate opened, disclosing the dimly-seen figure of a man standing in the inner darkness. “Are you the doctor?” he inquired.

I answered “Yes,” and, being thereupon bidden to enter, stepped through the opening of the wicket, which the man immediately closed, shutting out the last gleam of light from the street lamp outside. “It’s rather dark,” said the unseen custodian, taking me by the arm.

“It is indeed,” I replied, groping with my feet over the rough cobbles; “hadn’t you better get a light of some kind?”

“I will in a minute,” was the reply. “You see, all the other men have gone home. We close at six sharp. This is the way. I’ll strike a match. The man is down in the bottling-room.”

My conductor struck a match by the light of which he guided me through a doorway, along a passage or corridor and down a flight of stone steps. At the bottom of the steps was a flagged passage, out of which opened what looked like a range of cellars. Along the passage I walked warily, followed by the stranger and lighted, very imperfectly, by the matches that he struck; the glimmer of which threw a gigantic and ghostly shadow of myself on the stone floor, but failed utterly to pierce
the darkness ahead. I was exactly opposite the yawning doorway of one of the cellars when the match went out, and the man behind me exclaimed: "Wait a moment, Doctor! Don't move until I strike another light."

I halted abruptly; and the next moment I received a violent thrust that sent me staggering through the open doorway into the cellar. Instantly, the massive door slammed and a pair of heavy bolts were shot in succession on the outside.

"What the devil is the meaning of this?" I roared, battering and kicking furiously at the door. Of course there was no answer, and I quickly stopped my demonstrations, for it dawned on me in a moment that the factory was untenanted save by the ruffian who had admitted me; that I had been decoyed here of a set purpose, though what that purpose was I could not imagine.

But it was not long before I received a pretty broad hint as to the immediate intentions of my host. A gentle thumping at the door of my cellar attracted my attention and caused me to lay my ear against the wood. The sound that I heard was quite unmistakable. The crevices of the door were being filled, apparently with pieces of rag, which my friend was ramming home, presumably with a chisel. In fact the door was being "caulked" to make the joints airtight.

The object of this proceeding was clear enough. I was shut up in an air-tight cavity in which I was to be slowly suffocated. That was quite obvious. Why I was to be suffocated, I could form no sort of guess excepting that I had fallen into the hands of a homicidal lunatic. But I was not greatly alarmed. The air in a good-sized cellar will last a considerable time, and I could easily poke out anything that my friend might stuff into the keyhole. Then, when the men arrived in the morning, I could kick on the cellar door, and they would come and let me out. There was nothing to be particularly frightened about.

Were there any men? The injured man was evidently a myth. Supposing the other men were a myth too? I recalled Maggie's remark, that she "had thought the place was to let still." Perhaps it was. That would be rather more serious.

At this point my agitations were broken in upon by sounds from the adjoining cellar; the sound of someone moving about and dragging some heavy body. And it struck me at once as strange that I should hear these sounds so distinctly, seeing the massive door of my own cellar was sealed and the walls were of solid brick, as I ascertained by rapping at them with my knuckles. But I had no time to consider this circumstance, for there suddenly rose a new sound, whereat, I must confess my heart fairly came into my mouth; a loud, penetrating hiss like the shriek of escaping steam. It seemed to come from some part of the cellar in which I was immured; from a spot nearly overhead; and it was immediately echoed by a similar sound in the adjoining cellar and then by a third. Even as the last sound broke forth, the door of the adjoining cellar slammed, the bolts were shot and then faintly mingled with the discordant hissing. I could hear the dull thumping that told me that the cracks of that door, too, were being caulked.

It was a frightful situation. The hissing sound was obviously caused by the escape of gas under high pressure, and that gas must be entering my cellar through some opening. I felt for my match-box, and, grooping along the wall towards the point whence the loudest sound—and, indeed, all the sounds—proceeded, I struck a match. The glimmer of the wax vesta made everything clear. Close to the ceiling, about seven feet from the ground, was an opening in the wall about six inches square; and pouring through this in a continuous stream was a cloud of white particles that glistened like snowflakes. As I stood under the opening, some of them settled on my face; and the more than icy coldness of the contact, told the whole, horrible tale in a moment.

This white powder WAS snow—carbonic acid snow. The hissing sound came from three of those great iron bottles, charged under pressure with liquified carbonic acid, which are used by mineral water manufacturers for aerating the water. The miscreant (or lunatic) who had imprisoned me had turned on the taps, and the liquid was escaping and turning into snow with the cold produced by its own rapid evaporation and expansion. Of course the snow would quickly absorb heat, and, without again liquefying, evaporate into the gaseous form. In a very short time both cellars would be full of the poisonous gas, and I—well, in a word, I was shut up in a lethal chamber.

It has taken me some time to write this explanation, which, however, flashed through my brain in the twinkling of an eye as the light of the match fell on that sinister cloud of snowflakes. In a moment I had my coat off, and was stuffing it for dear life into the opening. It was but a poor protection against the gas, which would easily enough find its way through the interstices of the fabric; but it would not stop the direct stream of snow and give me time to think.

On what incalculable chances do the great issues of our lives depend! If I had been a short man I must have been dead in half an hour; for the opening through which the cloud of snow was pouring was well over seven feet above the floor and would have been quite out of my reach. Even as it was, with my six feet of stature and corresponding length of arm, it was impossible to ram my coat into the opening with the necessary force, for I had to stand close to the wall with my arm upraised at a great mechanical disadvantage. Still, as I have said, imperfect as the obstruction was, it served to stop the inrushing cloud of snow. It would take some time for the heavy gas in the adjoining cellar to rise to the level of the opening, and, meanwhile, I could be devising other measures.

I lit another match and looked about me. The cellar was much smaller than I had thought and was absolutely empty. The floor was of concrete, the walls of rough brickwork and the ceiling of plaster, all cracked and falling in. There was plenty of ventilation there, but that was of no interest to me. Carbonic acid gas is so heavy that it behaves almost like a liquid, and it would have filled the cellar and suffocated me even if the top of my prison had been open to the sky. The adjoining cellar was already filling rapidly, and when the gas in it reached the level of the opening, it would percolate through my coat and come pouring down into my cellar. But that, as I have said, would take some time—if the dividing wall was moderately sound. This important qualification, as soon as it occurred to me, set me exploring the wall with the aid of another match;
and very unsatisfactory was the result. It was a bad wall, built of inferior brick and worse mortar, and was marked by innumerable holes where wall-hooks and other fastenings had been driven in between the bricks. My brief survey convinced me that, so far from being gas-tight, the wall was as pervious as a sponge, and that whatever I meant to do to preserve my life, I must set about without delay.

But what was I to do? That was the urgent, the vital question. Escape was evidently impossible. There were no means of stopping up the numberless holes and weak places in the wall. The only vulnerable spot was the door. If I could establish some communication with the outer air, I could, for a time at least, disregard the poisonous gas with which I should presently be surrounded.

The first thing to be considered was the keyhole. That must be unstopped at once. Fumbling in my bag—for I had grown of a sudden niggardly with my matches—I found a good-sized probe, which I insinuated into the keyhole; and, in a moment, my hopes in that direction were extinguished. For the end of the probe impinged upon metal. The keyhole was not stopped with rag, but with a plate of metal fixed on the outside. With rapidly-growing alarm, but with a tidiness born of habit, I put the probe back in the bag and began feverishly to review the situation and consider my resources. And then I had an idea; only a poor, forlorn hope, but still an idea.

There is a certain ingenious type of pocket-knife, devised principally in the interest of the cutlery trade, that innocent persons (usually of the female persuasion) are wont to bestow as presents on their masculine friends. Such a knife I chanced to possess. It had been given to me by an aunt, and sentimental considerations had induced me to give it an amount of room in my trousers' pocket that I continually grudged. However, there it was at this critical moment, with its corkscrew, gimlet, its bewildering array of blades, its hoof-pick, tooth-pick, tweezers, file, screw-driver and assorted unclassifiable tools; a ponderous lump of pocket-destroying uselessness—and yet, the appointed means of saving my life.

The gimlet was the first tool that I called into requisition. Very gingerly—for these tools are commonly over-tempered and brittle—I bored in the thick plank a hole at about the level of my mouth; and as I worked I turned over my further plans. When the gimlet was through the door, I selected a tool on whose use I had often speculated—a sharp-edged spike, like a diminutive and very stumpy bayonet—which I proceeded to use broach-wise to enlarge the hole. When this tool worked loose, I exchanged it for the screwdriver, with which I managed to broach the hole out to about half an inch in width. And this was as large as I could make it, and it was not large enough. True, one could breathe fairly comfortably through a half-inch hole, but, with the deadly gas circulating around, a freer opening was very desirable.

Then I bethought me that the magic knife contained a saw—a wretched, thick-bladed affair, but still a saw—which would actually cut wood if you gave it time. This implement suggested a simple plan which I forthwith put into execution, working as rapidly as I could without running the risk of breaking the tools. My plan was to make a second hole some two inches diagonally below the first, and from each hole to carry two saw-cuts at right angles to one another. The two pairs of cuts would intersect and take a square piece out of the door, giving me a little window through which I could breathe in comfort.

It was a trifling task, but yet, with the miserable tools I had, it took a considerable time to execute; the more since the saw-blade was wider than the holes, excepting at its point. However, it was accomplished at last, and I had the satisfaction of pushing out the little separated square of wood and feeling that I now had free access to the pure air outside my dungeon.

But it was none too soon. As I rested from my labours, it occurred to me to test the condition of the air inside. Lighting a wax match, I held the little taper so that the flame ascended steadily, and then lowered it slowly. As it descended the flame changed colour somewhat, and about eighteen inches from the floor it went out quite suddenly. There was, then, a layer of the pure gas about eighteen inches deep covering the floor, and, no doubt, rising pretty rapidly.

This was rather startling, and it warned me to have recourse without delay to my breathing hole. For though carbonic acid gas behaves somewhat as a liquid, it is not a liquid: like other gases, it has the power of diffusing upwards, and the air of the cellar must be already getting unsafe. Accordingly, after carefully wiping the surface of the door with my handkerchief, I applied my mouth, with some distaste, to the opening and took in a deep draught of undoubtedly pure air.

The position in which I had to stand with my mouth to the hole was an irksome one, and I foresaw that it would presently become very fatiguing. Moreover, when the gas reached the level of my head, it would be difficult to prevent some of it from finding its way into my mouth and nostrils; and if it did, I should most assuredly be poisoned. This consideration suggested the necessity of making another hole at a lower level to let out the gas and allow me to rest myself by a change of position. But this new task had to be carried out with my mouth glued to the breathing hole; and very awkward and tiring I found it and very slow was the progress that I made. This second hole was smaller than the first, for time was precious, and I reflected that I could easily enlarge it by fresh saw-cuts, each two of which would take out a triangular piece of wood.

But it was tedious work, and its completion left me with aching arms; indeed, I was beginning to ache all over from the constrained position. Taking a deep breath and shutting my mouth, I stood up and stretched myself. Then I lit a match and looked at my watch. Half-past eight. I had been over two hours in the cellar. And meanwhile the patients were waiting for me at the surgery, and, no doubt, murmuring at the delay. How soon would my absence lead to enquiries? Or were enquiries being made even now?

Looking at the match that I still held in my hand, I noticed that its flame was pallid and bluish; and as I lowered it
slowly, it went out when it was a little over two feet from the floor. The gas, then, was still rising, though not so rapidly as I, had feared, but from the altered colour of the flame, it was evident that the air of the cellar, generally, contained enough diffused gas to be actively poisonous.

After a time, the erect position began to grow insupportably fatiguing. I felt that I must sit down for a few minutes’ rest, even though prudence whispered that it was highly unsafe. I struggled for awhile, but eventually, conquered by fatigue, sat down on the floor with my mouth applied closely to the lower breathing-hole. I persuaded myself that I would sit only just long enough to recover some of my strength, but minute after minute sped by and still I felt an unaccountable reluctance to rise.

Suddenly I because conscious of a vague feeling of drowsiness; of a desire to lean back against the wall and doze. It was only slight, but its significance was so appalling that I scrambled to my feet in a panic, and, putting my mouth to the upper breathing-hole, took several deep inspirations. A wave of furious anger swept over me and roused me a little; a burst of hatred of the cowardly wretch who had decoyed me, as I now suspected, to my death. Then this feeling passed and was succeeded by chilly fear, and I sank down once more into a sitting position with my mouth pressed to the lower opening.

The time ran on unreckoned by me. Gradually, by imperceptible degrees, my mental state grew more and yet more sluggish. Anger and fear and ever-dwindling hope flitted by turns across the slowly-fading field of my consciousness. Intervals of quiet indifference—almost of placid comfort—began to intervene, with increasing lassitude and a growing desire for rest. To lie down; that was what I wanted. To lay my head upon the stony floor and sink into sweet oblivion.

At last I must have actually dozed, though, fortunately, without removing my mouth from the breathing-hole, for I had no sense of the passage of time, when I was suddenly aroused by the loud and continuous jangling of a bell.

I listened with a sort of dull eagerness and keeping awake with a conscious effort.

The bell pealed wildly and without a pause for what seemed to me quite a long time.

Then it ceased, and again my consciousness began to grow dim. After an interval, I know not how long, there came to me dimly and only half-perceived, the closing of a door, the patter of quick footsteps, and then the voice of a man calling me by name.

I struggled to get on to my feet, but could not move. But I still held the clasp-knife and was able to rap with it feebly on the door. Again I heard the voice—it sounded nearer now, and yet infinitely far away—and again I rapped on the door and shouted through the breathing-hole; a thin, muffled cry, such as one utters in a troubled dream. And then the drowsiness crept over me again and I heard no more.

The next thing of which I was conscious was a sounding thwack on the cheek with something wet that felt like a dead fish. I opened my eyes and looked vaguely into two faces that were close to mine and seemed to be lighted by a lamp or candle. The faces were somehow familiar, but yet I failed clearly to recognize them, and, after staring stupidly for a few moments, I began to doze again. Then the dead fish returned to the assault and I again opened my eyes. Another vigorous flop caused me to open my mouth with an unparliamentary gasp. “Ah! That’s better,” said a familiar and yet “unplaced” voice. “When a man is able to swear, he is fairly on the road to recovery.” Flop!

The renewed attentions of the dead fish (which turned out, later, to be merely a wet towel) evoked further demonstrations on my part of progressing recovery, accompanied by a nervous titter in a female voice. Gradually the clouds rolled away, and to my returning consciousness, the faces revealed themselves as those of Maggie, the housemaid, and Dr. Thorndyke. Even to my muddled wits, the presence of the latter was somewhat of a puzzle, and, in the intervals of anathematizing the deceased fish—which I had not yet identified—I found myself hazily speculating on the problem of how my revered teacher came to be in this place, and what place this was. “Come, now, Jardine,” said Dr. Thorndyke, emptying a jug of water on my face, and receiving a volley of spluttered expletives in exchange, “pull yourself together. How did you get in that cellar?”

“Hang’f I know,” said I, composing myself for another nap. But here the wet towel came once more into requisition, and that with such vigour that, in a fit of exasperation, I sat up and yawned. “I think you’d better fetch a cab,” said Thorndyke, as Maggie wrung out the towel afresh; “but leave the gate open when you go out.”

“Wasser cab for?” asked sulkily. “Can’t I walk?”

“If you can, it will be better,” said Thorndyke. “Let us see if you are able to stand.” He hoisted me on to my feet and he and Maggie, taking each an arm, walked me slowly up and down the cobbled yard, which I now began to recognize as appertaining to the Mineral Water Works. At first I staggered very drunkenly, but by degrees the drowsy feeling wore off and I was able to walk with Thorndyke’s assistance only. “I think we might venture out now,” said he, at length, piloting me towards the gate, and when I had stumbled rather awkwardly through the wicket, we set forth homeward.

On my arrival home, Thorndyke ordered a supply of strong coffee and a light meal, after which—it being obvious that I was good for nothing in a professional sense, he suggested that I should go to bed. “Don’t worry about the practice,” said he. “I will send for my friend Jervis, and, between us, we will see that everything is looked after. If Maggie will give me a sheet of paper and an envelope I will write a note to him; and then she can take a hansom to my chambers and give the note either to Dr. Jervis or my man Polton. Meanwhile, I will stay here and see that you don’t go to sleep prematurely.”
He wrote the note; and Maggie, having made such improvements in her outward garb as befitted the status of a rider in hansom cabs, took charge of it and departed with much satisfaction and dignity. Thorndyke made a few enquiries of me as to the circumstances that had led to my incarceration in the cellar, but finding that I knew no more than Maggie—whom he had already questioned—he changed the subject; nor would he allow me again to refer to it. "No, Jardine," he said. "Better think no more of it for the present. Have a good night's rest and then, if you are all right in the morning, we will go into the matter and see if we can put the puzzle together."

VI — A COUNCIL OF WAR

I AWOKE somewhat late on the following morning; indeed, I was but half awake when there came a somewhat masterful and peremptory tap at my bedroom door, followed by the appearance in the room of a rather tall gentleman of some thirty years of age. I should have diagnosed him instantly as a doctor by his self-possessed, proprietary manner of entering, but he left me no time for guessing as to his identity. "Good-morning, Jardine," he said briskly, jingling the keys and small change in his trousers' pockets, "my name is Jervis. Second violin in the Thorndyke orchestra. I'm in charge here pro tem. How are you feeling?"

"Oh, I'm all right. I was just going to get up. You needn't trouble about the practice. I'm quite fit."

"I'm glad to hear it," said Jervis, "but you'd better keep quiet all the same. My orders are explicit, and I know my place too well to disobey. Thorndyke's instructions were that you are not to make any visits or go abroad until after the inquest."

"Inquest?" I exclaimed.

"Yes. He's coming here at four o'clock to hold an inquiry into the circumstances that led to your being locked up in a cellar, and until then I'm to look after the practice and keep an eye on you. What time do you expect the offspring of the flittermouse?"

"Who?" I demanded.

"Batson. He's coming back to-day, isn't he?"

"Yes. About six o'clock to-night."

"Then you'll be able to clear out. So much the better. The neighbourhood doesn't seem very wholesome for you."

"I suppose I can do the surgery work," said I.

"You'd better not. Better follow Thorndyke's instructions literally. But you can tell me about the patients and help me to dispense. And that reminds me that a person named Samway called just now, a rather fine-looking woman—reminded me of a big, sleek tabby cat. She wouldn't say what she wanted. Do you know anything about her?"

"I expect she came about her account. But she'll have to see Batson. I told her so, only a night or two ago."

"Very well," said Jervis, "then I'll be off now, and you take things easy and just think over what happened last night, so as to be ready for Thorndyke."

With this he bustled away, leaving me to rise and breakfast at my leisure. His advice to me to think over the events of the previous night was rather superfluous. The experience was not one that I was likely to forget. To have escaped from death by the very slenderest chance was in itself a matter to occupy one's thoughts pretty completely, apart from the horrible circumstances, and then there was the mystery in which the whole affair was enveloped, a mystery which utterly baffled any attempt to penetrate it. Turn it over as I would—and it was hardly out of my thoughts for a minute at a time all day—no glimmer of light could I perceive, no faintest clue to any explanation of that hideous and incomprehensible crime.

At four o'clock punctually to the minute, Dr. Thorndyke arrived, and, having quickly looked me over to see that I was none the worse for my adventure, proceeded to business. "Have you finished the visits, Jervis?" he asked.

"Yes; and sent off all the medicine. There's nothing more to do until six."

"Then," said Thorndyke, "we might have a cup of tea in the consulting-room and talk this affair over. I am rather taking possession of you, Jardine," he added, "but I think we ought to see where we are quite clearly, even if we decide finally to hand the case over to the police. Don't you agree with me?"

"Certainly," I agreed, highly flattered by the interest he was taking in my affairs; "naturally, I should like to get to the bottom of the mystery."

"So should I," said he, "and to that end, I propose that you give us a completely circumstantial account of the whole affair. I have had a talk with your very intelligent little maid, Maggie, and now I want to hear what happened after she left you."

"I don't think I have much to tell that you don't know," said I; "however, I will take up the story where Maggie left off," and I proceeded to describe the events in detail, much as I have related them to the reader.

Thorndyke listened to my story with profound attention, making an occasional memorandum but not uttering a word
until I had finished. Then, after a rapid glance through his memoranda, he said: “You spoke of a note that was handed in to you. Have you got that note?”

“I left it on the writing-table, and it is probably there still. Yes, here it is.” I brought it over to the little table on which our tea was laid and handed it to him; and as he took it from me with the dainty carefulness of a photographer handling a wet plate, I noted mentally that the habit of delicate manipulation contracted in the laboratory makes itself evident in the most trifling of everyday actions.

“I see,” he remarked, turning the envelope over and scrutinizing it minutely, “that this is addressed to ‘Dr. H. Jardine.’ It appears, then, that he knows your Christian name. Can you account for that?”

“No, I can’t. The only letter I have had here was addressed ‘Dr. Jardine’, and I have signed no certificates or other documents.”

He made a note of my answer, and, drawing the missive from its envelope, read it through. “The handwriting,” he remarked, “looks disguised rather than illiterate, and the diction is inconsistent. The blantly incorrect adverb at the end does not agree with the rest of the phraseology and the correct punctuation. As to the signature, we may neglect that, unless you are acquainted with anyone in these parts of the name of Parker.”

“I am not,” said I.

“Very well. Then if you will allow me to keep this note, I will file it for future reference. And now I will ask you a few questions about this adventure of yours, which is really a most astonishing and mysterious affair; even more mysterious, I may add, than it looks at the first glance. But we shall come to that presently. At the moment we are concerned with the crime itself—with a manifest attempt to murder you—and the circumstances that led up to it; and there are certain obvious questions that suggest themselves. The first is: Can you give any explanation of this attempt on your life?”

“No, I can’t,” I replied. “It is a complete mystery to me. I can only suppose that the fellow was a homicidal lunatic.”

“A homicidal lunatic,” said Thorndyke, “is the baffled investigator’s last resource. But we had better not begin supposing at this stage. Let us keep strictly to facts. You do not know of anything that would explain this attack on you?”

“No.”

“Then the next question is: Had you any property of value on your person?”

“No. Five pounds would cover the value of everything I had about me, including the instruments.”

“Then that seems to exclude robbery as a motive. The next question is: Does any person stand to benefit considerably by your death? Have you any considerable expectations in the way of bequests, reversions or succession to landed property or titles?”

“No,” I replied with a faint grin. “I shall come in for a thousand or two when my uncle dies, but I believe the London Hospital is the alternative legatee, and I suppose we would hardly suspect the hospital governors of this little affair. Otherwise, the only person who would benefit by my death would be the undertaker who got the contract to plant me.”

Thorndyke nodded and made a note of my answer. “That,” said he, “disposes of the principal motives for premeditated murder. There remains the question of personal enmity—not a common motive in this country. Have you, as far as you know, an enemy or enemies who might conceivably try to kill you?”

“As far as I know, I have not an enemy in the world, or anyone, even, who would wish to do me a bad turn.”

“Then,” said Thorndyke, “that seems to dispose of all the ordinary motives for murder; and I may say that I have only put these questions as a matter of routine precaution—ex abundantia cautelae, as Jervis says, when he is in a forensic mood—because certain other facts which I have learned seem to exclude any of these motives except, perhaps, robbery from the person.”

“You haven’t been long picking up those other facts,” remarked Jervis. “Why the affair only happened last night.”

“I have only made a few simple enquiries,” replied Thorndyke. “This morning I called on Mr. Highfield, whose name, as solicitor and agent to the landlords, I copied from the notice on the gate at the works last night. He knows me slightly so I was able to get from him the information that I wanted. It amounts to this.

“About four months ago, a Mr. Gill wrote to him and offered a lump sum for the use of the mineral water works for six months. Highfield accepted the offer and drew up an agreement, as desired, granting Gill immediate possession of the premises and the small stock and plant, of which the residue was to be taken back at a valuation by the landlords at the expiration of the term.

“I noted Gill’s address, as it appeared on the agreement, and sent my man, Polton, to make enquiries.

“The address is that of a West Kensington lodging house at which Gill was staying when he signed the agreement. He had been there only three weeks, he left two days after the date of the agreement and the landlady does not know where he went or anything about him.”

“Sounds a bit fishy,” Jervis remarked. “Did he tell Highfield what he wanted the premises for?”

“I understood that something was said about some assay work in connection with certain—or rather uncertain—mineral
concessions. But of course that was no affair of Highfield’s. His business was to get the rent, and, having got it, his interest in Mr. Gill lapsed. But you see the bearing of these facts. Gill’s connection with these works does, as Jervis says, look a little queer, especially after what has happened. But, seeing that he made his arrangements four months ago, at a time when Jardine had no thought of coming into this neighbourhood, it is clear that those arrangements could have no connection with this particular attempt. Gill obviously did not take those works with the intention of murdering Jardine. He took them for some other purpose; quite possibly the purpose that he stated. And we must not assume that Gill was the perpetrator of this outrage at all. Could you identify the man who let you in?”

“No,” I replied. “Certainly not. I hardly saw him at all. The place was pitch dark, and whenever he struck a match he was either behind me or in front with his back to me. The only thing I could make out about him was that he had some sort of coarse wash-leather gloves on.”

“Ha!” exclaimed Thorndyke. “Then we were right, Jervis.”

I looked in surprise from one to the other of my friends, and was on the point of asking Thorndyke what he meant, when he continued. “That closes another track. If you couldn’t identify the man, a description of Gill, if we could obtain it, would not help us. We must begin at some other point.”

“It seems to me,” said Jervis, “that we haven’t much to go upon at all.”

“We haven’t much,” agreed Thorndyke, “but still we have something. We find that the motive of this attempt was apparently not robbery, nor the diversion of inheritable property, nor personal enmity. It must have been premeditated, but yet it could not have been planned more than a week in advance, for Jardine has only been in this neighbourhood for that time, and his coming was unexpected. The appearances very strongly suggest that the motive, whatever it was, has been generated recently and probably locally. So we had better make a start from that assumption.”

“Is it possible,” Jervis suggested, “that this man Gill may be some sort of anarchist crank? Or a sort of thug? It is actually conceivable that he may have taken these premises for the express purpose of having a secure place where he could perpetrate murders and conceal the bodies.”

“It is quite conceivable,” said Thorndyke, “and when we go and look over the works—which I propose we do presently—we may as well bear the possibility in mind. But it is merely a speculative suggestion. To return to your affairs, Jardine, has your stay here been quite uneventful?”

“Perfectly,” I replied.

“No unusual or obscure cases? No injuries?”

“No, nothing out of the common,” I replied.

“No deaths?”

“One. But the man died before I took over.”

“Nothing unusual about that? Everything quite regular?”

“Oh, perfectly,” I answered; and then with a sudden qualm, as I recalled Batson’s uncertainty as to the actual cause of death, I added, “At least I hope so.”

“You hope so?” queried Thorndyke. “Yes. Because it’s too late to go into the question now. The man was cremated.”

At this a singular silence fell. Both my friends seemed to stiffen in their chairs, and both looked at me silently but very attentively. Then Thorndyke asked, “Did you have anything to do with that case?”

“Yes,” I replied. “I went with Batson to examine the body.”

“And are you perfectly satisfied that everything was as it should be?”

I was on the point of saying “yes.” And then suddenly there arose before my eyes the vision of Mrs. Samway looking at me over Batson’s shoulder with that strange, inscrutable expression. And again, I recalled her unexplained anger and then her sudden change of mood. It had impressed me uncomfortably at the time, and it impressed me uncomfortably now. “I don’t know that I am, now that I come to think it over,” I replied.

“Why not?” asked Thorndyke.

“Well,” I said, a little hesitatingly, “to begin with, I don’t think the cause of death was quite clear, Batson couldn’t find anything definite when he attended the man, and I know that the patient’s death came as quite a surprise.”

“But surely,” exclaimed Thorndyke, “he took some measures to find out the cause of death!”

“He didn’t. He assumed that it was a case of fatty heart and certified it as ‘Morbus cordis’; and a man named O’Connor confirmed his certificate after examining the body.”

“After merely inspecting the exterior?”

“Yes.”

My two friends looked at one another significantly, and Thorndyke remarked, with a disapproving shake of the head: “And this is what all the elaborate precautions amount to in practice. A case which might have been one of the crudest and
merely insensible, after all, as the police suggested?”

“Do you think about that you could hardly show your nose out with police look on me, I think, with their eyes a confirmed mystery-monger.”

“I know nothing about the case,” he replied, “excepting that there was gross neglect in issuing the certificates. What do you think about it yourself? Looking back at the case, is there anything besides the uncertainty that strikes you as unsatisfactory?”

I hesitated, and again the figure of Mrs. Samway rose before me with that strange, baleful look in her eyes. Finally I described the incident to my colleagues. “Mrs. Samway!” exclaimed Jervis. “Is that the handsome Lucrezia Borgia lady with the mongoose eyes who called here this morning? By Jove! Jardine, you are giving me the creeps.”

“I understand,” said Thorndyke, “that you were making as if to feel the dead man’s pulse?”

“Yes.”

“There is no doubt, I suppose, that he really was dead?”

“None whatever. He was as cold as a fish, and, besides there was quite distinct rigor mortis.”

“That seems conclusive enough,” said Thorndyke, but he continued to gaze at his open note-book with a profoundly speculative and thoughtful expression.

“It certainly looks,” said Jervis, “as if Jardine had either seen something or had been about to see something that he was not wanted to see; and the question is what that something could have been.”

“Yes,” I agreed, gloomily; “that is what I have just been asking myself. There might have been a wound or injury of some kind, or there might have been the marks of a hypodermic needle on the wrist. I wish I knew what she meant by looking at me in that way.”

“Well,” said Jervis, “we shall never know now. The grave gives up its secrets now and again, but the crematorium furnace never. Whether he died naturally or was murdered, Mr. Maddock is now a little heap of ashes with no message for anyone this side of the Day of Judgment.”

Thorndyke looked up. “That seems to be so,” said he, “and really, we have no substantial reasons for thinking that there was anything wrong. So we come back to your own affairs, Jardine, and the question is, What would you prefer to do?”

“In what respect?” I asked.

“In regard to this attempt on your life. You have told us that you have not an enemy in the world. But it appears as if you had; and a very dangerous one, too. Now would you like to put the case into the hands of the police, or would you rather that we kept our own counsel and looked into it ourselves?”

“I should like you to decide that,” said I.

“The reason that I ask,” said Thorndyke, “is this: the machinery of the police is adjusted to professional crime—burglary, coining, forgery, and so forth—and their methods are mostly based on ‘information received.’ The professional ‘crook’ is generally well known to the police, and, when wanted for any particular ‘job,’ can be found without much difficulty and the information necessary for his conviction obtained from the usual sources. But in cases of obscure, non-professional crime the police are at a disadvantage. The criminal is unknown to them; there are no confederates from whom to get information; consequently they have no starting-point for their enquiries. They can’t create clues; and they, very naturally, will not devote time, labour and money to cases in which they have nothing to go on.

“Now this affair of yours does not look like a professional crime. No motive is evident and you can give no information that would help the police. I doubt if they would do much more than give you some rather disagreeable publicity, and they might even suspect you of some kind of imposture.”

“Gad!” I exclaimed. “That’s just what they would do. It’s what they did last time, and this affair would write me down in their eyes a confirmed mystery-monger.”

“Last time?” queried Thorndyke. “What last time is that? Have there been any other attempts?”

“Not on me,” I replied. “But I had an adventure one night about six or seven weeks ago that has made the Hampstead police look on me, I think, with some suspicion”—and here I gave my two friends a description of my encounter with the dead (or insensible) cleric in Millfield Lane, and my discoveries on the following morning.

“But my dear Jardine!” Thorndyke exclaimed when I had finished, “what an extraordinary man you are! It seems as if you could hardly show your nose out of doors without becoming involved in some dark and dreadful mystery.”

“Well,” said I, “I hope I have now exhausted my gifts in that respect. I am not thirsting for more experiences. But what do you think about that Hampstead affair? Do you think I could possibly have been mistaken? Could the man have been merely insensible, after all, as the police suggested?”

Thorndyke shook his head. “I don’t think,” he replied, “that it is possible to take that view. You see the man had
disappeared. Now he could not have got away unassisted, in fact he could not have walked at all. One would have to assume that some persons appeared directly after you left and carried him away; and that they appeared and retired so quickly as not to be overtaken by you on your return a few minutes later with the police. That is assuming too much. And then there are the traces which you discovered on the following day, which seem to suggest strongly that a body had been carried away to Ken Wood. It is a thousand pities that you encountered that keeper, if you could have followed the tracks while they were fresh you might have been able to ascertain whether it had been carried. But now, to return to your latest experience, what shall we do? Shall we communicate with the police, or shall we make a few investigations on our own account?

“As far as I am concerned,” I replied eagerly, “a private investigation would be greatly preferable. But wouldn’t it take up rather a lot of your time?”

“Now, Jardine, you needn’t apologize,” said Jervis. “Unless I am much mistaken, my respected senior has ‘struck soundings,’ as the nautical phrase has it. He has a theory of your case, and he would like to see it through. Isn’t that so, Thorndyke?”

“Well,” Thorndyke admitted, “I will confess that the case piques my curiosity somewhat. It is an unusual affair and suggests some curious hypotheses which might be worth testing. So, if you agree, Jardine, that we make at least a few preliminary investigations, I suggest that, as soon as Batson returns, we three go over to the what the newspapers would call ‘the scene of the tragedy’ and reconstitute the affair on the spot.”

“And what about Batson?” I asked. “Shall we tell him anything?”

“I think we must,” said Thorndyke, “if only to put him on his guard; for your unknown enemy may be his enemy, too.”

At this moment the street door banged loudly, a quick step danced along the hall, and Batson himself burst into the room. “Good Lord!” he exclaimed, halting abruptly at the door and gazing in dismay at our little council. “What’s the matter? Anything happened?”

Thorndyke laughed as he shook the hand of his quondam pupil.

“Come, come, Batson,” said he, “don’t make me out such a bird of ill-omen.”

“I was afraid something awkward might have occurred, police job or inquest or something of that sort.”

“You weren’t so very far wrong,” said Thorndyke. “When you are at liberty I’ll tell you about it.”

“I’m at liberty now,” said Batson, dropping into a chair and glaring at Thorndyke through his spectacles. “No scandal, I hope.”

Thorndyke reassured him on this point and gave him a brief account of my adventure and our proposed visit to the works; to which he listened with occasional ejaculations of astonishment and relief. “By Gum!” he exclaimed, “what a mercy you got there in time. If you hadn’t there’d have been an inquest and a devil of a fuss. I should never have heard the last of it. Ruined the practice and worried me into a lunatic asylum. Oh, and about those works. I wouldn’t go there if I were you.”

“Why not?” Thorndyke asked.

“Well, you may have to answer some awkward questions, and we don’t want this affair to get about, you know. No use raising a dust. Rumpus of any kind plays the deuce with a medical practice.”

Thorndyke smiled at my principal’s frank egoism. “Jervis and I went over last night,” said he, “and had a hasty look round and we found the place quite deserted. Probably it is so still.”

“Then you won’t be able to get in. How jer get in last night?”

“I happened to have a piece of stiff wire in my pocket,” Thorndyke replied impassively.

“Ha!” said Batson. “Wire, eh? Picklock in fact. I wouldn’t, if I were you. Devil of a bobbery if anyone sees you. Hallo! There goes the bell. Patient. Let him wait. ’Tisn’t six yet, is it?”

“Two minutes past,” replied Thorndyke, rising and looking at his watch. “Perhaps we had better be starting as it’s now dark, and the business at the works, if there is any, is probably over for the day.”

“Hang the works!” exclaimed Batson. “I wouldn’t go nosing about there. What’s the good? Jardine’s alright and the chappie isn’t likely to be on view. You’ll only raise a stink for nothing and bring in a crowd of beastly reporters humming about the place. There’s that damn bell again. Well, if you won’t stay, perhaps you’ll look me up some other time. Always d’lighted to see you. Jervis too. You’re not going, Jardine. I’ve got to settle up with you and hear your report.”

“I’ll look in later,” said I; “when you’ve finished the evening’s work.”

“Right you are,” said Batson, opening the door and adroitly edging us out. “Sorry you can’t stay. Good-night! Good-night!”

He shepherded us persuasively and compellingly down the hall, with a skill born of long practice with garrulous patients, and, having exchanged us on the doorstep for a stout woman with two children, returned into the house with his prey and was lost to sight.
FROM my late principal’s house we walked away quickly down the lamplit street, all, I think, dimly amused at the circumstances of our departure. “Is Batson always like that?” Thorndyke asked.

“Always,” I replied. “Hurry and bustle are his normal states.”

“Dear, dear,” commented Thorndyke, “what a terrible amount of time he must waste. Of course, one can understand how that cremation muddle came about. Your incurable hustler is always thinking of the things he has got to do next instead of the thing that he is doing at the moment. By the way, Jardine, I am taking it for granted that you would like to inspect these premises. It is not essential. Jervis and I had a preliminary look round last night, and I daresay we picked up most of the facts that are likely to be of importance if we should be going farther into the matter.”

“I think it would be as well for me to take a look at the place and show you exactly where and how the affair happened.”

“I think so too,” said Thorndyke. “It was all pretty evident, but you might be able to show us something that we had overlooked. Here we are. I wonder if Mr. Gill is on the premises—supposing him still to frequent them.”

He looked up and down the street, and, taking a key from his pocket, inserted it into the lock. “Why, how on earth did you get the key?” I asked.

Thorndyke looked at me slyly. “We keep a tame mechanic,” said he, as he turned the key and opened the wicket.

“Yes, but how did he get the pattern of the lock?” I asked.

Thorndyke laughed softly. “It is only a simple trade lock. The fact is, Jardine, that in our branch of practice we have occasionally to take some rather irregular proceedings. For instance, I usually carry a small set of picklocks—fortunately for you. That is how I got in last night. Then I never go abroad without a little box of moulding wax; a most invaluable material, Jardine, for collecting certain kinds of evidence. Well, with a slip of wood and a bit of wax I was able to furnish my man with the necessary data for filing up a blank key. One doesn’t want to be seen using a picklock. Now, can you show us the way?”

He flashed a pocket electric lamp on the ground, and we advanced over the rough cobbles until we reached a door at the side. “This is where I went in,” said I. “It opens into a sort of corridor, and at the end is a door opening on some steps that lead down to the passage below.”

Thorndyke tried the handle of the door and pushed, but it was evidently locked or bolted. “I left this door unlocked last night,” said he; “so it is clear that someone has been here since. I hardly expected that. I thought our friend would have cleared off for good. But it is possible that Gill had nothing to do with the attempt. The premises may have been used by someone who happened to know that they were unoccupied. It would have been quite easy for such a person to gain admittance; as you see.”

While speaking, he had produced from his pocket a little bunch of skeleton keys, with one of which he now quietly unlocked the door. “These builders’ locks,” said he, “are merely symbolic of security. You are not expected to unfasten them without authority, but you can if you like and happen to have a bit of stiff wire.”

We entered the corridor, and, as we proceeded, looked into the rooms that opened out of it. One of them was meagrely furnished as an office, but the thick layer of dust on the desk and stools showed clearly that it had been long disused; the other rooms were empty and desolate, and showed no trace of use or occupation. “The worthy Gill,” said Jervis, “seems to have been able, like Diogenes, to get on with a very modest outfit.”

“Yes,” agreed Thorndyke, “it is a little difficult to guess what his occupation is. The place looks as if it had never been used at all. Shall I go first?”

He halted for a moment, passing the light of his lamp over the massive door at the head of the steps, and then began to descend. It was certainly a horrible and repulsive place, especially to my eyes, with the recollection of my late experience fresh in my mind. The rough brick walls, covered with the crumbling remains of old white-wash, the black masses of cobwebs that drooped like funereal stalactites from the ceiling, the fungi that sprouted in corners, and the snail-tracks that glistened in the lamplight on the stone floor, all contributed to a vault-like sepulchral effect that was most unpleasantly suggestive of what might have been and very nearly had been.

My late prison was easily distinguished by the two holes in the door. We looked in; but that cellar was completely empty save for a few chips of wood and a pinch or two of sawdust; memorials of my sojourn in the lethal chamber at which I could hardly look without a shudder. Then we passed on to the next cellar—the one adjoining my prison—and this was an object of no little curiosity to me. Here, while I was securely bolted into my cell, that unknown villain had, deliberately and in cold blood, made all the arrangements for my murder; arrangements which he little suspected that I should survive to look upon.

Thorndyke, too, was interested. He stood at the open door, looking in as if considering the positions of various objects. As in fact he was. “Someone has been here since last night, Jervis,” said he.

“Yes,” agreed Jervis.

“That gas bottle has been taken down from the opening. You see, Jardine,” he continued, “he had stood that big packing-
case up on end and laid the gas bottle along the top, with its nozzle just opposite the hole. Two other bottles were standing upright with their nozzles upwards."

"I understand," said Thorndyke, "that you heard three bottles only turned on?"

"Yes," I answered; "there was the one opposite the hole and two others."

"I ask," Thorndyke said, "because there are, as you see, seven other bottles, lying by the wall. Those are all empty. We tried them when we came here last night."

"I know nothing about those others," said I. "The three bottles that I have mentioned I heard distinctly, and after he had turned on the third, the man went out of the cellar and closed up the door."

"Then," said Thorndyke, "the other seven were presumably used for some other—and let us hope, more legitimate—purpose. I wonder why our friend has been at the trouble of moving the cylinders."

"Perhaps," suggested Jervis, "he thought that the arrangement might be a little too illuminating for the police, if they should happen to pay a visit to the place. He may not be aware that the apparatus had already been inspected in situ by us. Or, again, the cylinders may have been moved by someone else. We are assuming that he is a lawful occupant of the premises; but he may be a mere secret intruder like ourselves, who has discovered that the place is more or less unoccupied and has made use of the premises and plant for his own benevolent purposes."

"Yes," agreed Thorndyke, "that is perfectly true. But we can put the matter to the test, at least objectively. If the cylinders have been moved by an innocent stranger they will bear the prints of hands."

"But why shouldn't the man himself leave the prints of his hands on the cylinders?" I asked.

"Because, my dear Jardine, he is too knowing a bird. Jervis and I went carefully over the cylinders last night in the hope of getting a few finger-prints to submit to Scotland Yard; but not a vestige could we find. Our friend had seen to that. We assumed that he had operated in gloves and your description of him confirmed our assumption. Which, in its way, is an interesting fact, for a man who is knowing enough to take these precautions has probably had some previous experience of crime, or, at least, has some acquaintance with the ways of criminals. The suggestion, in fact, is that, although this is not an ordinary professional crime, the perpetrator may be a professional criminal. And the further suggestion is, of course, that of very deliberate premeditation."

While he had been speaking he had produced from his pocket a small, flattened bottle fitted with a metal cap and filled with a yellowish powder. Removing the cap and uncovering a perforated inner cap, like that of an iodoform dredger, he proceeded to shake a cloud of the light powder over the three upper cylinders, jarring them with his foot to make the powder spread. Then he blew sharply on them, one after the other, when the powder disappeared from their surfaces, leaving visible one or two shapeless whitened smears but never a trace of a finger-print or even the shape of a hand.

Thorndyke rose and slipped the bottle back in his pocket. "Apparently," said he, "the cylinders were moved by our unknown friend, with the same careful precautions as on the first occasion. A wary gentleman, this, Jervis. He'll give us a run for our money, at any rate."

"Yes," agreed Jervis; "he doesn’t mean to give himself away. He preserves his incognito most punctiliously. I'll say that for him."

"And meanwhile," said Thorndyke, "we had better proceed with our measures for drawing him out of this modest retirement. I want you, Jardine, to look round this cellar and tell us if any of the things that you see in it reminds you of anything that has happened to you, or suggests any thought or reflection."

I looked round, I am afraid rather vacantly. A more unsuggestive collection of objects I have never looked upon. "There are the gas cylinders," I said, feebly; "but I have told you about them. I don't see anything else excepting a few oddments of rubbish."

"Then take a good look at the rubbish," said he. "Remember that it may be necessary at some future time for you to recall exactly what this cellar was like, and what it contained. You may even have to make a sworn statement. So cast your eye round and tell us what you see."

I did so, wondering inwardly what the deuce I was expected to see and what might be the importance of my seeing it. "I see," said I, "a mouldy-looking cellar about fifteen feet by twelve, with very bad brick walls, a plaster ceiling in an advanced stage of decay, and a concrete floor. In the left hand wall is a hole about six inches square opening into the adjoining cellar. The contents are ten gas cylinders, all apparently empty, a key or spanner which seems to have been used to turn the cocks, a large packing-case, which, to judge by its shape, seems to have contained gas cylinders—"

"The word ‘large,’" interrupted Thorndyke, "is not a particularly exact one."

"Well, then, a packing-case about seven feet long by two and a half feet wide and deep."

"That’s better," said Thorndyke. "Always give your dimensions in quantitative terms if possible. Go on."

"There are a couple of waterproof sheets," said I. "I don’t see quite what they can have been used for."

"Never mind their use," said Thorndyke. "Note the fact that they are here."

"I have," said I; "and that seems to complete the list with the exception of the straw in which I suppose the gas cylinders
were packed. There is a large quantity of that, but not more than would seem necessary for the purpose. And that seems to complete the inventory, and, I may say, that none of these things conveys any suggestion whatever to my mind.”

“Probably not,” said Thorndyke, “and it is quite possible that none of these things has any particular significance at all. But as they are the only facts offered us, we must make the best of them. There is one other cellar that we have not yet looked into, I think.”

We came out, and, walking along the passage, came to another door which stood slightly ajar. Thorndyke opened it, and, throwing in the light of his lamp, revealed a considerable stack of long iron gas bottles, and one or two packing-cases similar to the one I had already seen. “I presume,” said he, “that these are full cylinders; the store from which our friend got his supply, but we may as well make sure.”

He ran back into the adjoining cellar, and returned with the spanner, with which he proceeded to turn the cock of one of the topmost cylinders; upon which a loud hiss and a thin, snowy cloud showed that his surmise was correct.

He had just closed the cock and stepped out into the passage to take back the spanner, when I saw him stop suddenly as if listening. And then he sniffed once or twice. “What is it?” asked Jervis; but Thorndyke, without replying, ran quickly along the passage and up the steps, and I heard him trying the door at the top.

“Bring up one of the empty cylinders,” he said quietly. “They have bolted us in and apparently set fire to the place.”

We did not require much urging to act quickly. Picking up one of the long, ponderous iron cylinders, we ran with it along the passage towards the light of Thorndyke’s lamp. As we ascended the steps I became plainly aware of the smell of burning wood and of a crackling sound, faintly audible through the massive door. “There is only one bolt,” said Thorndyke; “I noticed it as we came in. I will throw my light on the part of the door where it is fixed, and you two must batter on that spot with the cylinder.”

The door was, as I have said, a massive door but it would have been a massive door indeed that could have withstood the blows of that ponderous iron cylinder, wielded by two strong men whose lives depended on their efforts. At the very first crash of the battering-ram, a tiny chink opened and at each thundering blow, the building shook. Furiously we pounded at the thick, plank-built door, and slowly the chink widened as the screws of the bolt tore out of the woodwork. And as the chink opened, a thin reek of pungent smoke filtered in, and the cold light of Thorndyke’s lantern became contrasted with a red glare from without. And then suddenly, the door, under the heavy battering, burst from its fastenings and swung open. A blinding, choking cloud of smoke and sparks rolled in upon us, through which we could see in the corridor outside a pile of straw and crates and broken packing-cases, blazing and cracking furiously. It looked as if we were cut off beyond all hope.

Jervis and I had dropped the now useless cylinder and were gazing in horror at the blazing mass that filled the corridor and cut off our only means of escape, when we were recalled by the voice of Thorndyke, speaking in his usual quiet and precise manner. “We must get the full cylinders up as quickly as possible,” said he; and, running down the steps he made straight for the end cellar, whither we followed him. Picking up one of the cylinders, we carried it quickly to the top of the steps. “Lay it down,” said Thorndyke, “and fetch another.”

Jervis and I ran back to the cellar, and taking up another cylinder, brought it along the passage. As we were ascending the steps, there suddenly arose a loud, penetrating hiss, and as we reached the top, we saw Thorndyke disengaging the spanner from the cock of the cylinder out of which a jet of liquid was issuing, mingled with a dense, snowy cloud.

An instantaneous glance, as we laid down the fresh cylinder, reassured me very considerably. The icy, volatile liquid and the falling cloud of intensely cold carbonic acid snow had produced an immediate effect; as was evident in a blackened, smouldering patch in the midst of the blazing mass. With reviving hope I followed Jervis once more down the steps and along the passage to the end cellar, from which we brought forth a third cylinder.

By this time the passage was so filled with smoke that it was difficult either to see or to breathe, and the bright light that had at first poured in through the open doorway had already pulled down so far that Thorndyke’s figure, framed in the opening, loomed dim and shadowy amidst the smoke and against the dusky red background. We found him, when we reached the top of the steps, holding the great gas bottle and directing the stream of snow and liquid on to those parts of the wood and straw from which flames still issued. “It will be all right,” he said in his calm, unemotional way; “the fire had not really got an effective start. The straw made a great show, but that is nearly all burnt now, and all this carbonic acid gas will soon smother the burning wood. But we must be careful that it doesn’t smother us too. The steps will be the safest place for the present.”

He opened the cock of the new cylinder and, having placed it so that it played on the most refractory part of the burning mass, backed to the steps where Jervis and I stood looking through the doorway. The fire was, as he had said, rapidly dying down. The volumes of gas produced by the evaporation of the liquid and the melting snow, cut off the supply of air so that, in place of the flames that had, at first, looked so alarming, only a dense reek of smoke arose. “Now,” said Thorndyke, after we had waited on the steps a couple of minutes more, “I think we might make a sortie and put an end to it. If we can get the smouldering stuff off that wooden floor down on to the stone, the danger will be over.”

He led the way cautiously into the corridor, and, once more bringing his electric lamp into requisition, began to kick the smouldering cases and crates and the blackened masses of straw down the steps on to the stone floor of the passage, whither we followed them and scattered them with our feet until they were completely safe from any chance of re-ignition.
“There,” said Jervis, giving a final kick at a small heap of smoking straw, “I should think that ought to do. There’s no fear of that stuff lighting up again. And, if I may venture to make the remark, the sooner we are off these premises the happier I shall be. Our friend’s methods of entertaining his visitors are a trifle too strenuous for my taste. He might try dynamite next.”

“Yes,” I agreed; “or he might take pot shots at us with a revolver from some dark corner.”

“It is much more likely,” said Thorndyke, “that he has cleared off in anticipation of the alarm of fire. Still, it is undeniable that we shall be safer outside. Shall I go first and show you a light?”

He piloted us along the corridor and up the cobbled yard, putting away his lamp as he unlocked the wicket. There was no sign of anyone about the premises nor, when we had passed out of the gate, was there anyone in sight in the street. I looked about, expecting to see some sign of the fire; but there was no smoke visible, and only a slight smell of burning wood. The smoke must have drifted out at the back. “Well,” Thorndyke remarked, “it has been quite an exciting little episode. And a highly satisfactory finish, as things turned out; though it might easily have been very much the reverse. But for the fortunate chance of those gas-bottles being available, I don’t think we should be alive at this moment.”

“No,” agreed Jervis. “We should be in much the same condition by this time as Batson’s late patient, Mr. Maddock, or at least, well on our way to that disembodied state. However, all’s well that ends well. Are you coming our way, Jardine?”

“I will walk a little way with you,” said I. “Then I must go back to Batson to settle up and fetch my traps.”

I walked with them to Oxford Street and we discussed our late adventure as we went. “It was a pretty strong hint to clear out, wasn’t it?” Jervis remarked.

“Yes,” replied Thorndyke; “it didn’t leave us much option. But the affair can’t be left at this. I shall have a watch set on those premises, and I shall make some more particular enquiries about Mr. Gill. By the way, Jardine, I haven’t your address. I’d better have it in case I want to communicate with you; and you’d better have my card in case anything turns up which you think I ought to know.”

We accordingly exchanged cards, and, as we had now reached the corner of Oxford Street, I wished my friends adieu and thoughtfully retraced my steps to Jacob Street.

VIII — IT’S AN ILL WIND…

LONDON is a wonderful place. From the urban greyness of Jacob Street to the borders of Hampstead Heath was, even in those days of the slow horse tram, but a matter of minutes—a good many minutes, perhaps, but still, considerably under an hour. Yet, in that brief and leisurely journey, one exchanged the grim sordidness of a most unlovely street for the solitude and sweet rusticity of open and charming country.

A day or two after my second adventure in the mineral water works, I was leaning on the parapet of the viaduct—the handsome, red brick viaduct with which some builder, unknown to me, had spanned the pond beyond the Upper Heath, apparently with purely decorative motive, and in a spirit of sheer philanthropy. For no road seemed to lead anywhere in particular over it, and there was no reason why any wayfarer should wish to cross the pond rather than walk round it; indeed, in those days it was covered by a turfy expanse seldom trodden by any feet but those of the sheep that grazed in the meadows bordering the pond. I leaned on the parapet, smoking my pipe with deep contentment, and looking down into the placid water. Flags and rushes grew at its borders, water-lilies spread their flat leaves on its surface, and a small party of urchins angled from the margin, with the keen joy of the juvenile sportsman who suspects that his proceedings are unlawful.

I had lounged on the parapet for several minutes, when I became aware of a man, approaching along the indistinct track that crossed the viaduct, and, as he drew near, I recognized him as the keeper whom I had met in Ken Wood on the morning after my discovery of the body in Millfield Lane. I would have let him pass with a smile of recognition, but he had no intention of passing. Touching his hat politely, he halted, and, having wished me good-morning, remarked: “You didn’t tell me, sir, what it was you were looking for that morning when I met you in the wood.”

“No,” I replied, “but apparently, someone else has.”

“Well, sir, you see,” he said, “the sergeant came up the next day with a plain-clothes man to have a look round, and, as the sergeant is an old acquaintance of mine, he gave me the tip as to what they were after. I am sorry, sir, you didn’t tell me what you were looking for.”

“Why?” I asked.

“Well,” he replied, “we might have found something if we had looked while the tracks were fresh. Unfortunately there was a gale in the night that fetched down a lot of leaves, and blew up those that had already fallen, so that any foot-marks would have got hidden before the sergeant came.”

“What did the police officers seem to think about it?” I asked.

“Why, to speak the truth,” the keeper replied, “they seemed to think it was all bogey.”

“Do you mean to say,” I asked, “that they thought I had invented the whole story?”
“Oh, no, sir,” he replied, “not that. They believed you had seen a man lying in the lane, but they didn’t believe that he was a dead man and they thought your imagination had misled you about the tracks.”

“Then, I suppose they didn’t find anything?” said I.

“No, they didn’t, and I haven’t been able to find anything myself, though I’ve had a good look round.”

And then, after a brief pause: “I wonder,” he said, “if you would care to come up to the Wood and have a look at the place yourself.”

I considered for a moment. I had nothing to do for I was taking a day off, and the man’s proposal sounded rather attractive. Finally, I accepted his offer, and we turned back together towards the Wood.

Hampstead—the Hampstead of those days—was singularly rustic and remote. But, within the wood, it was incredible that the town of London actually lay within the sound of a church bell or the flight of a bullet. Along the shady paths, carpeted with moss and silvery lichen, overshadowed by the boughs of noble beeches; or in leafy hollows, with the humus of centuries under our feet, and the whispering silence of the woodland all around, we might have been treading the glades of some primeval forest. Nor was the effect of this strange remoteness less, when presently, emerging from the thicker portion of the wood, we came upon a moss-grown, half-ruinous boat-house on the sedgy margin of a lake, in which was drawn up a rustic-looking, and evidently, little-used punt.

“It’s wonderful quiet about here, sir,” the keeper remarked, as a water-hen stole out from behind a clump of high rushes and scrambled over the leaves of the water-lilies.

“And presumably,” I remarked, “it’s quieter still at night.”

“You’re right, sir,” the keeper replied. “If that man had got as far as this, he’d have had mighty little trouble in putting the body where no one was ever likely to look for it.”

“I suppose,” said I, “that you had a good look at the edges of the lake?”

“Yes,” he answered. “I went right round it, and so did the police, for that matter, and we had a good look at the punt, too. But, all the same, it wouldn’t surprise me if, one fine day, that body came floating up among the lilies; always supposing, that is,” he added, “that there really was a body.”

“How far is it,” I asked, “from the lake to the place where you met me that morning?”

“It’s only a matter of two or three minutes,” he answered, “we may as well walk that way and you can see for yourself.” Accordingly, we set forth together, and, coming presently upon one of the moss-grown paths, followed it past a large summerhouse until we came in sight of the beech beyond which I had encountered him while I was searching for the tracks. As we went, he plied me with questions as to what I had seen on the night in the lane, and I made no scruple of telling him all that I had told the police, seeing that they, on their side, had made no secret of the matter.

Of course, it was idle, after this long period—for it was now more than seven weeks since I had seen the body—to attempt anything in the nature of a search. It certainly did look as if the man who had stolen into that wood that night had been bound for the solitary lake. The punt, I had noticed, was only secured with a rope, so that the murderer—for such I assumed he must have been—could easily have carried his dreadful burden out into the middle, and there sunk it with weights, and so hidden it for ever. It was a quick, simple and easy method of hiding the traces of his crime, and, if the police had not thought it worth while to search the water with drags, there was no reason why the buried secret should not remain buried for all time.

After we had walked for some time about the pleasant, shady wood, less shady now that the yellowing leaves were beginning to fall with the passing of autumn, the keeper conducted me to the exit by which I had left on the previous occasion.

As I was passing out of the wicket, my eye fell once more on the cottage which I had then noticed, and, recalling the remark that my fair acquaintance had let fall concerning the artist to whom the derelict knife was supposed to belong, I said: “You mentioned, I think, that that house was let to an artist.”

“It was,” he replied; “but it’s empty now, the artist has gone away.”

“It must be a pleasant little house to live in,” I said, “at any rate, in summer.”

“Yes,” he replied, “a country house within an hour’s walk of the Bank of England. Would you like to have a look at it, sir? I’ve got the keys.”

Now I certainly had no intention of offering myself as a tenant, but, yet, to an idle man, there is a certain attractiveness in an empty house of an eligible kind, a certain interest in roaming through the rooms and letting one’s fancy furnish them with one’s own household goods. I accepted the man’s invitation, and, opening the wide gate that admitted to the garden from a byroad, we walked up to the door of the house. “It’s quite a nice little place,” the keeper remarked. “There isn’t much garden, you see, but then, you’ve got the Heath all around; and there’s a small stable and coachhouse if you should be wanting to go into town.”

“Did the last tenant keep any kind of carriage?” I asked.

“I don’t think so,” said the keeper, “but I fancy he used to hire a little cart sometimes when he had things to bring in from
town; but I don’t know very much about him or his habits.”

We walked through the empty rooms together, looking out of the windows and commenting on the pleasant prospects that all of them commanded, and talking about the man who had last lived in the house. “He was a queer sort of fellow,” said the keeper. “He and his wife seem to have lived here all alone without any servant, and they seem often to have left the house to itself for a day or two at a time; but he could paint. I have stopped and had a look when he has been at work, and it was wonderful to see how he knocked off those pictures. He didn’t seem to use brushes, but he had a lot of knives, like little trowels, and he used to shovel the paint on with them, and he always wore gloves when he was painting; didn’t like to get the paint on his hands, I suppose.”

“It sounds as if it would be very awkward,” I said.

“Just what I should have thought,” the keeper agreed. “But he didn’t seem to find it so. This seems to be the place that he worked in.”

Apparently the keeper was right. The room, which we had now entered, was evidently the late studio, and did not appear to have been cleaned up since the tenant left. The floor was littered with scraps of paper on which a palette-knife had been cleaned, with empty paint-tubes and one or two broken and worn-out brushes, and, in a packing-case, which seemed to have served as a receptacle for rubbish, were one or two canvases that had been torn from their stretchers and thrown away. I picked them out and glanced at them with some interest, remembering what my fair friend had said. For the most part, they were mere experiments or failures, deliberately defaced with strokes or daubs of paint, but one of them was a quite spirited and attractive sketch, rough and unfinished, but skilfully executed and undefaced. I stretched out the crumpled canvas and looked at it with considerable interest, for it represented Millfield Lane, and showed the large elms and the posts and the high fence under which I had sheltered in the rain. In fact, it appeared to have been taken from the exact spot on which the body had been lying, and from which I had made my own drawing; not that there was anything in the latter coincidence, for it was the only sketchable spot in the lane. “It’s really quite a nice sketch,” I said; “it seems a pity to leave it here among the rubbish.”

“It does, sir,” the keeper agreed. “If you like it, you had better roll it up and put it in your pocket. You won’t be robbing anyone.”

As it seemed that I was but rescuing it from a rubbish-heap, I ventured to follow the keeper’s advice, and, rolling the canvas up, carefully stowed it in my pocket. And shortly after as I had now seen all that there was to see, which was mighty little, we left the house, and, at the gate, the keeper took leave of me with a touch of his hat.

I made my way slowly back towards my lodgings by way of the Spaniard’s Road and Hampstead Lane, turning over in my mind as I went, the speculation suggested by my visit to the wood. Of the existence of the lake I had not been previously aware. Now that I had seen it, I felt very little doubt that it was known to the mysterious murderer—for such I felt convinced he was—who must have been lurking in the lane that night when I was sheltering under the lee of the fence. The route that he had then taken appeared to be the direct route to the lake. That he was carrying the body, I had no doubt whatever; and, seeing that he had carried it so far, it appeared probable that he had some definite hiding-place in view. And what hiding-place could be so suitable as this remote piece of still water? No digging, no troublesome and dangerous preparation would be necessary. There was the punt in readiness to bear him to the deep water in the middle; a silent, easily-handled conveyance. A few stones, or some heavy object from the boat-house, would be all that was needful; and in a moment he would be rid for ever of the dreadful witness of his crime.

Thus reflecting—not without dissatisfaction at the passive part that I had played in this sinister affair—I passed through the turnstile, or “kissing-gate,” at the entrance to Millfield Lane. Almost certainly, the murderer or the victim or both, had passed through that very gate on the night of the tragedy. The thought came to me with added solemnity with the recollection of the silent wood and the dark, still water fresh in my mind, and caused me unconsciously to tread more softly and walk more sedately than usual.

The lane was little frequented at any time and now, at mid-day, was almost as deserted as at midnight. Very remote it seemed, too, and very quiet, with a silence that recalled the hush of the wood. And yet the silence was not quite unbroken. From somewhere ahead, from one of the many windings of the tortuous lane, came the sound of hurried footsteps. I stopped to listen. There were two persons, one treading lightly, the other more heavily, apparently a man and a woman. And both were running—running fast.

There was nothing remarkable in this, perhaps; but yet the sound smote on my ear with a certain note of alarm that made me quicken my pace and listen yet more intently. And suddenly there came another sound; a muffled, whimpering cry like that of a frightened woman. Instantly I gave an answering shout and sprang forward at a swift run.

I had turned one of the numerous corners and was racing down a straight stretch of the lane when a woman darted round the corner ahead, and ran towards me, holding out her hands. I recognised her at a glance, though now she was dishevelled, pale, wild-eyed, breathless and nearly frantic with terror, and rage against her assailant spurred me on to greater speed. But when I would have passed her to give chase to the wretch, she clutched my arm frantically with both hands and detained me. “Let me go and catch the scoundrel!” I exclaimed; but she only clung the tighter.

“No,” she panted, “don’t leave me! I am terrified! Don’t go away!”

I ground my teeth. Even as we stood, I could hear the ruffian’s footsteps receding as rapidly as they had advanced. In a
few moments he would be beyond pursuit. “Do let me go and stop that villain!” I implored. “You’re quite safe now, and you can follow me and keep me in sight.”

But she shook her head passionately, and, still clutching my sleeve with one hand, pressed the other to her heart. “No, no, no!” she gasped, with a catch in her voice that was almost a sob, “I can’t be alone! I am frightened. Oh! Please don’t go away from me!”

What could I do? The poor girl was evidently beside herself with terror, and exhausted by her frantic flight. It would have been cruel to leave her in that state. But all the same, it was infuriating. I had no idea what the man had done to terrify her in this way. But that was of no consequence. The natural impulse of a healthy young man when he learns that a woman has been ill-used is to hammer the offender effectively in the first place, and then to inquire into the affair. That was what I wanted to do; but it was not to be. “Well,” I said, by way of compromise, “let us walk back together. Perhaps we may be able to find out which way the man went.”

To this she agreed. I drew her arm through mine—for she was still trembling and looked faint and weak—and we began to retrace her steps towards Highgate. Of course the man was nowhere to be seen, and by the time that we had turned the sharp corner where I had found the body of the priest, the man was not only out of sight, but his footsteps were no longer audible.

Still we went on for some distance in the hopes of meeting someone who could tell us which way the miscreant had gone. But we met nobody. Only, some distance past the posts, we came in sight of a sketching box and a camp-stool, lying by the side of the path. “Surely those are your things?” I said.

“Yes,” she answered. “I had forgotten all about them. I dropped them when I began to run.”

I picked up the box and the stool, and debated with myself whether it was worth while to go on any farther. From where we stood, nothing was to be seen, for the lane was still enclosed on both sides by a seven foot fence of oak boards. But the chance of overtaking the fugitive was not to be considered; by this time he was probably out of the lane on the Heath or in the surrounding meadows; and meanwhile, my companion, though calmer and less breathless, looked very pale and shaken. “I don’t know that it’s any use,” I said, “to tire you by going any farther. The man is evidently gone.”

She seemed relieved at my decision, and it then occurred to me to suggest that she should sit down awhile on the bank under the high fence to recover herself, and to this, too, she assented gladly. “If it wouldn’t distress you,” I said, “would you mind telling me what had happened?”

She pondered for a few seconds and then answered: “It doesn’t sound much in the telling and I expect you will think me very silly to be so much upset.”

“I’m sure I shan’t,” I said, with perfect confidence in the correctness of my statement.

“Well,” she said, “what happened was this as nearly as I can remember: I was coming up the path from the ponds and I had to pass a man who was leaning against the fence by the stile. As I came near to him, he looked at me, at first, in quite an ordinary way, and then, he suddenly began to stare in a most singular and disturbing fashion, not at me, so much, as at this little crucifix which I wear hung from my neck. As I passed through the turnstile, he spoke to me: ‘Would you mind letting me look at that crucifix?’ he asked. It was a most astonishing piece of impertinence, and I was so taken aback that I hardly had the presence of mind to refuse. However, I did, and very decidedly, too. Then he came up to me, and, in a most threatening and alarming manner, said: ‘You found that crucifix. You picked it up somewhere near here. It’s mine, and I’ll ask you to let me have it, if you please.’

“Now this was perfectly untrue. The crucifix was given to me by my father when I was quite a little child, and I have worn it ever since I have been grown up—ever since he died, in fact, six years ago. I told the man this, but he made no pretence of believing me, and was evidently about to renew his demand, when two labourers appeared, coming down the lane. I thought this a good opportunity to escape, and walked away quickly up the lane; it was very silly of me; I ought to have gone the other way.”

“Of course you ought,” I agreed, “you ought to have got out into a public road at once.”

“Yes, I see that now,” she said. “It was very foolish of me. However, I walked on pretty quickly, for there was something in the man’s face that had frightened me, and I was anxious to get home. I looked back, from time to time, and, when I saw no sign of the man, I began to recover myself; but just as I had got to the most solitary part of the lane, just about where we are now, shut in by these high fences, I heard quick footsteps behind me. I looked back and saw the man coming after me. Then, I suppose, I got in a sudden panic, for I dropped my sketching things and began to run. But as soon as I began to run, the man broke into a run too. I raced for my life, and when I heard the man gaining on me, I suppose I must have called out. Then I heard your shout from the upper part of the lane and ran on faster than ever to gain your protection. That’s all, and I suppose you think that I have been making a great fuss about nothing.”

“I don’t think anything of the kind,” I said, “and neither would our absent friend if I could get hold of him. By the way, what sort of person was he?—a tramp?”

“Oh, no, quite a respectable looking person; in fact, he would have passed for a gentleman.”

“Can you give any sort of description of him, not that verbal descriptions are of much use except in the case of a hunchback or a Chinaman or some other easily identifiable creature.”
“No, they are not,” she agreed, “and I don’t think that I can tell you much about this man excepting that he was clean-shaven, of medium height, quite well dressed, and wore a round hat and slate-coloured suede gloves.”

“I’m afraid we shan’t get hold of him from that description,” I said. “The only thing that you can do is to avoid solitary places for the present and not to come through this lane again alone.”

“Yes,” she said. “I suppose I must, but it’s very unfortunate. One cannot always take a companion when one goes sketching even if it were desirable, which it is not.”

As to the desirability, in the case of a good-looking girl, of wandering about alone in solitary places, I had my own opinions; and very definite opinions they were. But I kept them to myself. And so we sat silent for awhile. She was still pale and agitated, and perhaps her recital of her misadventure had not been wholly beneficial. At the moment that this idea occurred to me, a cracking in my breast-pocket reminded me of the forgotten canvas, and I bethought me that perhaps a change of subject might divert her mind from her very disagreeable experience. Accordingly, I drew the canvas out of my pocket, and, unrolling it, asked her what she thought of the sketch. In a moment she became quite animated. “Why,” she exclaimed, “this looks exactly like the work of that artist who was working on the Heath a little while ago.”

“It is his,” I replied, considerably impressed and rather astonished at her instantaneous recognition; “but I didn’t know you were so familiar with his work.”

“I’m not very familiar with it,” she replied, “but, as I told you, I sometimes managed to steal a glance or two when I passed him. You see, his technique is so peculiar that it’s easily recognised, and it interested me very much. I should have liked to stop and watch him and get a lesson.”

“It is rather peculiar work,” I said, looking at the canvas with new interest. “Very solid and yet very smooth.”

“Yes. It is typical knife-work, almost untouched with the brush. That was what interested me. The knife is a dangerous tool for a comparative tyro like myself, but yet one would like to learn how to use it. Did he give you this sketch?”

I smiled guiltily. “The truth is,” I admitted, “I stole it.”

“How dreadful of you!” she said, “I suppose that you could not be bribed to steal another?”

“I would steal it for nothing if you asked me,” I answered, “and meanwhile, you had better take possession of this one. It will be of more use to you than to me.”

She shook her head: “No, I won’t do that,” she said, “though it is most kind of you. You paint, I think, don’t you?”

“I’m only the merest amateur,” I replied. “I annexed the sketch for the sake of the subject. I have rather an affection for this lane.”

“So had I,” said she, “until to-day. Now, I hate it, but, might I ask how you managed your theft?”

I told her about the empty cottage and the rejected canvases in the rubbish box. “I’m afraid none of the others would be of any use to you because he had drawn a brushful of paint across each of them.”

“Oh, that wouldn’t matter,” she said. “The brush-strokes would be on dry paint and could easily be scraped off. Besides, it is not the subject but the technique that interests me.”

“Then I will get into the cottage somehow and purloin the remaining canvases for you.”

“Oh, but I mustn’t give you all this trouble,” she protested.

“It won’t be any trouble,” I said. “I shall quite enjoy a deliberate and determined robbery. But where shall I send the spoil?”

She produced her card-case, and, selecting a card, handed it to me, with a smile: “It seems to me,” she said, “that I am inciting you to robbery and acting as a receiver of stolen goods, but I suppose there’s no harm in it, though I feel that I ought not to give you all this trouble.”

I made the usual polite rejoinder as I took from her the little magical slip of pasteboard that, in a moment, transformed her from a stranger to an acquaintance, and gave her a local habituation and a name. Before bestowing it in my pocket-book, I glanced at the neat copper-plate and read the inscription: “Miss Sylvia Vyne. The Hawthorns. North End.”

The effect of our conversation had answered my expectations. Her agitation had passed off, the colour had come back to her cheeks, and, in fact, she seemed quite recovered. Apparently she thought so herself, for she rose, saying that she now felt well enough to walk home, and held out her hand for the colour-box and stool. “I think,” said I, “that if you won’t consider me intrusive, I should like to see you safely out on to an inhabited road at least.”

“I shall accept your escort gratefully,” she replied, “as far as the end of the lane, or farther if it is not taking you too much out of your way.”

Needless to say, I would gladly have escorted so agreeable and winsome a protegee from John o’ Groats to Land’s End and found it not out of my way at all; and when she passed out of the gate into Hampstead Lane, I clung tenaciously to the box and stool and turned towards “The Spaniards” as though no such thing as a dismissal had ever been contemplated. In fact, with the reasonable excuse of carrying the impedimenta, I maintained my place by her side in the absence of a definite congé; and so we walked together, talking quite easily, principally about pictures and painting, until, in the pleasant little
hamlet, she halted by a garden gate, and, taking her possessions from me, held out a friendly hand. “Good-bye,” she said. “I can’t thank you enough for all your help and kindness. I hope I have not been very troublesome to you.”

I assured her that she had been most amenable, and, when I had once more cautioned her to avoid solitary places, we exchanged a cordial hand-shake and parted, she to enter the pleasant, rustic-looking house, and I to betake myself back to my lodgings, lightening the way with much agreeable and self-congratulatory reflection.

IX — THORNDYKE TAKES UP THE SCENT

AT my lodgings, which I reached at an unconscionably late hour for lunch, I found a little surprise awaiting me; a short note from Dr. Thorndyke asking me if I should be at liberty early on the following afternoon to show him the spot on which I had found the mysterious body. Of course, I answered by return, begging him to come straight on from the hospital to an early lunch, over which we could discuss the facts of the case before settling out. Having dispatched my letter, I called at the offices of the house agent who had the letting of the cottage on the Heath, to see if he had duplicate keys. Fortunately he had, and was willing to entrust them to me on the understanding that they should be returned some time during the next day. I did not, however, go on to the cottage, for it occurred to me that Thorndyke would probably wish to visit the wood, and I could make my visit and purloin the canvases then.

A telegram on the following morning informed me that Thorndyke would be with me at twelve o’clock, and, punctually to the minute, he arrived. “I hope you don’t mind me swooping down on you in this fashion,” he said, as the servant showed him into the room.

I assured him, very truthfully, that I was delighted to be honoured by a visit from him, and he then proceeded to explain. “You may wonder, Jardine, why I am busying myself about this case, which is really no business of mine, or, at least, appears to be none; but the fact is, that as a teacher and a practitioner of Medical Jurisprudence, I find it advantageous to look into any unusual cases. Of course, there is always a considerable probability that I may be consulted concerning any out of the way case; but, apart from that, I have the ordinary specialist’s interest in anything remarkable in my own speciality.”

“I should think,” said I, “that it would be well for me to give you all the facts before we start.”

“Exactly, Jardine,” he replied, “that is what I want. Tell me all you know about the affair and then we shall be able to test our conclusions on the spot.”

He produced a large scale ordnance map, and, folding it under my direction, so that it showed only the region in which we were interested, he stood it up on the table against the water bottle, where we could both see it, and marked on it with a pencil each spot as I described it.

It is not necessary for me to record our conversation. I told him the whole story as I have already told it to the reader, pointing out on the map the exact locality where each event occurred. “It’s a most remarkable case, Jardine,” was his thoughtful comment when I had finished, “most remarkable; curiously puzzling and inconsistent too. For you see that on the one hand, it looks like a casual or accidental crime, and yet, on the other, strongly suggests premeditation. No man, one would think, could have planned to commit a murder in what is, after all, a public thoroughfare; and yet, the long distance which the body seems to have been carried, and the apparently selected hiding-place, seem to suggest a previously considered plan.”

“You think that there is no doubt that the man was really dead?” I asked.

“Had you any doubt at the time yourself?”

“None at all,” I replied, “it was only the disappearance of the body, and, perhaps, the sergeant’s suggestion, that made me think it possible that I might have been mistaken.”

Thorndyke shook his head. “No, Jardine,” said he, “the man was dead. We are safe in assuming that; and on that assumption our investigations must be based. The next question is, how was the body taken away? Did you measure the fence?”

“No, but I should say it is about seven feet high.”

“And what kind of fence is it? Are there any footholds?”

“I can show you exactly what the fence is like,” I answered. “That sketch, which I have pinned up on the wall, was apparently painted from the exact spot on which the body lay. That fence on the right-hand side is the one under which I sheltered and is exactly like the one over which the body seems to have been lifted.”

Thorndyke rose and walked over to the sketch, which I had fixed to the wall with drawing-pins. “Not a bad sketch, this, Jardine,” he remarked, “very smartly put in, apparently mostly with the knife. Where did you get it?”

I had to confess that the canvas was unlawfully come by, and told him how I had obtained it. “You don’t know the artist’s name?” said Thorndyke, looking closely at the sketch.

“No. In fact, I know nothing about him, excepting that he worked mostly with a small painting-knife, and usually wore kid gloves.”

“You don’t mean that he worked in gloves?” said Thorndyke.
“So I am told,” said I. “I never saw him.”

“It’s very odd,” said Thorndyke. “I have heard of men wearing a glove on the palette-hand to keep off the midges, and many men paint in gloves in exceptionally cold weather. But this sketch seems to have been painted in the summer.”

“I suppose,” said I, “the midges don’t confine their attentions to the palette-hand. And after all, to a man who worked entirely with the knife, a glove wouldn’t be really in the way.”

“No,” Thorndyke agreed, “that is true.” He looked closely at the sketch, and even took out his pocket lens to help his vision, which seemed almost unnecessary. It appeared that he was as much interested in the unknown artist's peculiar technique as was my friend, Miss Sylvia Vyne. “By the way,” said he, when he had resumed his seat at the table, “you were telling me about some kind of gold trinket that you had picked up at the foot of the fence. Shall we have a look at it?”

I fetched the little gold object from the dispatch box in which I had locked it up, and handed it to him. He turned it over in his fingers, read the letters that were engraved on it, and examined the little piece of silk cord that was attached to one ring. “There is no doubt,” said he, “as to the nature of this object, nor of its connection with the dead man. This is evidently a reliquary, and these initials engraved upon it bear out exactly your description of the body. S.V.D.P evidently means St. Vincent de Paul, who, as you probably know, was a saint who was distinguished for his works of charity. You have mentioned that the dead man wore a Roman collar, with a narrow, dark stripe up the front. That means that he was the lay-brother of some religious order, probably some philanthropic order, to whom St. Vincent de Paul would be an object of special devotion. The other letters, A.M.D.G., are the initials of the words Ad Majorem Dei Gloriam—the motto of the Society of Jesus. But as St. Vincent de Paul was not a Jesuit saint, the motto probably refers to the owner of the reliquary, who may have been a Jesuit or a friend of the Society. It was apparently attached—perhaps to the neck—by this silk cord, which seems to have been frayed nearly through, and probably broke when the body was drawn over the top of the fence.”

“I suppose I ought to have shown it to the police, I said.

“I suppose you ought,” he replied, “but, as you haven’t, I think we had better say nothing about it now.”

He handed it back to me, and I dropped it into my pocket, intending to return it presently to the dispatch box. A few minutes later, we sallied forth on our journey of exploration.

It is not necessary to describe this journey in detail since I have already taken the reader over the ground more than once. We went, of course, to the place where I had found the body and walked right through to Hampstead Lane. Then we returned, and reconstituted the circumstances of that eventful night, after which, I conducted Thorndyke to the place where I assumed that the body had been lifted over the fence. “I suppose,” I said, “we must go round and pick up the track from the other side.”

He looked up and down the lane and smiled. “Would your quondam professor lose your respect for ever, Jardine, if you saw him climb over a fence in a frock coat and a topper?”

“No,” I answered, “but it might look a little quaint if anyone else saw you.”

“I think we will risk that,” he said. “There is no one about, and I should rather like to try a little experiment. Would you mind if I hoisted you over the fence? You are something of an out-size, but then, so am I, too, which balances the conditions.”

Of course I had no objection, and, when we had looked up and down the lane and listened to make sure that we had no observers, Thorndyke picked me up, with an ease that rather surprised me, and hoisted me above the level of the fence. “Is it all clear on the other side?” he asked.

“Yes,” I answered, “there’s no one in sight.”

“Then I want you to be quite passive,” he said, and with this, he hoisted me up further until I hung with my own weight across the top of the fence. Leaving me hanging thus, he sprang up lightly, and, having got astride at the top, dropped down on the other side, when he once more took hold of me and drew me over. “It wasn’t so very difficult,” he said. “Of course, it would have been more so to a shorter man, but, on the other hand, it is extremely unlikely that the body was anything like your size and weight.”

We now followed the track up to the wood, which we entered by an opening in the fence, through which I assumed that the murderer had probably passed. I conducted Thorndyke by the nearest route to the boat-house, and, when he had thoroughly examined the place and made notes of the points that appeared to interest him, I showed him the way out by the turnstile.

It was here when we came in sight of the cottage that I bethought of my promise to Miss Vyne, and somewhat sheepishly explained the matter to Thorndyke. “It won’t take me a minute to go in and sneak the things,” I said apologetically, and was proposing that he should walk on slowly, when he interrupted me.

“I’ll come in with you,” said he. “There may be something else to filch. Besides, I am rather partial to empty houses. There is something quite interesting, I think, in looking over the traces of recent occupation, and speculating on the personality and habits of the late occupiers. Don’t you find it so?”

I said “Yes,” truthfully enough, for it was a feeling of this kind that had first led me to look over the cottage. But my interest was nothing to Thorndyke’s; for no sooner had I let him in at the front door, than he began to browse about
through the empty rooms and passages, for all the world like a cat that has just been taken to a new house. “This was evidently the studio,” he remarked, as we entered the room from which I had taken the canvas, “he doesn’t seem to have had much of an outfit, as he appears to have worked on his sketching-easel; you can see the indentations made by the toe-points, and there are no marks of the castors of a studio easel. You notice, too, that he sat on a camp-stool to work.”

It did not appear to me to matter very much what he had sat on, but I kept this opinion to myself and watched Thorndyke curiously as he picked up the empty paint tubes and scrutinized them one after the other. His inquisitiveness filled me with amused astonishment. He turned out the rubbish box completely, and having looked over every inch of the discarded canvases, he began systematically to examine, one by one, the pieces of paper on which the late resident had wiped his palette-knife.

Having rolled up and pocketed the waste canvases, I expressed myself as ready to depart. “If you’re not in a hurry,” said Thorndyke, “I should like to look over the rest of the premises.”

He spoke as though we were inspecting some museum or exhibition, and, indeed, his interest and attention, as he wandered from room to room, were greater than that of the majority of visitors to a public gallery. He even insisted on visiting the little stable and coachhouse, and when he had explored them both, ascended the rickety steps to the loft over the latter. “I suppose,” said I, “this was the lumber room or store. Judging by the quantity of straw it would seem as if some cases had been unpacked here.”

“Probably,” agreed Thorndyke. “In fact, you can see where the cases have been dragged along, and also, by that smooth indented line, where some heavy metallic object has been slid along the floor. Perhaps if we look over the straw, we may be able to judge what those cases contained.”

It didn’t seem to me to matter a brass farthing what they contained, but again I made no remark; and together we moved the great mass of straw, almost handful by handful, from one end of the loft to the other, while Thorndyke, not only examined the straw but even closely scrutinized the floor on which it lay.

As far as I could see, all this minute and apparently purposeless searching was entirely without result, until we were in the act of removing the last armful of straw from the corner; and even then the object that came to light did not appear a very remarkable one under the circumstances, though Thorndyke seemed to find what appeared to me a most unreasonable interest in it. The object was a pair of canvas-pliers, which Thorndyke picked up almost eagerly and examined with profound attention. “What do you make of that, Jardine?” he asked, at length, handing the implement to me.

“It’s a pair of canvas-pliers,” I replied.

“Obviously,” he rejoined, “but what do you suppose they have been used for?”

I opined that they had been used for straining canvases, that being their manifest function. “But,” objected Thorndyke, “he would hardly have strained his canvases up here. Besides, you will notice that they have, in fact, been used for something else. You observe that the handles are slightly bent, as if something had been held with great force, and if you look at the jaws, you will see that that something was a metallic object about three quarters of an inch wide with sharp corners. Now, what do you make of that?”

I looked at the pliers, inwardly reflecting that I didn’t care twopence what the object was, and finally said that I would give it up. “The problem does not interest you keenly,” Thorndyke remarked with a smile; “and yet it ought to, you know. However, we may consider the matter on some future occasion. Meanwhile, I shall follow your pernicious example and purloin the pliers.”

His interest in this complete stranger appeared to me very singular, and it seemed for the moment to have displaced that in the mysterious case which was the object of his visit to me. “A strange, vagabond sort of man that artist must have been,” he remarked, as we walked home across the Heath, “but I suppose one picks up vagabond habits in travelling about the world.”

“Do you gather that he had travelled much, then?” I asked.

“He appears to have visited New York, Brussels and Florence, which is a selection suggesting other travels.”

I was wondering vaguely how Thorndyke had arrived at these facts, and was indeed about to ask him, when he suddenly changed the subject by saying: “I suppose, Jardine, you don’t wander about this place alone at night?”

“I do sometimes,” I replied.

“Then I shouldn’t,” he said; “you must remember that a very determined attempt has been made on your life, and it would be unreasonable to suppose that it was made without some purpose. But that purpose is still unaccomplished. You don’t know who your enemy is, and, consequently, can take no precautions against him excepting by keeping away from solitary places. It is an uncomfortable thought, but at present, you have to remember that any chance stranger may be an intending murderer. So be on your guard.”

I promised to bear his warning in mind, though I must confess his language seemed to me rather exaggerated; and so we walked on, chatting about various matters until we arrived at my lodgings.

Thorndyke was easily persuaded to come in and have tea with me, and while we were waiting for its arrival, he renewed
his examination of the sketch upon the wall.

"Aren’t you going to have this strained on a stretcher?" he asked.

I replied "yes," and that I intended to take it with me the next time I went into town.

"Let me take it for you," said Thorndyke. "I should like to show it to Jervis to illustrate the route that we have marked on the map. Then I can have it left at any place that you like."

I mentioned the name of an artist's-colourman in the Hampstead Road, and, unpinning the canvas, rolled it up and handed it to him.

He took it from me and, rolling it up methodically and carefully, bestowed it in his breast pocket. Then he brought forth the map, and, as we drank our tea and talked over our investigations, he checked our route on it and marked the position of the cottage. Shortly after tea he took his leave, and I then occupied an agreeable half-hour in composing a letter to Miss Vyne to accompany the loot from the deserted house.

X — THE UNHEEDED WARNING

THORNDYKE’S warning, so emphatically expressed, ought to have been alike unnecessary and effective. As a matter of fact, it was neither. I suppose that to a young man, not naturally timorous, the idea of a constantly lurking danger amidst the prosaic conditions of modern civilization is one that is not readily accepted. At any rate, the fact is that I continued to walk abroad by day and by night with as much unconcern as if nothing unusual had ever befallen me. It was not that the recollection of those horrible hours in the poisoned cellar had in any way faded. That incident I could never forget. But I think, that in the back of my mind, there still lingered the idea of a homicidal lunatic; though that idea had been so scornfully rejected by Thorndyke.

But before I describe the amazing experience by which I once more came within a hair’s breadth of sudden and violent death, I must refer to another incident; not because it seemed to be connected with that alarming occurrence, but because it came first in the order of time, and had its own significance later.

It was a couple of days after Thorndyke’s visit that I walked down the Hampstead Road with the intention of fetching the sketch from the artist’s-colourman’s. The shop was within a few hundred yards of Jacob Street, and as I crossed the end of that street, I was just considering whether I ought to look in on Batson, when a lady bowed to me and made as if she would stop. It was Mrs. Samway. Of course, I stopped and shook hands, and while I was making the usual polite enquiries, I felt myself once more impressed with the unusualness of the woman. Even in her dress she was unlike other women, though not in the least eccentric or bizarre. At present, she was clothed from head to foot in black; but a scarlet bird’s wing in the coquettish little velvet toque, and a scarlet bow at her throat, gave an effect of colour that, unusual as it was, harmonized completely and naturally with her jet-black hair and her strange, un-English beauty. “So you haven’t started for Paris yet,” I remarked.

“No,” she replied, “my husband has gone and may, perhaps, come back. At any rate, I am staying in England for the present.”

“Then I may possibly have the pleasure of seeing you again,” I said, and she graciously replied that she hoped it might be so, as we shook hands and parted. A few minutes later, in the artist’s-colourman’s shop, I had another chance meeting and a more agreeable one. The proprietor had just produced the sketch, now greatly improved in appearance by being strained on a stretcher, when the glass door opened and a young lady entered the shop. Imagine my surprise when that young lady turned out to be none other than Miss Vyne. “Well,” I exclaimed, as we mutually recognized each other, “what an extraordinary coincidence!”

“I don’t see that it is very extraordinary,” she replied. “Most of the Hampstead people come here because it’s the nearest place where you can get proper artist’s materials. Is that the sketch you were telling me about?”

“Yes,” I answered, “and it’s the pick of the loot. But it isn’t too late to alter your mind. Say the word and it’s yours.”

“Well,” she replied, with a smile, “I am not going to say the word, but I want to thank you for rescuing those other treasures for me.”

She had, as a matter of fact, already thanked me in a very pretty little note, but I was not averse to her mentioning the subject again. We stepped back to the door, and in the brighter light, looked at the sketch together. “It’s a pity,” she remarked, “that he handled it so carelessly before the paint was hard. Those fingermarks wouldn’t matter a bit on a brush-painted surface; but on the smooth knife-surface they are rather a disfigurement.”

She placed the sketch in my hand, and I backed nearer to the glass door to get a better light. Happening to glance up, I noticed that a sudden and very curious change had come over her; a look of haughty displeasure and even anger, apparently directed at somebody or something outside the shop.

For a few moments I took no notice; then, half-unconsciously, I looked round just as some person moved away from the door. I looked once more at Miss Vyne. She was quite unmistakably angry. Her cheeks were flushed and there was a resentful light in her eyes that gave her an expression quite new to me.
I suppose she caught my enquiring glance for she exclaimed: "Did you see that woman? I never heard of such impertinence in my life."

"What did she do?" I asked.

“She came right up to the doorway and looked over your shoulder; and then stared at me in the most singular and insolent manner. I could have slapped her face.”

"Not through the glass door," I suggested; on which her anger subsided in a ripple of laughter as quickly as it had arisen. "What was this objectionable person like?" I asked. "Was she a charwoman or a slavey?"

“Oh, not at all,” replied Miss Vyne. "Quite a ladylike looking person, except for her manners. Rather tastefully dressed, too; a black and vermillion scheme of colour."

The reply startled me a little. "Had she a scarlet bird’s wing in her hat?" I asked.

“Yes, and a scarlet bow at her throat. I hope you are not going to say that you know her."

It was a rather delicate situation. I could not actually disavow the acquaintance, but I did not feel inclined to have a black and scarlet fly introduced into the sweet-smelling ointment of my intercourse with the fair Sylvia; so I explained with great care the exact scope of the acquaintance; on which Miss Vyne remarked that "she supposed that doctors could not be held responsible for the people they knew"; and proceeded to make her purchases.

I did not take the sketch away with me after, for it occurred to me that I might as well leave it to be framed; but instead, I carried forth with me the parcel containing Miss Vyne’s purchases. I had not far to carry it, for she was returning at once to Hampstead. I was tempted to return, for the sake of enjoying a chat with her, too, but discreetly withheld the temptation, and, having escorted her to a tram, I turned my face south and walked away at a leisurely pace into the jaws of an all-unexpected danger.

It was some hours, however, before anything remarkable happened.

My immediate objective was Lincoln’s Inn Fields, where, at the College of Surgeons, a lecture on Epidermic Appendages was to be delivered by the Hunterian Professor; and there, in the college theatre, I spent a delightful hour while the genial professor took his hearers with him on a personally-conducted tour among structures that ranged from the plumage of the sun-bird to the dermal plates of the crocodile, from the silken locks of beauty to the quills of the porcupine or the mail of the armadillo.

When I came out, the dusk was just closing in. It was a slightly foggy evening. The last glow of the sunset in the western sky lighted up the haze into a rosy back-ground, against which the shadowy buildings were relieved in shapes of cloudy grey. It was a lovely effect; an effect such as London alone can show, and fugitive as a breath on a mirror. As I sauntered westward up the Strand I presently bethought me that, before the light should have faded completely, I would see how the effect looked by the riverside. Walking quickly down Buckingham Street, I came out on to the Embankment and looked into the west. But the light was nearly gone, the shadows of evening were closing in fast, and the fog, creeping up the river, ushered in the night.

I leaned on the parapet and watched the last glimmer die away; watched the darkness deepen on the river and the faint lights on the barges moored on the southern shore at first twinkle palidly and then fade out as the fog thickened. I lit my pipe and looked down at the dark water swirling past, and gradually fell into a train of half-dreamy meditation.

Not for the first time since the occurrence, my thoughts turned to Mrs. Samway. Why had she stared at Miss Vyne in that singular manner—if indeed it was really Mrs. Samway, and if she really had stared in the manner alleged? It was an odd affair; but, after all, it did not very much matter. And with this, my thoughts rambled off in a new direction.

It was to the cottage on the Heath that they wandered this time, and the picture of Thorndyke’s cat-like prowlings and pryings arose before me. That was very queer, too. Was it possible that this learned and astute man habitually went about eagerly probing into the personal habits and trivial actions of chance strangers? The apparently puerile inquisitiveness that he had displayed seemed totally out of character with all that I knew about the man; but then it often happens that the private life of public men develops personal traits that are surprising and disappointing to those who have only known them in connection with their public activities.

I had become so completely immersed in my thoughts as to be almost oblivious of what was happening around. Indeed, there was mighty little happening. The gathering darkness and the thin fog limited my view to a few square yards. Now and again, a muffled hoot from the lower river spoke of life and movement on the water, and at long intervals an occasional wayfarer would pass along the pavement behind me.

My reflections had reached the point recorded above, when a person emerged from the obscurity near to the parapet and approached as if to pass close behind me. I only caught the dusky shape indistinctly with the tail of my eye; so indistinctly that I could not say certainly whether it was that of a man or a woman, for I was still gazing down at the dark water. He or she approached quietly, swerving towards me across the wide pavement, and was in the act of passing quite close to me when the thing happened. Of a sudden, I felt my knees clasp in a powerful grip, and at the same moment I was lifted off my feet and thrust forward over the parapet. Instinctively, I clutched at the stonework, but its flat surface offered nothing for my fingers to grasp. Then my assailant let go, and the next instant I plunged head-first into the icy water.

It was fortunate for me that the tide was nearly full, else must I, almost certainly, have broken my neck. As it was, my
head struck on the firm mud at the bottom with such force, that for some moments I was half-stunned. Nevertheless, I must have struck out automatically, for when I began to recover my wits my head was above water, and I was swimming as actively as my clinging garments would let me. But, apparently, in those moments of dazed semi-consciousness, I must have struck out towards the middle of the river, for now I was encompassed by a murky void in which nothing was visible save one or two reddish, luminous patches—presumably, the lamps on the Embankment.

Towards one of these I turned and struck out vigorously. The water was desperately cold, and hampered as I was with my clothing, I felt that I should not be able to keep myself afloat very long, strong swimmer as I was. The dim, red nebula of the unseen lamps moved past slowly, showing me that I was drifting down on the ebb-tide. Before me, I knew, was the long, inhospitable wall of the Embankment. True, there were some steps, if I was not mistaken, by Cleopatra’s Needle, but the question was whether I had not drifted past them already. I had given one or two lusty shouts as soon as I had cleared my chest of the mouthful of water that I got in my first plunge, and I was now letting off another yell, when, out of the darkness behind me, came a prolonged hoot.

I looked round quickly in the direction whence the sound had come, and then became aware of the churning of a propeller. Almost at the same moment, a dim, ruddy smudge of light broke through the darkness over the river, and began rapidly to brighten until it took the form of the twin mast-head lights of a tug with a vessel in tow.

For a moment I hesitated. My first impulse was to avoid the danger of being run down; but suddenly I altered my mind. For, as the tug bore down on me, with a roaring of water and a loud clank of machinery, I saw that she was not absolutely end-on, for her green starboard light, which had been for a moment visible, suddenly disappeared. Of what happened during the next few moments, I have but a confused recollection.

A splashing and churning, with the loud wash of water, the throb of the engines and a glare of light which blazed before my eyes for a moment, to vanish in an instant into pitchy darkness; a huge, black object, felt rather than seen to sweep past before me; and then my hand clutched a wooden projection, and I felt myself dragged violently through the water. The projection that I had laid hold of was the lee-board of a sailing barge, as I discovered when the rush of the water banged me against it; and much ado I had to hold on, with the water dragging at me and spouting up over my head. But, with what strength was left to me, I reached out with the other hand and clawed hold of the dwarf bulwark over which the water was lapping; and so, with a last violent effort, contrived to drag myself up on to the deck.

I essayed to stand up, and did, in fact, succeed, but as my sensations suggested those of a leaden statue with india-rubber legs, I sat down hastily on the hatch-cover to avoid going overboard. And there I sat for a minute or two leaning against the lowered mast with my teeth chattering, and seeming to grow more and more chilled and exhausted every moment.

Numb as my mind was by this time, my medical instincts told me that this would not do. Somehow I must get warmth and shelter, for I might as well have been drowned at once as die of exposure and cold. I looked round lethargically. There was no sign of any-one on board. Another barge was towing alongside, and the bows of two others were dimly visible astern. On those rear-most barges there must certainly have been someone steering. But they were inaccessible to me, and I had not the energy to shout; nor could anyone have got across to me if I had.

Suddenly my eye fell on the little chimney that rose by the cabin scuttle. A thin stream of smoke issued from it and blew away astern. Perhaps, then, the crew were below, or, if not, at least there was a fire. I crawled aft, holding on with my hands, and, pushing back the scuttle, backed cautiously down the ladder closing the scuttle after me.

There seemed to be nobody below, and the cabin was in darkness, save for the glow of the fire that burned in the little grate. The air was probably warm, though to me it felt icy; but, at least, there was no wind to play on my wet clothes.

I sat down on the locker as near to the fire as I could, and rested my elbows on the little triangular table. Chilled to the marrow and utterly exhausted, I was sensible of a growing desire to sleep; a desire which I repressed, as I believed, with noble resolution. But apparently my efforts in this respect were not so successful as I had supposed, for the next incident opened with suspicious suddenness.

A vigorous shake, which dislodged one of my elbows, introduced the episode.

I looked up, blinking sulkily, at a bright and most objectionably dazzling light, which further inspection showed to proceed from a hurricane lamp held by a rather dirty hand. “Here, wake up, mister,” said a hoarse voice, “this here ain’t the Hotel Cecil, you know.”

I sat up and stared vaguely at the speaker, or at least, the holder of the lamp, but could not think of anything appropriate to say. Then another voice emerged from nowhere in particular. “E’ve been overboard, that’s what ’e’s been.”

“Any fool can see that,” said the first man; “but the question is, who’s he and what’s he a-doin’ in my cabin? Who are yer, mister?”

Now, that would seem to be a perfectly simple and straightforward question. But it is not so simple as it seems. To a complete stranger, the bare mention of a name is unilluminating. Further explanations are needed. And at that moment I did not feel equal to explanations. Besides, I was not so very clear on the subject myself. Consequently, I preserved a silence which, perhaps, was wooden rather than golden. “Dye ’ear?” persisted the first man. “I’m a-arskin’ you a question.”

“What a good of arskin’ questions of a man what’s been a-rammin’ ’is crumpet against the bottom of the river?” protested the other man.
“What d’ye mean?” demanded the first mariner.

“Can’t you see?” retorted the other, “as ’e’s took the ground ’ard? Look at ‘is ‘ed.”

Here the first mariner—Lucifer, or lamp-bearer—wiped his hand over the top of my head and then examined the tip of his forefinger critically as though it were the arming of a deep-sea lead. “You’re right, Abel,” said he. “That’s mud off the bottom, that is. He must have took a regular header. Sooicide perhaps, and altered his mind. Found it a bit damper’n what he expected. Put the kittle on, Abe.”

From this moment, the two mariners treated me as if I had been a lay-figure. Silently, they peeled off my wet clothes, and dried my skin with vigorous friction as if it had been a wet deck. They not only asked no further questions, but when I would have spoken they urged me to economize my wind. They inducted me into stiff and hairy garments of uncouth aspect, and finally, Abe set before me on the table a large earthenware mug, the contents of which steamed and diffused through the cabin a strong odour of Dutch gin. “You git outside that, mister,” said the luminiferous mariner (who turned out subsequently to be the skipper), “and then you’d best turn in.”

The treatment was not strictly orthodox, but I obeyed without demur. Most people would have done the same under the circumstances. But the process of “getting outside” it took time, for the grog was boiling hot and had been brewed with a flexible wrist. By the time that I had emptied the mug I was not only revived, but (so far as my memory serves) rather disposed to be garrulously explanatory and facetious. I even felt a slight inclination to sing. But my friends would stand no nonsense. As soon as the mug was fairly empty, they bundled me, neck and crop, into a sort of elongated cupboard and proceeded to pile on me untold quantities of textile fabrics, including a complete suit of oilskins. Then they commanded me to go to sleep; which I believe I must have done almost instantly.
XI — A CHAPTER OF ACCIDENTS

AWAKENING in a strange place is always a memorable experience; especially to the young, in whom the capacity for novel sensations has not yet been exhausted by repetition. When I emerged, somewhat gradually, from the unconsciousness of sleep, my first impressions concerned themselves with the unusual appearance of the bedroom wall and its remarkable proximity to my nose. I further noticed that the bedstead had become inexplicably tilted and that the house appeared to be swaying; and as I mused on these phenomena with the vagueness of the half-awake, a loud voice, proceeding apparently from the floor above, roared out the mystic words, “Lee-O!” whereupon there ensued a sound like the shaking of colossal table cloths and the loud clanking of chains, and my bedstead took a sharp tilt to the opposite side. This roused me pretty completely, and turning over in the bunk, I looked out into the barge’s cabin.

It was broad daylight and evidently not early, for a square patch of sunlight crept to and fro on the little table, whence presently it slipped down to the floor and slithered about unsteadily, as if Phoebus had overdone his morning dram and could not drive his chariot straight. I watched it lazily for some time and then, becoming conscious of a vacancy within, crept out from under the mountain of bed clothes and made my way to the ladder.

As I put my head through the companion hatch, a man who stood at the wheel regarded me stolidly. “So you’ve woke up, have yer?” said he. “Thought you was going right round the clock. Abel! he’s woke up. Tell young Ted to stand by with them ‘eggs’ and that there ’addick.”

Here Abel looked round from behind the luff of the mainsail, and having verified the statement, conveyed the order to some invisible person in the fore-peak. Then he came aft with an obvious air of business. The time for explanations had arrived.

Accordingly I proceeded to “pitch them my yarn,” as they expressed it; to which they listened with polite attention and manifest disappointment, clearly regarding the story as a fabrication from beginning to end. And no wonder. The whole affair was utterly incredible even to me; to them it must have seemed sheer nonsense. Their own verdict of “sooiide” during very temporary insanity with sudden mental recovery, under the influence of cold water, was so much more rational. Not that they obstructed their views. They listened patiently and said nothing; and nothing that they could have said could have been more expressive.

Meanwhile I looked about me with no little surprise. Some miles away to the south lay a stretch of low land, faint and grey, with a single salient object, apparently a church with two spires. In every other direction was the unbroken sea horizon. “You seem to have made a pretty good passage,” I remarked.

“We’ve had sixteen hours to do it in,” replied the skipper, “and spring tides and a nice bit of breeze. If it ’ud only hold—which I’m afraid it won’t—we’d be in Folkestone Harbour this time to-morrow, or even sooner. Folkestone be much out of your way?”

I smiled at the artlessness of the question. It was undeniable that the route from Charing Cross to Hampstead by way of Folkestone was slightly indirect. But there was no need to insist on the fact. My hospitable friends had acted for the best and their prudence was justified by the result; for here I was, not a whit the worse for my ducking save that I badly wanted a bath. “Folkestone will suit me quite well,” I replied, “if there is enough money left in my pockets to pay my fare home.”

“That’s all right,” said the skipper. “I cleared out your pockets myself. You’ll find the things in a mug in the starboard locker. Better overhaul ‘em when you go below and see if you’ve dropped anything. Here comes young Ted with your grub.”

As he spoke the apprentice rose through the fore-hatch like a stage apparition—if one can imagine an apparition burdened with a tin tea-pot, two “’eggs” and an “’addick”—and came glumly along the weather side-deck, to vanish through the cabin hatchway. I followed gleefully, and, almost before young Ted had finished the somewhat informal table arrangements, fell to on the food with voracious joy. “If you want any more eggs or anything,” said the apprentice, “all you’ve got to do is just to touch the electric bell and the waiter’ll come and take your orders,” and having delivered this delicate shaft of irony he presented me with an excellent back view of a pair of brown dreadnoughts as he retired up the ladder.

As I consumed the rough but excellent breakfast I reflected on the strange events that had placed me in my present odd situation. For the first time, I began fairly to realize that I was in some way involved in a nexus of circumstances that I did not in the least understand. I had an enemy; a vindictive enemy, too, in whose eyes mere human life was a thing of no account. But who could he be? I knew of no one on whom I had ever inflicted the smallest injury. I bore no man any grudge and had never to my knowledge had unfriendly dealings with any human creature. Was this inveterate enemy of mine anyone whom I knew? Or was he some stranger whose path I had crossed without knowing it, and whom I should not recognize even if I saw him?

This last supposition was highly disquieting, especially as it seemed rather probable; for if my enemy was unknown to me, what precautions could I take?

Then, again, there was the question! What was the occasion of this extraordinary vendetta? What had I done to this man that he should pursue me with such deadly purpose? As to Jervis’s suggestion, that I had seen something at the Samways’ house that I was not wanted to see, there was nothing in it; for, as a matter of fact, I had seen nothing. There was nothing to see. The man Maddock was certainly dead. As to what he died of, that was Batson’s affair; but even in that there was no
sign of anything suspicious. The man himself had consulted Batson, and had thought so badly of himself that he had made his will in Batson's presence. The patient himself was fully aware of his serious condition; it was only Batson, with his eternal hurry and bustle and his defective eyesight, who had missed observing it. The only circumstance that supported Jervis's view was that the acts of violence seemed to be connected with the locality of Batson's house.

Of course there remained the mystery of the dead priest or lay-brother. But with that these attempts seemed to have no connection. Nor was there any reason why the murderer should pursue me. I had seen the body, it is true; but nobody believed me and no proceedings were being taken. Nor could I have identified the murderer if I had been confronted with him. Clearly, he had nothing to fear from me.

From the causes of my present predicament I passed to the immediate future. I should have to get back from Folkestone, and I sought to send a telegram to my landlady, Mrs. Blunt, who would probably be in a deuce of a twitter about me. I raised the lid of the locker, and, reaching out the big earthenware mug, emptied its contents on the table. All my portable property seemed to be there, including the little gold reliquary, which I had carelessly carried in my pocket ever since I had shown it to Thorndyke. My available funds were some four or five pounds; amply sufficient to get me home and to discharge my liability to the skipper as well. I swept the things back into the mug, which I returned to the locker, and having cut myself another thick slice of bread, proceeded with the largest breakfast that I have ever eaten.

The skipper's forebodings were justified by the course of events. When I came on deck the breeze had died down to a mere faint breath, hardly sufficient to keep the big red main-sail asleep—as the pretty old nautical phrase has it. The skipper was still at the wheel and Abel was anxiously taking soundings with a hand-lead. “You won't do it, Bill,” said the latter, coiling up the lead-line with an air of finality, “this 'ere breeze is a-petering right out.”

The skipper said nothing, but stared gloomily at the land which was now right ahead and much nearer than when I had last looked; and from the land his eye travelled to a sand-bank from which rose a tall post at the top of which was an inverted cone: “Ought to a-gone about a bit sooner, Bill,” pursued Abel; whereupon the skipper turned on him fiercely.

“What's the good o’ saying that now!” he demanded. “If you'd a-told me the wind was going to drop, I a-gone about sooner. What water is there?”

“Five fathom here,” replied Abel; “that means one and a quarter on the Woolpack. You'd best shove her nose round now, Bill.”

“Oh, all right!” retorted the skipper, “Lee-O! This is going to be an all-night job, this is,” and with this gloomy prediction, he spun the wheel round viciously, and once more headed away from the land.

Prophecy appeared to be the skipper's speciality and, like most prophets, he tended to view the future with an unfavourable eye. Gradually the breeze died away into a dead calm, so that we had presently to let go the anchor to avoid drifting on to a great sand-bank which now lay between us and the land. And here we remained not only for the rest of the day and the succeeding night, as the skipper had promised, but throughout the whole of the next day and following night.

I have already remarked on the incalculable chances by which the course of a man's life is determined. Looking back now, I see that the skipper's little miscalculation and his failure to cross the Woolpack Shoal into the inshore channel, was an antecedent determining the most momentous consequences for me. For had the barge been becalmed in the inshore channel, I could, and should, have landed in the boat and returned home forthwith; and if I had, certain events would not have happened and my life might have run a very different course. As it was miles of sea and the great bank known as the Margate Sand, lay between me and the shore; whence I was committed to the wanderings and dallyings of the barge as irrevocably as if we were crossing the Pacific.

We lay, then, in the Queen's Channel, outside Margate Sand, for two whole days and nights; during which time the skipper and Abel slept much and smoked more, and young Ted, having cleaned and dried my clothes, inducted me into the art of bottom-fishing. On the third day, a faint breath of breeze enabled us to crawl round the North Foreland, and the skipper having elected to pass outside the Goodwin, managed to get becalmed again in the neighbourhood of the East Goodwin Lightship. A little breeze at night enabled us to move on a few miles farther; and so we continued to crawl along at intervals, mainly on the tide, until nine o'clock in the morning of the fifth day, when we finally crawled into Folkestone Harbour.

As soon as the barge was brought up to a buoy, young Ted was detailed to put me ashore in the boat. The skipper and Abel had insisted on treating me as a guest, and I had perforce to accept the position. But young Ted had no such pride; and when I ran up the wooden steps by the old fish-market, I left him on the stage below, staring with an incredulous grin at a gold coin in his none-too-delicate palm.

I was not sorry to be landed in this unfashionable quarter of the town, for in spite of young Ted's efforts, my turn-out left much to be desired, especially in the matter of shirt-cuffs and collar, and I was, moreover, hatless and somewhat imperfectly shaved. Accordingly, I slunk inconspicuously past the market and the groups of lounging fishermen, and when I saw a well-dressed, lady-like woman preceding me into the little narrow street, known as the Stade, I slackened my pace so as not to overtake her. She sauntered along with a leisurely air as if she were waiting for something or somebody, and this and the fact that she carried a light canvas portmanteau and a rug, suggested to me that she was probably travelling by the cross-channel boat which was due to start presently.

Suddenly my attention was diverted from her by a loud chattering and a series of shouts. A small crowd of men and
women ran excitedly past the end of the little street. The clattering rapidly drew nearer; and then a horse, with a light van, swept round the corner and passing under an archway, advanced at a furious gallop. Evidently the horse had bolted and now, mad with terror, dashed forward with trailing reins, zigzagging erratically and making the van sway to and fro, so that it took up the whole of the narrow street. The few wayfarers darted into doorways and sheltered corners, and I was about to secure my own safety in a similar manner, when I noticed that the woman in front of me had apparently become petrified with terror, for she stood stock still, gazing helplessly at the approaching horse. It was no time for ceremony. The infuriated animal and the swaying van were thundering up the street like an insane Juggernaut. With a hasty apology, I seized the woman from behind and half-dragged, half-carried her to the opening of a little yard beside a sail-loft. And even then, I was hardly quick enough, for as the van roared past some projecting object struck me between the shoulders and sent me flying, face downwards, on to a pile of tarred drift-net.

I had had the presence of mind to let go, as I was struck, so that my fair protegee was not involved in my downfall; but in a moment, she was stooping over me, and with many expressions of concern, endeavouring to help me to rise. Beyond a thump in the back, however, I was not hurt in the least, but picked myself up, grinning and turned to reassure her. And then I really did get a shock; for as I turned, the woman gave a shriek and fell back on the steps of the sail-loft, gasping, and staring at me with an expression of the utmost astonishment and terror. I supposed the accident had upset her nerves; but to be sure, my own received, as I have said, a pretty severe shock. For the woman was Mrs. Samway.

We remained for a moment or two gazing at one another in mute astonishment. Then I recollected myself, and advanced to shake hands; but to my discomfiture, she shrank away from me and began to sob and laugh in an unmistakably hysterical fashion. I must confess that I was somewhat surprised at these manifestations in so robust a woman as Mrs. Samway. Unreasonably so, indeed, for all women-kind are more or less prone to hysteria; but whereas the normal woman tends to laugh and cry, the weaker vessels develop inexplicable diseases, with a tendency to social reform and emancipation.

I put on my best bedside manner, at once matter-of-fact and persuasive. “You seem quite upset,” I said, “and all about nothing, for the poor beggar of a horse must be half a mile away by now.”

“Yes,” she answered shakily, “it’s ridiculous of me, but it was so sudden and so—” here she laughed noisily, and as the laugh ended in a portentous sniff, I hastened to continue the conversation. “Yes, it was a bit of a facer to see that beast coming up the street as if it was Tottenham Corner. Why on earth didn’t you get out of the way?”

“I am sure I don’t know,” she answered. “I seemed to be paralyzed and idiotic and—” here the laughter began again.

“Well,” I interrupted cheerfully, “you didn’t get rolled on those tarred nets, so that’s something to be thankful for.”

This was a rather unlucky shot, for the semblance of facetiousness started a most alarming train of giggles, interrupted by rather loud sobs; but at this point, a new curative influence made itself manifest. Two smack boys halted outside the opening and surveyed her with frank interest and pleased surprise. Simultaneously, an elderly mariner appeared at the door of the sail-loft, grasping a black bottle and a tea-cup, and rather shyly descending the steps, suggested that “perhaps a drop o’ spirits might do the lady good.”

Mrs. Samway bounced off the steps, her hitherto pale cheeks aflame with anger. “I am making a fool of myself,” she exclaimed. “Let us go away from here.”

She walked out into the street, and I, having thanked the old gentleman for his most efficacious remedy, followed. As soon as I caught her up, she turned on me quickly and held out her hand. “Good-bye, Dr. Jardine,” she said, “and thank you so very much for risking your life for a—for a wretched giggling woman.”

“Oh, you’re not going to send me packing like this,” I protested, “when we’ve hardly said good morning. Besides, you’re not fit to be left. But you’re not to begin laughing again,” I added, threateningly, for an ominous twitching of her mouth seemed to herald a relapse, “or I shall go back and get that black bottle.”

She shook her head impatiently, but without looking at me. “I would rather you went away, Dr. Jardine,” she said in an agitated voice. “I would, really. I wish to be alone. Don’t think me ungracious. I am really most grateful to you, but I would rather you left me now.”

Of course there was nothing more to be said. She was not really ill or in need of assistance, and probably her instinct was right. Hysteria is not one of those affections which waste their sweetness on the desert air, I shook her hand cordially and, advising her to keep out of the way of stray vans and horses, once more pursued my way towards the town, meditating as I went, on the oddity of the whole affair. It was an astonishing coincidence that I should have run against this woman in this out of the way place. I had left her but a few days since apparently firmly rooted in the Hampstead Road, and now, behold, as I step ashore from the barge, she is almost the first person that I meet. And yet the coincidence, which had evidently hit her as hard as it had me, like most coincidences, tended to disappear on closer inspection. The only really odd feature was my own presence in Folkestone. As to Mrs. Samway, she had probably been sent for by her husband, and was crossing by the boat that was now due to start.

Her anxiety to get rid of me was more puzzling, until I suddenly remembered my bare head, my crumpled collar and generally raffish and disreputable appearance. The latter was, in fact, at this moment brought to my notice by a man, with whom, in my preoccupation, I collided; who first uttered an impatient exclamation and then, bestowing on me a quick stare of astonishment, muttered a hasty apology and hurried past. The incident emphasized the necessity for some reform,
and I mended my pace towards the region of shops in a very ferment of uncomfortable self-consciousness.

With the purchase of a new hat, a collar, a pair of cuffs, a neck-tie, a pair of gloves and a stick, some faint glimmer of self-respect revived in me. I was even conscious of a temptation to linger in Folkestone and spend a few hours by the sea; but a sense of duty, aided by a large, muddy stain on my coat, finally decided me to return to town at once. Accordingly, having sent off a telegram to my landlady and ascertained that a train left for London in about twenty minutes, I betook myself to the station.

There were comparatively few people travelling by this particular train; in fact, when I had established myself with the morning paper in the off-side corner seat of a smoking compartment, I began, with an Englishman’s proverbial unsociability, to congratulate myself on the prospect of having the compartment to myself, when my hopes were dashed by the entrance of an elderly clergyman; who not only broke up my solitude, but aggravated the offence by quite unnecessarily seating himself opposite to me. I was almost tempted to move to another corner, for my length of leg gives an added value to space; but it seemed a rude thing to do; and as the train moved off at this moment, I resigned myself to the trifling discomfort.

My clerical friend was a somewhat uncommon-looking man, with a countenance at once strong and secretive; a rectangular, masterful face, with a bull-like dew-lap and a small, and very sharp, Roman nose. On further inspection, I decided that he was either a High-Church parson or a Roman Catholic priest. His proceedings seemed to favour the latter hypothesis, for the train was barely out of the station before he had whisked out of his pocket an ecclesiastical-looking volume, which he opened at a marked place, and instantly began to read. I watched him with inquisitive interest, for his manner of reading was very singular. There was something habitual, almost mechanical, about it, suggesting an allotted and familiar task, and a lack of concentration that suggested a corresponding lack of novelty in the matter. As he read, his lips moved, and now and again I caught a faint whisper, by which I gathered that he was reading rapidly; but the most singular phenomenon was, that when his eyes strayed out of the carriage window, as they did at frequent intervals, his lips went on sputtering with unabated rapidity. Quite suddenly he appeared to come to the end of a sort of literary measured mile, for even as his lips were still moving, he clapped in the book-mark, shut the volume, and returned it to his pocket with a curious air of business-like finality.

As his eyes were no longer occupied with the book, my observations had to be suspended, and my attention was now turned to my own affairs. Putting my hand in my coat pocket for my pipe and pouch, I became aware of a state of confusion in the said pocket which I had already noticed when making my purchases. The fact is, that I had nearly come away from the barge without my portable property. It was only at the last moment that the skipper, remembering the mug, had fetched it hurriedly from the locker and shot its contents bodily into my coat pocket. The present seemed a good opportunity for distributing the various articles among their proper receptacles. Accordingly I turned out the whole pocketful on the seat by my side, and a remarkably miscellaneous collection they formed; comprising knives, pencils, match-box, keys, the minor implements of my craft, and various other objects, useful and useless, including the little gold reliquary.

My neighbour opposite was, I think, quite interested in my proceedings, though he kept up a dignified pretence of being entirely unaware of my existence. Only for a while, however. Suddenly he sat up, very wide awake, and slewing his head round, stared with undisguised intentness at my little collection. I guessed at once what it was that had attracted his attention. A cleric would not be thrilled by the sight of a clinical thermometer or an ophthalmoscope. It was the reliquary that had caught his eye. That was an article in his own line of business.

With deliberate mischiefs, I left the little bauble exposed to view as I very slowly and methodically conveyed the other things one by one, each to its established pocket. Last of all, I picked up the reliquary and held it irresolutely as if debating where I should stow it. And at this point His Reverence intervened, unable any longer to contain his curiosity. “Zat is a very remarkable little ophthalm, sir,” he said in excellent Anglo-German. “Might one bresume to ask vat it’s use is?”

I handed the reliquary to him and he took it from me with ill-disguised eagerness. “I understand,” said I, “that it is a reliquary. But you probably know more about such things than I do. I haven’t opened it so I can’t say what is inside.”

He nodded gravely. “Zo! I am glad to hear you zay zat. Brobably zere is inside some holy relic vich ought not to be touched egzeping by bious hands.” He turned the case over, and, putting on a pair of spectacles—which he had not appeared to require for reading—closely scrutinized the inscriptions, and even the wisp of cord that remained attached to one of the rings. “You zay,” he resumed without raising his eyes, “zat you understanad zat zis is a reliquary. Do you not zen know? Ze berson who gafe it to you, did he not tell you vat it gondained?”

“It wasn’t given to me at all,” I replied. “In fact, it isn’t properly mine. I picked it up and am merely keeping it until I find the owner.”

He pondered this statement with a degree of profundity that seemed rather out of proportion to its matter; and he continued to gaze at the reliquary, never once raising his eyes to mine. At length, after a considerable pause and a most unnecessary amount of reflection, he asked: “Might one ask, if you shall bardon my curiosuty, vere you found zis liddle ophect?”

I hesitated before replying. My first, and natural, impulse was to tell him exactly where and under what circumstances I had found the “ophect.” But the way in which my information had been received by the police had made me rather chary of offering confidences; besides which, I had half promised them not to talk about the affair. And, after all, it was no
business of this good gentleman’s where I found it. My answer was, therefore, not very explicit. “I picked it up in a lane at Hampstead, near London.”

“At Hampstead!” he repeated. “Zo! Zat would be a very good place to find such singer. I mean,” he added, hastily, “zere are many people in zat blace and some zere will be of ze old religion.”

Now, this last remark was such palpable nonsense that it set me speculating on what he had intended to say, for it was obvious that he had altered his mind in the middle of the sentence and completed it with the first words that came to hand. However, as I could read no sense into it at all, I said that “perhaps he was right,” which seemed an eminently safe rejoinder to an unintelligible statement.

When he had finished his minute examination of the reliquary, he handed it back to me with such evident reluctance that, if it had been mine, I should have tempted to ask him to accept it. But it was not mine. I was only a trustee. So I made no remark, but watched him as he, very deliberately, took off his spectacles and returned them to their case, looking meanwhile, at the floor with an air of deep abstraction. He appeared to be thinking hard, and I was quite curious as to what his next remark would be. A considerable interval elapsed before he spoke again; but at last the remark came, in the form of a question, and very disappointing it was. “You are not perhaps very much interested in relics and reliquaries?”

As a matter of fact, I didn’t care two straws for either the one or the other; but there was no need to put it as strongly as that. “We are apt,” I replied, “to find a lack of interest in subjects of which we are ignorant.” That was a fine sentence. It might have come straight out of Sandford and Merton.

“Zat is vat I sink, too,” he rejoined. “Ve do not know; ve do not care. But zere is a very eggeilent liddle book vich eggplains all ze customz and zeremoniz connected vid relics of ze zainte. I should like you to read zat book. Vill you berrmit me to send you a gobby ich I haf?”

Of course I said I should be delighted. It was an outrageous falsehood, but what else could I say? “Zen,” said he, “I shall haf great pleasure in zending it to you if you vill kindly tell me how I shall address it.”

I presented him with my card, which he read very attentively before bestowing it in his pocket-book. “I see,” he remarked, “zat you are a doctor of medicine. It is a fine brofession, if one does not too much vorget ze spiritual life in garing for zat of ze body.”

In this I acquiesced vaguely, and the conversation drifted into detached commonplaces, finally petering out as we approached Paddock Wood; where my reverend acquaintance bought a newspaper and underwent a total eclipse behind it.

As soon as the train started again, I took up my own paper; and the very first glance at it gave me a shock of surprise that sent all other matters clean out of my mind. It was an advertisement in the column headed “Personal” that attracted my attention, an advertisement that commenced with the word “Missing,” in large type, and went on to offer Two Hundred Pounds Reward: thus:—

“MISSING. TWO HUNDRED POUNDS REWARD.

“Whereas, on the 14th inst., Dr. Humphrey Jardine disappeared from his home and his usual places of resort; the above reward will be paid to any person who shall give information as to his whereabouts, if alive, or the whereabouts of his body if he is dead. He was last seen at 12.20 pm on the above date in the Hampstead Road, and was then walking towards Euston Road. The missing man is about twenty-six years of age; is somewhat over six feet in height; of medium complexion; has brown hair, grey eyes, straight nose and a rather thin face, which is clean-shaved. He was wearing a dark tweed suit, and soft felt hat.

“Information should be given to Hector Brodribb, Esquire, 65, New Square, Lincoln’s Inn, by whom the above reward will be paid.”

Here was a pretty state of affairs: It seemed that while I was placidly taking events as they came; smoking the skipper’s tobacco and bottom-fishing with young Ted; my escapade had been producing somewhere a most almighty splash. I read the advertisement again, with a self-conscious grin, and out of it there arose one or two rather curious questions. In the first place, who the deuce was Hector Brodribb? And what concern was I of his? And how came he to know that I was walking down Hampstead Road at 12.20 on the 14th inst.?

I felt very little doubt it was actually Thorndyke who was tweaking the strings of the Brodribbian puppet. But even this left the mystery unsolved. For how did Thorndyke know? This was only the fifth day after my disappearance, and it would seem that there had hardly been time for exhaustive enquiries.

Then another highly interesting fact emerged. The only person who had seen me walk away down Hampstead Road was Sylvia Vyne; whence it followed that Thorndyke, or the mysterious Brodribb, had in some way got into touch with her. And reflecting on this, the mechanism of the enquiry came into view. The connecting-link was, of course, the sketch. Thorndyke had, himself, left the canvas with Mr. Robinson, the artist’s-colourman, and he must have called to enquire if I had collected it. Then, he would have been told of my meeting with Miss Vyne, and as she was a regular customer, Mr. Robinson would have been able to give him her address. It was all perfectly simple, the only remarkable feature being the extraordinary promptitude with which the inquiry had been carried out. Which went to show how much more clearly Thorndyke had realized the danger that surrounded me than I had myself.

These various reflections gave me full occupation during the remainder of the journey, extending themselves into
consideration of how I should act in the immediate future. My first duty was obviously to report myself to Thorndyke without delay; after which, I persuaded myself, it would be highly necessary for me personally to re-assure the fair, and, perhaps, anxious Sylvia. As to how this was to be managed, I was not quite clear, and in spite of the most profound cogitation, I had reached no conclusion when the train rumbled into Charing Cross Station.

XII — MISS VYNE

AS I stepped out on to the platform with a valedictory bow to my reverend fellow-passenger, my irresolution came to an end and my duty became clear. I must, in common decency, report myself at once to Thorndyke, seeing that he had been at so much trouble on my account. His card, which he had given me, I had unfortunately—or perhaps fortunately, as it turned out—left on the mantelpiece at my lodgings; but I remembered that the address was King's Bench Walk and assumed that I should have no difficulty in finding the house. Nor had I, for, as I entered the Temple by the Tudor Street gate—having overshot my mark on the Embankment—I was almost immediately confronted by a fine brick doorway surmounted by a handsome pediment and bearing legibly painted on its jamb, "First pair, Dr. Thorndyke."

I ascended the "first pair" of stairs, which brought me to an open oak door, massive and iron-bound, and a closed inner door, on the brass knocker of which I executed a flourish that would have done credit to a Belgravian footman; whereupon the door opened and a small man of sedate and clerical aspect regarded me with an air of mild enquiry. "Is Dr. Thorndyke at home?" I asked. "No, sir. He is at the hospital."

"Dr. Jervis?"

"Is watching a case in the Probate Court. Perhaps you would like to leave a message or write a note. A message in writing would be preferable."

"I don't know that it's necessary," said I. "My name is Jardine, and if you tell him that I called that will probably be enough."

The little man gave me a quick, bird-like glance of obviously heightened interest. "If you are Dr. Humphrey Jardine," said he, "I think a few explanatory words would be acceptable. The Doctor has been extremely uneasy about you. A short note and an appointment, either here or at the hospital, would be desirable."

With this he stepped back, holding the door invitingly open, and I entered, wondering who the deuce this prim little cathedral dean might be, with his persuasive manners and his quaintly precise forms of speech. He placed a chair for me at the table, and, having furnished me with writing materials, stood a little way off, unobtrusively examining me as I wrote. I had finished the short letter, closed it up and addressed it, and was rising to go, when, almost automatically, I took out my watch and glanced at it. Of course it had stopped. "Can you tell me the time?" I asked.

My acquaintance drew out his own watch and replied deliberately: "Seventeen minutes and forty seconds past one." He paused for a moment and then added: "I hope, sir, you have not got any water into your watch."

"I'm afraid I have," I replied, rather taken aback by the rapidity of his diagnosis. "But I'll just wind it up to make sure."

"Oh, don't do that, sir!" he exclaimed. "Allow me to examine it before you disturb the movement." He whipped out of his pocket a watchmaker's eyeglass, which miraculously glued itself to his eye, and, having taken a brief glance at the opened watch, produced a minute pocket screw-driver and a sheet of paper; and, in the twinkling of an eye, as it seemed to me, the paper was covered with the dismembered structures which had in their totality formed my timepiece. "It's quite a small matter, sir," was his report, as he rose from his inspection and pocketed his eye-glass. "Just a speck or two of rust. If you will take my watch for the present, I will have your own in going order by the next time you call."

It seemed an odd transaction; but the little man's manner, though quiet, was so decisive that I took his proffered watch, and, affixing it to my chain, thanked him for his kindness and departed, wondering if it was possible that this prim clerical little person could possibly be the "tame mechanic" of whom Thorndyke had spoken.

Travelling in London was comparatively slow in those days—which, perhaps, was none the worse for a near and pleasant suburb like Hampstead; it had turned half-past two when I let myself into my lodgings with a rather rusty key and almost literally, fell into the arms of Mrs. Blunt. I feared, for a moment, that she was going to kiss me. But that was a false alarm. What she actually did was to seize both my hands and burst into tears with such violence as to cover me with confusion and cause the servant maid to rise like a domestic, and highly inquisitive, apparition from the kitchen stairs. I pacified Mrs. Blunt as well as I could and shook hands heartily with the maid, who thereupon retired, much gratified, to the underworld, whence presently issued an odour suggestive of sacrificial rites, not entirely unconnected with fried onions, and accompanied by an agreeable hissing sound. "But wherever have you been all this time?" Mrs. Blunt asked, as she preceded me up the stairs wiping her eyes, "and why didn't you send us a line just to say that you were all right?"

To this question I made a somewhat guarded answer in so far as the cause of my immersion in the river was concerned; otherwise I gave her a fairly correct account of my adventures. "Well, well," was her comment, "I suppose it was all for the best, but I do think those sailors might have put you on shore somewhere. Dear me, what a time it has been. I couldn't sleep at night for thinking of you, and what Susan and I have eaten between us wouldn't have kept a sparrow alive. And Dr. Thorndyke, too, I'm sure he was very anxious and worried about you, though he is such a quiet, self-contained man that you can't tell what he is thinking of. And Lord; what a lot of questions he do ask, to be sure!"
“By the way, how did he come to know that I was missing?”

“Why I told him, of course. When you didn’t come home that night—which Susan and me sat up for you until three in the morning—I thought there must be something wrong, you being so regular in your habits; so next day, the very first thing, I took his card from your mantelpiece and down I went to his office and told him what had happened. He came up here that evening to see if you had come home, and he’s been here every day since to enquire.”

“Has he really?”

“Yes. In a hansom cab. Every single day. And so has the young lady.”

“The young lady!” I exclaimed. “What young lady?”

Mrs. Blunt regarded me with something as nearly approaching a wink as can be imagined in association with an elderly female of sedate aspect. “Now,” she protested slyly, “as if you didn’t know! What young lady indeed! Why, Miss Vyne, to be sure; and a very sweet young lady she is, and talked to me just as simple and friendly as if she’d been an ordinary young woman.”

“How do you know that she isn’t an ordinary young woman?” I asked.

Mrs. Blunt was shocked. “Do you suppose, Mr. Jardine, sir,” she demanded severely, “that I who have been a head parlour-maid in a county family where my poor husband was coachman, don’t know a real gentlewoman when I meet one? You surprise me, sir.”

I apologized hastily and suggested that, as so many kind enquiries had been made, the least I could do was to call and return thanks without delay. “Certainly, sir,” Mrs. Blunt agreed; “but not until you have had your lunch. It’s a small porterhouse steak,” she added alluringly, being evidently suspicious of my intentions. The announcement, seconded by an appetizing whiff from below, reminded me that I was prodigiously sharp set, having tasted no food since I had come ashore at Folkestone, and put the grosser physiological needs of the body, for the moment, in the ascendant. But even as I was devouring the steak with voracious gusto, my mind occupied itself with plans for a strategic descent on the abode of the fair Sylvia and with speculations on the reception I should get; and the noise of water running into the bath formed a pleasing accompaniment to the final mouthfuls.

When I had bathed, shaved and attired myself in carefully selected garments, I set forth, as smart and spruce as the frog that would a-wooing go—saving the opera hat, which would have been inappropriate to the occasion. The distance to Sylvia’s house was not great, and a pair of long and rapidly-moving legs consumed it to such purpose that it was still quite reasonable calling time when I opened the gate of “The Hawthorns” and gave a modest pull at the bell. My summons was answered by a rather foolish-looking maid, by whom I was informed that Miss Vyne was at home, and when I had given her my name—which she seemed disposed to confuse with that of a well-known edible fish—she ushered me down a passage to a room at the back of the house, and, opening the door, announced me—correctly, I was glad to note; whereupon I assumed an ingratiating smile and entered.

Now there is nothing more disconcerting than a total failure of agreement between anticipation and realization. Unconsciously, I had pictured to myself the easy-mannered, genial Sylvia, seated, perhaps, at an easel or table, working on one of her pictures, and had prepared myself for a reception quite simple, friendly and unembarrassing. Confidently and entirely at my ease, I walked in through the doorway; and there the pleasant vision faded, leaving me with the smile frozen on my face, staring in consternation at one of the most appalling old women that it has ever been my misfortune to encounter.

I am, in general, rather afraid of old women. They are, to my mind, a rather alarming class of creature; but the present specimen exceeded my wildest nightmares. It was not merely that she was seated unnaturally in the exact centre of the room and that she sat with unhuman immobility, moving no muscle and uttering no sound as I entered, though that was somewhat embarrassing. It was her strange, forbidding appearance that utterly shattered my self-possession and seemed to disturb the very marrow in my bones.

She was a most remarkable-looking person. An immense Roman nose, a mop of frizzy grey fringe and a lofty surmounting cap or head-dress of some kind, suggested that monstrous and unreal bird, the helmeted hornbill; and the bird-like character was heightened by her eyes, which were small and glittering and set in the midst of a multitude of radiating wrinkles.

To this most alarming person I made a low bow—and dropped my stick, of which the maid had neglected to relieve me and for which I had found no appointed receptacle. As I stooped hastily to pick it up, my hat slipped from my grasp, and, urged by the devil that possess disengaged hats, instantly rolled under a deep ottoman, whence I had to hook it out with the handle of my stick. I rose, perspiring with embarrassment, to confront that immovable figure, and found the glittering eyes fixed on me attentively but without any sign of expression of human emotion. Haltingly I essayed to stammer out an explanation of my visit. “Er—I have—er—called.” Here I paused to collect my ideas and the old lady watched me stonily without offering any remark; indeed no comment was needed on a statement so self-evidently true. After a brief and hideous silence I began again. “I—er—thought it desirable—er—and in fact necessary and—er—proper to call—er and—”

Here my ideas again petered out and a horrid silence ensued, amidst which I heard a still, emotionless voice murmur: “Yes. And you have accordingly called.”

“Exactly,” I agreed, grasping eagerly at the slenderest straw of suggestion. “I have called to—er—well, the fact is that my
—er—very remarkable absence seemed to call for some explanation, especially as certain enquiries—er—"

At this point I stopped suddenly with a horrible doubt as to whether I was not saying more than was discreet; and the misgiving was intensified by that chilly, calm voice, framing the question: “Enquiries made personally?”

Now this was a facer. I seemed to have put my foot in it at the first lead off. Supposing Sylvia had said nothing about her little visits to Mrs. Blunt? It would never do to give her away to this inquisitorial old waxwork. I endeavoured to temporize. “Well,” I stammered, “not exactly made personally to me.”

“By letter, perhaps?” the voice suggested in the same even, impassive tone.

“Er—no. Not by letter.”

There was a short embarrassing pause, and then the old lady, as if summing up the case, said rigidly: “Not exactly personally and not by letter.”

I was so utterly confounded by her judicial manner, her immovable, expressionless face and the hypnotic quality of those glittering eyes, that for the moment I could think of nothing to say. “Don’t let me interrupt you,” said she after some seconds of agonized silence on my part; whereupon I pulled myself together and made a fresh start. “I should, perhaps, have explained that I have been unavoidably absent from home for some time, and, as I was unable to communicate with my friends, I have, I am afraid, caused them some anxiety. It was this that seemed to make it necessary for me to call and give an account of myself.”

She pondered awhile on this statement—if a graven image can be said to ponder—and at length enquired: “You spoke of your friends. Are any of them known to me?”

“Well,” I replied, “I was referring more particularly to your daughter.”

She continued to regard me fixedly, and, after a brief interval, rejoined: “You are referring to my daughter. But I do not recall the existence of any such person. I think you must be mistaken.”

It seemed extremely probable, and I hastened to amend the description. “I beg your pardon. I should have said Miss Vyne. But perhaps she is not at home.”

“You are evidently mistaken,” was the paralyzing reply. “I am Miss Vyne; and I need not add that I am at home.”

“But,” I demanded despairingly, “is there not another Miss Vyne?”

“There is not,” she answered. “But it is possible that you are referring to Miss Sylvia Vyne. Is that so?”

I replied sulkily that it was; and being somewhat nettled by this unnecessary and rather offensive hairsplitting, offered no further remark. How the conversation would have proceeded after this, I cannot even surmise. But it did not proceed at all, for the embarrassing silence was brought to an end by a very agreeable interruption. The door opened softly and for one moment Sylvia herself stood framed in the portal; then, with a little cry, she ran towards me with her hands held out impulsively and the prettiest smile of welcome. “So it is really you!” she exclaimed. “That silly little goose of a maid has only just told me you were here. I am glad to see you. When did you graciously please to descend from the clouds?”

“I arrived home this afternoon, and as soon as I had changed and had lunch I came here to report myself.”

“How nice of you,” said Sylvia. “I suppose you guessed how anxious we should be?”

“I didn’t presume to think that you would actually be anxious about me,” I replied, with a furtive eye on the waxwork, “though I knew that you had been kind enough to express an interest in my fate.”

“What a cold-bloodedly polite way to put it!” laughed Sylvia. “Express an interest, ’ indeed! We were most dreadfully worried about you.”

To a somewhat friendless man like myself this sympathetic warmth was very delightful, and my pleasure was not appreciably damped when a chill, emotionless voice affirmed: “The use of the first person singular would, I think, be preferable.”

Sylvia turned on her aunt with mock ferocity. “Well, really!” she exclaimed. “You are a dreadful impostor, Mopsy, dear! Just listen to her, Dr. Jardine. And if you had only seen what a twitter she was in as the time went on and no news came!”

I gasped, and the hair seemed to stir on my scalp. Mopsy! The name was obviously not applied to me. But could it be—was it possible that such a name could be associated with that terrific old lady? It was inconceivable. It was positively profane! It was almost as if one should presume to address the Deity as “old chap.” I could hardly believe my ears.

I glanced at her nervously and caught her glittering eye; but the grotesque face was as immovable as everlasting granite, though, indeed, by some ventriloquial magic, the word “Rubbish” managed to disengage itself from her person.

“It isn’t rubbish,” retorted Sylvia. “It’s the plain truth. We were both worried to death about you. And no wonder. Dr. Thorndyke was very quiet and matter-of-fact, but there was no disguising his fear that something dreadful had happened to you. And then there was the advertisement in the papers. Did you see that? Oh, it’s nothing to grin about. You’ve given us all a nice fright; and me especially, because, of course, I naturally thought of that ruffian from whom you rescued me in the lane.”

“But he never saw me.”

“You don’t know. He may have done. At any rate, you owe us an explanation; so, when the tea comes in you shall give us the true story of your adventures. I hope you’ve let Dr. Thorndyke know about your resurrection.”

I reassured her on this point, and as the “goose of a maid” now brought in the tea, I proceeded to “pitch my yarn,” as the skipper had expressed it, without those reservations that I had considered necessary in the case of Mrs. Blunt.

The old lady, having been unmasked by Sylvia, developed a slight tendency to thaw. She even condescended, in a rigid and effigian fashion, to consume bread and butter; a proceeding that seemed to me weirdly incongruous, as though one should steal into the British Museum in off hours and find the seated statue of Amenhotep the Third in the act of refreshing itself with a sandwich and a glass of beer. But I was less terrified of her now since I had gathered that a core of warm humanity was somewhere concealed within that grim exterior; and even though her little sparkling eyes were fixed on me immovably, I told my story to the end without flinching.

Sylvia listened to my narration with a rapt attention that greatly flattered my vanity and made me feel like a very Othello, and when I had finished, she regarded me for a while silently and with an air of speculation. “It’s a queer affair,” she said at length, “and there is a smack of mystery and romance about it that is rather refreshing in these commonplace days. But I don’t like it. Adventure is all very well, but there seems to have been a deliberate attempt to make away with you; unless you think it may have been a piece of silly horse-play that went farther than it was meant to.”

“That is quite possible,” I replied untruthfully—for I didn’t think anything of the sort, and only made this evasive answer to avoid raising other and more delicate issues.

“I hope that is the explanation,” said Sylvia, “though it sounds rather a lame one. You would know if you had an enemy who might wish to get rid of you. I suppose you don’t know of any such person?”

It was a rather awkward question, I didn’t want to tell an untruth, but, on the other hand, I knew that Thorndyke would not wish to have my affairs discussed while his investigations were in progress; so I “hedged” once more, replying, quite truthfully, that I was not acquainted with anyone who bore me the slightest ill-will.

My adventures done with, the talk drifted into other channels and presently came round to the little crucifix that had been the occasion of Sylvia’s disagreeable experience in the lane. In spite of my confusion, I had noticed, on first entering the room, that the old lady was wearing suspended from her neck, a small enamelled crucifix, and had instantly identified it and wondered not a little that she should be thus disporting herself in borrowed ornaments; but when Sylvia had arrived, behold, the original crucifix was hanging on its chain from her neck. From time to time during my recital my eyes had wandered from one to the other seeking some difference or variation but finding none, and at length my inquisitive glances caught the younger lady’s attention. “I can see. Dr. Jardine,” said she, “that you are eaten up with curiosity about the crucifix that my Aunt is wearing. Now confess. Aren’t you?”

“I am,” I admitted. “When I first came in I naturally thought it was yours. Is it a copy?”

“Certainly not,” said Miss Vyne, the elder. “They are duplicates.”

Sylvia laughed. “You’d better not talk about copies,” said she. “My aunt has only acquired her treasure lately, and she is as proud of it as a peacock; aren’t you, dear?”

“The sensations of a peacock,” replied Miss Vyne, “are unknown to me. I am very gratified at possessing the ornament.”

“Gratified indeed!” said Sylvia. “I consider such vanity most unsuitable to a person of your age. But they are very charming, and there is quite a little story attached to them. My father and a cousin of his—”

“By marriage,” interposed Miss Vyne.

“You needn’t insist on that,” said Sylvia, “as if poor old Vitalia were a person to be ashamed of. Well, my father and this cousin were at a Jesuit school in Belgium—at Louvain, in fact—and among the teachers in the school was an Italian Jesuit named Giglioli. Now the respected Giggley—”

“—oli,” interposed Miss Vyne in a severe voice.

“—oli,” continued Sylvia, “had formerly been a goldsmith; and the Father Superior, with that keen eye to the main chance which you may have noticed among professed religious, furnished him with a little workshop and employed him in making monstrances, thuribles and church plate in general. It was he who made these two crucifixes; and, with the Father Superior’s consent, he gave one to my father and the other to the cousin as parting gifts on their leaving school. As the boys were inseparable friends, the two crucifixes were made absolute duplicates of one another, with the single exception that each had the owner’s name engraved on the back. When my poor father died his crucifix became mine, and a short time ago, his cousin—who is now getting an old man—took a fancy that he would like the two crucifixes to be together once more and gave his to my aunt. So here they are, after all these years, under one roof again.”

As she finished speaking, she detached the crucifix from her neck and, having given it to me to examine, proceeded to remove its fellow from the neck of the elder lady—who not only submitted quite passively but seemed to be unaware of the transaction—and handed that to me also.

I laid them side by side in my palm and compared them, but could not detect the slightest difference between them. They were complete duplicates. Each was a Latin cross with trefoiled extremities, wrought from a single piece of gold and enriched with champlevé enamel. The body of the cross was filled with a ground of deep, translucent blue, from which the
figure stood out in rather low relief, and the space between each of the trefoils was occupied by a single Greek letter—Iota and Chi at the top and bottom respectively, and at the ends of the horizontal arm Alpha and Omega. On turning them over, I saw that the back of each bore an engraved inscription carried across the horizontal arm, that on Sylvia’s reading: "A. M. ROBERTUS, D.G., " while that on the other read: “A. M. VITALIS, D.G.”

“They are very charming little things,” I said, as I returned them to Sylvia; “and it was a pretty idea of the old Jesuit to make them both alike for the two friends. I suppose he didn’t make any more of them for his other pupils?”

“What makes you ask that?” demanded Sylvia.

“I am thinking of that man in the lane. He must have had some reason for claiming the crucifix as his, one would think; and as these are quite unlike any ordinary commercial jewellery, the suggestion is that the worthy Giglioli was tempted to repeat his successes. What do you think?”

“I think,” said Miss Vyne, “that the suggestion is inadmissible. Father Giglioli was an artist, and an artist does not repeat himself.”

“I am inclined to agree with my aunt,” said Sylvia. “An artist does not care to repeat a design, excepting for a definite purpose, as in the case of these duplicates; especially when the thing designed is intended as a gift.”

To this I gave a somewhat qualified assent, though I found the argument far from convincing; and, as I had made a very long visitation, especially for a first call, I now rose to depart. “I hope I may be allowed to come and see you again,” I ventured to say as Miss Vyne raised a sort of semaphore arm to my extended hand. “I see no reason why you should not,” she replied judicially. “You seem to be a well-disposed young man, though indiscreet. Good-afternoon.”

I bowed deferentially and then, to my gratification, was escorted as far as the garden gate by Sylvia; who evidently wished to gather my impressions of her relative, for, as she let me out, she asked with a mischievous smile: “What do you think of my aunt, Dr. Jardine?”

“She is rather a terrifying old lady,” I replied.

Sylvia giggled delightedly. “She does look an awful old griffin, doesn’t she? But it’s all nonsense, you know. She is really a dear old thing, and as soft as butter.”

“Well,” I said, “she conceals the fact most perfectly.”

“She does. She is a most complete impostor. I’ll tell you a secret, Dr. Jardine,” Sylvia added in a mysterious whisper, as we shook hands over the gate; “she trades on her nose. I’ve told her so. Her nose is her fortune, and she plays it for all it’s worth. Goodbye—or rather, au revoir! for you’ve promised to come and see us again.”

With a bright little nod she turned and ran up the garden path, still chuckling softly at her joke; and I wended homewards, very well pleased with the circumstances of my visit, despite the soul-shaking incidents with which it had opened.

XIII — A MYSTERIOUS STRANGER

ON the following morning I betook myself to the hospital intending to call later in the day at Dr. Thorndyke’s chambers; but that visit turned out to be unnecessary, for, as I ran my eye over the names on the attendance board in the entrance hall, I saw that Thorndyke was in the building, although it was not the day on which he lectured. I found him, as I had expected, in the museum and was greeted with a hearty grip of the hand and a welcome, the warmth of which gratified me exceedingly. “Well, Jardine,” he said, “you’ve given us all a pretty fine shake up. I have never been more relieved in my life than I was when my man Polton gave me your note. But you seem to have had another fairly close shave. What a fellow you are, to be sure! You seem to be as tenacious of life as the proverbial cat.”

“So that little archbishop is your man Polton, is he?”

“Yes; and a most remarkable man, Jardine, and simply invaluable to me, though he ought to be in a very different position. But I think he is quite happy with me—especially now that he has got your watch to experiment on. You will see that watch again some day, when he has rated it to half a second. And meanwhile let us go into the curator’s room and reconstitute your adventures.”

The curator’s room was empty at the moment; empty, that is to say, so far as human denizens were concerned. Otherwise it was decidedly full; the usual wilderness of glass jars, sepulchral slate tanks, bones in all stages of preparation and unfinished specimens, being supplemented by that all-pervading, unforgettable odour peculiar to curator’s rooms, compounded of alcohol and mortality, and suggesting a necropolis for deceased dipsomaniacs. Thorndyke seated himself on a well-polished stool by the work-bench, and, motioning me to another, bade me speak on. Which I did in exhaustive detail; giving him a minute history of my experiences from the time of my parting from Sylvia to the present moment, not omitting my encounter with Mrs. Samway and the clerical gentleman in the train.

He listened to my narrative in his usual silent, attentive fashion, making no comments and asking no questions until I had finished; when he cross-examined me on one or two points of detail. “With regard to Mrs. Samway,” he asked, “did you gather that she was crossing by the Boulogne boat?”
“I inferred that she was, but she said nothing on the subject.”

He nodded and then asked; “Do I understand that you never saw your assailant at all?”

“I never got the slightest glimpse of him; in fact I could not say whether the person who attacked me was a man or a woman excepting that the obvious strength and the method of attack suggest a man.”

To this he made no reply, but sat a while absorbed in thought. It was evident that he was deeply interested in the affair, not only on my account but by reason of the curious problems that it offered for solution. Indeed, his next remark was to this effect. “It is a most singular case, Jardine,” he said. “So much of it is perfectly clear, and yet so much more is unfathomable mystery. But just now, the speculative interest is overshadowed by the personal. I am rather doubtful as to what we ought to do. It almost looks as if you ought not to be at large.”

“I hope, sir, you don’t suggest shutting me up,” I exclaimed with a grin.

“That was in my mind,” he answered. “You are evidently in considerable danger, and you are not as cautious as you ought to be.”

“I shall be mighty cautious after this experience,” I rejoined; “and you have yourself implied that I have nine lives.”

“Even so,” he retorted, “you have played away a third of them pretty rapidly. If you are not more careful of the other six, I shall have to put you somewhere out of harm’s way. Do, for goodness sake, Jardine, keep away from unpopulated places and see that no stranger gets near enough to have you at a disadvantage.”

I promised him to keep a constant watch for suspicious strangers and to avoid all solitary neighbourhoods and ill-lighted thoroughfares, and shortly after this we separated to go our respective ways, he back to the museum and I to the surgical wards.

For some time after this, the record of my daily life furnishes nothing but a chronicle of small beer. I had resumed pretty regular attendance at the hospital, setting forth from my lodgings in the morning and returning thither as the late afternoon merged into evening; taking the necessary exercise in the form of the long walk to and from the hospital, and keeping close indoors at night. It began to look as though my adventures were at an end and life were settling down to the old familiar jog trot.

And yet the beer was not quite so small as it looked. Coming events cast their shadows before them, but often enough those shadows wear a shape ill-defined and vague, and so creep on unnoticed. Thus it was in these days of apparent inaction, though even then there were certain little happenings at which I looked askance. Such an episode occurred within a few days of my return, and gave me considerable food for thought. I had climbed on to the yellow ‘bus in the Tottenham Court Road and was seated on the top, smoking my pipe, when, as we passed up the Hampstead Road, I noticed a woman looking into the window of Mr. Robinson, the artist’s-colourman. Something familiar or distinctive in the pose of the figure made me glance a second time; and then I think my eyes must have grown more and more round with astonishment as the ‘bus gradually drew me out of range. For the woman was undoubtedly Mrs. Samway.

It was really a most surprising affair. This good lady seemed to be ubiquitous; to fly hither and thither and drop from the clouds as if she were the possessor of a magic carpet. Apparently she had not gone to Boulogne after all; or if she had, her stay on the Continent must have been uncommonly short. But if she had not crossed on the boat, what was she doing in Folkestone? It was all very well to say that she had as much right to be in Folkestone as I had. That was true enough, but it was a lame conclusion and no explanation at all.

It was my custom, as I have said, to walk from my lodgings to the hospital, a distance of some five miles; but this was practicable only in fine weather. On wet days I took the tram from the “Duke of St. Alban’s”; and beguiled the slow journey by reading one of my text-books and observing the manners and customs of my fellow-passengers. Such a day was the one that followed the re-appearance of Mrs. Samway. A persistent drizzle put my morning walk out of the question and sent me reluctant but resigned to seek the shelter of the tram, where having settled myself with a volume of Gould’s “Surgical Diagnosis,” I began to read to the accompaniment of the monotonous rhythm of the horses’ hoofs and the sleepy jingle of their bells. From time to time I looked up from my book to take a glance at the other occupants of the steamy interior, and on each occasion that I did so, I caught the eye of my opposite neighbour roving over my person as if taking an inventory of my apparel. Whenever he caught my eye, he immediately looked away; but the next time I glanced up I was sure to find him once more engaged in a leisurely examination of me.

There was nothing remarkable in this. People who sit opposite in a public vehicle unconsciously regard one another, as I was doing myself; but when I had met my neighbour’s eye a dozen times or more, I began to grow annoyed at his persistent inspection; and finally, shutting up my book, proceeded to retaliate in kind.

This seemed to embarrass him considerably. Avoiding my steady gaze, his eyes flitted to and fro, passing restless from one part of the vehicle to another; and then it was that my medical eye noted a fact that gave an intrinsic interest to the inspection. The man had what is called a nystagmus; that is, a peculiar oscillatory movement of the eyeball. As his eyes passed quickly from object to object, they did not both come to rest instantaneously, but the right eye stopped with a sort of vertical stagger as if the bearings were loose. The condition is not a very common one, and the one-sided variety is decidedly rare. It is usually associated with some defect of vision or habitual strain of the eye-muscles, as in miners’ nystagmus; whence my discovery naturally led to a further survey and speculation as to the cause of the condition in the present case.
The man was obviously not a miner. His hands—with a cigarette stain, as I noticed, on the left middle finger—were much too delicate, and he had not in any way the appearance of a labourer. Then the spasm must be due to some defect of eyesight. Yet he was not near-sighted, for, as we passed a church at some distance, I saw him glance out through the doorway at the clock and compare it with his watch; and again, I noticed that he took out his watch with his left hand. Then perhaps he had a blind eye or unequal vision in the two eyes; this seemed the most likely explanation; and I had hardly proposed it to myself when the chance was given to me to verify it. Confused by my persistent examination of him, my unwilling patient suddenly produced a newspaper from his pocket and, clapping a pair of pince-nez on his nose, began to read. Those pince-nez gave me the required information, for I could see that one glass was strongly convex while the other was nearly plane.

The question of my friend’s eyesight being disposed of, I began to debate the significance of that stain of the left middle finger. Was he left-handed? It did not follow, though it seemed likely; and then I found myself noting the manner in which he held his paper, until, becoming suddenly conscious of the absurdity of the whole affair, I impatiently picked up my book and reverted to the diagnosis of renal calculus. I was becoming, I reflected disparagingly, as inquisitive as Thorndyke himself; from whom I seemed to have caught some infection that impelled me thus to concern myself with the trifling peculiarities of total strangers.

The trivial incident would probably have faded from my recollection but for another, equally trivial, which occurred a day or two later. I was returning home by way of Tottenham Court Road and had nearly reached the crossing at the north end when I suddenly remembered that I had come to the last of my note-books. The shop at which I obtained them was in Gower Street, hard by, and as the thought of the books occurred to me, I turned abruptly and, running across the road, strode quickly down a by-street that led to the shop.

As I came out into Gower Street I noticed a small, but rapidly augmenting crowd on the pavement, and, elbowing my way through, found at its centre a man lying on the ground, writhing in the convulsions of an epileptic fit. I proceeded to ward off the well-meant attentions of the usual excited bystanders, who were pulling open his hands and trying to sit him up, and had thrust the corner of a folded newspaper between his teeth to prevent him from biting his tongue when a constable arrived on the scene; upon which, as the officer bore on his sleeve the badge of the St. John’s Ambulance Society, I gave him a few directions and began to back out of the crowd.

At this moment, I became aware of a pressure behind me and a suspicious fumbling, strongly suggestive of the presence of a pick-pocket. Instantly, I turned right about and directed a searching look at the people behind me, and especially at a bearded, nondescript person who seemed also to be backing out of the crowd. He gave me a single, quick glance as I followed him through the press and then averted his eyes; and as he did so, I noticed, with something of a start, that his right eye came to rest with a peculiar, rapid up-and-down shake. He had, in fact, a right-sided nystagmus.

The coincidence naturally struck me with some force. A nystagmus is not, as I have said, a very common condition; one-sided nystagmus is actually a rare one; and, of the one-sided instances, only some fifty per cent will affect the right eye. The coincidence was therefore quite a notable one; but had it any particular bearing? I had a half-formed inclination to follow the man; but he had not actually picked my pocket or done any other overt act, and one could hardly follow a person merely because he happened to suffer from an uncommon nervous affection.

The man was now walking up the street, briskly, but without manifest hurry; looking straight before him and swinging his stick with something of a flourish. I watched him speculatively, as I walked in the same direction, and then suddenly realized that he was carrying his stick in his left hand, and carrying it, too, with the unmistakable ease born of habit. Then he was left-handed! And here was another coincidence; not a remarkable one in itself, but, when added to the other, so singular and striking that I insensibly quickened my pace.

As my acquaintance reached the corner of the Euston Road, an omnibus stopped to put down a passenger. It was about to move on when he raised his stick, and, following it, stepped on the footboard and mounted to the roof. I was undecided what to do. Should I follow him? And, if so, to what purpose? He would certainly notice me if I did and be on his guard, so that I should probably have my trouble for nothing and possibly look like a fool into the bargain. And while I was thus standing irresolute at the corner, the omnibus rumbled away westward and decided the question for me.

I am not, as the reader may have gathered, a particularly cautious man or much given to suspicion. But recent events had made me a good deal more wary and had taught me to look with less charity on chance fellow creatures; and this left-handed person with the nystagmus occupied my thoughts to no small extent during the next day or two. Was he the man whom I had seen in the tram? Apparently not. The latter had been clean shaven and dressed neatly in the style of a clerk or ordinary City man, whereas the former wore a full beard and was shabby, almost beyond the verge of respectability. As to their respective statures, I could not judge, as I had seen the one man seated and the other standing; but, superficially, they were not at all alike, and, in all probability they were different persons.

But this conclusion was not at all inevitable. When I reflected on the matter, I saw that the resemblances and differences did not balance. The two men resembled one another in qualities that were inherent and unalterable, but they differed in qualities that were superficial and subject to change. A man cannot assume or cast off a nystagmus, but he can put on a false beard. A left-handed man may endeavour to conceal his peculiarity, but the superior deftness of the habitually used hand will make itself apparent in spite of his efforts; whereas he can make any alterations in his clothing that he pleases. And thus reflecting, the suspicion grew more and more strong that the two men might very well have been one and the same person, and that it would be discreet to keep a bright look-out for a left-handed man with a right-sided nystagmus.
During all this time I had seen nothing of my new friend Miss Sylvia. But I had by no means forgotten her. Without wishing to exaggerate my feelings, I may say that I had taken a strong liking to that very engaging young lady. She was a pleasant, easy-mannered girl, evidently good-tempered, and very frank and simple; a girl—as Mr. Sparkler would have said—with no bigod nonsense about her. Her tastes ran along very similar lines to my own, and she was clever enough to be a quite interesting companion. Then it was evident that she liked me—which was in itself an attraction, to say nothing of the credit that it reflected on her taste—and, in a perfectly modest way, she had made no secret of the fact. And finally, she was exceptionally good-looking. Now people may say, as they do, that beauty is only skin deep—which is perfectly untrue, by the way; but even so, one is more concerned with the skins of one’s fellow creatures than with their livers or vermiform appendices. The contact of persons, as of things, occurs at their respective surfaces.

From which it will be gathered that I was only allowing a decent interval to elapse before repeating my visit to “The Hawthorns”; indeed, I was beginning to think that a sufficient interval had already passed and to contemplate seriously my second call, when my intentions were forestalled by Sylvia herself. Returning home one Friday evening, I found on my mantelpiece a short letter from her, enclosing a ticket for an exhibition of paintings and sculpture at a gallery in Leicester Square, and mentioning—incidentally—that she proposed to visit the show on the following morning in order to see the works by a good light; which seemed such an eminently rational proceeding in these short winter days, that I determined instantly to follow her example and get the advantage of the morning light myself.

I acted on this decision with such thoroughness that, when I arrived at the gallery, I found the attendant in the act of opening the doors, and, for nearly half an hour I was in sole possession of the premises. Then, by twos and threes, other visitors began to struggle in, and among them Sylvia, looking very fresh and dainty and obviously pleased to see me. “I am glad you were able to come,” she said, as we shook hands. “I thought you would, somehow. It is so much nicer to have someone to talk over the pictures with, isn’t it?”

“Much more interesting,” I agreed. “I have been taking a preliminary look round and have already accumulated quite a lot of profound observations to discharge at you as occasion offers. Shall we begin at number one?”

We began at number one and worked our way methodically picture by picture, round the room, considering each work attentively with earnest discussion and a wealth of comment. As the morning wore on, visitors arrived in increasing numbers, until the two large rooms began to be somewhat inconveniently crowded. We had made a complete circuit of the pictures and were about to turn to the sculpture, which occupied the central floor space, when Sylvia touched me on the arm. “Let us sit down for a minute,” said she. “I want to speak to you.”

I led her to one of the large settees that disputed the floor-space with the busts and statuettes, and, somewhat mystified by her serious tone and by the rather agitated manner, which I now noticed for the first time, seated myself by her side. “What is it?” I asked.

She looked anxiously round the room, and, leaning towards me, said in a low tone: “Have you noticed a man who has been keeping near us and listening to our conversation?”

“No, I haven’t,” I replied. “If I had I would have given him a hint to keep farther off. But there’s nothing in it, you know. In picture galleries it is very usual for people to hang about and try to overhear criticisms. This man may be interested in the exhibits.”

“Yes, I know. But I don’t think this person was so much interested in the exhibits. He didn’t look at the pictures, he looked at us. I caught his eye several times reflected in the picture-glasses, and once or twice I saw him looking most attentively at this crucifix of mine. That was what really disturbed me. I wish, now, that I hadn’t unbuttoned my coat.”

“So do I. You will have to leave that crucifix at home if it attracts so much undesirable attention. Which is the man? Is he in this room?”

“No, I don’t see him now. I expect he has gone into the next room.”

“Then let us go there, too; and if you will point him out to me, I will pay him back in his own coin.”

We rose and made our way to the door of communication, and, as we passed into the second room, Sylvia grasped my arm nervously. “There he is—don’t let him see us looking at him—he is sitting on the settee at the farther end of the room.”

It was impossible to make a mistake since the settee held only a single person; a fairly well-dressed, ordinary-looking man, rather swarthy and foreign in appearance, with a small waxed moustache. He was sitting nearly opposite the entrance door and seemed, at the moment to be reading over the catalogue, which he held open on his knee; but, as he looked up almost at the moment when we entered, I turned my back to him and continued my inspection with the aid of the reflection in a picture-glass. “He is probably a journalist,” I said. “You see he is scribbling some notes on the blank leaves of his catalogue; probably some of your profound criticisms, which will appear, perhaps to-morrow morning, clothed in super-technical jargon, in a daily paper.”

Here I paused suddenly, for I had made a rather curious observation. The reflection in a mirror is, as everybody knows, reversed laterally; so that the right hand of a person appears to be the left, and vice versa. But in the present case, no reversal seemed to have taken place. The figure in the reflection was writing with his right hand. Obviously, then, the real person was writing with his left.

This put a rather different aspect on the affair. Up to the present, I had been disposed to think that Sylvia had been unduly disturbed; for there are plenty of ill-bred bounders to be met in any public place who will stare a good-looking girl
out of countenance. But now my suspicions were all awake. It is true that left-handed men are as common as blackberries; but still—"Can you tell me, Miss Vyne," I asked, as we worked our way towards the other end of the room, "if this man is at all like the one who frightened you so in Millfield Lane?"

"No, he is not. I am sure of that. The man in the lane was a good deal taller and thinner."

"Well," said I, "whoever he is, I want to have a good look at him, and the best plan will be to turn our attention to the sculpture. Shall we go and look at that rather remarkable pink bust? That will give our friend a chance of another stare at you, and, if he doesn’t take it, I will go and inspect him where he sits."

The bust to which I had referred was executed in a curious, rose-tinted marble, very crystalline and translucent, a material that suited the soft, girlish features of its subject admirably. It stood on an isolated pedestal quite near the settee on which the suspicious stranger was sitting, and I hoped that our presence might lure him from his retreat. "I don’t think," I said, taking up a position with my back to the settee, "that I have ever seen any marble quite like this. Have you?"

"No," replied Sylvia. "It looks like coarse lump sugar stained pink. And how very transparent it is; too transparent for most subjects."

Here she gave a quick, nervous glance at me, and I was aware of a shadow thrown by some person standing behind me. Had our friend risen to the bait already?

I continued the conversation in good audible tones. "Very awkward these isolated pedestals would be for slovenly artists who scamp the back of their work."

With this remark I moved round the pedestal as if to examine the back of the bust, and Sylvia followed. The move brought us opposite the person who had been standing behind me; and, sure enough, it was the gentleman from the settee. I continued to talk—rather bluntly, I fear—commenting on the careful treatment of the hair and the backs of the ears; and meanwhile took an occasional swift glance at the man opposite. He appeared to be gazing in wrath at the bust, but his glance, too, occasionally wandered; and when it did, the "point of fixation," as the oculists would express it, was Sylvia’s crucifix, which was still uncovered.

Presently I ventured to take a good, steady look at him and was for a few moments unobserved. His left eye moved, as I could see, quite smoothly and evenly from point to point; but the right, at each change of position, gave a little, rapid, vertical oscillation. Suddenly he became aware of my, now undisguised, inspection of him, and, immediately, the oscillation became much more marked, as is often the case with these spasmodic movements. Perhaps he was conscious of the fact; at any rate, he turned his head away and then moved off to examine a statuette that stood near the middle of the room.

I looked after him, wondering what I ought to do. That he was the man whom I had seen on the two previous occasions I had not the slightest doubt, although I was still unable to identify his features or anything about him excepting the nystagmus and the left-handed condition. But there could be no question that he was the same man; and this very variability in his appearance only gave a more sinister significance to the affair, pointing clearly, as it did, to careful and efficient disguise. Evidently he had been, and still was, shadowing me, and, what was still worse, he seemed to be taking a most undesirable interest in Sylvia. And yet what could I do? My small knowledge of the law suggested that shadowing was not a criminal act unless some unlawful intent could be proved. As to punching the fellow’s head—which was what I felt most inclined to do—that would merely give rise to disagreeable, and perhaps dangerous, publicity.

"My lord is pleased to meditate," Sylvia remarked at length, breaking in upon my brown study.

"I beg your pardon," I exclaimed. "The fact is I was wondering what we had better do next. Do you want to see anything else?"

"I should rather like to see the outside of the building," she answered. "That man has made me quite nervous."

"Then we will go at once, and we won’t sign the visitor’s book."

I led her to the door, and, as we rapidly descended the carpeted stairs, I considered once more what it were best to do. Had I been alone I would have kept our watcher in view and done a little shadowing on my own account; but Sylvia’s presence made me uneasy. It was of the first importance that this sinister stranger should not learn where she lived. The only reasonable course seemed to be to give him the slip if possible. "What did you make of that man?" Sylvia asked when we were outside in the square. "Don’t you think he was watching us?"

"Yes, I do. And I may say that I have seen him before."

She turned a terrified face to me and asked: "You don’t think he is the wretch who pushed you into the river?"

Now this was exactly what I did think, but it was not worth while to say so. Accordingly I temporized. "It is impossible to say. I never saw that man, you know. But I have reason for thinking that this fellow is keeping a watch on me, and it occurs to me that, if he appears still to be following us, I had better put you into a hansom and keep my eye on him until you are out of sight."

"Oh, I’m not going to agree to that," she replied with great decision. "I don’t suppose that my presence is much protection to you, but still, you are safer while we are together, and I’m not going to leave you."

This settled the matter. Of course she was quite right. I was much safer while she was with me, and if she refused to go
off alone, we must make our escape together. I looked up the square as we turned out of it towards the Charing Cross Road, but could see no sign of our follower, and, as we walked on at a good pace, I hoped that we might get clear away. But I was not going to take any chances. Before turning homewards, I decided to walk sharply some distance in an easterly direction and then see if there was any sign of pursuit; for my previous experiences of this good gentleman led me to suspect that he was by no means without skill and experience in the shadowing art.

We walked down to Charing Cross and turned eastward along the north side of the Strand. I had chosen this thoroughfare as offering a good cover to a pursuer, who could easily keep out of sight among the crowd of way-farers who thronged the pavement for the first question to be settled was whether we were or were not being shadowed. “Where are we going now?” Sylvia asked.

“We are going up Bedford Street,” I answered. “There is a book shop on the right-hand side where we can loiter unobtrusively and keep a look-out. If we see nobody, we will try one of the courts off Maiden Lane where we should be certain to catch anyone who was following. But we will try the bookstall first because, if our friend is in attendance, I have a rather neat plan for getting rid of him.”

We accordingly made our way to the bookstall in Bedford Street and began systematically to look through the second-hand volumes; and as we pored over an open book, we were able to keep an effective watch on the end of the street and the Strand beyond. Our vigil was not a long one. We had been at the stall less than a minute when Sylvia whispered to me: “Do you see that man looking in the shop on the farther side of the Strand?”

“Yes,” I replied, “I have noticed him. He has only just arrived, and I fancy he is our man. If he is, he will probably go into the doorway so as not to have to keep his back to us.”

Almost as I spoke, the man moved into the deep doorway as if to inspect the end of the shop window, and Sylvia exclaimed: “I’m sure that is the man. I can see his profile now.”

There could be no doubt of the man’s identity; and, at this moment, as if to clinch the matter, he took out a cigarette and lighted it, striking the match with his left hand. “Come along,” said I. “We will now try my little plan for getting rid of him. We mustn’t seem to hurry.”

We sauntered up to the corner of Maiden Lane and there stood for a few moments looking about us. Then we strolled across to the farther side of Chandos Street, and, as soon as we were out of sight of our follower, crossed the road and slipped in at the entrance to the Civil Service Stores. Passing quickly through the provision department, we halted at the glazed doors, from which we could look out through the Bedford Street entrance. “There he is!” exclaimed Sylvia. And there he was, sure enough, walking rather quickly up the east side of Bedford Street. “Now,” said I, “let us make a bolt for it. This way.”

We darted out through the china, furniture and ironmongery departments, across the whole width of the building and out of the Agar Street entrance, where we immediately crossed into King William Street, turned down Adelaide Street, shot through the alley by St. Martin’s Church, and came out opposite the National Portrait Gallery just as a yellow omnibus was about to start. We sprang into the moving vehicle, and, as it rumbled away into the Charing Cross Road, we kept a sharp watch on the end of King William Street. But there was no sign of our pursuer. We had got rid of him for the present, at any rate. “Don’t you think,” said Sylvia, “that he will suspect that we went into the Stores?”

“I have no doubt he will, and that is where we have him. He can’t come away and leave the building unsearched. Most probably he is, at this very moment, racing madly up and down the stairs and trying to watch the three entrances at the same time.”

Sylvia chuckled gleefully. “It has been quite good fun,” she said, “but I am glad we have shaken him off. I think I shall stay indoors for a day or two and paint, and I hope you’ll stay indoors, too. And that reminds me that I am out of Heyl’s white. I must call in at Robinson’s and get a pound tube. Do you mind? It won’t delay us more than a few minutes.”

Now I would much rather have gone straight on to Hampstead, for our unknown attendant certainly knew the whereabouts of my lodgings and might follow us when he failed to find us in the stores. Moreover, I had, of late, given the neighbourhood of the artist’s-colourman’s shop a rather wide berth, having seen Mrs. Samway from afar once or twice, therabouts, and having surmised that she tended to haunt, that particular part of the Hampstead Road. But the fresh supply of flake white seemed to be a necessity, so I made no objection, and we accordingly alighted opposite the shop and entered. Nevertheless, while Sylvia was making her purchase, I stood near the glass door and kept a watchful eye on the street. When a tram stopped a short distance away, I glanced quickly over its passengers, as well as I could, though without observing anyone who might have been our absent friend. But just as it was about to move on, I saw a woman run out from the pavement and enter; and though I got but an indifferent view of her, I felt an uncomfortable suspicion that the woman was Mrs. Samway.

Looking back, I do not quite understand why I had avoided this woman or why I now looked with distaste on the fact that she was travelling in our direction. She was a pleasant-spoken, intelligent person, and I had no dislike of her, nor any cause for dislike. Perhaps it was the recollection of the offence that she had given Sylvia in this very shop, but a short time since, that made me unwilling to encounter her now in Sylvia’s company. At any rate, whatever the cause may have been, throughout the otherwise, pleasant journey, and in spite of an animated and interesting conversation, the thought of Mrs. Samway continually recurred, and this notwithstanding that I kept a constant, unobtrusive look-out for the mysterious spy who might, even now, be hovering in our rear.
We alighted from the tram at the “Duke of St. Alban’s” and made our way to North End by way of the Highgate Ponds. As we crossed the open fields and the Heath, I turned at intervals to see if there was any sign of our being followed; but no suspicious-looking person appeared in sight, though on two separate occasions, I noticed a woman ahead of us, and walking in much the same direction, turn round and look our way. There was no reason, however, to suppose that she was looking at us, and, in any case, she was too far ahead to be recognizable. At last, somewhere in the neighbourhood of the Spaniard’s Road, she finally disappeared, possibly into the hollow beyond, and I saw no more of her.

At the gate of “The Hawthorns” I delivered up the heavy tube of paint, and thus, as it were, formally brought our little outing to an end; and as we shook hands Sylvia treated me to a parting exhortation. “Now do take care of yourself and keep out of harm’s way,” she urged. “You are so large, you see,” she added with a smile, “and such a very conspicuous object that you ought to take special precautions. And you must come and see us again quite soon. I assure you my aunt is positively pining for another conversation with you. Why shouldn’t you drop in to-morrow and have tea with us?”

Now this very idea had already occurred to me, so I hastened to close with the invitation; and then, as she retired up the path with another “good-bye” and a wave of the hand, I turned away and walked back towards the Heath.

For some minutes I strode on, across fuzzy hollows or over little hills, traversed by sunken, sandy paths, occupying myself with thoughts of the pleasant, friendly girl whom I had just left and reflections on the strange events of the morning. Presently I mounted a larger hill, on which was perched a little, old-fashioned house. Skirting the wooden fence that enclosed it, I turned the corner and saw before me, at a distance of some forty yards, a rough, rustic seat. On that seat a woman was sitting; and somehow, when I looked at her and noted the graceful droop of the figure, it was without any feeling of surprise—almost that of realized expectation—that I recognized Mrs. Samway.

---

### XIV — A LONELY WOMAN

IF I had had any intention of avoiding Mrs. Samway, that intention must inevitably have been frustrated, for her recognition was as instantaneous as my own. Almost as I turned the corner, she looked up and saw me; and a few moments later, she rose and advanced in my direction, so that, to an onlooker it would have appeared as if we had met by appointment. There was obviously nothing for it but to look as pleased as I could manage at such short notice; which I did, shaking her hand with hypocritical warmth. “And I suppose, Dr. Jardine,” said she, “you are thinking what a very odd coincidence it is that we should happen to meet here?”

“Oh, I don’t know that it is so very odd. I live about here and I understood you to say that you often come up to the Heath. At any rate, our last meeting was a good deal more odd.”

“Yes, indeed. But the truth is that this is not a coincidence at all. I may as well confess that I came here deliberately with the intention of waylaying you.”

This very frank statement took me aback considerably; so much so that I could think of no appropriate remark beyond grumbling something to the effect that “it was very flattering of her.”

“I have been trying,” she continued, “to get a few words with you for some time past; but, although I have lurked in your line of march in the most shameless manner, I have always managed to miss you. I thought, from what you told me, that you passed Robinson’s shop on your way to the hospital.”

“So I do,” I replied mendaciously; for I could hardly tell her that I had lately taken to shooting up by-streets with the express purpose of avoiding that particular stretch of pavement.

“It’s rather curious that I never happened to meet you there. However, I didn’t, so, to-day, I determined to take the bull by the horns and catch you here.”

This last statement, like the former ones, gave me abundant matter for reflection. How the deuce had she managed to “catch me here?” I supposed that she had seen Sylvia and me in the Hampstead Road and had guessed that we were coming on to this neighbourhood. That was a case of feminine intuition; which, like the bone-setter’s skill, is a wonderful thing—when it comes off (and when it doesn’t one isn’t expected to notice the fact). Then she had gone on ahead—still guessing at our final destination—and kept us in sight while keeping out of view herself. It was not so very easy to understand and not at all comfortable to think of, for there was a disagreeable suggestion that she had somehow ascertained Sylvia’s place of abode beforehand. And yet—well, the whole affair was rather mysterious. “You don’t ask why it was that I wanted to waylay you,” she said, at length, as I made no comment on her last statement.

“There is an old saying,” I replied, “that one shouldn’t look a gift-horse in the mouth.”

“That is very diplomatic,” she retorted with a laugh. “But I daresay your knowledge of women makes the question unnecessary.”

“My knowledge of women,” said I, “might be put into a nutshell and still leave plenty of room for the nut and a good, fat maggot besides.”

“Then I must beware of you. The man who professes to know nothing of women is the most deep and dangerous class of person. But there is one item of knowledge that you seem to have acquired. You seem to know that women like to have pretty things said to them.”
“If you call that knowledge,” said I, “you must apply the same name to the mere blind impulse that leads a spider to spin a nice, symmetrical web.”

She laughed softly and looked up at me with an expression of amused reflection. “I am thinking,” she said, “what a very fine symmetrical web you would spin if you were a spider.”

“Possibly,” I replied. “But it looks as if the role of bluebottle were the one that is being marked out for me.”

“Oh! Not a bluebottle. Dr. Jardine. It doesn’t suit you at all. If you must make a comparison, why not say a Goliath beetle, and have something really dignified—and not so very inappropriate.”

“Well, then, a Goliath beetle, if you prefer it; not that he would look very dignified, kicking his heels in the elegant web of the superlatively elegant feminine spider.”

“Oh, but that isn’t pretty of you at all, Dr. Jardine. In fact it is quite horrid; and unfair, too; because you are trying to get the information without asking a direct question.”

“What question am I supposed to ask?”

“You needn’t ask any. I will take pity on your masculine pride and tell you why I have been lying in wait for you, although I daresay you have guessed. The truth is, I am simply devoured by curiosity.”

“Concerning what?”

“Now, how can you ask? Just think! One day I meet you in the Hampstead Road, going about your ordinary business, apparently a fixture, at least for months. A few days later, a hundred miles from London, I feel myself suddenly seized from behind; I turn round and there are you with tragedy and adventure written large all over you.”

“I thought the tragedy was rather on your side; and so did the ancient mariner with the black bottle and the tea cup. But—”

“I don’t wish to discuss the views of that well-meaning old brute. I want an explanation. I want to know how you came to be in Folkestone and in that extraordinary condition. I am sure something strange must have happened to you.”

“Why? Haven’t I as much right to be in Folkestone as you have?”

“That is mere evasion. When I see a man who is usually rather carefully and very neatly dressed, walking in the streets of a seaport town without hat or a stick and with a collar that looks as if it had been used to clean out a saucepan, and great stains on his clothes, I am justified in inferring that something unusual has happened to him.”

“I didn’t think you had noticed my negligé get-up.”

“At the time I did not. I was very upset and agitated, I had just had a lot of worry and was compelled to cross to France at a moment’s notice; and then there was that horrible horse, and the sudden way that you seized me and then got knocked down; and the—”

“The ancient mariner.”

“Yes, the ancient mariner; and the knowledge that I was behaving like an idiot and couldn’t help it—though you were so nice and kind to me. So you see, I was hardly conscious of what was happening at the time. But afterwards, when I had recovered my wits a little, I recalled the astonishing figure that you made, and I have been wondering ever since what had happened to you. I assure you. Dr. Jardine, you looked as if you might have swum to Folkestone.”

“Did I, by Jove!” I exclaimed with a laugh. “Well, appearances weren’t so very deceptive. The fact is that I had swum part of the way.”

She looked at me incredulously. “Whatever do you mean?” she asked.

“I mean that you are now looking on a modern and strictly up-to-date edition of Sinbad the Sailor.”

“That isn’t very explanatory. But I suppose it isn’t meant to be. It is just a preliminary stimulant to whet my appetite for marvels, and a most unnecessary one, I can assure you, for I am absolutely agate with curiosity. Do go on. Tell me exactly what had happened to you.”

Now the truth is that I had already said rather more than was strictly discreet and would gladly have drawn in my horns. But I had evidently let myself in for some sort of plausible explanation, and a lack of that enviable faculty that enables its possessor to tell a really convincing and workmanlike lie, condemned me to a mere unimaginative adherence to the bald facts, though I did make one slight and amateurish effort at preparation.

“You want a detailed log of Sinbad’s voyages, do you?” said I. “Then you shall have it. We will begin at the beginning. The port of departure was the Embankment somewhere near Cleopatra’s Needle. I was leaning over the parapet, staring down at the water like a fool, when some practical joker came along, and, apparently thinking it would be rather funny to give me a fright, suddenly lifted me off my feet. But my jocose friend hadn’t allowed for the top-heaviness of a person of my height, and, before you could say ‘knife,’ I had slipped from his hold and taken a most stylish header into the water. Fortunately for me, a barge happened at the moment to be towing past, and, when I had managed to haul myself on board, I fell into the arms of a marine species of Good Samaritan, who, not having a supply of the orthodox oil and wine, proceeded to fill me up with hot gin and water, which is distinctly preferable for internal application. Then the Samaritan aforesaid clothed
me in gorgeous marine raiment and stowed me in a cupboard to sleep off the oil and wine, which I did after some sixteen hours, and then awoke to find our good ship on the broad bosom of the ocean. And so—not to weary you with the incidents of the voyage—I came to Folkestone, where I found a beautiful lady endeavouring, very unsuccessfully, to hypnotize a run-away horse; and so to the adventure of the tarred nets and the ancient mariner with the black bottle."

Mrs. Samway smiled a little consciously as I mentioned the last incidents, but the smile quickly faded and left a deeply thoughtful expression on her face. "You take it all very calmly," said she, "but it seems to me to have been a rather terrible experience. You really had a very narrow escape from death."

"Yes; quite near enough. I'm far from wanting any more from the same tap."

"And I don't quite see why you assume that it was a mere clumsy joke that sent you into the river by accident."

"Why, what else could it have been?"

"It looks more like a deliberate attempt to drown you. Perhaps you have some enemy who might want to make away with you."

"I haven't. There isn't a soul in the world who owes me the slightest grudge."

"That seems rather a bold thing to say, but I suppose you know. Still, I should think you ought to bear this strange affair in mind, and be a little careful when you go out at night; to avoid the riverside, for instance. Have you—did you give any information to the police about this accident, as you call it?"

"Good Lord! Not! What would have been the use?"

"I thought you might have given them some description of the man who pushed you over."

"But I never saw him. I don't even know for certain that it was a man. It might have been a woman for all that I can tell."

Mrs. Samway looked, up at me with that strangely penetrating expression that I had seen before in those singular, pale eyes of hers. "You don't mean that?" she said. "You don't really think that it could have been a woman?"

"I don't think very much about it; but as I never saw the person who did me the honour of hoisting me overboard, I am clearly not in a position to depose as to the sex of that person. But if it was a woman, she must have been an uncommonly strong one."

Mrs. Samway continued to look at me questioningly. "I thought you seemed to hint at a suspicion that it actually was a woman. You would surely be able to tell."

"I suppose I should if there were time to think about the matter; but, you see, before I was fairly aware that anyone had hold of me, I was sticking my head into the mud at the bottom of the river, which is a process that does not tend very much to clarify one's thoughts."

"No, I suppose not," she agreed. "But it is a most mysterious and dreadful affair. I can't think how you can take it so calmly. You don't seem to be in the least concerned by the fact that you have been within a hairsbreadth of being murdered. What do your friends think about it?"

"Well, you see, Mrs. Samway," I replied evasively, "one doesn't talk much about incidents of this kind. It doesn't sound very credible, and one doesn't want to gain a reputation as a sort of modern Munchausen. I shouldn't have told you but that you were already partly in the secret and that you cross-examined me in such a determined fashion."

"But," she exclaimed, "do you mean to tell me that you have said nothing to anyone about this extraordinary adventure of yours?"

"No, I don't say that. Of course, I had to give some sort of explanation to my landlady, for instance, but I didn't tell her all that I have told you; and I would rather, if you don't mind, that you didn't mention the affair to anyone. I should hate to be suspected of romancing."

"You shan't be through anything that I may say," she replied, "though I should hardly think that anyone who knew you would be likely to suspect you of inventing imaginary adventures."

For some minutes after this we walked on without speaking, and, from time to time, I stole a glance at my companion. And, once again, I found myself impressed by something distinctive and unusual in her appearance. Her unquestionable beauty was not like that of most pretty women, localized and unequal, having features of striking attractiveness set in an indiff erent or even defective matrix. It was diffused and all pervading, the product of sheer physical excellence. With most women one feels that the more attractive wares are judiciously pushed to the front of the window while a discreet reticence is maintained respecting the unpresentable residue. Not so with Mrs. Samway. Her small, shapely head, her symmetrical face, her fine supple figure, and her easy movements, all spoke of a splendid physique. She was not merely a pretty woman, she was that infinitely rarer creature, a physically perfect human being; comely with the comeliness of faultless proportion, graceful with the grace of symmetry and strength.

Suddenly she looked up at me with just a hint of shyness and a little heightening of the colour in her cheek. "Are you going to tell me again, Dr. Jardine, that a cat may look at a king? Or was it that a king may look at a cat?"

"Whichever you please," I replied. "We will put them on a footing of equality, excepting that the king might have the better claim if the cat happened to be an exceptionally good-looking cat. But I wasn't really staring at you this time, I was
only giving you a sort of friendly look over. You weren’t quite yourself, I think, when we met last.”

“No, I certainly was not. So you are now making an inspection. May I ask if I am to be informed of the diagnosis, as I think you call it?”

Now, to tell the truth, I had thought her looking rather haggard and worn and decidedly thinner; and when her sprightliness subsided in the intervals of our somewhat flippant talk, it had seemed to me that her face took on an expression that was weary and even sad. But it would hardly do to say as much. “It is quite irregular,” I replied. “The diagnosis is for the doctor; the patient is only concerned with the treatment. But I’ll make an exception in your case, especially as my report is quite unsensational. I thought you looked as if you had been doing rather too much and not greatly enjoying the occupation. Am I right?”

“Yes. Quite right. I’ve had a lot of worry and bother lately, and not enough rest and peace.”

“I hope all that is at an end now?”

“I don’t know that it is,” she replied, wearily, “or, for that matter, that it will ever be. Fate or destiny, or whatever we may call it, starts us upon a certain road, and along that road we must needs trudge, wherever it may lead.”

I was rather startled at the sudden despondency of her tone. Apparently the road that Mrs. Samway trod was not strewn with roses. “Still,” I said, “it is a long road that has no turning.”

“It is,” she agreed, bitterly, “but many have to travel such a road, to find the turning at last barred by the churchyard gate.”

“Oh, come!” I protested, “we don’t talk of churchyards at your time of life. We think of the jolly wayside inns and the buttercups and daisies and the may-blossom in the hedgerows. Churchyard indeed! We will leave that to the old folk and the village donkey, if you please.”

She smiled rather wanly. Her gaiety seemed to have deserted her for good. “The wayside inns and the wayside flowers,” said she, “are your portion—at least, I hope so. They are not for me. And, after all, there are worse things to think of than a nice quiet churchyard, with the village donkey browsing among the graves, as you say.”

“I quite agree with you. From the standpoint of the disinterested spectator, not contemplating freehold investments, nothing can be more delightfully rustic and peaceful. It is the personal application that I object to.”

Again she smiled, but very pensively, and for a while we walked on in silence. Presently she resumed. “I used to think that the shortness of life was quite a tragedy. That was when I was young. But now—”

“When you were young!” I interrupted. “Why, what are you now? I can tell you, Mrs. Samway, that there is many a girl of twenty who would be only too delighted to exchange personalities with you, and who would stand to make a mighty fine bargain if she could do it. If you talk like this, I shall have to refer you to the great Leonardo’s advice to painters.”

“What is that?” she asked.

“He recommends the frequent use of a looking-glass.” She gave me a quick glance and then blushed so very deeply that I was quite alarmed lest I should have given offence. But her next words reassured me.

“It was nice of you to say that, and most kindly meant. I won’t say that I don’t care very much how I look, because that would be an ungracious return for your compliment and it wouldn’t be quite true. There are times when one is quite glad to feel that one looks presentable; the present moment, for instance.”

I acknowledged the compliment, with a bow. “Thank you.” I said. “That was more than I deserved. I only wish that your fortune was equal to your looks, but I am afraid it isn’t. I have an uncomfortable feeling that you are not very happy.”

“I’m afraid I’m not,” she replied. “Life is rather a lottery, you know, and the worst of it is that you can only take a single ticket. So, when you find that you’ve drawn the wrong number and you realize that there is no second chance—well, it isn’t very inspiring, is it?”

I had to admit that it was not; and, after a short pause, she continued: “Women are poor dependent creatures, Dr. Jardine; dependent, I mean, for their happiness on the people who surround them.”

“But that is true of us all.”

“Not quite. A man—like yourself, for instance—has his work and his ambitions that make him independent of others. But, for a woman, whatever pretences she may make as to larger interests in life, a husband, a home and one or two nice children form the real goal of her ambition.”

“But you are not a lone spinster, Mrs. Samway,” I reminded her.

“No, I am not. But I have no children, no proper home, and not a real friend in the world—unless I may think of you as one.”

“I hope you always will,” I exclaimed impulsively; for there was, to me, something very pathetic in the evident loneliness of this woman. She must, I felt, be friendless indeed if she must needs appeal for friendship to a comparative stranger like myself.

“I am glad to hear you say that,” she replied, “for I am making you bear a friend’s burden. I hope you will forgive me for
pouring out my complaints to you in this way."

"It isn’t difficult," said I, "to bear other people’s troubles with fortitude. But if sympathy is any good, believe me, Mrs. Samway, when I tell you that I am really deeply grieved to think that you are getting so much less out of life than you ought. I only wish that I could do something more than sympathize."

"I believe you do," she said. "I felt, at Folkestone, how kind you were—as a good man is to a woman in her moments of weakness. That is why, I suppose, I was impelled to talk to you like this. And that is why," she added, after a little pause, "I felt a pang of envy when I saw you pass with your pretty companion."

I started somewhat at this. Where the deuce could she have seen us near enough to tell whether my companion was pretty or not? I turned the matter over rapidly in my mind, and meanwhile, I said: "I don’t quite see why you envied me, Mrs. Samway."

"I didn’t say that I envied you," she replied, with a faint smile and the suspicion of a blush.

"Or her either," I retorted. "We are only the merest acquaintances."

My conscience smote me somewhat as I made this outrageous statement, but Mrs. Samway took me up instantly. "Then you’ve only known her quite a short time?"

The rapidity with which she had jumped to this conclusion fairly took my breath away, and I had answered her question before I was aware of it. "But," I added, "I don’t quite see how you arrived at your conclusion."

"I thought," she replied, "that you seemed to like one another very well."

"So we do, I think. But can’t acquaintances like one another?"

"Oh, certainly; but if they are a young man and a maiden they are not likely to remain mere acquaintances very long. That was how I argued."

"I see. Very acute of you. By the way, where did you see us? I didn’t see you."

"Of course you didn’t. Yet you passed quite close to me on the Spaniard’s Road, immersed in conversation, and little suspecting that the green eyes of envy were fixed on you."

"Oh, now, Mrs. Samway, I can’t have that. They’re not green, you know, although what their exact colour is I shouldn’t like to say offhand."

"What! Not after that careful inspection?"

"That didn’t include the eyes. Perhaps you wouldn’t mind if I made another, just to satisfy my curiosity and settle the question for good."

"Oh, do, by all means, if it is such a weighty question."

We both halted and I stared into the clear depths of her singular, pale hazel eyes with an impertinent affectation of profound scrutiny, while she looked up smilingly into mine. Suddenly, to my utter confusion, her eyes filled and she turned away her head. "Oh! please forgive me!" she exclaimed. "I beg your pardon—I do beg your pardon most earnestly for being such a wretched bundle of emotions. You would forgive me if you knew what I can’t tell you."

"There is no need, dear Mrs. Samway," I said very gently, laying my hand on her arm. "Are we not friends? And may I not give you my warmest sympathy without asking too curiously what brings the tears to your eyes?"

I was, in truth, deeply moved, as a young man is apt to be by a pretty woman’s tears. But more than this, something whispered to me that my playful impertinence had suddenly brought home to her the void that was in her life; the lack of intimate affection at which she had seemed to hint. And, instantly, all that was masculine in me had risen up with the immemorial instinct of the male in defence of the female; for, whatever her faults may have been, Mrs. Samway was feminine to the finger-tips.

She pressed my hand for a moment and impatiently brushed the tears from her eyes. "I do hope, Dr. Jardine," she said, looking up at me with a smile, "that your wife will be a good woman. You’ll be a dreadful victim if she isn’t. But your quick sympathy and your endless patience with feminine silliness. And now I won’t plague you any more with my tantrums. I hope I am not bringing you a great deal out of your way. You do live in this direction, don’t you?"

"Yes; and I have been assuming that my direction was yours, too. Is that right? Are you going back to Hampstead Road?"

"Not at once. I’m going to make a call at Highgate first."

"Then you’ll want to go up Highgate Rise or Swain’s Lane; and I will walk up with you if you’ll let me."

"I think my nearest way will be up the little path that leads out of Swain’s Lane. You know it, I expect?"

"Yes. It is locally known as Love Lane: it leads to the crest of the hill."

"That is right. You shall see me to the top of it and then I’ll take myself off and leave you in peace."

We had by this time crossed Parliament Hill Fields and passed the end of the Highgate Ponds. A few paces more brought us out at the top of the Grove and a few more to the entrance of the rather steep and very narrow lane. For some time Mrs. Samway walked by my side in silence, and, by the reflective way in which she looked at the ground before her, seemed to be
wrapped in meditation, which I did not disturb. As we entered the lane, however, she looked up at me thoughtfully and said: "I wonder what you think of me, Dr. Jardine."

It was a fine opening for a compliment, but somehow, compliments seemed out of place, after what had passed between us. I accordingly evaded the question with another. "What do you suppose I think of you?"

"I don’t know. I hardly know what I think of myself. You would be quite justified in thinking me rather forward, to waylay you in this deliberate fashion."

"Well, I don’t. Your curiosity about that Folkestone affair seems most natural and reasonable."

"I’m glad you don’t think me forward," she said; "but, as to my curiosity, I am beginning to doubt whether it was that alone that determined me of a sudden to come here and talk to you. I half suspect that I was feeling a little more solitary than usual, and that some instinct told me that you would be kind to me and say nice things and pet me just a little—as you have done."

I was deeply touched by her pathetic little confession; so deeply that I could find nothing to say in return. "You don’t think any the worse of me," she continued, "for coming to you and begging a little sympathy and friendship?"

As she spoke, she looked up very wistfully and earnestly in my face, and rested her hand for a moment on my arm. I took it in mine and drew her arm under my own as I replied: "Of course I don’t. Only I think it a wonder and a shame that my poor friendship and sympathy should be worth the consideration of a woman like you."

She pressed my arm slightly, and, after a little interval, said in a low voice with just the suspicion of a tremor in it: "You have been very kind to me, Dr. Jardine; more kind than you know. I am very, very grateful to you for taking what was really an intrusion so nicely."

"It was not in the least an intrusion," I protested; "and as to gratitude, a good many men would be very delighted to earn it on the same terms. You don’t seem to set much value on your own exceedingly agreeable society."

She smiled very prettily at this, and again we walked on for a while up the slope without speaking. Once she turned her head as if listening for some sound from behind us, but our feet were making so much noise on the loose gravel, and the sound reverberated so much in the narrow space between the wooden fences that I, at least, heard nothing. Presently we turned a slight bend and came in sight of the opening at the top of the hill, guarded by a couple of posts. Within a few yards of the latter she halted, and withdrawing her hand from my arm, turned round and faced me. "We must say ‘Good-bye’ here," said she. "I wonder if I shall ever see you again."

For a moment I felt a strong impulse to propose some future meeting at a definite date, but fortunately some glimmering of discretion—and perhaps some thought of Sylvia—restrained me. "Why shouldn’t you?" I asked.

"I don’t know. But mine is rather a vagabond existence, and I suppose you will be travelling about. I hope we shall meet again soon; but if we do not, I shall always think of you as my friend, and you will have a kind thought for me sometimes, won’t you?"

"I shall indeed. I shall think of you very often and hope that your life is brighter than it seems to be now."

"Thank you," she said earnestly; "and now ‘Good-bye!’"

She held out her hand, and, as I grasped it, she looked in my face with the wistful, yearning expression that I had noticed before, and which so touched me to the heart that, yielding to a sudden impulse, I drew her to me and kissed her. Dim as was the light of the fading winter’s day, I could see that she had, in an instant, turned scarlet. But she was not angry; for, as she drew away from me, shyly and almost reluctantly, she gave me one of her prettiest smiles and whispered "Good-bye" again. Then she ran out between the posts, and, turning once again—and still as red as a peony—waved me a last farewell.

I stood in the narrow entrance looking out after her with a strange mixture of emotions; pity, wonder and admiration and a little doubt as to my own part in the late transaction. For I had never before kissed a married woman, and cooling judgment did not altogether approve the new departure; for if Mr. Samway was not all that he might be, still he was Mr. Samway and I wasn’t. Nevertheless, I stood and watched my late companion with very warm interest until she faded into the dusk; and even then I continued to stand by the posts, gazing out into the waning twilight and cogitating on our rather strange interview.

Suddenly my ear caught a sound from behind me, down the lane; a sound which, while it set my suspicion on the alert, brought a broad grin to my face. It was what I suppose I must call a stealthy footstep, but the stealthiness might have stood for the very type and essence of futility, for, as I have said, the ground sloped pretty steeply and was covered with loose pebbles, whereby every movement of the foot was rendered as audible as a thunderclap. However, absurd as the situation seemed—if the unseen person was really trying to approach by stealth—it was necessary to be on my guard. Moreover, if this should chance to be the person with the nystagmus, the present seemed to be an excellent opportunity for coming to some sort of understanding with him.

Accordingly I wheeled about and began to walk back down the lane. Instantly, the steps—no longer stealthy—began to retire. I quickened my pace; the unknown and invisible eavesdropper quickened his. Then I broke into a run, and so did he, notwithstanding which, I think I should have had him but for an untoward accident. The ground was not only sloping, but, under the loose gravel, was as hard as stone.
Consequently, the foothold was none of the best, as I presently discovered, for, as I raced down one of the steepest slopes, the pebbles suddenly rolled away under my foot and I lost my balance. But I did not fall instantly. Half recovering, I flew forward, clawing the air, stamping, staggering, kicking up the gravel, and making the most infernal hubbub and clatter, before I finally subsided into a sitting posture on the pebbles. When I rose, the footsteps were no longer audible, though the lower end of the lane was still some distance away.

I resumed my progress at a more sedate pace and kept a sharp look-out for a possible ambush, though the lane was too narrow, even in the darkness that now pervaded it, to furnish much cover to an enemy. Some distance down, I came to an opening in the fence, where one or two boards had become loose, and was half disposed to squeeze through and explore. But I did not, for, on reflection, it occurred to me that if the man was not there it would be useless for me to go, while if he should be hiding behind the fence it would be simply insane of me to put my head through the hole.

When I emerged into the road at the bottom, I looked about vaguely, but, of course there was no sign of the fugitive—nor, indeed, could I have identified him if I had met him. I loitered about undecidedly for a minute or two, and then, realizing the futility of keeping a watch on the entrance of the lane for a man whom I could not recognize, and becoming conscious of a ravenous desire for food I made my way down the Grove in the direction of my lodgings.

**XV — EXIT DR. JARDINE**

MY second visit to “The Hawthorns,” to which I had looked forward with some eagerness, had, after all, to be postponed indefinitely. I say “had,” since, under the circumstances, it appeared to be so unsafe that I could not fairly take the risk that it involved. I had made the engagement thoughtlessly, and, in my preoccupation with Mrs. Samway, had not realized the indiscretion to which I had committed myself until I was brought back sharply to the actual conditions by the incident in Love Lane which I have mentioned. But, after that, I saw that it would be the wildest folly to show myself in the vicinity of Sylvia’s house. Evidently the spy, after we had given him the slip so neatly, had made direct for my lodgings and lurked in the neighbourhood, and there it must have been that he had picked me up again as I passed with Mrs. Samway. Of course it was possible that the unseen person in the lane was not really shadowing me at all; but his stealthy approach, his hasty retreat and his mysterious disappearance, left me in very little doubt on the subject.

I was not very nervous about this enigmatical person on my own account. In spite of my alarming experiences, I found it difficult to take him as seriously as I should have done, and still felt a quite unjustifiable confidence in my capability of taking care of myself. But on Sylvia’s account I was exceedingly uneasy. The interest that this man had shown in the unlucky little ornament that she wore, associated itself in my mind most disagreeably with her mysterious and terrifying adventure in Millfield Lane, and made me feel that it would be sheer insanity for me to go from my house to hers and so possibly give this unknown villain the clue to her whereabouts.

This conclusion, at which I had arrived overnight, was confirmed on the following morning, for, having taken a brisk walk out in the direction of Harrow, and having kept a very sharp look-out, I was distinctly conscious of the fact that there always appeared to be a man in sight. I never got near him and was not able to recognize him, but at intervals throughout the morning he continually reappeared in the distance, even on the comparatively solitary country roads and the hedge-divided meadows.

It was excessively irritating. Yet what could I do? Even if I could have identified him with the man who had apparently shadowed me before, I really had nothing against him. And cogitating on the matter, with no little annoyance, I determined to take counsel with Thorndyke, and meanwhile to avoid the neighbourhood of “The Hawthorns.”

After lunch, I wrote a letter to Sylvia, briefly explaining the state of affairs, and, having given it to our maid to deliver, I took the precaution to go out and saunter towards Kentish Town with the object of engaging the spy’s attention and preventing him from following my messenger to North End. The rest of the day I spent at home and occupied my time in writing a long letter to Thorndyke in which I gave a pretty detailed account of my recent experiences; which letter was duly posted by Mrs. Blunt herself in time for the evening collection.

I had barely seated myself at the breakfast table on the following morning when a telegram was brought to me. On opening it I found that it was from Thorndyke, advising me that a letter had been dispatched by hand and asking me to stay at home until I had received it; which I did; and within an hour it arrived and was delivered into my own hands by a messenger boy.

It was curt and rather peremptory in tone, desiring me to meet him at one o’clock at Salter’s Club in a turning off St. James’s Street and concluding with these somewhat remarkable instructions: “I want you to wear an overcoat and hat of a distinctive and easily recognizable character and to take every means that you can of being seen and, if possible, followed to the club. You had better put a few necessaries in a bag or suit-case and tell your landlady that you may not be home to-night. Follow these instructions to the letter and bring this note with you.”

At the latter part of these directions I was somewhat disposed to boggle, remembering my worthy teacher’s threat to put me somewhere out of harm’s way. But Thorndyke was a difficult man to disobey. Suave and persuasive as his manners were, he had a certain final and compelling way with him that silenced objections and produced a sort of frictionless obedience without any sense of compulsion. Hence, notwithstanding a slight tendency to bluster and tell myself that I would see him hanged before I would submit to being mollycoddled like an idiot, I found myself, presently, walking down...
the Grove in a buff overcoat and a grey felt hat, carrying a green canvas suit-case in which were packed the necessaries for a brief stay away from home, and bearing in my pocket the incriminating letter.

I walked slowly as far as the Junction Road in order to give any pursuer a fair opportunity to take up the chase and to make the necessary observations on my tasteful turn-out. At the Junction I waited for a tram and carefully abstained from staring about in a manner which would have embarrassed any person who might wish unobserved to share the conveyance with me; and from the terminus at Euston Road I proceeded in leisurely fashion on foot, still resisting the temptation to look about and see if I had picked up a companion by the way.

Salter's Club was domiciled in a typical West End house situated in a quiet street of similar houses, graced at one end by a cabstand. I timed my arrival with such accuracy that a neighbouring church-clock struck one as I ascended the steps; and on my entering the hall, I was met by an elderly man in a quiet livery who seemed to expect me, for, when I mentioned Thorndyke's name, he asked, “Dr. Jardine, sir?” and, hardly waiting for my reply, showed me to the cloak-room. “Dr. Thorndyke,” said he, “will be with you in a few minutes. When you have washed, I will show you to the dining room where he wished you to wait for him.”

I was just a little surprised at even this short delay, for Thorndyke was the soul of punctuality. However, I had not to wait long. I had been sitting less than three minutes at a small table laid for two in the deep bay window, scanning the street through the wire-gauze blinds, when he arrived. “I needn't apologize, I suppose, Jardine,” he said, shaking my hand heartily. “You will have guessed why I have kept you waiting.”

“You flatter me, sir,” I replied with a slight grin. “I haven't your powers of instantaneous deduction.”

“You hardly needed them,” he retorted. “Of course I was watching your approach and observing the corner by which you entered the street to see who came after you.”

“Did anyone come after me?”

“Several persons. I examined them all very carefully with a prism binocular that magnifies twelve times linear, and an assistant is now at the same window—the one over this—following the fortunes of those persons with the same excellent glass.”

“Did you spot anyone in particular as looking a likely person?”

“Yes. The second man who came after you seemed to be sauntering in a rather unpurposive fashion and looking a little obtrusively unconcerned. I noticed, too, that he was carrying an umbrella in his left hand. But we needn't concern ourselves. If anyone is shadowing you we are certain to see him. He must expose himself to view from time to time, for he can't afford to lose sight of our doorway for more than a few seconds, and there is practically no cover in this street.”

“He might hide in a doorway,” I suggested.

“Oh, might he! These are all clubs in this street. He'd very soon have the servants out wanting to know his business. No; he'll have to keep on the move and he'll have to keep mostly in sight of this house. And meanwhile we are going to take our lunch at our leisure and have a little talk to while away the time.”

The lunch was on a scale that my youthful appetite approved strongly, though the number of courses and irrelevant, time-consuming kickshaws struck me as rather unusual. And I never saw a man eat so slowly and delay a meal so much as Thorndyke did on that occasion. I believe that it took him fully twenty minutes to consume a fried sole; and even then he created a further delay by drawing my attention to the skeleton on his plate as an illustration of inherited deformity adjusted to special environmental conditions. But all the time, whether eating or talking, I noticed that his eye continually travelled up and down the stretch of street that was visible through the wire blinds. “You haven't told me why you sent for me, sir,” I said, after waiting patiently for him to open the subject.

“I dare say you have guessed,” he replied; “but we may as well thrash the matter out now. You realize that you are running an enormous and unnecessary risk by going abroad with this man at your heels?”

“Well, I don't suppose he is following me about from sheer affection.”

“No. I thought it possible that he might be a plain-clothes policeman, but I have ascertained that he is not. Who he is we don't know, but we have strong reasons for suspecting his intentions. There have been three very determined attempts on your life. They were all made with such remarkable caution and foresight that, though they failed, practically no traces have been left. Those attempts imply a strong motive, though to us, an unknown one; and that motive, presumably, still exists. Your enemy may well be getting desperate, and may be prepared to take greater risks to get rid of you; and if he is, the chances are that he will succeed sooner or later. Murder isn't very difficult to a cool-headed man who means business.”

“Then what do you propose, sir?”

“I propose that you disappear from your ordinary surroundings and come and stay, for a time, at my chambers in the Temple.”

This was no more than I had expected, but my jaw dropped considerably, notwithstanding. “It's awfully good of you, sir,” I stammered—and so, to be sure, it was—“but don't you think it would be simpler to turn the tables on this Johnnie and shadow him?”
An excellent idea, Jardine, and one, I may say, that I am acting on at this moment. But there isn’t so much in it as you seem to think. Supposing we identify this man and even run him to earth? What then? We have nothing against him. We know of no crime that has been committed. We may suspect that the man whom you saw at Hampstead had been murdered. But we can’t prove it. We can’t produce the body or even prove that the man was dead. And we couldn’t connect this person with the affair because nobody was known to be connected with it. I should like to know who this man is, but I don’t want to put him on my guard; and above all, I can’t agree to your going about as a sort of live-bait to enable us to locate him. By the way, that man on the opposite side of the street is the one whom I selected as being probably your attendant. Apparently I was right, as this is the third time he has passed. Do you recognize him?”

I looked attentively at the uncharacteristic figure on the farther side of the street, but could find nothing familiar in his appearance. “No,” I replied; “he doesn’t look to me like the same man. He is dressed differently—but that’s nothing, as he has been dressed differently on each occasion—and that torpedo beard and full moustache are quite unlike, though there’s nothing in that either; but the man looks different altogether—distinctly taller, for instance.”

Thorndyke chuckled. “Good,” said he. “Now look at his feet, as he passes opposite. Did you ever see an instep set at that angle to the sole? And does not your anatomical conscience cry out at a foot of that thickness?”

“Yes, by Jove!” I exclaimed; “there’s room for a double row of metatarsals. It is a fake of some kind, I suppose?”

“Cork ‘raisers’ inside high-heeled boots. Through the glasses I could see that the boots gaped considerably at the instep, as they will when there is a pad inside as well as a foot. But you notice, also, that the man is dressed for height. He has a tall hat, a long coat, and his shoulders are obviously raised by padding. I think there is very little doubt that he is our man.”

“It must be a dull job,” I remarked, “hanging about by the hour to see a man come out of a house.”

“Very,” Thorndyke agreed. “I am quite sorry for the worthy person, especially as we are going to play him a rather shabby trick presently.”

“What are we going to do?” I asked.

“We are going to let him in for one of the longest waits he has ever had, I am afraid. Perhaps I had better give you the particulars of our modus operandi. First, I shall send down to the stand for a hansom, which will draw up opposite the club; and thereupon I have no doubt our friend will hurry down to the cab-stand to be in readiness. At any rate, I shall let him get down to that end of the street before I do anything more. Then I shall take the liberty of putting on your coat and hat and go out to the cab with your suit-case in my hand; I shall stand on the kerb long enough to let our friend get a good view of my back, I shall get into the cab, give the driver the direction through the trap to drive to the hospital, and pay the fare in advance.”

“Why in advance?” I asked.

“So that I shall not have to turn round and show my face when I get out at the hospital entrance. I assume that your friend will follow me in another hansom. Also that he will alight at the outer gates, whereas I shall drive into the courtyard right up to the main entrance, so that he will merely see your hat, coat and suit-case disappear into the building. Then, as I say, he will be in for an interminable vigil. I have a lecture to give this afternoon, and, when I have finished, I shall come away in a black overcoat and tall hat (which are at this moment hanging up in the curator’s room), leaving your friend to wait for the reappearance of your coat, hat and suit-case. I only hope he won’t wait too long.”

“Why?”

“Because he may wear out the patience of my assistant. I have a plain-clothes man keeping a watch from the window above. If your friend sets off in pursuit of your garments, as I anticipate, the plain-clothes man will go straight to the hospital and take up his post in the porter’s lodge, which, as you know, commands the whole street outside the gates.”

“And what have I got to do?”

“First of all, you will put your tooth brush in your pocket—never mind about your razor—and let me try on your hat, in case we have to pad the lining. Then, when you have seen your friend start off in pursuit and are sure the coast is clear, you will make straight for my chambers and wait there for me.”

“And supposing the chappie doesn’t start off in pursuit? Supposing he twigs the imposture?”

“Then the plain-clothes man will go out and threaten to arrest him for loitering with intent to commit a felony. That would soon move him on out of the neighbourhood, and the officer might accompany him some distance and try to get his address. Meanwhile, you would be off to King’s Bench Walk.”

“But wouldn’t it be simpler to run the Johnnie in, in any case? Then we should know all about him.”

“No, it wouldn’t do. The police wouldn’t actually make an arrest without an information; and, if they did proceed, they would want me to appear. That wouldn’t suit me at all. Until we obtain some fresh evidence, I don’t want this man to get any suspicion that the case is being investigated. And now I think the time has come for a move. Let us go to the cloak-room and see if your hat fits me sufficiently well.”

It was not a good fit, being just a shade small; but, as it was a soft felt, this was not a vital defect. The overcoat fitted well enough, though a trifle long in the sleeves, and when Thorndyke was fully arrayed in this borrowed plumage, his back view, so far as I could judge, was indistinguishable from my own. “If you will take out your toothbrush and hand me your suit-
case," said he, "I will send for a hansom, and then we will watch the progress of events from the dining-room window."

I handed him the green canvas case and we returned to the dining-room and there, when he had ordered the cab, we took up a position at the window, screened from observation by the wire blinds. "Our friend," said Thorndyke, "was walking towards the right hand end of the street when we saw him last. As the cabstand is at the left hand end, we may hope to look upon his face once again."

As he spoke, the air was rent by the shriek of the cab-whistle, and the leading hansom began immediately to bear down on the club. It had hardly come to rest at our door when a figure appeared from the opposite direction, advancing at a brisk walk on our side of the road. I recognized him instantly as the man to whom Thorndyke had directed my attention, and watched him closely, as he approached, to see if I could identify him with the man who had shadowed Sylvia and me at the picture gallery; but, though he passed within a few yards of the window, and I felt no doubt that he was the same man, I could trace no definite resemblance. It is true, that while actually passing the club, he averted his face somewhat; but I had a good view of him within an easy distance, and the face that I then saw was certainly not the face of the man at the gallery. The skilfulness of the make-up—assuming it to be really a disguise—was incredible, and I remarked on it to Thorndyke. "Yes," he agreed, "a really artistic make-up is apt to surprise the uninitiated. And that reminds me that Polton has instructions to make a few trifling alterations in your own appearance."

I stared at him aghast. "You don't mean to say," I exclaimed, "that you contemplate making me up?"

"We won't discuss the question now," he replied a little evasively. "You talk it over with Polton. It is time for me to go now, as our quarry has considerably acted up to our expectations. He little knows what confusion of our plans he would have occasioned by simply staying at the other end of the street."

The spy had, in fact, now halted opposite the cabstand and was apparently making some notes in a pocket-book, facing, meanwhile, in our direction. With a few parting instructions to me, Thorndyke picked up the suit-case and hurried out, and I saw him dart down the steps—with his face turned somewhat to the right—and stand for a few seconds at the edge of the pavement with his back to the cabstand, but in full view, looking at his watch as if considering some appointment. Suddenly he sprang into the cab and, pushing up the trap, gave the driver his instructions and handed up the fare. At the same moment I saw the unknown shadower hail a hansom, and, scrambling to the footboard, give some brief directions to the driver. Then Thorndyke's cabman touched his horse with the whip, and away he went at a smart trot; but hardly had the cab turned the first corner when the second hansom rattled past the club in hot pursuit.

I was about to turn away from the window when a tall, well-dressed man ran down the steps and immediately signalled to the cabstand with his stick. Thinking it probable that this was the plain-clothes policeman, I stopped to watch; and when I had seen him enter the cab and drive off in the same direction as the other two, I decided that the show was over and that it was time for me to take my departure; which I did, after stuffing a couple of envelopes into the lining of Thorndyke's hat, to prevent it from slipping down towards my ears.

That my arrival at number 5A, King's Bench Walk was not quite unexpected I gathered not only from the fact that the "oak" stood wide open, revealing the inner door, but from the instantaneous way in which this latter opened in response to my knock; and something gleeful and triumphant in Mr. Polton's manner as he invited me to enter, stirred my suspicions and aroused vague forebodings.

He helped me out of my—or rather Thorndyke's—overcoat, and; having taken the hat from me, peered inquiringly into its interior and fished out the two envelopes, which he politely offered to me. Then, having disposed of his employer's property, he returned to confront me, and, wrinkling his countenance into a most singular and highly corrugated smile, he opened his mouth and spoke. "So you have come, sir, the Doctor tells me, to take sanctuary for a time with us from the malice of your enemies."

"I don't know about that," I replied, "but there is a cockeyed transformationist who seems to be dodging about after me, and Dr. Thorndyke thinks I had better give him the go-by for the present."

"And very proper, too, sir. Discretion is the better part of valour, as the proverb says—though I really could never see that it is any part at all. But no doubt our forefathers, who made the proverb, knew best. Did the Doctor mention that he had given me certain instructions about you?"

"He said that I was to talk over some question with you, but I didn't quite follow him. What were his instructions?"

Polton rubbed his hands, and his face became more crinkly than ever. "The Doctor instructed me," he replied, looking at me hungrily and obviously making a mental inventory of my features, "to effect certain slight alterations in your outward personality."

"Oh, did he," said I. "And what does he mean by that? Does he mean that you are to make me up as an old woman or a nigger minstrel?"

"Not at all, sir," replied Polton. "Neither of those characters would be at all suitable. They would occasion remark, which it is our object to avoid; and as to a negro minstrel, his presence in chambers would undoubtedly be objected to by the benchers."

"But," I expostulated, "why any disguise at all, if I am to be boxed up in these chambers? The chappie isn't likely to come and look through the keyhole."
“He wouldn’t see anything if he did,” said Polton. “I fitted these locks. But, you see, sir, many strangers come to these chambers, and then, too, you might like to take a little exercise about the inn or the gardens. That would probably be quite safe if you were unrecognizable, but otherwise, I should think, inadmissible. And really, sir,” he continued persuasively, “if you do a thing at all you may as well do it thoroughly. The Doctor wishes you to disappear; then disappear completely. Don’t do it by halves.”

I could not but admit to myself that this was reasonable advice. Nevertheless, I grumbled a little sulkily. “It seems to me that Dr. Thorndyke is making a lot of unnecessary fuss. It is absurd for an able-bodied man to be sneaking into a hiding-place and disguising himself like a runaway thief.”

“I can offer no opinion on that, sir,” said Polton; “but you’re wrong about the Doctor. He is a cautious man but he is not nervous or fussy. You would be wise to act as he thinks best, I am sure.”

“Well,” I said; “I won’t be obstinate. When do you want to begin on me?”

“I should like,” replied Polton, brightening up wonderfully at my sudden submission, “to have you ready for inspection by the time that the Doctor returns. If agreeable to you, sir, I would proceed immediately.”

“Then in that case,” said I, “we had better adjourn to the green-room forthwith.”

“If you please, sir,” replied Polton; and with this, having opened the door and cautiously inspected the landing, he conducted me up the stairs to the floor above, the rooms of which appeared to be fitted as workshops and laboratories. In one of the former, which appeared to be Polton’s own special den, I saw my watch hanging from a nail, with a rating table pinned above it, and proceeded to claim it. “I suppose, sir,” said Polton, reluctantly taking it from its nail and surrendering it to me, “as you are going to reside on the premises and I can keep it under observation, you may as well wear it. The present rate is plus one point three seconds daily. And now I will trouble you to sit down on this stool and take off your collar.”

I did as he bade me, and, meanwhile, he turned up his cuffs and stood a little way off, surveying me as a sculptor might survey a bust on which he was at work. Then he fetched a large cardboard box, the contents of which I could not see, and fell to work.

His first proceeding was to oil my hair thoroughly, part it in the middle and brush it smoothly down either side of my forehead. Next he shaved off the outer third of each eyebrow, and, having applied some sort of varnish or adhesive, he proceeded to build up, with a number of short hairs, a continuation of the eyebrows at a higher level. The result seemed to please him amazingly, for he stepped back and viewed me with an exceedingly self-satisfied smirk. “It is really surprising, sir,” said he, “how much expression there is in the corner of an eyebrow. You look a completely different gentleman already.”

“Then,” said I, “there’s no need to do any more. We can leave it at this.”

“Oh, no we can’t, sir,” Polton replied hastily, making a frantic dive into the cardboard box. “Begging your pardon, sir, it is necessary to attend to the lower part of the face, in case you should wish to wear a hat, which would cover the hair and throw the eyebrows into shadow.”

Here he produced from the box an undeniable false beard of the torpedo type and approached me, holding it out as if it were a poultice. “You are not going to stick that beastly thing on my face!” I exclaimed, gazing at it with profound disfavour.

“Now, sir,” protested Polton, “pray be patient. We will just try it on, and the Doctor shall decide if it is necessary.”

With this he proceeded to affix the abomination to my jowl with the aid of the same sticky varnish that he had used previously, and, having attached a moustache to my upper lip, worked carefully round the edges of both with a quantity of loose hair, which he stuck on the skin with the adhesive liquid and afterwards trimmed off with scissors. The process was just completed and he had stepped back once more to admire his work when an electric bell rang softly in the adjoining room. “There’s the Doctor,” he remarked. “I’m glad we are ready for him. Shall we go down and submit our work for his inspection?”

I assented readily, having some hopes that Thorndyke would veto the beard, and we descended together to the sitting-room, where we found that Jervis and his principal had arrived together. As to the former, he greeted my entrance by staggering back several paces with an expression of terror, and then seated himself on the edge of the table and laughed with an air of enjoyment that was almost offensive; particularly to Polton, who stood by my side, rubbing his hands and smiling with devilish satisfaction. “I assume,” Thorndyke said, gravely, “that this is our friend Jardine.”

“It isn’t,” said Jervis. “It’s the shopwalker from Wallis’s. I recognized him instantly.”

“Look here,” I said, with some heat, “it’s all very well for you to make me up like Charley’s Aunt and then jeer at me, but what’s the use of it? The fifth of November’s past.”

“My dear Jardine,” Thorndyke said, soothingly, “you are confusing your sensations with your appearance. I daresay that make-up is rather uncomfortable, but it is completely successful, and I must congratulate Polton; for the highest aim of a disguise is the utterly common-place, and I assure you that you are now a most ordinary-looking person. Fetch the looking-glass from the office, Polton, and let him see for himself.”
I gazed into the mirror which Polton held up to me with profound surprise. There was nothing in the least grotesque or unusual in the face that looked out at me, only it was the face of an utter stranger; and, as Thorndyke had said, a perfectly common-place stranger, at whom no one would look twice in the street. Grudgingly, I acknowledged the fact, but still objected to the beard. "Do you think it is really necessary, sir, in addition to the other disfigurements?"

"Yes, I do," replied Thorndyke. "It is only a temporary expedient, because, in a fortnight, your own beard will have grown enough to serve with a little artificial re-enforcement. And," he continued, as Polton retired with a gratified smile, "I am anxious that your disappearance shall be complete. It is not only a question of your safety—although that is very urgent, and I feel myself responsible for you, as we are not appealing to the police. There are other issues. Assuming, as we do assume, that some crime has been committed, the lapse of time must inevitably cause some of the consequences of that crime to develop. If the man whose body you saw at Hampstead was really murdered, he must presently be missed and enquired for. Then we shall learn who he was and perhaps we may gather what was the motive of the crime. Then, your secret enemy will be left unemployed and may produce some fresh evidence—for he can’t wait indefinitely for your reappearance. And finally, certain enquiries which I am making may set us on the right track. And, if they do, you must remember, Jardine, that you are probably the sole witness to certain important items of evidence; so you must be preserved in safety as a matter of public policy, apart from your own prejudices in favour of remaining alive."

"I didn’t know that you were actually working at the case," I said. "Have you been following up that man Gill of the mineral water works?"

"I followed him up to the vanishing-point. He has gone and left no trace; and I have been unable to get any description of him."

"Then," said I, "if it is allowable to ask the question, in what direction have you been making enquires?"

"I have been interesting myself," Thorndyke replied, "in the other case; that of your patient Mr. Maddock, as the attacks on you seemed to be associated with his neighbourhood rather than with that of Hampstead. I have examined his will at Somerset House and am collecting information about the persons who benefited by its provisions. Especially, I am making some enquiries about a legatee who lives in New York, and concerning whom I am rather curious. I can’t go into further details just now, but you will see that I am keeping the case in hand, and you must remember that, at any moment, fresh information may reach me from other sources. My practice is a very peculiar one, and there are few really obscure cases that are not, sooner or later, brought to me for an opinion."

"And, meanwhile, I am to eat the bread of idleness here and wait on events."

"You won’t be entirely idle," Thorndyke replied. "We shall find you some work to do, and you will extend your knowledge of medico-legal practice. You write shorthand fairly well, don’t you?"

"Yes; and I can draw a little, if that is of any use."

"Both accomplishments are of use, and, even if they are not, we should have to exercise them for the sake of appearances. It will certainly become known that you are here, so we had better make no secret of it, but find you such occupation as will account for your presence. And, as you will have to meet strangers now and again, we must find you a name. What do you think of ‘William Morgan Howard’?"

"It will do as well as any other," I replied.

"Very well, then William Morgan Howard let it be. And, in case you might forget your alias, as the crooks are constantly doing, we will drop the name of Jardine and call you Howard even when we are alone. It will save us all from an untimely slip."

To this arrangement also I agreed with a sour smile, and so, with some physical discomfort in the neighbourhood of the lower jaw, and a certain relish of the novelty and absurdity of my position, I placed myself, under the name of Howard, on the roster of Thorndyke’s establishment.  

XVI — ENTER FATHER HUMPERDINCK

ON the day following my—and Thorndyke’s—masterly retreat from Salter’s Club, the plain-clothes officer called to make his report; and even before he spoke, I judged from his rather sheepish expression that he had failed. And so it turned out. He had waited in the porter’s lodge, he told us, until midnight keeping a watch on the watchful, who, for his part, lurked in the street, always keeping in sight of the hospital, and whiling away the time by gazing into the shop windows. The spy had evidently failed to recognize Thorndyke, for when the latter left the hospital in company with one of the physicians, he had given only a passing glance at the open carriage in which the two men sat.

After the shops had shut, the persevering shadower had occupied himself with a sort of dismal sentry-go up and down the street, disappearing into the darkness and reappearing at regular intervals. Once or twice, the plain-clothes man went out and followed his quarry in his perambulations, but, not considering it prudent to expose himself too much to view, he remained mostly in the Lodge. It was after one of these sallies that the mishap occurred. Returning to the Lodge, he saw the spy pass the gates and disappear up the dark street; he looked, after the usual interval, for him to reappear. But the interval passed and there was no reappearance. Then the officer hurried out in search of his quarry, but found only an empty street. Even the apparently inexhaustible patience of the spy had given out at last. And so the quest had ended.
I cannot say that Thorndyke impressed me as being deeply disappointed; in fact, I thought that he seemed, if anything, rather relieved at his emissary's failure. This was Jervis's opinion also, and he had no false delicacy about expressing it. "Well," Thorndyke replied, "as the fellow thrust himself right under my nose, I could hardly do less than make some sort of an attempt to find out who he is. But I don't particularly want to know. My investigations are proceeding from quite another direction; and you see, Jervis, how awkward it might have been to have this person on our hands. We could only charge him with loitering with felonious intent, and we couldn't prove the intent after all; for we can't produce any evidence connecting this man with the three attempted murders. He may not be the same man at all. And I certainly don't want to go into the witness box just now, and still less do I want my new clerk, Mr. Howard, put into that position. I don't want to take any action until I have the case quite complete and am in a position to make a decisive move."

"The truth is," said Jervis, addressing me confidentially in a stage whisper, "Thorndyke hates the idea of spoiling a really juicy problem by merely arresting the criminal and pumpling his friends. He looks on such a proceeding much as a Master of Foxhounds would look on the act of poisoning a fox."

Thorndyke smiled indulgently at his junior. "There is such a thing," said he, "as failing to poison a fox and only making him too unwell to leave his residence. A premature prosecution is apt to fail; and then the prisoner has seen all the cards of his adversaries. At present I am playing against an unseen adversary, but I am hoping that I, in my turn, am unseen by him, and I am pretty certain that he has no idea what cards I hold."

"Gad!" exclaimed Jervis, "then he is much the same position as I am." And with this the subject dropped.

The first week of my residence in Thorndyke's chambers was quite uneventful, and was mainly occupied in settling down to the new conditions. My letters were sent on by Mrs. Blunt to the hospital whence they were brought by my principal—as I may now call my quondam teacher—with the exception of Sylvia's; which we had agreed were to be sent to the chambers enclosed in an envelope addressed to Thorndyke.

At first, I had feared that the confinement would be unendurable; but the reality proved to be much less wearisome than I had anticipated. A horizontal bar rigged up by Polton in the laboratory, gave me the means of abundant exercise of one kind; and in the early mornings, before the gates of the inn were opened, I made it my daily practice to trot round the precincts for an hour at a time, taking the circuit from our chambers through Crown Office Road to Fountain Court and back by way of Pump Court and the Cloisters, to the great benefit of my health and the mild surprise of the porters and laundresses.

Nor was I without occupation in the daytime. Besides an exhaustively detailed account of all the remarkable experiences that had befallen me of late which I wrote out at Thorndyke's request, I had a good deal of clerical work of one kind and another, and was frequently employed, when clients called, in exhibiting my skill as a stenographer; taking down oral statements, or making copies of deposits or other documents which were read over to me by Thorndyke or Jervis.

It was the exercise of these latter activities that introduced me to a certain Mr. Marchmont, and through him to some new and rather startling experiences. Mr. Marchmont was a solicitor, and, as I gathered, an old client of Thorndyke's; for, when he called one evening, about ten days after my arrival, with a bagful of documents, he made sundry references to former cases by which I understood that he and Thorndyke had been pretty frequently associated in their professional affairs. "I have got a lot of papers here," he said, opening the bag, "of which I suppose I ought to have had copies made; but there hasn't been time and I am afraid there won't be, as I have to return them to-morrow. But perhaps, if you run your eye over them, you will see what it is necessary to remember and make a few notes."

"I think," said Thorndyke, "that my friend, Mr. Howard, will be able to help us by taking down the essentials in shorthand. Let me introduce you. Mr. Howard is very kindly assisting me for a time by relieving me of some of the extra clerical work."

Mr. Marchmont bowed, and, as we shook hands, looked at me, as I thought, rather curiously; then he extracted the papers from his bag, and, spreading them out on the table, briefly explained their nature. "There is no need," said he, "to have copies of them all, but I thought you had better see them. Perhaps you will glance through them and see which you think ought to be copied for reference."

Thorndyke ran his eye over the documents, and, having made one or two brief notes of the contents of some, which he then laid aside, collected the remainder and began to read them out to me, while I took down the matter verbatim, interpolating Marchmont's comments and explanations on a separate sheet of paper. The reading and the discussion occupied a considerable time, and, before the business was concluded, the Treasury clock had struck half-past nine. "It's getting late," said Marchmont, folding the papers and putting them back in the bag. "I must be going or you'll wish me at Halifax, if you aren't doing so already." He snapped the fastening of the bag, and, grasping the handle, was about to lift it from the table, when he appeared to recollect something, for he let go the handle and once more faced my principal.

"By the way, Thorndyke," said he, "there is a matter on which I have wanted to consult you for some time past, but couldn't get my client to agree. It is a curious affair; quite in your line, I think; a case of disappearance—not in the legal sense, as creating a presumption of death, but disappearance from ordinary places of resort with a very singular change of habits, so far as I can learn. Possibly a case of commencing insanity. I have been wanting to lay the facts before you, but my client, who is a Jesuit and as suspicious as the devil, insisted on trying to ferret out the evidence for himself and wouldn't hear of a consultation with you. Of course he has failed completely, and now, I think, he is more amenable."

"Are you in possession of the facts, yourself?" asked Thorndyke.
“No, I’m hanged if I am,” replied Marchmont. “The case is concerned with a certain Mr. Reinhardt, who was a client of my late partner, poor Wyndhurst. I never had anything to do with him; and it unfortunately happens that our old clerk, Bell—you remember Bell—who had charge of Mr. Reinhardt’s business, left us soon after poor Wyndhurst’s death, so there is nobody in the office who has any personal knowledge of the parties.”

“You say it is a case of disappearance?” said Thorndyke.

“Not exactly disappearance, but—well, it is a most singular case. I can make nothing of it, and neither can my worthy and reverend client, so as I say, he is now growing more amenable, and I think I shall be able to persuade him to come round with me and take your opinion on such facts as we have. Shall you be at home to-morrow evening?”

“Yes, I can make an appointment for to-morrow, after dinner, if you prefer that time.”

“We won’t call it an appointment,” said Marchmont. “If I can overcome his obstinacy, I will bring him round and take the chance of your being in. But I think he’ll come, as he is on his beam-ends; and if he does, I fancy you will find the little problem exactly to your liking.”

With this Mr. Marchmont took his departure, leaving Thorndyke and me to discuss the various legal aspects of disappearance and the changes of habit and temperament that usher in an attack of mental alienation. I could see that the solicitor’s guarded references to an obscure and intricate case had aroused Thorndyke’s curiosity to no small extent, for, though he said little on the subject, it evidently remained in his mind, as I judged by the care with which he planned the disposal of his time of the following day, and the little preparations that he made for the reception of his visitors. Nor was Thorndyke the only expectant member of our little establishment. Jervis also, having caught the scent of an interesting case, made his business to keep the evening free, and so it happened that when eight o’clock struck on the Temple bell, it found us gathered round the fire, chatting on indifferent subjects, but all three listening for the expected tread on the stairs. “It is to be hoped,” said Jervis, “that our reverend friend won’t jib at the last moment. I always expect something good from Marchmont. He doesn’t get flummoxed by anything simple or common place. I think we have had most of our really thrilling cases through him. And seeing that Jardine has laid in two whole quarto note-blocks and put those delightful extra touches to his already alluring get-up—”

“There is no such person here as Jardine,” Thorndyke interrupted.

“I beg his pardon. Mr. Howard, I should have said. But listen! There are two persons coming up the stairs. You had better take your place at the table, Ja-Howard, and look beastly business-like, or the reverend gentleman will want you chucked out, and then you’ll lose the entertainment.”

I hurried across to the table and had just seated myself and taken up a pen when the brass knocker on our inner door rattled out its announcement. Thorndyke strode across and threw the door open, and as Mr. Marchmont entered with his client I looked at the latter inquisitively. But only for a single instant. Then I looked down and tried to efface myself utterly, for Mr. Marchmont’s client was none other than the cleric with whom I had travelled from Folkestone to London.

The solicitor ushered in his client with an air of but half-concealed triumph and proceeded with exaggerated geniality to do the honours of introduction. “Let me make you known to one another, gentlemen,” said he. “This is the Very Reverend Father Humperdinck. These gentlemen are Dr. Thorndyke, Dr. Jervis and Mr. Howard, who will act, on this occasion, as the recording angel to take down in writing the particulars of your very remarkable story.”

Father Humperdinck bowed stiffly. He was evidently a little disconcerted at finding so large an assembly, and glanced at me, in particular, with undisguised disfavour, while I, my oiled hair, deformed eyebrows and false beard notwithstanding, perspired with anxiety lest he should recognize me. But however unfavourably the reverend father may have viewed our little conclave, Mr. Marchmont, who had been watching him anxiously, gave him no chance of raising objections, but proceeded to open the matter forthwith.

“I have not brought any digest or precis of the case,” said he, “because I know you prefer to hear the facts from the actual parties. But I had better give you a brief outline of the matter of our inquiry. The case is concerned with a Mr. Vitalis Reinhardt, who has been closely associated with Father Humperdinck for very many years past, and who has now, without notice or explanation, disappeared from his ordinary places of resort, ceased from communication with his friends, and adopted a mode of life quite alien from and inconsistent with his previous habits. Those are the main facts, stated in general terms.”

“And the inquiry to which you referred?” said Thorndyke.

“Concerns itself with three questions,” replied Marchmont, and he proceeded to check them off on his fingers. “First, is Vitalis Reinhardt alive or dead? Second, if he is alive, where is he? Third, having regard to the singular change in his habits, is his conduct such as might render it possible to place him under restraint or to prove him unfit to control his own affairs?”

“To certify him as insane, if I may put it bluntly,” said Thorndyke. “That question could be decided only on a full knowledge of the nature of the changes in this person’s habits, with which, no doubt, you are prepared to furnish us. But what instantly strikes me in your epitome of the proposed inquiry is this: you raise the question whether Mr. Reinhardt is alive or dead, and then you refer to certain changes in his habits; but, since a man must be alive to have any habits at all, the two questions seem to be mutually irreconcilable in relation to the same group of facts.”

Father Humperdinck nodded approvingly. “Zat is chust our great difficulgy,” said he. “Zome zings make me suspect zat
my friend Reinhardt is dead; some ozzing things make me feel certain zat he is alife. I do not know vich to zink. I am gomblely buzzled.”

“Perhaps,” said Thorndyke, “the best plan would be for Father Humperdinck to give us a detailed account of his relations with Mr. Reinhardt and of the latter gentleman’s habits as they are known to him; after which we could discuss any questions that suggest themselves and clear up any points that seem to be obscure. What do you say, Marchmont?”

“It will be a long story,” Marchmont replied doubtfully.

“So much the better,” rejoined Thorndyke. “It will give us the more matter for consideration. I would suggest that Father Humperdinck tells us the story in his own way and that Mr. Howard takes down the statement. Then we shall have the principal data and can pursue any issue that seems to invite further investigation.”

To this proposal Marchmont agreed, a little reluctantly, fortifying himself for the ordeal by lighting a cigar; and Father Humperdinck, having cast a somewhat disparaging glance at me, began his account of his missing friend, which I took down verbatim, and which I now reproduce shorn of the speaker’s picturesque but rather tiresome peculiarities of pronunciation. “My acquaintance with Vitalis Reinhardt began more than forty years ago, when we were both schoolboys in the Jesuit’s house at Louvain. But I did not see much of him then, as I was preparing for the novitiate while he was on the secular side. In spite of his German name, Vitalis was looked upon as an English boy, for his father had married a rich English lady and was settled in England; and Vitalis, being the only child, had very great expectations. When he left school I lost sight of him for some years, and it was only after the war had broken out between Germany and France that we met again. I had then just been ordained and was attached as chaplain to a Bavarian regiment; he had come out from England as a volunteer to attend the sick and wounded; and so we met, soon after the battle of Saarbrück, in the wards of a temporary hospital. But our career in the field was not a long one. Less than a month after Saarbrück, our little force met a French division and had to retreat, leaving a number of men and guns and all the wounded in the hands of the enemy. Both of us were among the prisoners, and Vitalis was one of the wounded, for, just as the retreat began, a French bullet struck him in the right hip. We were both taken to Paris with the rest of the prisoners, and there, in the hospital for wounded prisoners, I was allowed to visit him.

“His wound was a severe one. The bullet had entered deeply and lodged behind the bone of the hip, so that the repeated efforts of the surgeons to extract it not only failed but caused great pain and made the wound worse. From day to day poor Vitalis grew thinner and more yellow, and we could see plainly that if no change occurred, the end must come quite soon. So the doctors said and so Vitalis himself felt.

“Then it came to me that, if the skill of man failed us, we should ask for help from above. It happened that I possessed a relic of the blessed Saint Vincent de Paul, which was contained in a small gold reliquary, and which I had been permitted by the Father General to keep. I proposed to Vitalis that we should apply the relic and make a special appeal to the saint for help, and also that he should promise to dedicate some part of his great possessions to the service of God.

“He agreed readily, for he had always been a deeply pious man. Accordingly he made the promises as I had suggested, we offered up special prayers to the saint, and, with the permission of the surgeons, I attached the reliquary to the dressings of the wound, praying that it should avail to draw out the bullet.”

“And did it?” asked Marchmont in a tone which evidently did not escape the observant Jesuit, for that noble-witted gentleman turned sharply on the lawyer and replied with severe emphasis: “No, sir, it did not. And why? Because there was no need. The very next day after the reliquary was applied, when the dressings were changed, a small shred of filthy cloth came out of the wound. That was the cause of the trouble, not the clean metal bullet. The saint, you see, sir, knew better than the surgeon.”

“Evidently,” said Marchmont, glancing quickly at me, and the expression that I caught in the eye of that elderly heathen suggested that he had actually contemplated a wink and then thought better of it.

“As soon as the piece of cloth was out of the wound,” Father Humperdinck resumed, “all the trouble ceased. The fever abated, the wound healed, and very soon Vitalis was able to get about, none the worse for his mishap.

“It was natural that he should be grateful to the saint who had saved his life, for though we look forward to the hereafter, we do not wish to die. Also was it natural that he should feel a devotion to the holy relic which had been the appointed instrument of his recovery. He did, and to gratify him, I obtained the Father General’s permission to bestow it on him, which gave him great joy, and thenceforth he always carried the reliquary on his person.”

“I hope he kept his promise to the saint,” said Marchmont.

“He did; faithfully, and, indeed, handsomely. No sooner was he recovered of his wound than he proposed to me the founding of a new society of brothers of charity to attend the sick and wounded. I consulted with the Father General of my Society—the Society of Jesus—and received his sanction to act as director of the new society or fraternity which was to be affiliated to the Society of Jesus under the title of ‘The Poor Brothers of Saint Joseph of Aramitha.’

“Why not Saint Vincent de Paul?” asked Marchmont.

“Because there was already a society named after that saint, and because Saint Joseph was a man of eminent charity. But I shall not weary you with a history of our society. It was founded and blessed by His Holiness, the Pope, it prospered, and it still prospers to the glory of God and to the benefit and relief of the sick, the poor, and the suffering. At first Vitalis paid all the costs, and he has been a generous benefactor ever since.”
“This is all extremely interesting,” said Marchmont, “but—you will excuse my asking—has it any bearing on your friend’s disappearance?”

“Yes, sir, it has,” replied Father Humperdinck, “as you shall receive, ven I my narradive gondinume.”

Mr. Marchmont bowed, and Father Humperdinck, quite undisturbed by the interruption, “gondinued his narradive.”

“Our first house was established in Belgium, near Brussels, and Vitalis came to live with us in community. He did not regularly join the society or take any vows, but he lived with us as one of ourselves and wore the habit of a lay brother when in the house and the dress of one when he went abroad. This he has continued to do ever since. Though bound by no vows, he has lived the life of a professed religious by choice, occupying an ordinary cell for sleeping and taking his meals at the refectory table. But not always. From time to time he has taken little holidays to travel about and mix—with the outer world. Sometimes he would come to England to visit his relatives, and sometimes he would spend a few weeks in one of the great cities of the Continent, looking over the museums and picture-galleries. He was greatly interested in art and liked to frequent the society of painters and sculptors, of whom he knew several; and one, in particular—an English painter named Burton, whose acquaintance he made quite recently—he seemed very much attached to, for he stayed with him at Bruges for more than a month.

“When he came back from Bruges, he told me that he purposed going to England to see his relatives and to make certain arrangements with his lawyers for securing a part of his property to our Society. I had often urged him to do this, but, hitherto, he had retained complete control of his property and only paid the expenses of the Society as they occurred. He was most generous, but, of course, this was a bad arrangement, because, in the event of his death, we should have been left without the support that he had promised. It seemed that while he was at Bruges he had discussed this matter with Mr. Burton, who was a Catholic, and that the Englishman also had advised him to make a permanent provision for the Society. It seemed that he had decided to divide his property between our community and a cousin of his who lives in England, a project of which I strongly approved. After staying with us for a month or two, he left for England with the purpose of making this arrangement. That was in the middle of last September, and I have not seen him since.”

“Did he complete the arrangements that he had mentioned?” Thorndyke asked.

“No, he did not. He made certain arrangements as to his property, but they were very different ones from those he had proposed. But we shall come to that presently. Let me finish my story.

“A few days after Vitalis left us, our oldest lay brother was taken very seriously ill. I wrote to Vitalis, who was deeply attached to Brother Bartholomew, telling him of this, and, as I did not know where he was staying, I sent the letter to his cousin’s house at Hampstead. He replied, on the eighteenth of September, that he should return immediately. He said that he was then booking his luggage and paying his hotel bill; that he had to see his cousin again, but that he would try to come by the night train, or if he missed that, he would sleep at the station hotel and start as early as possible on the following day, the nineteenth. That was the last I ever heard from him. He never came and has never communicated with me since.”

“You have made enquiries, of course?” said Thorndyke.

“Yes. When he did not come, I wrote to his lawyer, Mr. Wyndhurst, whom I knew slightly. But Mr. Wyndhurst was dead, and my letter was answered by Mr. Marchmont. From him I learned that Vitalis had called on him on the morning of the nineteenth and made certain arrangements of which he, perhaps, will tell you. Mr. Marchmont ascertained that, on the same day, Vitalis’s luggage was taken from the cloak-room in time to catch the boat train. I have made inquiries and find that he arrived at Calais, and I have succeeded in tracing him to Paris, but there I have lost him. Where he is now I am unable to discover.

“And now, before I finish my story, you had better hear what Mr. Marchmont has to tell. He has been very close with me, but you are a lawyer and perhaps know better how to deal with lawyers.”

Thorndyke glanced enquiringly at the solicitor, who, in his turn, looked dubiously at the end of his waning cigar. “The fact is,” said he, “I am in a rather difficult position. Mr. Reinhardt has employed me as his solicitor, and I don’t quite see my way to discussing his private affairs without his authority.”

“That is a perfectly correct attitude,” said Thorndyke, “and yet I am going to urge you to tell us what passed at your interview with your client. I can’t go into particulars at present, but I will ask you to take it from me that there are sound reasons why you should; and I will undertake to hold you immune from any blame for having done so.”

Marchmont looked sharply and with evidently awakened interest at Thorndyke. “I think I know what that means,” he said, “and I will take you at your word, having learned by experience what your word is worth. But before describing the interview, I had better let you know how Reinhardt had previously disposed of his property.

“About twelve years ago he got Wyndhurst to draft a will for him by which a life interest in the entire property was vested in his cousin, a Miss Augusta Vyne, with reversion to her niece, Sylvia Vyne, the only child of his cousin Robert. This will was duly executed in our office.

“After that our firm had, until quite recently, no special business to transact for Mr. Reinhardt beyond the management of his investments. The whole of his property—which was all personal—we in our hands to invest, and our relations with him were confined to the transfer of sums of money to his bank when we received instructions from him to effect such transfer. He never called at the office, and latterly there has been no one there who knew him excepting Wyndhurst himself and the clerk, Bell.”
“The next development occurred last September. On the seventeenth I received a letter from him, written at Miss Vyne’s house at Hampstead, saying that he had been discussing his affairs with her and that he should like to call on me and make some slight alterations in the disposal of the property. I replied on the eighteenth, addressing my letter to him at Miss Vyne’s house, making an appointment for eleven o’clock on the morning of the nineteenth. He kept the appointment punctually, and we had a short interview, at which he explained the new arrangements which he wished to make.

“He began by saying that he had found it somewhat inconvenient, living, as he did, on the Continent, to have his account at an English Bank. He proposed, therefore, to transfer it to a private bank at Paris, conducted by a certain M. Desire, or rather to open an account there, for he did not suggest closing his account at his English bank.”

“Do you know anything about this M. Desire?” asked Thorndyke.

“I did not, but I have since ascertained that he is a person of credit—quite a substantial man in fact—and that his business is chiefly that of private banker and agent to the officers of the army.

“Well, Mr. Reinhardt went on to say that he had become rather tired of the monotonous life of a lay brother—which he, after all, was not—and wished for a little freedom and change. Accordingly he intended to travel for a time—which was his reason for employing M. Desire—and did not propose, necessarily, to keep anyone informed of his whereabouts. He was a rich man and he had decided to get some advantage from his wealth, which really did not seem to me at all an unreasonable decision. He added that he had no intention of withdrawing his support from the Society of the Poor Brothers; he merely intended to dissociate himself, personally, from it, and he suggested that any occasions that might arise for pecuniary assistance should be addressed to him under cover of M. Desire.

“Finally, he desired me to transfer one thousand pounds stock to his new agent seven days from the date of our interview, and gave me an authority in writing to that effect in which he instructed me to accept M. Desire’s receipt as a valid discharge.”

“And you did so?” asked Thorndyke.

“Certainly I did. And I hold M. Desire’s receipt for the amount.”

“Did you think it necessary to raise the question of your client’s identity, seeing that no one in the office knew him personally?”

“No, I did not. The question did not arise. There could not possibly be any doubt on the subject. He was an old client of the firm, and our correspondence had been carried on under cover of his cousin, Miss Vyne, who had known him all his life. You remember that I wrote to him at Miss Vyne’s address, making the appointment for the interview.”

“And what happened next?”

“The next development was a letter from Father Humperdinck asking if I could give him Mr. Reinhardt’s address. Of course I could not, but I wrote to M. Desire asking him if he could give it to me. Desire replied that he did not, at the moment, know where Mr. Reinhardt was, but, if desired, take charge of any communications and forward them at the first opportunity. This statement may or may not have been true, but I don’t think we shall get any more information out of Desire. He is Reinhardt’s agent and will act on his instructions. If Reinhardt has told him not to give anyone his address, naturally he won’t give it. So there the matter ends, so far as I am concerned.”

“Did Vitalis make no suggestion as to altering his will?” Father Humperdinck enquired.

“None whatever. Nothing was said about the will. But,” Mr. Marchmont added, after a cogitative pause, “we must remember that he has another man of business now. There is no saying what he may have done through M. Desire.”

Father Humperdinck nodded gloomily, and Thorndyke addressing the solicitor, asked: “And that is all you have to tell us?”

“Yes. And I’m not sure that it is not a good deal more than I ought to have told you. It is Father Humperdinck’s turn now.”

The Jesuit acknowledged the invitation to resume his narrative by a stiff bow and then proceeded: “You can now see, sir, that what I said is perfectly correct. The conduct of my friend Vitalis shows a sudden and unaccountable change. It is quite inconsistent with his habits and his way of thinking. And the change is, as I say, so sudden. One day he is coming with the greatest haste to the bedside of his sick friend, Brother Bartholomew, the next he is making arrangements for a life of selfish pleasure, utterly indifferent as to whether that friend is alive or dead. As a matter of fact, the good brother passed away to his reward the day after Vitalis should have arrived, without even a message from his old friend. But now I return to my story.

“When Vitalis failed to appear, and I could get no news of him, I became very anxious; and, as it happened that the business of our Society called me to England, I determined to inquire into the matter. Circumstances compelled me to travel by way of Boulogne and cross to Folkestone. I say ‘circumstances,’ but I should rather say that I was guided that way by the hand of Providence, for, in the train that brought me from Folkestone to London, I had a most astonishing experience. In the carriage, alone with me, there travelled a young man, a very strange young man indeed. He was a very large man—or, I should say, very high—and in appearance rather fierce and wild. His clothes were good, but they were disordered and stained with mud, as if he had been drunk at night and had rolled in the gutter. And this, I think, was the case, for, soon after we had started, he began to turn out his pockets on the seat of the carriage, as if to see whether he had
lost anything during his debauch. And then it was that I saw a most astonishing thing. Among the objects that this man took from his pockets and laid on the seat, was the reliquary that I had given so many years ago to Vitalis.

“I could not mistake it. Once it had been mine, and I had been accustomed to see it almost daily since. Moreover the young man had the effrontery to pass it to me that I might examine it, and I found on it the very letters which I, myself, had caused to be engraved on it. When I asked him where he had obtained it, he told me that he had picked it up at Hampstead, and he professed not to know what it was. But his answers were very evasive and I did not believe him.”

“Nevertheless,” said Mr. Marchmont, “there was nothing improbable in his statement. Mr. Reinhardt had been at Hampstead and might have dropped it.”

“Possibly. But he would have taken measures to recover it. He would not have left England until he had found it. He was a rich man, and he would have offered a large reward for this his most prized possession.”

“You say,” said Thorndyke, “that he habitually carried this reliquary on his person. Can you tell us how he carried or wore it?”

“That,” replied Father Humperdinck, “was what I was coming to. The reliquary was a small gold object with a ring at each end. It was meant I suppose, to be worn round the wrist, or perhaps the neck, by means of a cord or chain attached to the two rings, or to be inserted into a chaplet of devotional beads. But this was not the way in which Vitalis carried it. He possessed a small and very beautiful crucifix which he set great store by, because it was given to him by one of the fathers when he left school, and which he used to wear suspended from his neck by a green silk cord. Now, when I gave him the reliquary, he caused a goldsmith to link one of its rings to the ring of the crucifix and he fastened the silk cord to the other ring, and so suspended both the reliquary and the crucifix from his neck.”

“Did he wear them outside his clothing so that they were visible?” Thorndyke asked.

“Yes, outside his waistcoat, so that they were not only visible but very conspicuous when his coat was unbuttoned. It was, of course, very unsuitable to the dress of a lay brother, and I spoke to him about it several times. But he was sometimes rather self-willed, as you may judge by his refusal to settle an endowment on the Society, and, naturally, as he was not professed, I had no authority over him. But I shall return presently to the reliquary. Now I continue about this young man.

“When I had heard his explanation, and decided that he was telling me lies, I made a simple pretext to discover his name and place of abode. With the same effrontery, he gave me his card, which I have here, and which, you will see, is stained with mud, owing, no doubt, to those wallowings in the mire of which I have spoken.” He drew the card from his pocket-book and handed it to Thorndyke, who read it gravely, and, pushing it across the table to me, said, without moving a muscle of his face: “You had better copy it into your notes, Mr. Howard, so that we may have the record complete.”

I accordingly copied out my own name and address with due solemnity and a growing enjoyment of the situation, and then returned the card to Father Humperdinck, who pocketed it carefully and resumed: “Having the name and address of this young man, I telegraphed immediately to a private detective bureau in Paris, asking to have sent to me, if possible, a certain M. Foucault, who makes a speciality of following and watching suspected persons. This Foucault is a man of extraordinary talent. His power of disguising himself is beyond belief and his patience is inexhaustible. Fortunately he was disengaged and came to me without delay, and, when I had given him the name and address of this young man, Jardine, and described him from my recollection of him, he set a watch on the house and found that the man was really living there, as he had said, and that he made a daily journey to the hospital of St. Margaret’s, where he seemed to have some business, as he usually stayed there until evening.”

“St. Margaret’s!” exclaimed Marchmont. “Why that is your hospital, Thorndyke. Do you happen to know this man Jardine?”

“There is, or was, a student of that name, who qualified some little time ago, and who is probably the man Father Humperdinck is referring to. A tall man; quite tall, I should say, as my friend here, Mr. Howard.”

“I should say,” said Father Humperdinck, “that the man, Jardine, is taller, decidedly taller. I watched him as I walked behind him up the platform at Charing Cross, and M. Foucault has shown him to me since. But that matters not. Have you seen the man, Jardine, lately at the hospital?”

“Not very lately,” Thorndyke replied. “I saw him there nearly a fortnight ago, but that, I think, was the last time.”

“Ah!” exclaimed Humperdinck. “Exactly. But I shall continue my story. For some time M. Foucault kept a close watch on this man, but discovered nothing fresh. He went to the hospital daily, he came home, and he stayed indoors the whole evening. But, at last, there came a new discovery.

“Once morning M. Foucault saw the man, Jardine, come out of his house, dressed more carefully than usual. From his house, Foucault followed him to a picture gallery in Leicester Square and went in after him; and there he saw him meet a female, evidently by a previous assignation. AND, Father Humperdinck continued, slapping the table to emphasize the climax of his story, “From-the-neck-of-that-female-was-hanging-Vitalis-Reinhardt's-CRUCIFIX!”

Having made this thrilling communication, our reverend client leaned back to watch its effect on his audience. I am afraid he must have been a little disappointed, for Thorndyke was habitually impassive in his exterior, and, as for Jervis and me, we were fully occupied in maintaining a decent and befitting gravity. But Marchmont—the only person present who was not already acquainted with the incident—saved the situation by exclaiming: “Very remarkable! Very remarkable
“It is more than remarkable,” said Father Humperdinck. “It is highly suspicious. You observe that the reliquary and the crucifix had been linked together. Now they are separated, and since both the rings of the reliquary were unbroken, it follows that the ring of the crucifix must have been cut through and a new one made, by which to suspend it.”

“I don’t see anything particularly suspicious in that,” said Marchmont. “If Jardine found the two articles fixed together, and—having failed to discover the owner—wished to give the crucifix to his friend, it is not unnatural that he should have separated them.”

“I do not believe that he found them,” Father Humperdinck replied doggedly; “but I shall continue my story and you will see. There is not much more to tell.

“It seems that the man, Jardine, suspected Foucault of watching him, for presently he left the gallery in company with the female, and, after being followed for some distance, he managed to escape. As soon as Foucault found that he had lost him, he went to Jardine’s house and waited about the neighbourhood, and an hour or two later he had the good fortune to see him coming from Hampstead towards Highgate, in company with another female. He followed them until they entered a narrow passage or lane that leads up the hill, and when they had gone up this some distance, he followed, but could not get near enough to hear what they were saying.

“And now he had a most strange and terrible experience. For some time past he had felt a suspicion that some person—some accomplice of Jardine’s perhaps—was following and watching him; and now he had proof of it. At the top of the lane, Jardine stopped to talk to the female, and Foucault crept on tiptoe towards him; and while he was doing so, he heard someone approaching stealthily up the lane, behind him. Suddenly, Jardine began to return down the lane. As it was not convenient for Foucault to meet him there, he also turned and walked back; and then he heard a sound as if someone were climbing the high wooden fence that enclosed the lane. Then Jardine began to run, and Foucault was compelled also to run but he would have been overtaken if it had not happened that Jardine fell down.

“Now, just as he heard Jardine fall, he came to a broken place in the fence, and it occurred to him to creep through the hole and hide while Jardine passed. He accordingly began to do so, but no sooner had he thrust his head through the hole than some unseen ruffian dealt him a violent blow which rendered him instantly insensible. When he recovered his senses, he found himself lying in a churchyard which adjoins the lane, but Jardine and the other ruffian were, of course, nowhere to be seen.

“And now I come to the last incident that I have to relate. The assault took place on a Saturday; on the Sunday M. Foucault was somewhat indisposed and unable to go out, but early on Monday he resumed his watch on Jardine’s house. It was nearly noon when Jardine came out, dressed as if for travelling and carrying a valise. He went first to a house near Piccadilly and from thence to the hospital in a cab. Foucault followed in another cab and saw him go into the hospital and waited for him to come out. But he never came. Foucault waited until midnight, but he did not come out. He had vanished.”

“He had probably come out by a back exit and gone home,” said Marchmont.

“Not so,” replied Humperdinck. “The next day Foucault watched Jardine’s house, but he did not come there. Then he made enquiries; but Jardine is not there, and the landlady does not know where he is. Also the porter at the hospital knows nothing and is not at all polite. The man Jardine has disappeared as if he had never been.”

“That really is rather queer,” said Marchmont. “It is a pity that you did not give me all these particulars at first. However, that can’t be helped now. Is this all that you have to tell us?”

“It is all; unless there is anything that you wish to ask me.”

“I think,” said Thorndyke, “that it would be well for us to have a description of Mr. Reinhardt; and, as we have to trace him, if possible, a photograph would be exceedingly useful.”

“I have not a photograph with me,” said Father Humperdinck, “but I will obtain one and send it to you. Meanwhile I will tell you what my friend Vitalis is like. He is sixty-two years of age, spare, upright, rather tall—his height is a hundred and seventy-three centimetres—”

“Roughly five feet nine,” interposed Thorndyke.

“His hair is nearly white, he is, of course, clean shaven, he has grey eyes, a straight nose, not very prominent, and remarkably good teeth for his age, which he shows somewhat when he talks. I think he is a little vain about his teeth and he well may be, for there are not many men of sixty-two who have not a single false tooth, nor even one that has been stopped by the dentist. As to his clothing, he wears the ordinary dress of a lay brother, which you are probably familiar with, and he nearly always wears gloves, even indoors.”

“Is there any reason for his wearing gloves?” Thorndyke asked.

“Not now. The habit began when he had some affliction of the skin, which made it necessary for him to keep his hands covered with gloves which contained some ointment or dressing, and afterwards for a time to conceal the disagreeable appearance of the skin. The habit having been once formed, he continued it, saying that his hands were more comfortable covered up than when exposed to the air.”
"Was he dressed in this fashion when he called at your office, Marchmont?" asked Thorndyke.

"Yes. Even to the gloves. I noticed, with some surprise, that he did not take them off even when he wrote and signed the note of which I told you."

"Was he then wearing the reliquary and crucifix as Father Humperdinck has described, on the front of his waistcoat?"

"He may have been, but I didn’t notice them, as I fancy I should have done if they had been there."

"And you have nothing more to tell us, Father Humperdinck, as to your friend’s personal appearance?"

"No. I will send you the photograph and write to you if I think of anything that I have forgotten. And now, perhaps you can tell me if you think that you will be able to answer those questions that Mr. Marchmont put to you."

"I cannot, of course, answer them now," replied Thorndyke. "The facts that you have given us will have to be considered and compared, and certain enquiries will have to be made. Are you staying long in England?"

"I shall be here for at least a month; and I may as well leave you my address, although Mr. Marchmont has it."

"In the course of a month," Thorndyke said, as he took the proffered card, "I think I may promise you that we shall have settled definitely whether your friend is alive or dead; and if we find that he is alive, we shall, no doubt, be able to ascertain his whereabouts."

"That is very satisfactory," said Father Humperdinck. "I hope you shall be able to make good your promise."

With this he rose, and, having shaken hands stiffly with Thorndyke, bestowed on Jervis and me a ceremonious bow and moved towards the door. I thought that Marchmont looked a little wistful, as if he would have liked to stay and have a few words with us alone; indeed, he lingered for a moment or two after the door was open, but then, apparently altering his mind, he wished us "good-night" and followed his client.
XVII — THE PALIMPSEST

IT was getting late when our friends left us, but nevertheless, as soon as they were gone, we all drew our chairs up to the fire with the obvious intention of discussing the situation and began, with one accord, to fill our pipes. Jervis was the first to get his tobacco alight, and, having emitted a voluminous preliminary puff, he proceeded to open the debate. “That man, Jardine, seems to be a pretty desperate character. Just think of his actually wallowing in the mire—not merely rolling, mind you, but wallowing—and of his repulsive habit of consorting with females; one after the other, too, in rapid succession. It’s a shocking instance of depravity.”

“Our reverend friend,” said Thorndyke, “reaches his conclusions by a rather short route—in some cases, at least; in others, his methods seem a little indirect and roundabout.”

“Yes,” agreed Jervis, “he’s a devil at guessing. But he didn’t get much food for the imagination out of the man, Thorndyke. Why were you so extraordinarily secretive? With what he told you and what you knew before, you could surely have suggested a line of inquiry. Why didn’t you?”

“ Principally because of the man’s personality. I could not have answered his questions; I could, only have suggested one or two highly probable solutions of the problem that he offered and partial solutions at that. But I am not much addicted to giving partial solutions—to handing over the raw material of a promising inquiry. Certainly, not to a man like this, who seems incapable of a straight forward action.”

“The reverend father,” said Jervis, “does certainly seem to be a rather unnecessarily downy bird. And he doesn’t seem to have got much by his excessive artfulness, after all.”

“No,” agreed Thorndyke; “nothing whatever. Quite the contrary, in fact. Look at his ridiculous conduct in respect of ‘the man Jardine’. I don’t complain of his having taken the precaution to obtain that malefactor’s address; but, when he had got it, if he had not been tortuous, so eager to be cunning; if, in short, he had behaved like an ordinary sensible man, he would have got, at once, all the information that Jardine had to give. He could have called on Jardine, written to him, employed a lawyer or applied to the police. Either of these simple and obvious plans would have been successful; instead of which, he must needs go to the trouble and expense of engaging this absurd spy.”

“Who found a mare’s nest and got his head thumped,” remarked Jervis.

“Then,” continued Thorndyke, “look at his behaviour to Marchmont. Evidently he put the case into Marchmont’s hands, but, equally evident, he withheld material facts and secretly tinkered at the case himself. No, Jervis, I give no information to Father Humperdinck until I have this case complete to the last rivet. But, all the same, I am greatly obliged to him, and especially to Marchmont for bringing him here. He has given us a connected story to collate with our rather loose collection of facts and, what is perhaps more important, he has put our investigation on a business footing. That is a great advantage. If I should want to invoke the aid of the powers that be, I can do so now with a definite locus standi as the legal representative of interested parties.”

“I can’t imagine,” said I, “in what direction you are going to push your inquiries. Father Humperdinck has given us, as you say, a connected story, but it is a very unexpected one, to me, at least, and does not fall into line at all with what we know—that is, if you are assuming, as I have been, that the man whom I saw lying in Millfield Lane was Vitalis Reinhardt.”

“It is difficult,” replied Thorndyke, “to avoid that assumption, though we must be on our guard against coincidences; but the man whom you saw agreed with the description that has been given to us, we know that Reinhardt was in the neighbourhood on that day, and you found the relicuary on the following morning in the immediate vicinity. We seem to be committed to the hypothesis that the man was Reinhardt unless we can prove that he was someone else, or that Reinhardt was in some other place at the time; which at present we cannot.”

“Then,” said I, “in that case, the bobby must have been right, after all. The man couldn’t have been dead, seeing that he called on Marchmont the following day and was afterwards traced to Paris. But I must say that he looked as dead as Queen Anne. It just shows how careful one ought to be in giving opinions.”

“Some authority has said,” remarked Jervis, “that the only conclusive proof of death is decomposition. I believe it was old Taylor who said so, and I am inclined to think that he wasn’t far wrong.”

“But,” said Thorndyke, “assuming that the man whom you saw was Reinhardt, and that he was not dead how do you explain the other circumstances? Was he insensible from the effects of injury or drugs? Or was he deliberately shamming insensibility? Was it he who passed over the fence? and if so, did he climb over unassisted or was he helped over? And what answers do you suggest to the questions that Marchmont propounded? You answer his first question: ‘Is Reinhardt alive?’ in the affirmative. What about the others?”

“As to where he is,” I replied, “I can only say, the Lord knows; probably skulking somewhere on the Continent. As to his state of mind, the facts seem to suggest that, in vulgar parlance, he has gone off his onion. He must be as mad as a hatter to have behaved in the way that he has. For, even assuming that he wanted to get clear of the Poor Brothers of Saint Jeremiah Diddler without explicitly saying so, he adopted a fool’s plan. There is no sense in masquerading as a corpse one day and turning up smiling at your lawyer’s office the next. If he meant to be dead, he should have stuck to it and remained dead.”

“The objection to that,” said Jervis, “is that Marchmont would have proceeded to get permission to presume death and
administer the will.”

“Then I can only suppose that he had got infected by Father Humperdinck and resolved to be artful at all costs and hang the consequences.”

“Then,” said Thorndyke, “I understand your view to be that Reinhardt is at present hiding somewhere on the Continent and that his mind is more or less affected?”

“Yes. Though as to his being unfit to control his own affairs, I am not so clear. I fancy there was more evidence in that direction when he was forking out the bulk of his income to maintain the poverty of the Poor Brothers. But the truth is, I haven’t any opinions on the case at all. I am in a complete fog about the whole affair.”

“And no wonder,” said Jervis. “One set of facts seems to suggest most strongly that Reinhardt must certainly be dead. Another set of facts seems to prove beyond doubt that he was alive, at least after that affair in Millfield Lane. He may be perpetrating an elephantine practical joke on the Poor Brothers; but that doesn’t seem to be particularly probable. The whole case is a tangle of contradictions which one might regard as beyond unravelment if it were not for a single clear and intelligible fact.”

“What is that?” I asked.

“That my revered senior has undertaken to furnish a solution in the course of a month; from which I gather that my revered senior has something up his sleeve.”

“There is nothing up my sleeve,” said Thorndyke, “that might not equally well be up yours. I have made no separate investigations. The actual data which I possess were acquired in the presence of one or both of you, and are now the common property of us all. I am referring, of course, to the original data, not to fresh matter obtained by inference from, or further examination of those data.”

Jervis smiled sardonically. “It is the old story,” said he. “The magician offers you his hat to inspect. ‘You observe, ladies and gentlemen, that there is no deception. You can look inside it and examine the lining, and you can also inspect the top of my head. I now put on my hat. I now take it off again and you notice that there is a guinea pig sitting in it. There was no deception, ladies and gentlemen, you had all the data.’”

Thorndyke laughed and shook his head, “That’s all nonsense, Jervis,” he said. “It is a false analogy. I have done nothing to divert your attention. The guinea pig has been staring you in the face all the time.”

“I have even drawn your attention to him once or twice. But, seriously, I don’t think that this case is so very obscure, though mind you, it is a mere hypothesis so far as I am concerned, and may break down completely when I come to apply the tests that I have in view. But what I mean is, that the facts known to us suggested a very obvious hypothesis and that the suggestion was offered equally to us all. The verification may fail, but that is another matter.”

“Are you going to work at the case immediately?” I asked.

“No,” Thorndyke replied. “Jervis and I have to attend at the Maidstone Assizes for the next few days. We are retained on a case which involves some very important issues in relation to life assurance, and that will take up most of our time. So this other affair will have to wait.

“And meanwhile,” said Jervis, “you will stay at home like a good boy and mind the shop; and I suppose we shall have to find you something to do, to keep you out of mischief. What do you say to making a longhand transcript of Father Humperdinck’s statement?”

“Yes, you had better do that,” said Thorndyke; “and attach it to the original shorthand copy. And now we must really turn in or we shall never be ready for our start in the morning.”

The transcription of Father Humperdinck’s statement gave me abundant occupation for the whole of the following morning. But when that was finished, I was without any definite employment, and, though I was not in the least dull—for I was accustomed to a solitary life—I suppose I was in that state of susceptibility to mischief that is proverbially associated with unemployment. And in these untoward circumstances I was suddenly exposed to a great temptation; and after some feeble efforts at resistance, succumbed ignominiously.

I shall offer no excuses for my conduct nor seek in any way to mitigate the judgment that all discreet persons will pass upon my folly. I make no claims to discretion or to the caution and foresight of a man like Thorndyke. At this time I was an impulsive and rather headless young man, and my actions were pretty much those which might have been expected from a person of such temperament.

The voice of the tempter issued in the first place from our letter-box, and assumed the sound of the falling of letters thereinto. I hastened to extract the catch, and sorting out the envelopes, selected one, the superscription of which was in Sylvia’s now familiar handwriting. It was actually addressed to Dr. Thorndyke, but a private mark, on which we had agreed, exposed that naively pious fraud and gave me the right to open it; which I did, and seated myself in the armchair to enjoy its perusal at my ease.

It was a delightful letter; bright, gossipy and full of frank and intimate friendliness. As I read it, the trim, graceful figure and pretty face of the writer rose before me and made me wonder a little discontentedly how long it would be before I
should look on her and hear her voice again. It was now getting into the third week since I had last seen her, and, as the time passed, I was feeling more and more how great a blank in my life the separation from her had caused. Our friendship had grown up in a quiet and unsensational fashion and I suppose I had not realized all that it meant; but I was realizing it now; and, as I conned over her letter, with its little personal notes and familiar turns of expression, I began to be consumed with a desire to see her, to hear her speak, to tell her that she was not as other women to me, and to claim a like special place in her thoughts.

It was towards the end of the letter that the tempter spoke out in clear and unmistakable language, and these were the words that he used, through the medium of the innocent and unconscious Sylvia: “You remember those sketches that you stole for me—‘pinched,’ I think was your own expression. Well, I have cleaned off the daubs of paint with which they had been disfigured and put them in rough frames in my studio. All but one; and I began on that yesterday with a scraper and a rag dipped in chloroform. But I took off, not only the defacing marks but part of the surface as well; and then I got such a surprise! I shan’t tell you what the surprise was, because you’ll see, when you come out of the house of bondage. I am going to work on it again to-morrow, and perhaps I shall get the transformation finished. How I wish you could come and see it done! It takes away more than half the joy of exploration not to be able to share the discovery with you; in fact, I have a good mind to leave it unfinished so that we can complete the transformation together.”

Now, I need not say that, as to the precious sketches, I cared not a fig what was under the top coat of paint. What I did care for was that this dear maid was missing me as I missed her; was wanting my sympathy with her little interests and pleasures and was telling me, half unconsciously, perhaps, that my absence had created a blank in her life, as her absence had in mine. And forthwith I began to ask myself whether there was really any good reason why I should not, just for this once, break out of my prison and snatch a few brief hours of sunshine. The spy had been exploded. He was not likely to pick up my tracks after all this time and now that my appearance was so altered; and I did not care much if he did seeing that he had been shown to be perfectly harmless. The only circumstance that tended to restrain me from this folly was the one that mitigated its rashness—the change in my appearance; and even that, now that I was used to it and knew that my aspect was neither grotesque nor ridiculous, had little weight, for Sylvia would be prepared for the change and we could enjoy the joke together.

I was aware, even at the time, that I was not being quite candid with myself, for, if I had been, I should obviously have consulted Thorndyke. Instead of which I answered the letter by return, announcing my intention of coming to tea on the following day; and having sent Polton out to post it, spent the remainder of the afternoon in gleeful anticipation of my little holiday, tempered by some nervousness as to what Thorndyke would have to say on the matter, and as to what “my pretty friend,” as Mrs. Samway had very appropriately called her, would think of my having begun my letter with the words, “My dear Sylvia.”

Nothing happened to interfere with my nefarious plans.

On the following morning, Thorndyke and Jervis went off after an early breakfast, leaving me in possession of the premises and master of my actions. I elected to anticipate the usual luncheon time by half an hour, and, when this meal was disposed of, I crept to my room and thoroughly cleansed my hair of the grease which Polton still persisted in applying to it; for, since my hat would conceal it while I was out of doors, the added disfigurement was unnecessary. I was even tempted to tamper slightly with my eyebrows, but this impulse I nobly resisted; and, having dried my hair and combed it in its normal fashion, I descended on tip-toe to the sitting-room and wrote a short, explanatory note to Polton, which I left conspicuously on the table. Then I switched the door-bell on to the laboratory, and, letting myself out like a retreating burglar, closed the door silently and sneaked away down the dark staircase.

Once fairly outside, I went off like a lamplighter, and, shooting out through the Tudor Street gate, made my way eastward to Broad Street Station, where I was fortunate enough to catch a train that was just on the point of starting. At Hampstead Heath Station I got out, and, sniffing the air joyfully, set forth at my best pace up the slope that leads to the summit; and in little over twenty minutes found myself at the gate of “The Hawthorns.”

There was no need to knock or ring. My approach had been observed from the window, and, as I strode up the garden path, the door opened and Sylvia ran out to meet me. “It was nice of you to come!” she exclaimed, as I took her hand and held it in mine. “I don’t believe you ought to have ventured out, but I am most delighted all the same. Don’t make a noise; Mopsy is having a little doze in the drawing room. Come into the morning room and let me have a good look at you.”

I followed her meekly into the front room, where, in the large bay window, she inspected me critically, her cheeks dimpling with a mischievous smile. “There’s something radically wrong about your eyebrows,” she said, “but, really, you are not in the least the fright that you made out. As to the beard and moustache, I am not sure that I don’t rather like them.”

“I hope you don’t,” I replied, “because, off they come at the first opportunity—unless, of course, you forbid it.”

“Does my opinion of your appearance matter so much then?”

“It matters entirely. I don’t care what I look like to anyone else.”

“Oh! what a fib!” exclaimed Sylvia. “Don’t I remember how very neatly turned out you always were when you used to pass me in the lane before we knew one another?”

“Exactly,” I retorted. “We didn’t know one another then. That makes all the difference in the world—to me, at any rate.”
“Does it?” she said, colouring a little and looking at me thoughtfully. “It’s very—very flattering of you to say so, Dr. Jardine.”

“I hope you don’t mean that as a snub,” I said, rather uneasy at the form of her reply and thinking of my letter.

“A snub!” she exclaimed. “No, I certainly don’t. What did I say?”

“You called me Dr. Jardine. I addressed you in my letter as ‘Sylvia—My dear Sylvia.’”

“And what ought I to have said?” she asked, blushing warmly and casting down her eyes.

“Well, Sylvia, if you liked me as well as I like you, I don’t see why you shouldn’t call me Humphrey. We are quite old friends now.”

“So we are,” she agreed; “and perhaps it would be less formal. So Humphrey it shall be in future, since that is your royal command. But tell me, how did you prevail on Dr. Thorndyke to let you come here? Is there any change in the situation?”

“There’s a change in my situation, and a mighty agreeable change, too. I’m here.”

“Now don’t be silly. How did you persuade Dr. Thorndyke to let you come?”

“Ha—that, my dear Sylvia, is a rather embarrassing question. Shall we change the subject?”

“No, we won’t.” She looked at me suspiciously for a moment and then exclaimed in low, tragical tones: “Humphrey! You don’t mean to tell me that you came away without his knowledge!”

“I’m afraid that is what it amounts to. I saw a loop-hole and I popped through it; and here I am, as I remarked before.”

“But how dreadful of you! Perfectly shocking! And whatever will he say to you when you go back?”

“That is a question that I am not proposing to present vividly to my consciousness until I arrive on the door-step. I’ve broken out of chokee and I’m going to have a good time—to go on having a good time, I should say.”

“Then you consider that you are having a good time now?”

“I don’t consider. I am sure of it. Am I not, at this very moment looking at you? And what more could a man desire?”

She tried to look severe, though the attempt was not strikingly successful, and retorted in an admonishing tone: “You needn’t try to wheedle me with compliments. You are a very wicked person and most indiscreet. But it seems to me that some sort of change has come over you since you retired from the world. Don’t you think I’m right?”

“You’re perfectly right. I’ve improved. That’s what it is. Matured and mellowed, you know, like a bottle of claret that has been left in a cellar and forgotten. Say you think I’ve improved, Sylvia.”

“I won’t,” she replied, and then, changing her mind, she added: “Yes, I will. I’ll say that you are more insinuating than ever, if that will do. And now, as, you are clearly quite incorrigible, I won’t scold you any more, especially as you ‘broke out of chokee’ to come and see me. You shall tell me all about your adventures.”

“I didn’t come here to talk about myself, Sylvia. I came to tell you something—well, about myself, perhaps, but—er—not my adventures you know or—or that sort of thing—but, I have been thinking a good deal, since I have been alone so much—about you, I mean, Sylvia—and—er—Oh! the deuce!”

The latter exclamation was evoked by the warning voice of the gong, evidently announcing tea, and the subsequent appearance of the housemaid; who was certainly not such a goose as she was supposed to be, for she tapped discreetly at the door and waited three full seconds before entering; and even then she appeared demurely unconscious of my existence.

“If you please, Miss Sylvia, Miss Vyne has woke up and I’ve taken in the tea.”

Such was the paltry interruption that arrested the flow of my eloquence and scattered my flowers of rhetoric to the winds. I murmured inwardly, “Blow the tea!” for the opportunity was gone; but I comforted myself with the reflection that it didn’t matter very much, since Sylvia and I seemed to have arrived at a pretty clear understanding; which understanding was further clarified by a momentary contact of our hands as we followed the maid to the drawing-room. Miss Vyne was on this occasion, as on the last, seated in the exact centre of the room, and with the same monumental effect; so that my thoughts were borne irresistibly to the ethnographical section of the British Museum, and especially to that part of it wherein the deities of Polynesia look out from their cases in perennial surprise at the degenerate European visitors. If she had been asleep previously, she was wide enough awake now; but the glittering eyes were not directed at me. From the moment of our entering the room they focussed themselves on Sylvia’s face and there remained riveted, whereby the heightening of that young lady’s complexion, which our interview had produced, became markedly accentuated. It was to no purpose that I placed myself before the rigid figure and offered my hand. A paw was lifted automatically to mine, but the eyes remained fixed on Sylvia. “What did you say this gentleman’s name was!” the waxwork asked frigidly.

“This is Dr. Jardine,” was the reply.

“Oh, indeed. And who was the gentleman who called some three weeks ago?”

“Why, that was Dr. Jardine; you know it was.”

“So I thought, but my memory is not very reliable. And this is a Dr. Jardine, too? Very interesting. A medical family, apparently. But not much alike.”
I was beginning to explain my identity and the cause of my altered appearance, when Sylvia approached with a cup of tea and a carefully dissected muffin, which latter she thrust under the nose of the elder lady; who regarded it attentively and with a slight squat, owing to its nearness. "It's of no use, you know," said Sylvia, "for you to pretend that you don't know him, because I've told you all about the transformation—that is, all I know myself. Don't you think it's rather a clever make-up?"

"If," said Miss Vyne, "by 'make-up' you mean a disguise, I think it is highly successful. The beard is a most admirable imitation."

"Oh, the beard is his own; at least, I think it is."

I confirmed this statement, ignoring Polton's slight additions. "Indeed," said Miss Vyne. "Then the wig—it is a wig, I suppose?"

"No, of course it isn't," Sylvia replied.

"Then," said Miss Vyne, majestically, "perhaps you will explain to me what the disguise consists of."

"Well," said Sylvia, "there are the eyebrows. You can see that they have been completely altered in shape."

"If I had committed the former shape of the eyebrows to memory, as you appear to have done," said Miss Vyne. "I should, no doubt, observe the change. But I did not. It seems to me that the disguise which you told me about with such a flourish of trumpets just amounts to this; that Dr. Jardine has allowed his beard to grow. I find the reality quite disappointing."

"Do you?" said Sylvia. "But, at any rate, you didn't recognize him; so your disappointment doesn't count for much."

The old lady, being thus hoist with her own petard, relapsed into majestic silence; and Sylvia then renewed her demand for an account of my adventures. "We want to hear all about that objectionable person who has been shadowing you, and how you finally got rid of him. Your letters were rather sketchy and wanting in detail, so you have got to make up the deficiency now."

Thus commanded, I plunged into an exhaustive account of those events which I have already chronicled at length and which I need not refer to again, nor need I record the cross-examination to which I was subjected, since it elicited nothing that is not set forth in the preceding pages. When I had finished my recital, however, Miss Vyne, who had listened to it in silence, hitherto, put a question which I had some doubts about answering. "Have you or Dr. Thorndyke been able to discover who this inquisitive person is and what is his object in following you about?"

I hesitated. As to my own experiences, I had no secrets from these friends of mine, excepting those that related to the subjects of Thorndyke's investigations, But I must not come here and babble about what took place in the sacred precincts of my principal's chambers. "I think I may tell you," said I, "that Dr. Thorndyke has discovered the identity of this man and that he is not the person whom we suspected him to be. But I mustn't say any more, as the information came through professional channels and consequently is not mine to give."

"Of course you mustn't," said Sylvia; "though I don't mind admitting that you have put me on tenterhooks of curiosity. But I daresay you will be able to tell us everything later."

I agreed that I probably should; and the talk then turned into fresh channels.

The short winter day was running out apace. The daylight had long since gone, and I began, with infinite reluctance, to think of returning to my cage. Indeed, when I looked at my watch, I was horrified to see how the time had fled. "My word!" I exclaimed. "I must be off, or Thorndyke will be putting the sleuth-hounds of the law on my track. And I don't know what you will think of me for having stayed such an unconscionable time."

"It isn't a ceremonial visit," said Sylvia, as I rose and made my adieux to her aunt. "We should have liked you to stay much longer."

Here she paused suddenly, and, clasping her hands, gazed at me with an expression of dismay. "Good Heavens! Humphrey!" she exclaimed.

"Eh?" said Miss Vyne.

"I was addressing Dr. Jardine," Sylvia explained, in some confusion.

"I didn't suppose you were addressing me," was the withering reply.

"Do you know," said Sylvia, "that I haven't shown you those sketches, after all. You must see them. They were the special object of your visit."

This was perfectly untrue, and she knew it; but I did not think it worth while to contest the statement in Miss Vyne's presence. Accordingly I expressed the utmost eagerness to see the trumpery sketches, and the more so since I had understood that they were on view in the studio; which turned out to be the case. "It won't take a minute for you to see them," said Sylvia. "I'll just run up and light the gas; and you are not to come in until I tell you."

She preceded me up the stairs to the little room on the first floor in which she worked, and, when I had waited a few moments on the landing she summoned me to enter. "These are the sketches," said she, "that I have finished. You see, they are quite presentable now. I cleaned off the rough daubs of paint with a scraper and finished up with a soft rag dipped in
chloroform.”

I ran my eye over the framed sketches, which, now that the canvases were strained on stretchers and the disfiguring brush-strokes removed, were, as she had said, quite presentable, though too rough and unfinished to be attractive. “I daresay they are very interesting,” said I, “but they are only bare beginnings. I shouldn’t have thought them worth framing.”

“Not as pictures,” she agreed, “but as examples of a very curious technique, I find them most instructive. However, you haven’t seen the real gem of the collection. This is it, on the easel. Sit down, on the chair and say when you are ready. I’m going to give you a surprise.”

I seated myself on the chair opposite the easel, on which was a canvas with its back towards me. “Now,” said Sylvia. “Are you ready? One, two, three!”

She picked up the canvas, and, turning it round quickly, presented its face to me. I don’t know what I had expected—if I had expected anything; but certainly I was not in the least prepared for what I saw. The sketch had originally represented, very roughly, a dark mass of trees which occupied nearly the whole of the canvas; but of this the middle had been cleaned away, exposing an under painting. And this it was that filled me with such amazement that, after a first startled exclamation, I could do nothing but stare open-mouthed at the canvas; for, from the opening in the dark mass of foliage there looked out at me, distinct and unmistakable, the face of Mrs. Samway.

It was no illusion or chance resemblance. Rough as the painting was, the likeness was excellent. All the well-known features which made her so different from other women were there, though expressed by a mere dextrous turn of the knife; the jet-black, formally-parted hair, the clear, bright complexion, the pale, inscrutable eyes; all were there, even to the steady, penetrating expression that looked out at me from the canvas as if in silent recognition. As I sat staring at the picture with a surprise that almost amounted to awe, Sylvia looked at me a little blankly. “Well!” she exclaimed, at length, “I meant to give you a surprise, but—what is it, Humphrey? Do you know her?”

“Yes,” I replied, “and so do you. Don’t you remember a woman who looked in at you through the glass door of Robinson’s shop.”

“Do you mean that black and scarlet creature? I didn’t recognize her. I had no idea she was so handsome; for this is really a very beautiful face, though there is something about it that I don’t understand. Something—well eerie; rather uncanny and almost sinister. Don’t you think so?”

“I have always thought her a rather weird woman, but this is the weirdest appearance she has made. How on earth came her face on that canvas?”

“It is an odd coincidence. And yet I don’t know that it is. She may have been some relative of that rather eccentric artist, or even his wife. I don’t know why it shouldn’t be so.”

Neither did I. But the coincidence remained a very striking one, to me, at least; much more so than Sylvia realized; though what its significance might be—if it had any—I could not guess. Nor was there any opportunity to discuss it at the moment, for it was high time for me to be gone. “You will send me a telegram when you get back, to say that you have arrived home safely, won’t you,” said Sylvia, as we descended the stairs with our arms linked together. “Of course nothing is going to happen to you, but I can’t help feeling a little nervous. And you’ll go down to the station by the High Street, and keep to the main roads. That is a promise, isn’t it?”

I made the promise readily having decided previously to take every possible precaution, and, when I had wished Sylvia “good-bye” at some length, I proceeded to execute it; making my way down the well-populated High Street and keeping a bright look-out both there and at the station. Once more I was fortunate in the matter of trains, and, having taken a hansom from Broad Street to the Temple, was set down in King’s Bench Walk soon after half-past six.

As I approached our building, I looked up with some anxiety at the sitting-room windows; and when I saw them brightly lighted, a suspicion that Thorndyke had returned earlier than usual filled me with foreboding, I had had my dance and now I was going to pay the piper, and I did not much enjoy the prospect; in fact, as I ascended the stairs and took my latch-key from my pocket, I was as nervous as a school-boy who has been playing truant However, there was no escape unless I sneaked up to my bed-room, so, inserting the key into the lock, I turned it as boldly as I could, and entered.

-----------

XVIII — A VISITOR FROM THE STATES

AS I pushed open the inner door and entered the room I conceived the momentary hope of a reprieve from the wrath to come, for I found my two friends in what was evidently a business consultation with a stranger, and was on the point of backing out when Thorndyke stopped me. “Don’t run away, Howard,” said he. “There are no secrets being disclosed—at least, I think not. We have finished with your affairs, Mr. O’Donnell, haven’t we?”

“Yes, doctor,” was the answer; “you’ve run me dry with the exception—of your own little business.”

“Then, come in and sit down, Howard, and let me present you to Mr. O’Donnell, who is a famous American detective and has been telling us all sorts of wonderful things.”

Mr. O’Donnell paused in the act of returning a quantity of papers to a large attache case and offered his hand. “The
doctor,” he remarked, “is blowing his trumpet at the wrong end. I haven’t come here to give information but to get advice. But I guess I needn’t tell you that.”

“I hope that isn’t quite true,” said Thorndyke. “You spoke just now of my little business; haven’t you anything to tell me?”

“I have; but I fancy it isn’t what you wanted to hear. However, we’ll just have a look at your letter to Curtis and take your questions one by one. By the way, what made you write to Curtis?”

“I saw, when I inspected Maddock’s will at Somerset House, that he had left a small legacy to Curtis. Naturally, I inferred that Curtis knew him and could give me some account of him.”

“It struck you as a bit queer, I reckon, that he should be leaving a legacy to the head of an American detective agency.”

“The circumstance suggested possibilities,” Thorndyke admitted.

O’Donnell laughed. “I can guess what possibilities suggested themselves to you, if you knew Maddock. Your letter and the lawyer’s, announcing the legacy, came within a mail or two of one another. Curtis showed them both to me and we grinned. We took it for granted that the worthy testator was foxing. But we were wrong. And so are you, if that is what you thought.”

“You assumed that the will was not a genuine one?”

“Yes; we thought it was a fake, put up with the aid of some shyster to bluff us into giving up Mr. Maddock as deceased. So, as I had to come across about these other affairs, Curtis suggested that I should look into the matter. And a considerable surprise I got when I did; for the will is perfectly regular and so is everything else. That legacy was a sort of posthumous joke, I guess.”

“Then do I understand that Mr. Curtis was not really a friend of Maddock’s?”

O’Donnell chuckled. “Not exactly a friend, doctor,” said he. “He felt the warmest interest in Maddock’s welfare, but they weren’t what you might call bosom friends. The position was this: Curtis was the chief of our detective agency; Maddock was a gentleman whom he had been looking for and not finding for a matter of ten years. At last he found him; and then he lost him again; and this legacy, I take it, was a sort of playful hint to show which hole he’d gone down.”

“Was Maddock in hiding all that time?” asked Thorndyke.

“In hiding!” repeated O’Donnell. “Bless your innocent heart, doctor, he had a nice convenient studio in one of the best blocks in New York a couple of doors from our agency, and he used to send us cards for his private views. No, sir, our dear departed friend wasn’t the kind that lurks out of sight in cellars or garrets. It was Maddock, sure enough, that Curtis wanted, only he didn’t know it. But I guess I’m fogging you. I’d best answer the questions that you put to Curtis.

“First, do we know anything about Maddock? Yes, we do. But we didn’t know that his name was Maddock until a few months ago. Isaac Vandamme was the name we knew him by, and it seems that he had one or two other names that he used on occasion. We now know that the gay Isaac was a particularly versatile kind of crook, and a mighty uncommon kind, too, the Lord be praised; for, if there were many more like him we should have to raise our prices some. He wasn’t the kind of fool that make a million dollar coup and then goes on the razzle and drops it all. That sort of man is easy enough to deal with. When he’s loaded up with dollars everybody knows it, and he’s sure to be back in a week or two with empty pockets, ready for another scoop. Isaac wasn’t that sort. When he made a little pile, he invested his winnings like a sensible man and didn’t live beyond his means; and the only mystery to me is that, when he died, he didn’t leave more pickings. I see from his will—which I’ve had a look at—that the whole estate couldn’t have been above five thousand dollars. He had a lot more than that at one time.”

“He may have disposed of the bulk of his property by gift just before his death,” Jervis suggested.

“That’s possible,” agreed O’Donnell. “He’d escape the death dues that way. However, to return to his engaging little ways. His leading line was penmanship—forgery—and he did it to an absolute finish. He was the most expert penman that I have ever known. But where he had us all was that he didn’t only know how to write another man’s name; he knew when to write it. I reckon that the great bulk of his forgeries were never spotted at all, and, of the remainder very few got beyond the bare suspicion that they were forgeries. In the case of the few that were actually spotted as forgeries, his tracks were covered up so cleverly that no one could guess who the forger was.”

“And how did you come to suspect him eventually?” Thorndyke asked.

“Ah!” said O’Donnell. “There you are. Every crook—even the cleverest—has a strain of the fool in him. Isaac’s folly took the form of suspicion. He suspected us of suspecting him. We didn’t; but he thought we did, and then he started to dodge and make some false clues for us. That drew our attention to him. We looked into his record, traced his little wanderings and then we began to find things out. A nice collection there was, too, by the time we had worked a month or two at his biography; forgeries, false notes, and, at least two murders that had been a complete mystery to us all. We made ready to drop on Isaac, but, at that psychological moment, he disappeared. It looked, as if he had left the States, and, as we have no great affection for extradition cases, we let the matter rest, more or less, expecting that he would turn up again, sooner or later. And then came this lawyer’s letter and yours, announcing his decease. Of course Curtis and I thought he was at the old game; that it was a bit of that sort of extra caution that won’t let well alone. So, as I was coming over, I thought I’d just look into the affair as I told you; and, to my astonishment, I found everything perfectly regular; the will properly proved, the death certificate made out correctly and a second certificate signed by two doctors.”
“Did you go into the question of identity?” asked Thorndyke.

“Oh, yes. I called on one of the doctors, a man named Batson, and ascertained that it was all correct. Batson’s eyesight seemed to be none of the best, but he made it quite clear to me that his late patient was certainly our friend Isaac, or Maddock. So that’s the end of the case. And if you want to go into it any further you’ve got to deal with a little pile of bone ash, for our friend is not only dead; he’s cremated. That’s enough for us. We don’t follow our clients to the next world. We are not so thorough as you seem to be.”

“You are flattering me unduly,” said Thorndyke. “I’m not so thorough as that; but our clients, when they betake themselves to the happy hunting-ground, usually leave a few of their friends behind to continue their activities. Do you happen to know what Maddock’s original occupation was? Had he any profession?”

“He was originally an engraver, and a very skilful engraver, too, I understand. That was what made him so handy in working the flash note racket. Then he went on the stage for a time, and didn’t do badly at that; but I fancy he was more clever at making-up and mimicry than at acting in the dramatic sense. For the last ten years or so he was practising as a painter—chiefly of landscape, though he could do a figure subject or a portrait at a pinch. I don’t fancy he sold much, or made any great efforts to sell his work. He liked painting and the art covered his real industries, for he used to tour about in search of subjects and so open up fresh ground for the little operations that actually produced his income.”

“Was his work of any considerable merit?” Thorndyke asked.

“Well, in a way, yes. It was rather in the American taste, though Maddock was really an Englishman. Our taste, as you know, runs to technical smartness and novelty of handling; and Maddock’s work was very peculiar and remarkably smart and slick in handling. He used the knife more than the brush, and he used it uncommonly cleverly. In fact, he was unusually skilful in many ways; and that’s the really surprising thing about him, when one considers his extraordinary-looking paws.”

“What was there peculiar about his hands?” asked Thorndyke. “Were they noticeably clumsy in appearance?”

“Clumsy!” exclaimed O’Donnell. “They were more than that. They were positively deformed. A monkey’s hands would be delicate compared with Maddock’s. They were short and thick like the paws of an animal. There’s some jaw-twisting name for the deformity that he suffered from; bronchodaotilious, or something like that.”

“Brachydactylous,” suggested Thorndyke.

“That’s the word; and I daresay you know the sort of paw I mean. It didn’t look a very likely hand for a first-class penman and engraver of flash notes, but you can’t always judge by appearances. And now as to your other questions: You ask what Maddock was like in appearance. I can only give you the description which I gave to Batson and which he recognized at once.”

“Had he noticed the peculiarity of the hands?” enquired Thorndyke.

“Yes. I asked him about it and he remembered having observed it when he was attending Maddock. Well, then, our friend was about five feet nine in height, fairly broad and decidedly strong, of a medium complexion with grey eyes and darkish brown hair. That’s all I can tell you about him.”

“You haven’t got his finger-prints, I suppose?”

“No. He was never in prison, so we had no chance of getting them.”

“Was he married?”

“He had been; but some years ago his wife divorced him, or he divorced her. Latterly he has lived as a bachelor.”

“There is nothing else that you can think of as throwing light on his personality or explaining his actions?”

“Nothing at all, doctor. I’ve told you all I know about him, and I only hope the information may be more useful than it looks to me.”

“Thank you,” said Thorndyke; “your information is not only useful; I expect to find it quite valuable. Reasoning, you know, Mr. O’Donnell,” he continued, “is somewhat like building an arch. On a supporting mould, the builder lays a number of shaped stones, or voussoirs; but until all the voussoirs are there, it is a mere collection of stones, incapable of bearing its own weight. Then you drop the last voussoir—the keystone—into its place, and the arch is complete; and now you may take away the supports, for it will not only bear its own weight, but carry a heavy superstructure.”

“That’s so, doctor,” said O’Donnell. “But, if I may ask, is this all gratuitous wisdom or has any particular bearing?”

“It has this bearing,” replied Thorndyke. “I have myself been, for some time past, engaged, metaphorically, in the building of an arch. When you came here to-night, it was but a collection of shaped and adjusted stones, supported from without. With your kind aid, I have just dropped the keystone into its place. That is what I mean.”

The American thoughtfully arranged the papers in his case, casting an occasional speculative glance at Thorndyke. “I’d like to know,” he said presently, “what it was that I told you. It doesn’t seem to me that I have produced any startling novelties. However, I know it’s no use trying to squeeze you, so I’ll get back to my hotel and have a chew at what you’ve told me.”

He shook hands with us all round, and, when Thorndyke had let him out, we heard him bustling downstairs and away up
King's Bench Walk towards Mitre Court.

For a minute or more after his departure none of us spoke. Thorndyke was apparently ruminating on his newly-acquired information, and Jervis and I on the statement that had so naturally aroused the detective's curiosity.

At length Jervis opened the inevitable debate. "I begin to see a glimmer of daylight through the case of Septimus Maddock, deceased," said he; "but it is only a glimmer. Whereas, from what you said to O'Donnell, I gather that you have the case quite complete."

"Hardly that, Jervis," was the reply. "I spoke metaphorically, and metaphors are sometimes misleading. Perhaps I overstated the case; so we will drop metaphor and state the position literally in terms of good, plain, schoolboy logic. It is this: we had certain facts presented to us in connection with Maddock's death. For instance, we observed that the cause of death was obscure, that the body was utterly destroyed by cremation and that Jardine, who was an unofficial witness to some of the formalities, was subsequently pursued by some unknown person with the unmistakable purpose of murdering him. Those were some of the observed facts; and the explanation of those facts was the problem submitted to us; that is to say, we had to connect those facts and supply others by deduction and research, so that they should form a coherent and intelligible sequence, of which the motive for murdering Jardine should form a part.

"Having observed and examined our facts, we next propose a hypothesis which shall explain them. In this case it would naturally take the form of a hypothetical reconstruction of the circumstances of Maddock's death. That hypothesis must, of course, be in complete agreement with all the facts known to us, including the attempts to murder Jardine. Then, having invented a hypothesis which fits our facts completely, the next stage is to verify it. If the circumstances of Maddock's death were such as we have assumed, certain antecedent events must have occurred and certain conditions must have existed. We make the necessary inquiries and investigations, and we find that those events had actually occurred and those conditions had actually existed. Then it is probable that our hypothesis is correct, particularly if our researches have brought to light nothing that disagrees with it.

"With our new facts we can probably amplify our hypothesis; reconstruct it in greater detail; and then we have to test and verify it afresh in its amplified and detailed form. And if such new tests still yield an affirmative result, the confirmation of the hypothesis becomes overwhelmingly strong. It is, however, still only hypothesis. But perhaps we light on some final test which is capable of yielding a definite answer, yes or no. If we apply that test—the 'Crucial Experiment,' of the logicians—and obtain an affirmative result, our inquiry is at an end. It has passed out of the region of hypothesis into that of demonstrative proof."

"And are we to understand," asked Jervis, "that you have brought Maddock's case to the stage of complete demonstration?"

"No," answered Thorndyke. "I am still in the stage of hypothesis; and when O'Donnell came here to-night there were two points which I had been unable to verify. But with his aid I have been able to verify them both, and I now have a complete hypothesis of the case which has been tested exhaustively and has answered to every test. All that remains to be done is to apply the touchstone of the final experiment."

"I suppose," said Jervis, "you have obtained a good many new facts in the course of your investigations?"

"Not a great many," replied Thorndyke; "and what new data I have obtained, I have, for the most part, communicated to you and Jardine. I assure you, Jervis, that if you would only concentrate your attention on the case, you have ample material for a most convincing and complete elucidation of it."

Jervis looked at me with a wry smile. "Now Jardine-Howard," said he; "why don't you brush up your wits and tell us exactly what happened to the late Mr. Maddock and why some person unknown is so keen on your vile body. You have all the facts, you know."

"So you tell me," I retorted; "but this case of yours reminds me of those elaborate picture puzzles that used to weary my juvenile brain. You had a hatful of irregular-shaped pieces which, if you fitted them together, made a picture. Only the beggars wouldn't fit together."

"A very apt comparison," said Thorndyke. "You put the pieces together, and, if they made no intelligible part of a picture, you knew you were wrong, no matter how well they seemed to fit. On the other hand, if they seemed to make parts of a picture you had to verify the result by finding pieces of the exact shape and size of the empty spaces. That is what I have been doing in this case; trying the data together and watching to see if they made the expected picture. As I have told you, O'Donnell's visit found me with the picture entire save for two empty spaces of a particular shape and size; and from him I obtained two pieces that dropped neatly into those spaces and made the picture complete. All I have to do now is to see if the picture is a true representation or only a consistent work of imagination."

"I take it that you have worked the case out in pretty full detail," said Jervis.

"Yes. If the final verification is successful I shall be able to tell you exactly what happened in Maddock's house, what was the cause of death—and I may say that it was not that given in the certificates—who the person is who has been pursuing Jardine and what is his motive, together with a number of other very curious items of information. And the mention of that person reminds me that our friend has been disporting himself in public, contrary to advice and to what I thought was a definite understanding."

"But surely," I said, "it doesn't matter now. We have given that spy chappie the slip, and, even if he hasn't given up the
chase as hopeless, we know that he is quite harmless.”

“Harmless!” exclaimed Thorndyke. “Why, my dear fellow, he was your guardian angel. Didn’t you realize that from Father Humperdinck’s statement? He shadowed you so closely that no attack on you was possible; in fact, he actually caught a rap on the head that was apparently meant for you. You were infinitely safer with him at your heels than alone.”

“But we’ve given the other fellow the slip, too,” I urged.

“We mustn’t take that for granted,” said Thorndyke. “The French detective, you remember, came on the scene quite recently, whereas the other man has been with us from the beginning. He probably saw Jervis and me enter the mineral water works on the night of the fire, for he was certainly there; and he may even have followed us home to ascertain who we were. There are several ways in which he could have connected you with us and traced you here; so I must urge you most strongly not to venture out of the precincts of the Temple for the next few days, in fact, it would be much wiser to keep indoors altogether. It will be only a matter of days unless I get a quite unexpected set back, for I hope to have the case finally completed in less than a week; and when I do, I shall take such action as will give your friend some occupation other than shadowing you.”

“Very well,” I said. “I will promise not to attempt again to escape from custody. But, all the same, my little jaunt to-day has not been entirely without result. I have picked up a new fact, and a rather curious one, I think. What should you say if I suggested that Mrs. Samway was the wife of that eccentric artist who used to paint on the Heath? The man, I mean, who always worked in gloves?”

“T have assumed that she was in some such relation to him,” replied Thorndyke, “but I should like to hear the evidence.”

“Mrs. Samway,” Jervis said in a reflective tone; “isn’t that the handsome uncanny-looking lady with the mongoose eyes, who reminded me of Lucrezia Borgia?”

“That is the lady. Well, I met with a portrait of her to-day which was evidently the work of the man with the gloves,” and here I gave them a description of the portrait and an account of the odd way in which it had been disinterred from the landscape that had been painted over it, to which they both listened with close attention.

“It’s a queer incident,” said Thorndyke, “and quite dramatic. If one were inclined to be superstitious one might imagine some invisible agency uncovering the tracks that have been so carefully hidden and working unseen in the interests of justice. But haven’t you rather jumped to your conclusion? The existence of the portrait establishes a connection, but not necessarily that of husband and wife.”

“I only suggested the relationship; but it seemed a likely one as the portrait had been painted over and thrown into the rubbish box.”

Jervis laughed sardonically; and even Thorndyke’s impassive face relaxed into a smile. “Our young friend,” said the former, “doesn’t take as favourable a view of the married state as one might expect from a gay Lothario who breaks out of his cage to go a-philandering. But we’ll overlook that, in consideration of the very interesting information that he has brought back with him. Not that it conveys very much to me. It is obviously a new piece to fit into our puzzle, but I’m hanged if I see, at the moment, any suitable space to drop it into.”

“I think,” said Thorndyke, “that if you consider the picture as a whole, you will soon find a vacant space. And while you are considering it, I will just send off a letter, and then we had better adjourn this discussion. We have to catch the early train to Maidstone to-morrow, and that, I hope, will be the last time. Our case ought to be disposed of by the afternoon.”

He seated himself at the writing-table and wrote his letter, while Jervis stared into the fire with a cogitative frown. When the letter was sealed and addressed, Thorndyke laid it on the table while he went to the lobby to put on his hat and coat, and, glancing at it almost unconsciously, I noted that the envelope was of foolscap size and was addressed to the Home Office, Whitehall. The name of the addressee escaped me, for, suddenly realizing the impropriety of thus inspecting another man’s letter, I looked away hastily; but even then when Thorndyke had taken it away to the post, I found myself speculating vaguely on the nature of the communication and wondering if it had any relation to the mysterious and intricate case of Septimus Maddock.

THE resigned composure with which I accepted Thorndyke’s sentence of confinement within doors was not entirely attributable to discretion or native virtue. My resolution to follow scrupulously my principal’s very pointed advice was somewhat like the ascetic resolutions formed by the gourmet as he rises replete from the banquet table; for, just as the latter is in a peculiarly favourable condition for the unmoved contemplation of a—temporary—abstinence from food, so I, having enjoyed my little dissipation, could now contemplate with fortitude a brief period of retirement. Moreover, the weather was in my favour, being—as Polton reported, when he returned, blue-nosed and powdered with snow, with a fresh supply of tobacco for me—bitterly cold, with a threatening of smoky fog from the east.

Under these circumstances it was no great hardship to sit in a roomy armchair with my slippered feet on the kerb and read and meditate as I basked in the warmth of a glowing fire; though, to be sure, my reading was perfunctory enough, for the treatise of “The Surface Markings of the Human Body,” admirable as it was, competed on very unfavourable terms with other claimants to my attention. In truth, I had plenty to think about even if I went no farther for matter than to the events

XIX — Tenebrae
of the previous day. There was my visit to Sylvia, for instance. I had not said much to her, but what I had said had pledged me to a life-long companionship; which was a solemn thing to reflect upon even though I looked forward to the fulfillment of that pledge with nothing but hopeful pleasure. The dice were thrown. Of course they would turn up sixes, every one; but still—the dice were thrown.

From my own strictly personal affairs my thoughts rambled by an easy transition to the singular episode of the buried portrait, and thence to the subject of that strange palimpsest. Viewed by the light of Mr. O'Donnell's revelations, Mrs. Samway's position was not all that could have been desired. She and her husband had unquestionably been closely associated with Maddock; but Maddock was, it seemed, a habitual criminal. Could this fact have been known to the Samways? Or was it that the cunning forger and swindler had sheltered himself behind their respectability. It was impossible for me to say.

Then there was the strange and perplexing case of the man Maddock, himself. I could make nothing of that, had not, indeed, been aware that there had been a "case", until Thorndyke's investigations had put me in possession of the fact. And even now I could see nothing on which to base any suspicion, apart from the attempts on my life, which we were assuming to be in some way connected with events that had occurred in Maddock's house. The cause of death was apparently not "Morbus Cordis"; which might easily enough be, seeing that the diagnosis of heart disease was a mere guess on Batson's part. But if not Morbus Cordis, what was it? Thorndyke apparently knew, and seemed to hint that it was something other than ordinary disease. Could there have been foul play? And, if so, were the Samways involved in it in any way? It seemed incredible, for had not Maddock himself suspected that he was in a dangerous state of health. There was certainly one possibility which I considered with a good deal of distaste; namely, that Maddock had been in a hypochondriacal state and that the Samways had taken advantage of his gloomy views as to his health to administer poison. The thing was actually possible; but I did not entertain it; for, even if one assumed that poison had been administered, at any rate, the cremation of the body was not designed to hide the traces of the crime. The Samways had nothing to do with that; the cremation had been adopted in preference to burial by Maddock's own wish.

So my thoughts flitted from topic to topic, with occasional interludes of Surface Markings, through the lazy forenoon until Polton came to lay my solitary luncheon. And after this little break in the comfortable monotony, another spell of meditative idleness set in. Polton was busy upstairs in the laboratory with some photographic copying operations and I was disposed to wander up and look on; but my small friend politely but very firmly vetoed any such proceeding. On some other occasion he would be delighted to show me the working of the great copying camera, but, just now, he had a big job in hand, and, as he was working against time, he would prefer to be alone. He even suggested that I might attend to any stray callers and make my own tea on the gas-ring so as to avoid interrupting his work; and when I had agreed to relieve him to this extent, he thanked me profusely and retired and I saw no more of him.

For some time after his departure, I stood at the window looking out across the wide space at Paper Buildings and the end of Crown Office Bow. It was a wretched afternoon. The yellow, turbid sky brooded close down upon the house roofs and grew darker and more brown moment by moment, as if the invisible sun had given the day up in despair and gone home early.

A comfortless powdering of snow filtered down at intervals and melted on the pavements, along which depressed wayfarers hurried with their coat collars turned up and their hands thrust deep into their pockets. I watched them commiseratingly, reflecting on the superior advantages of being within doors and forbidden to go out; and then, having flung another scoopful of coal on the fire, I betook myself once more to the armchair, the Surface Markings and idle meditation.

It was some time past four when my reflective browsings had begun to proceed in the direction of the teakettle, that I heard a light footsteps on the landing as of someone wearing goloshes. Then a letter dropped softly into the box, and, as I instantly pushed back my chair to rise, the footsteps retreated. I crossed the room quickly and opened the door; but the messenger had already disappeared down the dark staircase, and had gone so silently on his rubber soles that, though I listened attentively, I could hear no sound from below.

Having closed the door, I extracted the letter from the box and took it over to the window to examine it, when I was not a little surprised to find that it was addressed to W. M. Howard, Esq. This was the first communication that I had received in my borrowed name, and my surprise at its arrival was not unreasonable, for, of the few persons who knew me by that name, none—with the exception, perhaps, of Mr. Marchmont—was in the least likely to write to me.

But, if the address on the envelope had surprised me, the letter itself surprised me a good deal more; for though the writer was quite unknown to me, even by name, he seemed to be in possession of certain information concerning me which I had supposed to be the exclusive property of Thorndyke, Jervis, Polton and myself. It bore the address, 29, Fig-tree Court, Inner Temple, and ran thus:

DEAR SIR,

I am taking the liberty of writing to you to ask for your assistance as I happen to know that my friends, Drs. Thorndyke and Jervis, are away at Maidstone and not available at the moment, and I understand that you have some acquaintance with medical technicalities.

The circumstances are these. At half-past five today I shall be meeting a solicitor to advise as to action in
respect of a case in which I am retained; and the decision as to our action will be vitally affected by a certain issue on which I am not competent to form an opinion for lack of medical knowledge. If Dr. Thorndyke had been within reach I should have taken his opinion; as he is not, it occurred to me to ask if you would fill his place on this occasion, it being, of course, understood that the usual fee of five guineas will be paid by the solicitor.

If you should be unable to come to the consultation, do not trouble to reply, as I am now going out and shall not be returning until five-thirty, the time of the appointment. I am,

Yours faithfully,

ARTHUR COURTLAND.

The contents of this letter, as I have said, surprised me more than a little. How, in the name of all that was wonderful, had this stranger, whose very name was unknown to me, come to be aware that I had any knowledge of medicine? Not from Thorndyke, I felt perfectly sure; nor from Jervis, who, notwithstanding a certain flippant facetiousness of manner, was really an extremely cautious and judicious man. Could it be that my principal was overseen in his trusted laboratory assistant? Was it conceivable that the suave and discreet Polton had moments of leakiness, when, in unofficial talk outside, he let drop the secrets of his employer's unbounded confidence had made him the repository? I could not believe it. Not only did Polton appear to be the very soul of discretion; there was Thorndyke himself; he was not the man to give his confidence to anyone until after the most exhaustive proof of the safety of so giving it. Nor was he a man who was likely to be deceived; for nothing escaped his observation, and nothing that he observed was passed over without careful consideration.

My lethargy having been shaken off, I addressed myself to the task of preparing tea; and, as I listened to the homely crescendo of the kettle's song, I turned the matter over in all its bearings. By some means this Mr. Courtland had become aware that I was either a doctor or a medical student. But by what means? Was it possible that he had merely inferred from the circumstance of my being associated with Thorndyke that I was of the same profession? That was just barely conceivable; but, if he had, then, as Jervis had said of Father Humperdinck, he must be "a devil at guessing."

As I made the tea and subsequently consumed it, I continued to ruminate on the contents of that singular letter. No answer to it was required. Then what was Mr. Courtland going to do if I did not turn up? He admitted that the issue, which seemed to be an important one, was beyond him, and yet he had to give an answer to the solicitor. And he was prepared to pay five guineas for the advice of a man of whom he—presumably—knew nothing. That was odd. In fact, the whole tone of the letter, with its inconsistent mixture of urgency and casual trusting to chance, seemed irreconcilable with the care and method that one expects from a professional man.

And there was another point. The time of the consultation was half-past five. Now within an hour of that time Thorndyke would be back—or even sooner if he came by the earlier train as he had done on the previous day—as Mr. Courtland must have known, since he knew whither my principal had gone, and he must have often attended assizes himself. Could he not have waited an hour? And again; had this business been sprung upon him so suddenly that he had had no time to get Thorndyke's opinion? And, yet again, why had it been written at all, instead of dropping in at our chambers with the solicitor, as was so commonly done by Thorndyke's clients?

All of which were curious and puzzling questions which I put to myself, one by one, and had to dismiss unanswered. And then I came to the practical question, to which I had to find an answer, and which was: Could I, under the existing circumstances, accede to Mr. Courtland's request? To go outside the precincts of the Inn was, I recognized, absolutely forbidden; but I had given no actual promise to remain in our chambers, nor had I been positively forbidden to leave them. Thorndyke had advised me to remain indoors, and his advice had been given so pointedly and with so evident a desire that it should be followed that I had not hitherto even thought of leaving our premises. But this was an unforeseen contingency; and the question was, did it alter my position in regard to Thorndyke's advice?

I think I have never been so undecided in my life. On the one hand, I was strongly tempted to keep the appointment. The prospect of triumphantly handing to Thorndyke a five-guinea fee which I had earned as his deputy appealed to me with almost irresistible force. On the hand, my knowledge of Thorndyke did not support this appeal. I knew him to be a man to whom a principle was much more important than any chance benefit gained by its abandonment, and my inner consciousness told me that he would be better pleased by a strict adherence to our understanding than by the increment of five guineas.

So my thoughts oscillated, to and fro, now compelling me to risk it and earn the fee, and now urging me to keep to the letter of my instructions; and, meanwhile, the time ran on and the hour of the consultation approached What decision I should have reached at the end, it is impossible to say. As matters turned out, I never reached any decision at all, for, just as the Treasury clock struck a quarter past five, I heard a light, quick step on our landing and immediately after a soft but hurried knock at the door.

I strode quickly across the room and threw the door open. And then I started back with an exclamation of astonishment. For the visitor—who stood full in the light of the landing-lamp—was a woman; and the woman was Mrs. Samway.

As I stood gazing at her in amazement, she slipped past me into the room and softly shut the door. And then I saw very plainly that there was something amiss, for she was as pale as death, and had a dreadful, frightened, hunted look which
later. Will you try, Humphrey?"

"You needn't mind. I should hardly have known you if I had not expected—"

She stopped short, and, casting a strange, scared glance over her shoulder at the dark windows, whispered: "Can they see in? Can anyone see us from outside?"

"I shouldn't think so," I replied; but, nevertheless, I stepped over to the windows and drew the curtains. "That looks more comfortable, at any rate," said I. "And now tell me how in the name of wonder you knew I was here."

She grasped both my wrists and looked earnestly-almost fiercely-into my eyes. "Ask me no questions!" she exclaimed. "Ask me nothing! But listen. I have come here for a purpose. Has a letter been left here for you?"

"Yes," I replied.

"Ask you to go to a place in Fig-tree Court?"

"Good God!" I exclaimed. "How on earth—"

She shook my wrists impatiently in her strong grasp. "Answer me!" she exclaimed, "answer me!"

"Yes," I replied. "I was to go there at half-past five."

Again her strong grasp tightened on my wrists. "Humphrey," she said, in a low, earnest voice, "you are not to go. Do you hear me? You are not to go." And then, as I seemed to hesitate, she continued more urgently; "I ask you—I beg you to promise me that you won't."

I gazed at her in sheer amazement; but some instinct, some faint glimmer of understanding, restrained me from asking for any explanation. "Very well," I said. "I won't go if you say I'm not to."

"That is a promise?"

"Yes, it's a promise. Besides, it's nearly half-past already, so if I don't go now, the appointment falls through."

"And you won't go outside these rooms to-night. Promise me that, too."

"If I don't go to this lawyer, I shan't go out at all."

"And to-morrow, too. Give me your word that you won't let any sort of pretext draw you out of these rooms to-morrow, or the next day, or, in fact, until Dr. Thorndyke says you may."

For a few moments I was literally struck dumb with astonishment at her last words, and could do nothing but gaze at her in astounded silence. At length, recovering myself a little, I exclaimed: "My dear Mrs. Samway—", but she interrupted me.

"Don't call me by that horrible name! Give me my own name, Letitia; or," she added, a little shyly and in a soft, coaxing tone, "call me Lettie. Won't you, Humphrey, just for this once? You needn't mind. You wouldn't if you knew. I should like, when I think of my friend—the only friend that I care for—to remember that he called me by my own name when he said good-bye. You'll think me silly and sentimental, but you needn't mind indulging me just once. It's the last time."

"The last time!" I repeated. "What do you mean by that, Lettie, and by speaking of our saying good-bye? Are you going away?"

"Yes, I am going away. I don't suppose you will ever see me again. I am going out of your life."

"Not out of my life, Lettie. We are always friends, even if we never see one another."

"Are we?" she said, looking up at me earnestly. "Perhaps it is so; but still, this is good-bye. I ought to say it and go; but O God!" she exclaimed with sudden passion, "I don't want to go—away from you, Humphrey, out into the cold and the dark!"

She buried her face against my shoulder, and I could feel that she was sobbing though she uttered no sound.

It was a dreadful situation. Instinctively certain though I was that her grief had a real and tragic basis, I could offer no word of comfort. For what was there to say? She was going, clearly, to a life of wretchedness without hope of any relief or change and without a single friend to cheer her loneliness. That much I could guess, vaguely and dimly. But it was enough. And it wrung my heart to witness her passion of grief and to be able to offer no more than a pressure of the hand.

After a few seconds she raised her head and looked in my face, with the tears still clinging to her lashes. "Humphrey," she said, laying her hands on my shoulders, "I have a few last words to say to you, and then I must go. Listen to me, dearest friend, and remember what I say. When I am gone, people will tell you things and you will come to know others. People will say that I am a wicked woman, which is true enough, God knows. But if they say that I have done or connived at wretchedness against you, try to believe that it was not as it seemed, and to forgive me for what I have done amiss. And say to yourself, 'This wicked woman would have willingly given her heart's blood for me.' Say that, Humphrey. It is true. I would gladly give my life to make you safe and happy. And try to think kindly of me in the evil report that will reach you sooner or later. Will you try, Humphrey?"
"My dear Lettie," I said, "we are friends, now and always. Nothing that I hear shall alter that."

"I believe you," she said, "and I thank you from my heart. And now I must go—I must go; and it's good-bye—good-bye, Humphrey, for the very last time."

She passed her arms around my neck and pressed her wet cheek to mine; then she kissed me, and, turning away abruptly, walked across to the door and opened it. On the landing, in the light of the lamp, she turned once more; and I saw that the hot blush that had risen to her cheek as she kissed me, had faded already into a deathly pallor, and that the dreadful, frightened, hunted look had come back into her face. She stood for a moment with her finger raised warily and whispered: "Good-bye, dear, good-bye! Shut the door now and shut it quietly," and then she passed into the opening of the dark staircase.

I closed the door softly and turned away towards the window; and, as I did so, I heard her stumble slightly on the stair a short way down and utter a little startled cry. I was nearly going out to her, and did, in fact, stand a moment or two listening; but, as I heard nothing more, I moved over to the window, and, drawing back the curtain, looked down on our doorstep to see her go out. My mind was in a whirl of confused emotions. Profound pity for this lonely, unhappy, warm-hearted woman contended with amazement at the revelation of her manifest connection with the mystery that surrounded me; and I stood bewildered by the tumult of incoherent thought, grasping the curtain and looking down on the great square stone that I might, at least, catch a farewell glance at this poor soul who was passing so unwillingly out of my life.

The seconds passed. A man came out of our entry and, turning to the left, walked at a rapid pace towards the Tudor Street gate. Still she did not appear. Perhaps she had heard him on the stairs and was waiting to pass out unnoticed. But yet it was strange.

Nearly a minute had elapsed since she started to descend the stairs. Could I have missed her? It seemed impossible, since I had come to the window almost immediately. A vague uneasiness began to take possession of me. I recalled her white face and frightened eyes, and as I stared down at the door-step with growing anxiety, I found myself listening—listening nervously for I knew not what.

Suddenly I caught a sound—faint and vague, but certainly a sound. And it seemed to come from the staircase. In a moment I had the door open and was stealing on tip-toe out on the landing. The house was profoundly silent. No murmur even penetrated from the distant streets. I crept across the landing, breathing softly and listening. And then, from the stillness below, but near at hand came a faint, whispering sigh or moan. Instantly I sprang forward, all of a tremble and darted down the stairs.

At the first turn I saw, projecting round the angle, a hand—a woman's hand, plump and shapely and white as marble. With a gasp of terror I flew round the turn of the staircase and—

God in Heaven! She was there! Huddled limply in the angle, her head resting against the baluster and one hand spread out on her bosom, she lay so still that she might have been dead but for the shallow rise and fall of her breast and the wide-staring eyes that turned to me with such dreadful appeal, I stooped over her and spoke her name, and it seemed to me that a pitiful little smile trembled for a moment on the bloodless lips, but she made no answer beyond a faint, broken sigh, and it was only when she moved her hand slightly that the overwhelming horror of the reality burst upon me. Then when I saw the crimson stain upon her fingers and upon the bosom of her dress, the meaning of that horrible pallor, the sharpening features and strange, pinched expression flashed upon me with a shock that seemed to arrest the very blood at my heart. Yet, stunned as I was, I realized instantly that human skill could avail her nothing; that I could do nought for her but raise her from the sharp edge of the stair and rest her head on my arm. And so I held her, whispering endearments brokenly, and looking as well as I might through the blinding tears into those inscrutable eyes, that gazed up at me, no longer with that stare of horror but with a vague and childlike wonder. And, even as I looked, the change came in an instant. The wide eye-lids relaxed and drooped, the eyes grew filmy and sightless, the hand slipped from her breast and dropped with a thud on the stair, and the supple body in my arms shrank of a sudden with the horrible limpness of death.

Up to this point my recollection is clear, even vivid, but of what followed I have only a dim and confused impression. The awfulness—the unbelievable horror of this frightful thing that had happened left me so dazed and numb that I recall but vaguely the passage of time of what went on around me in this terrible dream from which there was to be no waking. Dimly I recollect kneeling by her side on the silent staircase—but how long I know not—holding her poor body in my arms and gazing incredulously at the marble-white face—now with its drowsy lids and parted lips, grown suddenly girlish and fragile —while the hot tears dropped down on her dress; choking with grief and horror and a fury of hate for the foul wretch who had done this appalling thing, and who was now far away out of reach. I see—dimly still—the livid marks of accused fingers lingering yet on the whiteness around the mouth to tell me why no cry from her had reached me, and the dreadful, red-edged cut in the bodice mutely demanding vengeance from God and man.

And then of a sudden the silence is shattered by rushing feet and the clamour of voices. Someone—it is Jervis—leads me forcibly away to our room and places me in a chair by the table. Presently I see her lying on our sofa, drowsy-eyed, peaceful, like a marble figure on a tomb. And I see Thornyke, with a strange, coppery flush and something grim and terrible in the set calm of his face, showing the letter, which I had left on the table, to a tall stranger, who hurries from the room. Anon come two constables with heads uncovered carrying a stretcher. I see her laid on the sordid bier and reverently covered. The dread procession moves out through the doorway, the door is shut after it, and so, in dreadful fulfillment of her words, she passed out of my life.
XX — THE HUE AND CRY

THE silence of the room remained unbroken for a quite considerable time after the two bearers had passed out with their dreadful burden. My two friends sat apart and, with a tact of which I was gratefully sensible, left me quietly undisturbed by banal words of consolation, to sustain the first shock of grief and horror and get my emotion under control. Still dazed and half-incredulous, I sat with my elbows on the table and my teeth clenched hard, looking dreamily across the room, half unconsciously observing my two friends as they silently examined the fatal letter. I saw Thorndyke rise softly and take a small bottle from a cabinet, and watched him incuriously as he sprinkled on the paper some of the dark-coloured powder that it contained. Then I saw him blow the powder from the surface of the paper into the fire and scan the letter closely through a lens. And still no word was spoken. Only once, when Jervis, in crossing the room, let his hand rest for a moment on my shoulder, did any communication pass between us; and that silent touch told me unobtrusively—if it were needful to tell me—how well he understood my grief for the woman who had walked open-eyed into the valley of the shadow, had offered her heart’s blood that I might pass unscathed.

In about a quarter of an hour the tall stranger returned, bringing with him an atmosphere of bustling activity that at once dispelled the gloomy silence. His busy presence and brisk, matter-of-fact speech, though distressing to me at the moment, served as a distraction and brought me out of my painful reverie to the grim realities of this appalling catastrophe. “You were quite right, sir,” said he. “The chambers were an empty set. Mr. Courtland left them about six weeks ago, so they tell me at the office. I’ve looked them over carefully, and I think it is pretty clear what this man meant to do.”

“Did you go in?” asked Thorndyke.

“Yes. Mr. Polton went with me and picked the lock, so I was able to go right through the rooms. And it is evident that this villain was not acting on the spur of the moment. He’d made a very neat plan, and I should say that it was pretty near to coming off. He had selected his chambers with remarkable judgment, and uncommonly well suited they were to his purpose. In the first place, they were the top set—nothing above them; no chance strangers passing up or down; and they were the only set on that landing. Then some previous tenant had made a little trap or grille in the outer door, a little hole about six inches square with a sliding cover on the inside. That was the attraction, I fancy. The landing lamp was alight—he must have lighted it himself, as the landing was out of use—and I fancy he meant to watch through the grille for your friend to come and shoot him as he knocked at the door.”

“That would be taking more risk than he usually did,” said Thorndyke.

“You mean that the report of the shot would have been heard. Perhaps it might. But these modern, small-bore, repeating pistols make very little noise, though they are uncommonly deadly, especially if you open the nose of the bullets.”

“But,” objected Thorndyke, “if he had been heard, there he would have been, boxed up in the chambers with no means of escape.”

Our acquaintance shook his head. “No,” said he; “that’s just what he wouldn’t have been, and there is where he had planned the affair so neatly. These chambers are a double set. They have a second entrance that opens on the staircase of the next house. You see the idea. When he’s fired his shot and made sure that it was all right—or all wrong, if you prefer it—he would just have slipped through to the other entrance, let himself out, shut the door quietly and walked down the stairs. Then, if the shot had been heard, there was he, coming out of the next house to join the crowd and see what was the matter. It was a clever scheme, and, as I say, it might very well have come off if this poor young lady hadn’t given it away. So that’s all about the chambers; and now”—here he cast a glance in my direction—I must ask for a few particulars.” He produced a large, black-covered notebook and, opening it on the table, looked at me inquiringly.

“This,” said Thorndyke, “is Mr. Superintendent Miller of the Criminal Investigation Department. He has charge of this case, so you must tell him exactly what happened. And try, Jardine, to be as clear and circumstantial as possible.”

The Superintendent looked up sharply. “I had an impression,” said he, “that this gentleman’s name was Howard.”

“He has used the name of Howard since he has been staying here, for reasons which no longer exist but which I will explain to you later. His name is Humphrey Jardine, and he is a bachelor of medicine.”

Mr. Miller entered these particulars in his book and then said: “I suppose it is not necessary to ask if you were actually present when this poor lady was murdered?”

“No, I was not.”

“And I presume you did not see the murderer?”

“I saw a man, whom I believe to have been the murderer, come out of our entry and walk quickly towards the Tudor Street Gate. But I can give you no description of him. I saw him from the window and by the light of the entry lamp.”

The Superintendent wrote down my answer and reflected for a few moments. “Perhaps,” said he, “you had better just give us an account of what happened and we can ask you any questions afterwards. It’s very painful for you, I know, but it has to be, as you will understand.”

It was more than painful; it was harrowing to reconstitute that hideous tragedy, step by step, with the knowledge that the poor murdered corpse was still warm. But it had to be, and I did it, haltingly, indeed, and with many a pause to command
my voice; but in the end, I gave the superintendent a full description of the actual occurrences, though I withheld any reference to those words that my poor dead friend had spoken for my ear alone. When I had read through and signed my statement, Mr. Miller studied his note-book with an air of dissatisfaction and then turned to Thorndyke. "This is all quite clear, Doctor," said he, "and just about what you inferred from that letter. But it doesn't help us much. The question is. Who is this man? I've an inkling that you know, Doctor."

"I have a very strong suspicion as to who he is," replied Thorndyke.

"That will do for me," said Miller. "Your strong suspicion is equal to another man's certainty. Do you know his name, sir?"

"He has recently passed under the name of Samway," replied Thorndyke. "What his real name is, I think I shall be able to tell you later. Meanwhile, I can give you such particulars as are necessary for making an arrest."

The Superintendent looked narrowly at Thorndyke as the latter pressed the button of the electric bell. "Apparently, Doctor," said he, "you have been making some investigations concerning this man, and, as it was not in connection with this crime, it must have been in connection with something else."

"Yes," replied Thorndyke, "you are quite right, Miller, and it will be a matter of the deepest regret to me to my dying day that circumstances have hindered those investigations as they have. The delay has cost this poor woman her life. A few more days and my case would almost certainly have been complete, and then this terrible disaster would have been impossible."

As Thorndyke finished speaking, the door opened quietly and Polton entered with a small, neatly-made parcel in his hand. "Ah!" said Thorndyke, "you guessed what I wanted, and guessed right, as you always do, Polton. How many are there in that parcel?"

"Three dozen, sir," replied Polton.

"That ought to be enough for the moment. Hand them to the Superintendent, Polton. If you want any more, Miller, we can let you have a further supply, and I am having a half-tone block made which will be ready to-morrow morning."

"Are these portraits of the man you suspect?" asked Miller.

"No, I haven't his portrait, unfortunately, but on each card is a photograph of three of his finger-prints, which are all I have been able to collect, and on the back is a description which will enable you easily to identify him. You can post them off to the various sea-ports and telegraph the description in advance; and I would recommend you especially to keep a watch on Dover and Folkestone, as I know that he has been in the habit of using that route.

"Speaking of finger-prints," said Miller, "have you tried that letter for a single trace of a fingerprint. He must have realised the risk he was taking and worn gloves when he wrote it."

The Superintendent pocketed the parcel with a thoughtful air, and, after a few moments' cogitation, turned once more to Thorndyke. "You've supplied me with the means of arresting the man, Doctor," said he, "but that's all. Supposing I find him and detain him in custody? What then? I don't know that he murdered this poor woman. Do you? Dr. Jardine can't identify him, and apparently no one else saw him. I have no doubt that you have substantial grounds for suspecting him, but I should like to know what they are."

Thorndyke reflected for a moment or two before replying. "You are quite right, Miller," he said, at length, "you ought to have enough information to establish a prima facie case. But I think, that on this occasion, I can say no more than that, if you produce the man, you can rely upon me to furnish enough evidence to secure a conviction. Will that do?"

"It will do from you, sir," replied Miller, rising and buttoning his overcoat. "I will get this description circulated at once. Oh—there was one more matter; the name of the deceased lady was Samway—the same as that of the suspected murderer. What was the relationship?"

"She passed as—and presumably was—his wife."

"Ah!" said Miller. "I see. That was how she knew. Well, well. She was a brave woman, to take the risk that she did, and she deserved something very different from what she got. But we are taught that there is a place where people who suffer injustice and misfortune in this world get it made up to them. I hope it's true, for her sake—and for his," he added abruptly with a sudden change of tone.

"Naturally you do," said Thorndyke, "but, meanwhile, our business is with this world. Spread your net close and wide, Miller. I shall never forgive you if you let this villain slip. It is our sacred duty to purge the world of his presence. You do your part, Miller, and be confident that I will do mine."

"You can depend on me to do my best, sir," said Miller, "though I am working rather in the dark. I suppose you couldn't give me any sort of hint as to what you've got up your sleeve. You've no doubt, for instance, that it was really the man Samway who committed this murder?"

Thorndyke, according to his usual habit, considered the Superintendent's question for awhile before answering. At length he replied: "I don't know why I shouldn't take you into my confidence to some extent, Miller, knowing you as I do.
But you will remember that this is a confidence. The fact is that I am proposing to proceed against this man on an entirely different charge. But I am not quite ready to lay an information; and I want you to secure his person on the charge of murdering his wife while I complete the other case."

"Is that another case of murder?" asked Miller.

"Yes. The facts are briefly these. A certain Septimus Maddock, who was living with the Samways, died some time ago under what seem to me very suspicious circumstances. He was nursed by Samway and his wife and by no one else. The cause of death given on the certificate was, in my opinion, not the true one, and I am proceeding to verify my theory as to what was the real cause of death."

"I see," said Miller. "You are applying for an exhumation of the body?"

"Well, hardly an exhumation. The man Maddock was cremated."

"Cremated!" exclaimed Miller. "Then we're done. There isn't any body to exhume."

"No," agreed Thorndyke, "there is no body, but there are the ashes."

"But, surely," said Miller, "you can't get any information out of a few handfuls of bone ash?"

"That remains to be proved," replied Thorndyke. "I have applied for an authority to make an exhaustive examination of those ashes, and, if my opinion as to the cause of death is correct, I shall be able to demonstrate its correctness; and that will involve a charge of murder against this man Samway. It will also support a charge against him of attempts to murder Dr. Jardine, and furnish strong evidence connecting him with the horrible crime that has just been committed. So you see, Miller, that the important thing is to get possession of him before he has time to escape from this country, and hold him in custody, if necessary, while the evidence against him is being examined and completed. And I must impress on you that no time ought to be lost in getting the description circulated."

"No, that's true," said Miller. "I'll go and telegraph it off at once, and I'll send one or two of our best men to watch the likely seaports."

He shook hands with us all round, and, when we had all most fervently wished him success he took his departure.

As soon as he was gone, Jervis turned to his senior, and, looking at him with a sort of puzzled curiosity exclaimed: "You are a most astounding person, Thorndyke! You really are! I thought I had begun to see daylight in that Maddock case, and now I find that I was all abroad. And I can't, for the life of me, conceive what in the world you expect to discover by examining a few pounds of calcined phosphates. Suppose Maddock was poisoned, what evidence will be obtainable from the ashes? Of the poisons which could possibly have been used under the known circumstances, not one would leave a trace after cremation. But, of course, you've thought of all that."

"Certainly, I have," replied Thorndyke, "and I agree with you that the ashes of a body that has been cremated are highly unpromising material for a primary investigation. But, does it not occur to you that, in a case where certain circumstantial evidence is available, excellent corroborative data might be obtained by the examination of the ashes?"

"No," replied Jervis, "I can't say that it does."

"It is not too late to consider the question," said Thorndyke. "I shall probably not get the authority for a day or two, so you will have time to turn the problem over in the interval. It is quite worth your while, I assure you, apart from this particular case, as a mere exercise in constructive theory. You can acquire experience from imaginary cases as well as from real ones, as I have often pointed out; in fact, much of my own experience has been gained in this way. I think I have mentioned to you that, in my early days, when I had more leisure than practice, it was my custom to construct imaginary crimes of an elaborately skilful type, and then—having, of course, all the facts—to consider the appropriate procedure for their detection. It was a most valuable exercise, for I was thus able to furnish myself with an abundance of problems of a kind that, in actual practice, are met with only at long intervals of years. And since then a quite considerable number of my imaginary cases have presented themselves, in a more or less modified form, for solution in the course of practice, and have come to me with the familiarity of problems that have already been considered and solved. That is what you should do, Jervis. Try the synthetic method and then consider what analytical procedure would be appropriate to your result."

"I have," Jervis replied, gloomily. "I have worked at this confounded case until I feel like a rat that has been trying to gnaw through a plate-glass window. Still, I'll have another try. By the way, where are you going to make this examination?"

"I think I shall do it here. I had thought of handing the ashes over to one of the more eminent analysts, but it will be only a small operation, well within the capacity of our own laboratory. I think of asking Professor Woodfield to come here and carry out the actual analysis. Polton will give him any help that he may want and, of course, we shall be here to give any further assistance if he should need it."

"Why not have made the analysis yourself?" asked Jervis. "Is there anything specially difficult or intricate about it?"

"Not at all," replied Thorndyke. "But, as the case will have to go into Court on a capital charge—that is, assuming that my hypothesis turns out to be correct—I thought it best to have the analysis made by a man whose name as an authority on chemistry will carry special weight. Neither the judge nor the jury are likely to have much special knowledge of chemistry, but they will be able to appreciate the fact that Woodfield is a man with a world-wide reputation, and they will respect his opinion accordingly."
“Yes,” agreed Jervis, “I think you are quite right. A well-known name goes a long way with a jury. I hope your experiment will turn out as you expect, and I hope, too, that some of Miller's men will manage to lay that murderous devil by the heels. But I'm afraid they'll have their work cut out. He is a clever scoundrel; one must admit that. How do you suppose he contrived to track Jardine here?”

“I think,” replied Thorndyke, “that he must have seen us on one of the two occasions when we went to the mineral water works and followed us here. Then, when Jardine disappeared from his lodgings, he would naturally look for him here, this being, in fact, the only place known to him in connection with Jardine, excepting Batson’s house, on which he also probably kept a watch.”

“But how would he have discovered that Jardine actually was here?”

“There are a number of ways in which he might have ascertained the fact. A good many persons knew that we had a new resident. We could not conceal his presence here. Many of our visitors have seen him, and the porter and hangers-on of the inn will have noticed him taking his exercise in the morning. Samway, himself, even, may have seen him, and he would easily have penetrated the disguise if he saw him out of doors, for there is no disguising a man's stature. He might have made enquiries of one of the porters or lamp-lighters, or he might have employed someone else to make enquiries. The fact that someone was staying here and that his name was Howard could not have been very difficult to discover, while, as for ourselves, we are as well known in the inn as the griffin at Temple Bar. From the circumstance that he knew of our attendance at the Maidstone Assizes, it seems likely that he had subsidized some solicitor's clerk who would know our movements.”

“And I suppose,” said I, “as he is gone now, I may as well go back to my lodgings.”

“Not at all,” replied Thorndyke. “In the first place, we don't know that he is gone, and we do know that he is now absolutely desperate and reckless. And you must not forget, Jardine, that whether we charge him with murder in the case of Maddock, with the murder of poor Mrs. Samway, or the attempted murder of yourself, in either case you are the chief witness for the prosecution. You are the appointed instrument of retribution in this man's case, and you must take the utmost care of yourself until your mission is accomplished. He knows the value of your evidence better than you do, and it is still worth his while to get rid of you if he can. But you, I am sure, are at least as anxious as we are to see him hanged.”

“I'd sooner twist his neck with my own hands,” said I.

“I daresay you would,” said Thorndyke, “and it is perfectly natural that you should. But it is not desirable. This is a case for a few fathoms of good, stout, hempen rope, and the common hangman. The private vengeance of a decent man would be an undeserved honour for a wretch like this. So you must stay here quietly for a few days more and give us a little help when we need it.”

Thorndyke's decision was not altogether unwellcome. Shaken as I was by the shock of this horrible tragedy, I was in no state to return to the solitude of my lodgings. The quiet and tactful sympathy of my two friends—or I should rather say three, for Polton was as kind and gentle as a woman—was infinitely comforting and their sober cheerfulness and the interest of their talk prevented me from brooding morbidly over the catastrophe of which I had been the involuntary cause. And, dreadful as the associations of the place were, I could not but feel that those of my older resorts would be equally painful. For me, at present, the Heath would be haunted by the figure of poor Letitia, walking at my side, telling me her pitiful tale and so pathetically craving my sympathy and friendship. And the Highgate Road could not but wring my heart with the recollection of that evening when we had walked together up the narrow lane—all unconscious of a black-hearted murderer stealing after us and foiled only by that futile spy—when, as we said good-bye I had kissed her and she had run off blushing like a girl.

Moreover, if Thorndyke's chambers were fraught with terrible and gloomy associations, they were also pervaded by an atmosphere of resolute, relentless preparation which was itself a relief to me; for, as the first shock of horrified grief passed, it left me possessed by a fury of hatred for the murderer and consumed by an inextinguishable craving for vengeance. Nor by the time of suspense so long as we had anticipated, as the very next morning a letter arrived from the Home Office containing the necessary authority to make the proposed examination and informing Thorndyke that on the following day the police would take possession of the ashes, which would be delivered to him by an officer who would remain to witness the examination and to resume possession of the remains when it was concluded.

I saw very little more of Thorndyke that day, but gathered that he was busy making the final arrangements for the important work of the marrow and clearing off various tasks so as to leave himself in from engagements. Nor did I enjoy much of Jervis's society, for he, too, was anxious to have the day free for the “Crucial Experiment,” which was—we hoped—to solve the mystery of Septimus Maddock's death and explain the villain Samway's strange vindictiveness towards me.

Left to myself, and by no means enamoured of my own society, I wandered up to the laboratory to see what Polton was doing and to distract my gloomy thoughts by a little gossip with him on the various technical processes of which he possessed so much curious information. I found him arrayed in a white apron, with his sleeves turned up, busily occupied with what I took to be a slab of dough, which he had spread on a pastry board and was levelling with a hard-wood rolling-pin. He greeted me, as I entered with his queer, crinkly smile, but made no remark; and I stood awhile in silence, watching him cut the paste in halves, sprinkle it with flour, fold it up and once more roll it out into a sheet with the wooden pin. "Is this going to be a meat pie, Polton?" I asked, at length.

His smile broadened at my question—for which I suspect he had been waiting. "I don't think you'd care much for the
flavour of it, if it was, sir,” he answered. “But it does look like dough, doesn’t it. It’s moulding-wax; a special formula of the Doctor’s own.”

“I thought that white powder was flour.”

“So it is, sir; the best wheaten flour. It’s lighter than a mineral powder and more tenacious. You have to use some powder to reduce the stickiness of the wax, especially in a soft paste like this, which has a lot of lard in it.”

“What are you going to use it for? I asked.

“Ah!” exclaimed Polton, pausing to give the paste a vicious whack with the rolling-pin, “there you are, sir. That’s just what I’ve been asking myself all the time I’ve been rolling it out. The Doctor, sir—God bless him—is the most exasperating gentleman in the world. He fairly drives me mad with curiosity, at times. He will give me a piece of work to do—something to make, perhaps— with full particulars—all the facts, you understand, perfectly clear and exact, with working drawings if necessary. But he never says what the thing is for. So I make a hypothesis for myself—whole bundles of hypotheses, I make. And they always turn out wrong. I assure you, sir,” he concluded with solemn emphasis, “that I spend the best part of my life asking myself conundrums and giving myself the wrong answers.”

“I should have thought,” said I, “that you would have got used to his ways by now.”

“You can’t get used to him,” rejoined Polton. “It’s impossible. He doesn’t think like any other man. Ordinary men’s brains are turned out pretty much alike from a single mould, like a batch of pottery. But the Doctor’s brain was a special order. If there was any mould at all, that mould was broken up when the job was finished.”

“What you mean is,” said I, “that he has a great deal more intelligence than is given to the rank and file of humanity.”

“No, I don’t,” retorted Polton. “It isn’t a question of quantity at all. It’s a different kind of intelligence. Ordinary men have to reason from visible facts. He doesn’t. He reasons from facts which his imagination tells him exists, but which nobody else can see. He’s like a portrait painter who can do you a likeness of your face by looking at the back of your head. I suppose it’s what he calls constructive imagination, such as Darwin and Harvey and Pasteur and other great discoverers had, which enabled them to see beyond the facts that were known to the common herd of humanity.”

I was somewhat doubtful as to the soundness of Polton’s views on the transcendental intellect, though respectfully admiring of the thoughtfulness of this curious little handicraftsman; accordingly I returned to the more concrete subject of wax. “Haven’t you any idea what this stuff is going to be used for?”

“Not the slightest,” he replied. “The Doctor’s instructions were to make six pounds of it, to make it soft enough to take a squeeze of a stiff feather if warmed gently, and firm enough to keep its shape in a half-inch layer with a plaster backing, and to be sure to have it ready by to-morrow morning. That’s all. I know there’s an important analysis on to-morrow and I suppose this wax has got something to do with it. But, as to what moulding wax can have to do with a chemical analysis, that’s a question that I can’t make head or tail of.”

Neither could I, though I had more data than Polton appeared to possess. Nor could Jervis, to whom I propounded the riddle when he came in to tea. We went up to the laboratory together and inspected, not only the wax, but the exterior of three large parcels addressed to Professor Woodfield, care of Dr. Thorndyke, and bearing the labels of a firm of wholesale chemists. But neither of us could suggest any solution of the mystery; and the only result of our visit to the laboratory was that Polton was somewhat scandalized by the conduct of his junior employer, who consoled himself for his failure by executing with the wax, a life-sized and highly grotesque portrait of Father Humperdinck.

XXI — THE FINAL PROBLEM

At exactly half-past eleven in the following forenoon, Professor Woodfield arrived, bearing a massive cowhide bag which he deposited on a chair as a preliminary to taking off his hat and wiping his forehead. He was a big burly, heavy-browed man, sparing of speech and rather gruff in manner. “Stuff arrived yet?” he asked when he had brought his forehead to a satisfactory polish.

“I think it came yesterday morning,” replied Thorndyke.

“The deuce it did!” exclaimed Woodfield.

“Yes. Drapers—Three parcels from Townley and—”

“Oh, you’re talking of the chemicals. I meant the other stuff.”

“No; the officer hasn’t arrived yet, but I expect he will be here in a few minutes. Superintendent Miller is a scrupulously punctual man.”

The professor strode over to the window and glared out in the direction of Crown Office Row. “That man of yours got everything ready?” he asked.

“Yes,” answered Thorndyke; “and I have looked over the laboratory myself. Everything is ready. You can begin the instant the ashes are delivered to us.”

Woodfield expressed his satisfaction—or whatever he intended to express—by a grunt, without removing his eyes from
the approach to our chambers. "Cab coming," he announced a few moments later. "Man inside with a parcel. That the officer?"

Jervis looked out over the professor’s shoulder. "Yes," said he, "that’s Miller; and, confound it! here’s Marchmont with old Humperdinck. Shall we bolt up to the laboratory and send down word that we’re all out of town?"

"I don’t see why we should," said Thorndyke. "Woodfield won’t be inconsolable if we have to leave him to work by himself for a while."

The professor confirmed this statement by another grunt, and, shortly afterwards, the clamour of the little brass knocker announced the arrival of the first contingent, which, when I opened the door, was seen to consist of the solicitor and his very reverend client. "My dear Thorndyke!" exclaimed Marchmont, shaking our principal’s hand; "what a shocking affair this is—this murder, I mean. I read about it in the paper. A dreadful affair!"

"Yes, indeed," Thorndyke assented; "a most callous and horrible crime."

"Terrible! Terrible!" said Marchmont. "So unpleasant for you, too, and so inconvenient. Actually on your own stairs, I understand. But I hope they’ll be able to catch the villain. Have you any idea who he is?"

"I have a very strong suspicion," Thorndyke replied.

"Ah!" exclaimed Marchmont, "I thought so. The rascal brought his pigs to the wrong market. What? Like doing a burglary at Scotland Yard. He couldn’t have known who lived here. Hallo! why here’s Mr. Miller. Howdy-do, Superintendent!"

The officer, for whom I had left the door ajar, entered in his usual brisk fashion, and, having bestowed a comprehensive salutation on the assembled company, deposited on the table an apparently weighty parcel, securely wrapped and decorated with a label bearing the inscription "This side up."

"There, sir," said he, "there’s your box of mystery; and I don’t mind telling you that I’m on tenterhooks of curiosity to see what you are going to make of it."

"Professor Woodfield is the presiding magician," said Thorndyke, "so we will hand it over to him. I suppose the casket is sealed?"

"Yes; it was sealed in my presence, and I’ve got to be present when the seals are broken."

"We’ll break the seals up in the laboratory," said Woodfield, "but we may as well undo the parcel here."

He produced a solid-looking pocket knife, fitted with a practicable corkscrew, and, having cut the string, stripped off the wrappings of the parcel. "God bless my soul!" exclaimed Marchmont, as the last wrapping was removed; "why, it’s a cremation urn! What in the name of Fortune are you going to do?"

Miller tapped the lid of the urn with a dramatic gesture. "Dr. Thorndyke," said he, "is going, I hope, to extract from the ashes in this casket an instrument of vengeance on the murderer of Mrs. Samway."

"Ach!" exclaimed Father Humperdinck, "do not speak of vengeance in ze presence of zese boor remains of a fellow creature. Chustice if you laig, but not vengeance. Vengeance is mine, saiz ze Lordt!"

"M’yes," agreed Miller, "that’s perfectly true, sir, and we quite understand your point of view. Still, we’ve got our job to do, you know."

"But," said Marchmont, "I don’t understand. What is the connection? These appear to be the remains of Septimus Maddock, whoever he may have been, and he seems to have died last November. What has he to do with the murder of this poor woman, Samway?"

"The connection is this," replied Thorndyke; "the man who murdered Mrs. Samway murdered the man whose ashes are in this urn. That is my proposition; and I hope, with the skilful aid of my friend Professor Woodfield, to prove it."

"Well," said Marchmont, "it is a remarkable proposition and the proof will be still more remarkable. I certainly thought that a body that had been cremated was beyond the reach of any possible inquiry."

"I am afraid that is so, as a rule," Thorndyke admitted. "But I hope to find an exception in this case. Shall we go upstairs and commence the examination?"

Woodfield having agreed with gruff emphasis, Miller picked up the casket and we all proceeded to the laboratory, where Polton, like a presiding analytical demon, was discovered amidst his beloved apparatus. The casket was placed on a table, the seals broken and the cover removed by Woodfield, whereupon we all, with one accord, craned forward to peer in at what looked like a mass of fragments of snowy madrepore coral. "Ach!" exclaimed Father Humperdinck, "bot it is a solemn zought zat zese boor ashes vas vunce a living man chust like ourselves."

"Yes," said Marchmont, "it is, and I suppose we shall all be pretty much alike by the time we reach this stage. Cremation is a leveller, with a vengeance. Still, I will say this much, these remains are perfectly unobjectionable in every way, in fact they are almost agreeable in appearance; whereas, an ordinary disinterment after this lapse of time would have been a most horrid business."

"Yes, indeed," agreed Thorndyke; "I have had to make a good many examinations of exhumed bodies, and, as you say,
they were very different from this. If I were not a practitioner of legal medicine—in which exhumation often furnishes crucial evidence—I should say that this cleanly and decent method of disposing of the dead was incomparably superior to any other. Unfortunately it has serious medico-legal drawbacks. I think, Woodfield, that we will turn the ashes out on that sheet of paper on the bench, and then, with your permission, I will pick out the recognizable fragments and examine them while you are working on the small, powdery portions.”

He took up the urn—which was an oblong, terracotta vessel some fourteen inches in length—and very carefully inverted it over the large sheet of clean white paper. Then, from the dazzling, snowy heap, he picked out daintily the larger fragments—handling them with the utmost tenderness—for, of course, they were excessively fragile—and finally transferring them, one by one, to another sheet of paper at the other end of the bench.

The appearance of the remains was not quite as I had expected. Among the powdery debris was a quite considerable number of larger fragments, most of which were easily recognizable by the anatomical eye, while some of the larger long bones almost gave the impression of having been broken to enable them to be placed in the urn, and suggested that a partial reconstitution, for the purpose of determining the stature or other peculiarities of the skeleton was by no means as impossible as I had supposed. But, large and small alike, the pieces were strangely light and attenuated, like the ghosts of bones or artificial counterfeits in porous, spongy coral.

When Thorndyke had picked out such of the fragments as he wished to examine, Professor Woodfield glanced casually over the collection, but suddenly paused and, stooping over a large piece of the right innominate bone, narrowly inspected a somewhat shiny yellow stain on its inner surface. "Looks as if you were right, Thorndyke," he said in his laconic way, "qualitatively, at any rate. We shall see what the quantitative test says." I pored over that dull yellow stain—as did Jervis also—but could make no guess at its nature or conceive any explanation of its presence. What interested me more was a small depression or cavity in the bone at the centre of the stain. That it was not the result of cremation was obvious from the fact that it was surrounded by a small area of sclerosed or hardened bone, which was quite plainly distinguishable on the spongy background, and which clearly pointed to some inflammatory change that had occurred during life. But of its cause, as of that of the stain itself, I could think of no intelligible explanation. "Have you enough of the small fragments to go on with for the present, Woodfield?" Thorndyke asked.

"Plenty," replied Woodfield.

"Then," said Thorndyke, "I will get on with my side of the inquiry. I shall want the whole-plate camera first, Polton."

Meanwhile, Professor Woodfield was proceeding—under the horrified supervision of Father Humperdinck—with his part of the investigation. He was a matter-of-fact man, a chemist to the backbone, and to him it was evident that the late Septimus Maddock was simply so many pounds of animal phosphates. Quite composedly he shovelled up a suffocul of the ashes, which he emptied into the pan of a spring-balance, and, having weighed out a pound and a quarter, shot the contents of the pan into a large mortar and forthwith began to grind the fragments to a fine powder, humming a cheerful stave to the ring of the pestle. But his next proceeding scandalized the worthy Jesuit still more deeply. Having weighed out certain quantities of charcoal, sodium carbonate and borax, he pulverized each in a second mortar, mixed the whole together and shot the mixture into the first mortar, which contained the ash, stirring the entire contents up into a repulsive-looking grey powder. "But, my dear sir!" exclaimed Father Humperdinck. "You are destroying ze remains!"

Woodfield looked at him from under his beetling brows, but went on stirring. "Matter is indestructible," he replied stolidly; and with this he tipped the contents of the mortar on to a sheet of paper and transferred them to a large fireclay crucible. "Now, Polton," said he, "is the furnace ready?"

Polton disengaged himself for a moment from the camera, and took up a position by the side of the big fireclay drum with his hand on the gas cock. Then Woodfield, having dropped three or four large iron nails into the crucible, carried the latter over to the furnace and lowered it into the central cavity. The cock was turned on by Polton and a match applied, whereupon a great purplish flame shot up with a roar from the mouth of the furnace; and even when this had been confined by the dropping on of the massive cover, the ironcased cylinder continued to emit a muffled, sullen growl.

While the crucible was heating, I transferred my attention to Thorndyke. The photographic operations were now concluded and the moulding wax had just been produced from a warmed incubator. Polton’s curiosity—and mine—was about to be satisfied.

Thorndyke began by laying a thick slab of the warm and pliable wax on the middle of a smooth plate of varnished plaster, at each corner of which was a small, hemispherical pit, and dusting powdered French chalk sparingly over the level surface of the wax. Then he took the large fragment of bone, which bore the mysterious yellow stain, and laid it on the wax with the stained side uppermost, pressing it very gently until it gradually sank into the soft, pasty mass. Next, he took a somewhat smaller slab of wax and, having dusted its surface with French chalk, laid it on the fragment of bone, pressing it on gently but firmly, especially in the neighbourhood of the stain. Having squeezed some irregular-shaped lumps of wax on the back of the top slab, he fastened a strip of India-rubber round the edge of the plaster plate, so that it formed an upright rim, and turned to Polton. "Now mix a bowl of plaster—and mix it extra stiff, so that it will set quickly and hard."
With a soft brush he painted a thin coat of oil on the exposed portion of the plaster plate, up to the edges of the wax, and including the little circular hollows. By the time he had done this, Polton reappeared from the workshop with a basin of liquid plaster, which he was beating up with a spoon as if preparing a custard or batter pudding. As soon as the plaster began to thicken, he poured it on the wax and the oiled slab until it formed a level mass, nearly flush with the top of the india-rubber rim. In a surprisingly short time, the smooth, creamy liquid solidified into a substance having the appearance of icing-sugar, and when Polton had stripped away the india-rubber rim, exposing the edge of the new plaster slab, this part of the process was finished. “We will put this mould aside for the plaster to harden while we make the other mould,” said Thorndyke.

“ Aren’t you going to make moulds of all the fragments?” asked Jervis.

“No,” Thorndyke answered; “the photographs of the rest will be sufficient, and I don’t think we shall want even those; in fact, what I am doing now is merely by way of extra precaution. We are obliged to destroy the fragments in order to make the analysis, so I am just putting their appearance on record. You never know what an ingenious defending counsel may spring on you.”

As Polton produced a second plate of varnished plaster and Thorndyke began to prepare the wax for the next mould, I turned my attention once more to Professor Woodfield. He had now deserted the mortar—in which he had been preparing a further supply of “the stuff”—and taken up a position by the furnace, with a long pair of crucible-tongs in his hand. On the bench, hard by, was an iron plate, and on this an oblong block of iron in which were six conical hollows.

Presently Woodfield glanced at his watch, turned off the gas-cork, removed the cover of the furnace with his tongs, and, reaching down into the glowing interior, lifted out the nearly white-hot crucible. Instantly Marchmont, Humperdinck and Jervis gathered round to watch, and even Thorndyke left his mould to come and see the result of the first trial.

Having stood the crucible on the iron plate while he picked out the large nails, one by one, Woodfield lifted it and steadily poured its molten contents into the first hollow in the iron block, which they soon filled, and overflowing ran along the iron plate in glowing streams that soon grew dull from contact with the cold surface. I noticed that, as the crucible was slowly tilted, Thorndyke kept his eyes fixed on its interior, as also did Jervis and Woodfield; and, watching closely, I saw just as the vessel was nearly empty, what looked somewhat like a red-hot oil-globule floating in the last of the glowing liquid. This passed out as the crucible was tilted further, and disappeared into the iron mould; when Woodfield, having exchanged a quick, significant glance with Thorndyke, proceeded forthwith, in his matter-of-fact way to fill up the still red-hot vessel with another pound and a quarter of the late Septimus Maddock. “I suppose,” said Marchmont, “it is premature to ask you what is the final object of these very interesting operations?”

“It’s no use asking me,” replied Woodfield, “because I don’t know. I am searching for traces of a particular substance, but what may be the significance of its presence, I haven’t the slightest idea. You’d better ask Dr. Thorndyke—and he won’t tell you.”

“No, I know,” said Marchmont. “Thorndyke will never tell you anything until he can tell you everything. By the way, will the remains be completely destroyed or will it be possible to recover them?”

“They are not destroyed at all,” replied Woodfield. “They are all in the slag that came out of the crucible. We shall simply put the slag in the urn. There is a little charcoal, soda and borax added, but nothing is taken away.”

I could see that to the unchemical mind of Father Humperdinck, this was far from satisfactory, and I observed him poring, with obvious disapproval, over the dark-coloured, glassy masses of slag on the iron plate. “Ashes to Ashes” was an intelligible formula, but “ashes to slag” was quite another matter, for which no provision had been made in any known ritual.

After a rather hurried luncheon, the wax moulds were carefully opened and the fragments of bone picked out, when it was seen that each fragment had left a perfect impression on the wax surface into which it had been pressed. These hollow impressions were now filled with liquid plaster, and, when the latter had thickened sufficiently, the two halves of each mould were quickly fitted together and kept in close contact by a weight.

During the interval which was necessary to allow of the plaster setting quite firmly, I had leisure to note that Professor Woodfield had filled two more of the cavities in the iron mould. Now that the furnace was thoroughly hot, he was able to work rather more quickly, and he had economized time by leaving a crucible to heat while we were at lunch. He was preparing to take the fourth charge from the furnace when I observed Polton removing the weight from one of the moulds and hurriedly transferred my patronage to his part of the entertainment. The mould on which he was operating was the one bearing the impressions of the stained fragment of the innominate bone, and when he separated the two halves and exposed the newly-made cast inside one might have thought that the actual bone had been left in, so perfectly did the snowy plaster cast reproduce the dazzlingly-white calcined bone. But, naturally, the stain did not appear in the cast, a defect which Thorndyke proceeded at once to remedy by making a tracing of the exact position and extent of the coloured patch and transferring it to the cast. Then, and not till then, Thorndyke regretfully handed the original fragment to Professor Woodfield, who impassively dropped it into the mortar and pounded it into a mere characterless powder.

After the opening of the second mould and the removal of the casts, the interest of the investigation lapsed for a time. Woodfield’s operations were, doubtless, the most important part of the procedure, but they were not thrilling to look on at. In fact they became by unvarying repetition, decidedly tedious, and when the last charge—containing the uttermost crumb of ash—had been placed in the furnace and there was nothing to do but stare at the great fireclay drum, Marchmont and
Humperdinck began to yawn in the most portentous manner. I rather wondered that they did not go, for the investigation was no business of theirs, and there was little entertainment in gazing at the outside of the furnace or watching Polton and the Superintendent gather up the masses of slag from the plate and drop them into the casket. But I supposed that they, like myself, were consoling themselves for the tedium of the chemist’s manipulations by the prospect of satisfying their curiosity as to the final result of the experiment.

When at length, the last charge was ready, Woodfield withdrew the white-hot crucible from the furnace and stood it on the iron plate. But this time he did not pour out the contents. Instead, he tilted the iron mould, and, picking out the conical masses of slag that it contained, one by one, lowered them with his tongs into the hot crucible. Then, having thrown in a little fresh flux, he returned the crucible to the furnace. “Why didn’t he pour out the melted stuff this time?” Marchmont asked.

“Because,” Thorndyke replied, “I want, for certain reasons, to have the total result of the analysis in a single mass. Each of those little cones of slag contains the result from a sixth part of the ash; the crucible now contains the matter extracted from the whole of the ashes. For my purposes this is more suitable, as you will see in a few minutes—for we shall not have to leave the crucible in the furnace so long this time.”

“I’m glad of that,” said Marchmont, “though this has been a most interesting, and I may say, fascinating experience. I am delighted to have had an opportunity of witnessing these most instructive and—er—aw—”

The rest of the sentence was rendered somewhat obscure by a colossal yawn; but very soon the interest of the proceedings was revived by Woodfield, who approached the furnace with a determined air and removed its cover with somewhat of a flourish. “Now we shall see, Thorndyke,” said he, turning off the gas and reaching down into the glowing cavity with his tongs. He lifted out the crucible and, standing it on the iron plate, took out the nails, tapping each on the side of the pot as he withdrew it. “Do you want me to pour it out, or shall I break the pot?” asked Woodfield.

“That rests with you,” replied Thorndyke.

“Better break the pot, then,” said Woodfield.

This entailed a further spell of expectant waiting, and we all stood round, gazing impatiently at the crucible as it slowly faded from bright red to dull red and from this to its natural dull drab. It was quite a long time before Woodfield considered it cool enough to be broken, indeed I half suspected him of prolonging our suspense with deliberate malice. At length he took up a peculiarly-shaped hammer which Polton had handed to him, and, laying the crucible on its side, struck it sharply near the bottom with the pointed beak; then he turned the pot over and struck a similar blow on the opposite side; upon which the bottom of the crucible broke off cleanly, exposing the mass of dark, glassy slag, and, embedded in it, a bright button of metal. “What metal is that?” Jervis demanded eagerly.

The professor struck the button smartly with the hammer, whereupon it detached itself from the slag and rolled on to the plate. “Lead,” said he, “I don’t vouch for its purity, but it is undoubtedly lead.”

Jervis turned to Thorndyke with a puzzled look. “You can’t be suggesting,” said he, “that this was a case of acute lead poisoning. The circumstances didn’t admit of it, and besides, the quantity of lead is impossibly large.”

“I should suppose,” interposed Miller, “that the doctor was suggesting a most particularly acute form of lead poisoning, only that it is impossible to imagine that a cremation certificate would be granted in a case where a man had been killed by a pistol shot.”

“I am not so sure of that,” said Thorndyke; “though it is not likely that a cremation certificate would be applied for under those circumstances. But I am certainly not suggesting lead poisoning.”

“What do you say is the weight of this button, Thorndyke?” the professor asked.

“That,” replied Thorndyke, “depends on its relation to the total content of lead in the ashes. What percentage do you suppose has been lost in the process of reduction?”

“No more than ten per cent. I hope. You may take this button as representing ninety per cent of the total lead; perhaps a little more.”

Thorndyke made a rapid calculation on a scrap of paper. “I suggest,” said he, “that the total lead in the ashes was three hundred and eighty-six grains. Deducting a tenth, say thirty-eight and a half grains, we have three hundred and forty-seven and a half grains, which should be the weight of this button.”

Woodfield picked up the button and striding over to the glass case which contained the chemical balance, slid up the front, and, placing the button in one pan, put the weight corresponding to Thorndyke’s estimate, in the other. On turning the handle that released the balance, it was seen that the button was appreciably heavier than Thorndyke had stated, and Woodfield adjusted the weights with a small pair of forceps until the index stood in the middle of the graduated arc. “The weight is three hundred and forty-nine and a half grains,” said Woodfield. “That means that my assay was rather better than I thought. You were quite right, Thorndyke, as you generally are. I wonder what the object was that weighed three hundred and eighty-six grains. Are you going to tell us?”

Thorndyke felt in his waistcoat pocket. “It was an object,” said he, “very similar to this.”

As he spoke, he produced a rather large, dark-coloured bullet, which he handed to Woodfield, who immediately placed it
in the pan of the balance and tested its weight. "Just a fraction short of three hundred and eighty-seven grains," said he.

The Superintendent peered curiously into the balance-case, and, taking the bullet out of the pan, turned it over in his fingers. "That's not a modern bullet," said he. "They don't make 'em that size now, and they don't generally make 'em of pure lead."

"No," Thorndyke agreed. "They don't. This is an old French bullet; a chassepot of about 1870."

"A chassepot!" exclaimed Humperdinck, with suddenly-awakened interest.

"Yes," said Thorndyke; "and this button," —he picked it up from the floor of the balance-case as he spoke—"was once a chassepot bullet, too. This, Father Humperdinck," he added, holding out the little mass of metal towards the Jesuit, "was the bullet which struck your friend, Vitalis Reinhardt, near Saarbrück more than thirty years ago."

The priest was thunderstruck. For some seconds, he gazed from Thorndyke's face to the button of lead, with his mouth agape and an expression of utter stupefaction. "But," he exclaimed, at length, "it is impossible! How can it be, in the ashes of a stranger?"

"I take it," said Marchmont, "that Dr. Thorndyke is suggesting that this was the body of Vitalis Reinhardt."

"Undoubtedly I am," said Thorndyke.

"It sounds a rather bold supposition," Marchmont observed, a little dubiously. "Isn't it basing a somewhat startling conclusion upon rather slender data? The presence of the lead is a striking fact, but still, taken alone—"

"But it isn't taken alone," Thorndyke interrupted. "It is the final link in a long chain of evidence. You will hear that evidence later, but, as it happens, I can prove the identity of these remains from facts elicited by the examination that we have just made. Let me put the argument briefly.

"First, I will draw your attention to these plaster casts, which you have seen me make from the original bones, Take, to begin with, these small fragments. Dr. Jervis will tell you what bones they are."

He handed the small casts to Jervis, who looked them over—not for the first time—and passed them to me. "I say that they represent two complete fingers and the first, or proximal, joint of a right thumb. What do you say, Jardine?"

"That is what I had already made them out to be," I replied.

"Very well," said Thorndyke. "That gives us an important initial fact. These remains contained two complete fingers and the first joint of a thumb. But these remains profess to be those of a man named Septimus Maddock. Now this man is known to have had deformed hands, of the kind described as brachydactylous. In such hands all the fingers are incomplete—they have only two joints instead of the normal three—and the first, or proximal joint of the thumb is absent. Obviously, then, these remains cannot be those of Septimus Maddock, as alleged.

"But, if not Maddock's remains, whose are they? From certain facts known to me, I had assumed them to be those of Vitalis Reinhardt. Let us see what support that assumption has received. Reinhardt is known to have been wounded in the right hip by a chassepot bullet, and the bullet was never extracted. Now I find, among these remains, a considerable portion of the right hip-bone. In that bone is a mark which plainly shows that it has been perforated and the perforation repaired, and there is a cavity in which a foreign body of about the size of a chassepot bullet has been partly embedded. The chemical composition of that foreign body is plainly indicated by a stain which surrounds the cavity; which stain is evidently due to oxide of lead. Clearly the foreign body was composed of lead, which will have melted in the cremation furnace and run away, but left a small portion, in the cavity, which small portion, becoming oxidized, the oxide will have liquified and become soaked up by the absorbent bone-ash, thus producing the stain.

"Finally, we find by assay, that this foreign body actually was composed of lead and that its weight was—within a negligible amount of error—three hundred and eighty-six grains, which is the weight of a chassepot bullet.

"I say that the evidence, from the ashes alone, is conclusive. But this is only corroborative of conclusions that I had already formed on a quite considerable body of evidence. Are you satisfied, Marchmont? I mean, of course, only in respect of a prima facie case."

"Perfectly satisfied," replied Marchmont. "And now I understand why you insisted on my being present at this investigation and bringing Father Humperdinck; which, I must admit, has been puzzling me the whole day. By the way, I rather infer, from what you said, that there has been foul play. Is that so?"

"I think," replied Thorndyke, "there can hardly be a doubt that Reinhardt was murdered by Septimus Maddock."

Father Humperdinck's face suddenly turned purple. "And zis man Maddock," he exclaimed fiercely, "zis murderer of my poor vriend Vitalis, vere is he?"

"He is being sought by the police at this moment," replied Thorndyke.

"He must be caught!" Father Humperdinck shouted in a furious voice, "and ven he is caught he must be bunished as he deserves. I shall not vun moment rest until he is hanged as high as Haman." Here I caught a quick glance from Marchmont's eyes and seemed to hear a faint murmur which framed the words "Vengeance is mine."

"But," the Jesuit continued, after a momentary pause, in the same loud, angry tone: "Zis villain has a double grime committed; he has murdered a goat, a chenerous, a bious man; and he has robbed ze boor, ze suffering and ze
unfortunate."

“How has he done that?” asked Marchmont.

“By murdering ze benefactor of our zozietie,” was the answer.

“Yes, to be sure,” agreed the solicitor. “I hadn’t thought of that. Of course, the original will in favour of Miss Vyne probably stands without modification.”

At this point Superintendent Miller interposed. “You were saying, sir, that the man Maddock is now being sought by the police. Do you mean under that name?”

“No,” answered Thorndyke. “I mean under the name of Samway. Septimus Maddock, alias Isaac Van Damme, is written off as deceased. But Samway, alias Maddock, alias Burton of Bruges, alias Gill, is his re-incarnation, and, as such, I commend him to your attention; and I hope, Miller, you will be able to produce him shortly, in the flesh. The evidence, as you see, is now ready, and all that is lacking is the prisoner.”

“He shan’t be lacking long, sir, if any efforts of mine can bring him to light. I see a case here that will pay for all the work that we can put into it; and now, with your permission, doctor, I will take possession of this urn and get off, to see that everything necessary is being done.”

The Superintendent, as so often happens with departing guests, infected our other two visitors with a sudden desire to be gone. Father Humperdinck, especially, seemed unwilling to lose sight of the police officer—who was correspondingly anxious to escape—and, having wished us a very hasty adieu, hurried down the stairs in his wake, followed, at a greater interval, by his legal adviser.

XXII — THORNDYKE REVIEWS THE CASE

WHEN Professor Woodfield, having deliberately packed his bag and—to my great relief and Jervis’s—declined Thorndyke’s invitation to stay and take tea with us, presently took his departure, we descended to the sitting-room, whither Polton followed us almost immediately with a tea-tray, having, apparently, boiled the kettle in the adjacent workshop while the final act of the analysis was in progress. He placed the tray on a small table by Thorndyke’s chair, and, evidently, anticipating the inevitable discussion on the results of the analysis, made up the fire on a liberal scale and retired with unconcealed reluctance.

As soon as we were alone, Jervis opened the subject by voicing his and my joint desire for “more light.”

“This has been a great surprise to me, Thorndyke,” said he.

“A complete surprise?” Thorndyke asked.

“No, I can’t say that. The solution of the problem was one that I had proposed to myself, but I had rejected it as impossible; and it looks impossible still, though I now know it to be the true solution.”

“I quite appreciate your difficulty,” said Thorndyke, “and I see that if you did not happen to light on the answer to it, the difficulty was insuperable. That was the really brilliant feature in Maddock’s plan. But for a single fact which was almost certain to be overlooked, the real explanation of the circumstances would appear utterly incredible. Even if suspicion had been aroused later and the true explanation suggested, there seemed to be one fact with which it was absolutely irreconcilable.”

“Yes,” agreed Jervis; “that is what I have felt.”

“The truth is,” said Thorndyke, “that this crime was planned with the most diabolical cleverness and subtlety. We realize that when we consider by what an infinitely narrow margin it failed. Indeed, we can hardly say that it did fail. As far as we can see, it succeeded completely, and if the criminal could only have accepted its success, there seems to be no reason why any discovery should ever have taken place. Looking back on the case, we see that our experience has been the same as O’Donnell’s; we had no clue whatever excepting the one that was furnished by the criminal himself in his unnecessary efforts to obtain even greater security. Suppose Maddock, having carried out his plan successfully, had been content to leave it at that, who would have known, or even suspected, that a crime had been committed? Not a soul, I believe. But instead of that he must needs do what the criminal almost invariably does; he must tinker at the crime when all is going well and surround himself by a number of needless safeguards by which, in the end, attention is attracted to his doings. He knows, or believes he knows, that Jardine has in his possession certain knowledge of a highly dangerous character; he does not ask himself whether Jardine is aware that he possesses such knowledge, but, appraising that knowledge at what he, himself, knows to be its value, he decides to get rid of Jardine as the one element of danger. And that was where he failed. If he had left Jardine alone, the whole affair would have passed off as perfectly normal and its details would soon have been lost sight of and forgotten. Even as it was, he missed complete success only by a hair’s breadth. But for the most trivial coincidence, Jardine’s body might be lying undiscovered in that cellar at this very moment.”

“That’s a comfortable thought for you, Jardine,” my younger colleague remarked.

“Very,” I agreed, with a slight shudder at the recollecting of that horrible death-trap. “But what was the coincidence? I never understood how you came to be in that most unlikely place at that very opportune moment.”
“It was the merest chance,” replied Thorndyke. “I happened to have called in at the hospital that evening, and, having an hour to spare, it occurred to me to look in at Batson’s and see if you were getting on quite happily in your new command. As I had induced you to take charge, I felt some sort of responsibility in the matter.”

“It was exceedingly kind of you, sir,” said I.

“Not in the least,” said Thorndyke. “It was just the ordinary solicitude of the teacher for a promising pupil. Well, when I arrived at the house, I found that excellent girl, Maggie, standing on the doorstep, looking anxiously up and down the street. It seemed that, on reflection, she was still convinced that the works were untenanted, and the oddity of the whole set of circumstances had made her somewhat uneasy. I waited a few minutes and disposed of one or two patients, and then, as you did not return, after what seemed an unaccountably long absence, I very easily induced her to show me where the place was; and when we arrived there, the deserted aspect of the building and the notice board over the gate seemed rather to justify her anxiety.

“I rang the bell loudly, as I daresay you know, but I did not wait very long. When I failed to get any response, I too, became suspicious, and proceeded without delay to pick the lock of the wicket—and it is most fortunate that the wicket was unprovided with a bolt, which would have delayed me very considerably. You know the rest. When I shouted your name you must have tried to answer, for I caught a kind of muffled groan and the sound of tapping, which guided me and Maggie to your prison. But it was a near thing; for, when I opened the cellar door, you fell out quite unconscious and accompanied by a gush of carbon dioxide that was absolutely stifling.”

“Yes,” said I, “it was touch and go. A few minutes more and it would have been all up with me. I realised that as soon as I recovered consciousness. But I couldn’t, for the life of me understand why anybody should want to murder me, and I am not so very clear on the subject now. I really knew nothing about Maddock.”

“You knew more than anyone else knew, and he thought you knew more than you did. But perhaps it would be instructive to review the case in detail.”

“It would be very instructive to me,” said Jervis, “for I don’t, even now, see how you managed to bridge over those gaps that stopped me in my attempts to make a hypothesis that covered all the circumstances.”

“Very well,” said Thorndyke, “then we will begin at the beginning; and the beginning, for me, was the finding of Jardine, as I have described it. Here was a pretty plain case of attempted murder, evidently premeditated and apparently committed by some person who had access to these works; evidently, also, conceived and planned with considerable knowledge, skill and foresight, though with how much foresight I did not realize until I had heard Jardine’s story. When I had Jardine’s account of the affair, I saw that the crime had been planned with quite remarkable ingenuity and judgment; in fact, the circumstances had been so carefully considered, and contingencies so well provided for that, but for a single tactical error the plan would have succeeded. That error was in making the pretended emergency a surgical injury. If the letter to Jardine had stated that a man was in a fit, instead of suffering from a wound, our friend would have had no need to call at the surgery for appliances but would have gone straight to the works. And there, in all probability, his body would still be lying, for no one would have known whither he had gone; and even if his body had been accidentally discovered, all traces of the means by which he had been killed would probably have been removed. There would have been nothing to show that he had not strayed into the deserted factory and turned on the gas himself; indeed, it is pretty certain that matters would have been so arranged as to convey that impression to the persons who made the discovery.”

“There was the letter,” said I. “That would have given things away to some extent.”

“But you would have had it in your pocket, from which he would, of course, have removed it. We may be sure that he had not overlooked the letter. It was the need for surgical appliances that he had overlooked; but, in spite of this error, the plan was ingenious, subtle, and clearly not the work of an ignorant man.

“And here I would point out to you that this latter fact was one of great importance in searching for the solution of the mystery. We knew something of our man. He was subtle, resourceful, and absolutely ruthless. Noting this, I was prepared, in pursuing the case, to find his other actions characterized by subtlety, resourcefulness and ruthlessness. His further actions were not going to be those of a dullard or an ignoramus.

“But this was not all the information that I had concerning the personalty of this unknown villain. Jervis and I looked over the cellars that same night within an hour and a half of the rescue and before anything had been moved. We were then in a position to infer that the unknown was probably a somewhat tall man and above the average of strength, as shown by the weight, position and arrangement of the iron bottles. Moreover, since there was no faintest trace of a finger-print on any of them, it followed that some precaution against them—such as gloves—had been adopted; which again suggested either a professional criminal or a person well acquainted with criminal methods.

“So much for the man. As to the rest of the information that I obtained by looking into the cellar, it seemed, at the time meagre enough; and yet, when considered by the light of Jardine’s statement, it turned out to be of vital importance. You remember what it was, Jardine? That cellar contained certain objects. They seemed very unilluminating and commonplace, but, according to my invariable custom, I considered them attentively and made a written list of them. Do you remember what they were?”

“Yes, quite well. There were ten empty cylinders, a spanner, a packing-case—”

“What were the dimensions of the case?” Thorndyke interrupted.
"Seven feet long by two and a half wide and deep. Then there were a couple of waterproof sheets and a quantity of straw. That is the lot, I think, and I'll be hanged if I can see what any of them—excepting the three cylinders that were used for my benefit—have to do with the case. Can you, Jervis?"

"I'm afraid I can't," he replied. "They are all such very ordinary objects."

"Ordinary or not," said Thorndyke, "there they were; and I made a note of them on the principle—which I am continually impressing on my students—that you can never judge in advance what the evidential value of any fact will be, and on the further principle that, in estimating evidence, there is no such thing as a commonplace fact or object.

"Until I had heard Jardine's account of the affair there was not much to be gained by thinking about the possibilities that it presented. There was, however one point to be settled, and I dealt with it at once. My slight inspection of the works had shown that no business was being carried on in them; and the question was whether they were completely untenanted or whether there was someone who had regular access to them. My enquiries resulted, as you know, in the unearthing of the mysterious Mr. Gill, but what his relation to the affair might be I was not, at the moment, in a position to judge.

"Then came our talk with Jardine, from which emerged the fact that the ordinary motives of murder apparently did not exist in this case, and that the crime appeared to have its origin in circumstances that had arisen locally and recently. And, on our proceeding to search for such conditions as might conceivably generate an adequate motive, we lighted on a case of cremation.

"Now, it is my habit, whenever I have to deal with death which has been followed by cremation, to approach the case with the utmost caution and scrutinize the circumstances most narrowly. For, admirable as is this method of disposing of the dead regarded from a hygienic standpoint, it has the fatal defect of lending itself most perfectly to the more subtle forms of murder, and especially to the administration of poison. By cremation all traces of the alkaldoids, the toxines and the other organic poisons are utterly destroyed, while of the metals, the three whose compounds are most commonly employed for criminal purposes—arsenic, antimony and mercury—are volatilized by heat and would be more or less completely dissipated during the incineration of the body. It is true that the most elaborate precautions in the form of examination and certification are prescribed—and usually taken, I presume—before cremation is performed; but, as every medical jurist knows, precautions taken before the event are useless, for, to be effective, they would have to cover every possible cause of death, which would be impracticable. Hence, as suspicion, in case of poisoning, commonly does not arise until some time after death, I always give the closest consideration to the antecedent circumstances in cases where cremation has been performed.

"But in this case of Jardine's it was at once obvious that the circumstances called for the minutest inquiry and that no inquiry had been made. On the face of it the case was a suspicious one; and the curious incident that Jardine described made it look more suspicious still and, moreover, suggested a possible motive for the attempt on his life. Apparently he had seen, or was believed to have seen, something that he was not desired to see; something that it was not intended that anyone should see.

"Now what might that something have been? Apparently it was connected with the hand or with the part of the arm adjacent to the hand. I considered the possibilities; and at once they fell into two categories. That something might have been a wound, an injury, a hypodermic needle-mark; something, that is to say, related to the cause of death; or it might have been a mutilation, a deformity, a finger-ring, a tattoo-mark; something, that is to say, related to the identity of the deceased. And it followed that the cremation might have been made use of to conceal either the cause of death or the identity of the body. But all this was purely speculative. The case looked suspicious; but there was not a particle of positive evidence that anything abnormal had occurred.

"At this point Jardine exploded on us his second mystery; that of the dead cleric at Hampstead. This gave us, at once, an adequate motive for getting rid of him; for it had every appearance of a case of murder with successful concealment of the body, and Jardine was the only witness who could testify to its having occurred. On hearing of this I was for a moment disposed to dismiss the cremation case; to consider that the suspicious elements in it had been magnified by our imaginations in our endeavours to find an explanation of the assault on Jardine. Moreover, since we now had a sufficient motive for that assault the cremation case appeared to be outside the scope of the inquiry.

"But there was a difficulty. It was now six weeks since Jardine had encountered the body in the lane, and during that time he had been entirely unmolested. The assault had occurred on his moving into a new neighbourhood, to which he had come unexpectedly unannounced. Moreover, the assault had been committed by some person who either had access to the factory or was, at least, well acquainted with it and who, therefore, seemed to be connected with the new neighbourhood; and it was committed within a few days of the cremation incident. Furthermore, the assault was manifestly premeditated and prepared; but yet the circumstances—namely, Jardine's recent and unexpected appearance in the neighbourhood—were such as to make it certain that the crime could have been planned only a day or two before its execution. Which again seemed to connect it with the cremation case rather than with the Hampstead case.

"There were two more points. We have seen that Jardine's would-be murderer was a subtle, ingenious, resourceful and cautious villain. But a crime adjusted, to the conditions of cremation is exactly such a crime as we should expect of such a man; whereas the Hampstead crime—assuming it to be a crime—appeared to have been a somewhat clumsy affair, though the successful concealment of the body pointed to a person of some capacity. So that the former crime was more congruous with the known personality of the would-be murderer than the latter.
“The second point was made on further investigation. The day after our consultation I looked round the neighbourhood with the aid of a large-scale map; when I discovered that the yard of the factory in Norton Street backed on the garden of the Samways’ house in Gayton Street. This, again, suggested a connection between the cremation case and the assault on Jardine; and the suggestion was so strong that once more the cremation incident assumed the uppermost place in my mind.

“I considered that case at length. Assuming a crime to have been committed, what was the probable nature of that crime? Now, cremation, as I have said, tends to destroy two kinds of evidence, namely; that relating to the cause of death and that relating to the identity of the body; whence it follows that the two crimes which it may be used to conceal are murder and substitution.

“To which of these crimes did the evidence point in the present instance? Well we had the undoubted fact that cremation had been performed pursuant to the expressed wishes of Septimus Maddock, the man who was alleged to have been cremated. But if it was a case of murder, the crime must have been hurriedly planned a few days before the man’s death—that is, after the execution of the will; for we could assume that Maddock would not have connived at his own murder; whereas, if it was a case of substitution Maddock, himself, was probably the actual agent. Considering the circumstances—the inexplicable, symptomless illness and the unexpected death—the latter crime was obviously more probable than the former. The illness, in that case, would be a sham illness deliberately planned to prepare the way for the introduction of the substituted body.

“Moreover, the attendant circumstances were more in favour of substitution than of murder. Of the three doctors who saw the body, only one had seen the living man; and that one, Batson, was more than half blind and wholly inattentive and negligent. For the purpose of substitution, no more perfectly suitable practitioner could have been selected. The identity of the body was taken for granted—naturally enough, I admit—and no verification was even thought of. Then, as to Jardine’s experience. The hand or wrist is not at all a likely region on which to find either a fatal injury or the trace of a hypodermic injection; whereas it is a most important region for purposes of identification. The hand is highly characteristic in itself even when normal; and there is no part of the body that is so subject to mutilation or in which mutilations and deformities are so striking, so conspicuous, and so characteristic. Lost fingers, stiff fingers, webbed fingers, supernumary fingers, contracted palm, deformed nails, brachydactyly and numerous other abnormal conditions are not only easily recognized, but—since the hand is usually unclothed and visible—their existence will be known to a large number of persons.

“The evidence, in short, was strongly in favour of substitution as against murder.

“If, however, the body which was cremated was not that of Maddock, then it was the body of some other person; that is to say that the theory of substitution left us with a dead body that was unaccounted for. And since a dead body implies the death for some person, the theory of substitution left us with a death unaccounted for and obviously concealed; that is to say, it raised a strong presumption of the murder of some unknown person. And here it seemed that our data came to an end; that we had no material whatever for forming any hypothesis as to the identity of the person whose dead body we were assuming to have been substituted for that of Septimus Maddock.

“But while I was thus turning over the possibilities of this cremation case, the other—the Hampstead case—continued to lurk in the background of my mind. It was much less hypothetical. There was positive evidence of some weight that a crime had been committed. And the circumstances offered a fully adequate motive for getting rid of Jardine. Thus it was natural that I should raise the question. Was it possible that the two cases could be in any way connected?

“At the first glance, the suggestion looked absolutely wild. But still I considered it at length; and then it looked somewhat less wild. The two cases had this in common, that if a crime had been committed, Jardine was the sole witness. Moreover, the supposition that the two cases were connected and incriminated the same parties, greatly intensified the motive for making away with Jardine. But there was another and much stronger point in favour of this view. If we adopted the theory of substitution, it was impossible, on looking at the two cases, to avoid being struck by the very curious converseness of their conditions. In the Hampstead case we were dealing with a body which had suddenly vanished, no one could say whither; in the Maddock case we were dealing with a body which had suddenly appeared, no one could say whence.

“When I reflected on this very striking appearance of relation it was inevitable that I should ask myself the question. Is it conceivable that these two bodies could have been one and the same? That the body which was cremated could have been the body which Jardine saw in the lane?

“Again, at the first glance, the question looked absurd. The first body was seen by Jardine more than six weeks before the alleged death of Maddock; and the body which he saw at the Samways’ house was that of a man newly dead, with rigor mortis just beginning. It was, indeed barely conceivable that the Hampstead body was not actually dead and that the man might have lingered on alive for six weeks. But this suggestion failed to fit the known facts in two respects. In the first place, the body which Jardine saw in the lane was, from his description, pretty unmistakably a dead body, and, in the second, the sham illness of Maddock and the elaborate, leisurely preparations suggest a complete control of the time factor, which would be absent if those preparations were adjusted to a dying man who might expire at any moment.

“Rejecting this suggestion, then, the further question arose. Is it possible that the body that was seen in the lane could, after an interval of six weeks, have been produced in Gayton Street, perfectly fresh and in a state of incipient rigor mortis? And when the question was thus fairly stated, the answer was obviously in the affirmative. For, is it, not a matter of common knowledge that the bodies of sheep are habitually brought from New Zealand to London, traversing the whole width of the Tropics in the voyage, and are delivered, after an interval of more than six weeks, perfectly fresh and in a state
of incipient rigor mortis? The physical possibility was beyond question.

“But if physically possible, was such preservation practicable? Well, how are the bodies of the sheep preserved? By exposing them continuously to intense cold. And how is that intense cold produced? Roughly speaking, by the volatilization of a liquefied gas—ammonia, in the case of the sheep. But behold! The very man whom we are suspecting of being the agent in this crime is a man who has command of large quantities of a liquefied gas, and who has hired a mineral water factory for no apparent reason and put the premises to no apparent use.”

At this point Jervis brought his fist down with a bang on the arm of his chair. “Idiot!” he exclaimed. “Ass, fool, dole, imbecile that I am! With those cylinders staring me in the face, too! Of course, it was that interval of six weeks that brought me up short. And yet I had actually heard Jardine describe the cloud of carbon dioxide snow that fell on his face! Don’t you consider me an absolute donkey, Thorndyke?”

“Certainly not,” replied Thorndyke. “You happened to miss a link and, of course, the chain would not hold. It occurs to us all now and again. But, do you see, Jardine, how ‘the stone which the builders rejected has become the head of the corner’? Don’t you understand how, when I reached this point, there rose before me the picture of that cellar with the commonplace objects that it contained? The case, seven feet by two and a-half—so convenient for preserving a body in a bulky packing; the two waterproof sheets—so well adapted to holding a mass of carbon dioxide snow in contact with the body; the mass of straw—one of the most perfect non-conductors—so admirably fitted for its use as a protective packing for the frozen body; and lastly, those ten empty cylinders, of which seven had been used for some purpose unknown to us? Let this case be a lesson to you, Jardine, not only in legal medicine but in clinical medicine, too, to take the facts as you find them—relevant or irrelevant, striking or commonplace—note them carefully and trust them to find their own places in the inductive scheme.”

“It has been a most instructive lesson to me,” said I; “especially your analysis of the reasoning by which you identified the criminal.”

“Hum,” said Thorndyke. “I didn’t know I’d got as far as that.”

“But if the body was preserved in a frozen state, there could not be much doubt as to who had preserved it.”

“Possibly not,” Thorndyke agreed. “But I had not proved that it had been so preserved, but only that it was possible for it to have been; and that the supposition of its having been so preserved was in agreement with the known circumstances of the case. But I must impress on you that up to this point I was dealing in pure hypothesis. My hypothesis was perfectly sound, perfectly consistent in all its parts, and perfectly congruous with all the known facts, but it did not follow therefore that it was true. It was entirely unverified; for hitherto I had not one single item of positive evidence to support it.

“Nevertheless, the striking agreement between the hypothesis and the known facts encouraged me greatly; and, as it was evident that I had now exhausted the material yielded by the cremation incident, I decided to take up the clue at the other end; to investigate the details of the Hampstead affair. To this end I called on Jardine, who very kindly went over the case with me afresh. And here it was that I first came within hail of positive evidence. On his wall was pinned an oil sketch, and on that sketch was a distinct print of a right thumb. It was beautifully clear; for the paint having been dry on the surface but soft underneath, had taken the impression as sharply as a surface of warm wax.

“Now, you will remember that I took possession of the letter which summoned Jardine to the mineral water works and I may now say that I tested it most carefully for finger-prints. But paper is a poor material on which to develop invisible prints owing to its absorbent nature and I had very indifferent success. Still, I did not fail entirely. By the combined use of lycopodium powder and photography I obtained impressions of parts of two finger-tips and a portion of the end of a right thumb. They were wretched prints but yet available for corroboration, since one could see part of the pattern on each and could make out that the ridge-pattern of the thumb was of the kind known as a ‘twinned loop.’

“Bearing this fact in mind, you will understand that I was quite interested to find that the print on the sketch—also that of a right thumb—had a twinned loop pattern. I noted the fact as a coincidence, but, of course, attached no importance to it until Jardine told me that the artist who painted the sketch habitually worked in gloves; and even then I merely made a mental note that I would ascertain who and what the artist was.

“I need not go over our examination of the scene of the crime. I need only say that I was deeply interested in following the track along which the body had been carried because I was on the look-out for something; and that something was a house or other building in which the body might have been temporarily deposited.

“My hypothesis seemed to demand such a building. For, since the body was quite fresh and rigor mortis was only beginning when Jardine saw it at Gayton Street, it must have been frozen very shortly after death. Now, it obviously could not have been carried from Hampstead to Gayton Street on a man’s back; the alternative is either a vehicle waiting at an appointed place—and necessarily not far away—or a house or other building to which the body could be taken. But the vehicle would, under the circumstances be almost impracticable. It would hardly be possible to make an appointment with any exactness as to time; and the presence of a waiting or loitering vehicle would, at such an hour—it was about midnight, you will remember—be almost certain to arouse suspicion and inquiry.

“On the other hand, a house to which the body could be conveyed would meet the conditions perfectly. When once the body was deposited there, the danger of pursuit would be practically at an end; and it would be quite possible to have a supply of the liquid gas ready for use on its arrival. This is assuming long premeditation and very deliberate preparation;
an assumption supported by Gill’s peculiar tenancy of the factory.

"I, therefore, kept a sharp look-out for a likely house or building; and, as Jardine and I came out of Ken Wood by the turnstile, behold! a house which answered the requirements to perfection. It was a solitary house; there was no other house near; and it lay right on the track along which the body had apparently been carried. Instantly, I decided to investigate the recent history of that house and its tenants; but Jardine saved me the trouble. From him I learned that, at the time of the assumed murder, it had been inhabited by the artist whom he had mentioned, but that it had now been empty for a week or two.

"Here were news indeed! This artist, who habitually wore gloves and whose right thumb-print was a twinned loop, had been living in this house at the time of the assumed murder, but had been living elsewhere at the time of the cremation! It was a striking group of facts, and I readily availed myself of the opportunity of looking over the house.

"At first, the examination was quite barren and disappointing. The man’s habits, as shown by the few discarded articles of use or other traces, were of no interest to me—and still less to Jardine; and of traces of his personality there were none. I searched all the rejected canvases and every available scrap of paper in the hope of collecting some fresh finger-prints, but without the smallest result. In fact, the examination looked like being an utter failure up to the very last, when we entered the stable-loft; but here I came upon one or two really significant traces of occupation.

"The first of these was a smooth, indented line on the floor, as if some heavy, metallic object had been dragged along it, with other, rougher lines, apparently made by a heavy wooden case. Then there was a quantity of straw, not new straw such as you might expect to find in a stable-loft, but straw that had evidently been used for packing. And, finally, there was a pair of canvas pliers which appeared to have been strained by a violent effort to rotate from right to left some hard, metallic body, three quarters of an inch wide, with sharp corners and apparently square in section; some body, in fact, that in shape, in size and apparently in material, was identical with the square of the cock on one of the liquid gas bottles; which appeared to have been connected with a screw thread and had clearly required great force to turn it with this inadequate appliance.

"The evidence collected from the loft, suggesting that a large case had been moved in and out and that a gas cylinder had been opened, you will say was of the flimsiest. And so it was. But the effects of evidence are cumulative. To estimate the value of these observations made in the loft, you must add them to the facts just obtained concerning the artist himself, the position of his house and the date on which he vacated it; and these coincidences and agreements must be added to—or, more strictly, multiplied into—the body of coincidences and agreements which I have already described.

"But the evidence collected at the house was the least important part of the day’s ‘catch.’ On returning to Jardine’s rooms I ventured to borrow the sketch and took it home with me; and when I compared the thumb-print on it with the photograph of the thumb-print on the letter—employing the excellent method of comparison that is in use at Scotland Yard—there could be no possible doubt (disregarding for the moment, the chances of forgery) that they were the prints of one and the same thumb.

"Here, then, at last I had stepped out of the region of mere hypothesis. Here was an item of positive evidence, and one, moreover, of high probative value. It proved, beyond any reasonable doubt, the existence of some connection between the house on the Heath and the factory in Norton Street; and it established a strong presumption that the artist and the man at the factory were the same person; the weak point in this being the absence of proof that the thumb-print on the painting was made by the artist.

"And here, Jardine, I would draw your attention to the interesting way in which, when a long train of hypothetical reasoning has at length elicited an actual, demonstrable truth, that truth instantly reacts on the hypothesis, lifting it as a whole on to an entirely different plane of probability. I may compare the effect to that of a crystal, dropped into a supersaturated solution of a salt, such as sodium sulphate. So long as it is at rest, the solution remains a clear liquid; but drop into it the minutest crystal of its own salt, and, in a few moments the entire liquid has solidified into a mass of crystals.

"So it was in the present case. In the instant when it became an established fact that the house at Hampstead and the factory in Norton Street had been occupied by the same person, the entire sequence of events which I had hypothetically construed sprang from the plane of mere conceivability to that of actual probability. It was now more likely than unlikely that the unknown cleric had been murdered, that his body had been conveyed to the artist’s house, that it had there been frozen, transferred to the factory, preserved there for some weeks, passed over the wall to the Samways’ house, and finally cremated under the name of Septimus Maddock.

"All that now remained to be done was the verification and identification of the body. As to the first, I examined the will at Somerset House and found it, as the American detectives suspected, a mere notification to the New York authorities that Septimus Maddock was dead. I wrote to the detective agency and in due course came O’Donnell with the answers to my questions; from which we learned for certain that the artist was Septimus Maddock and that the assumed peculiarity of the hands consisted of brachydractyly. And then came the good Father Humperdinck to enable us to give a name to the body and to furnish us with that unlocked for means of identification. Henceforward, all was plain sailing with only one possible source of failure; the possibility that the bullet might have been subsequently extracted. But this was highly improbable. We knew that the wound had healed completely, and it was pretty certain that the bullet was lying quietly encysted or embedded in the bone. Still, I will confess that I have never in my life been more relieved than I was when my eyes lighted on that dent in the ilium with the stain of lead oxide round it."
“So I can imagine,” said Jervis. “It was a triumph; and you deserved it. I have never known even my revered senior to work out the theory of a crime more neatly or with less positive matter to work from. And I suppose you have a pretty clear and connected idea of the actual sequence of events.”

“I think so,” replied Thorndyke, “although much of it is necessarily conjectural. I take it that Maddock, while hiding in Bruges under the name of Burton, made the acquaintance of Reinhardt, and saw in the rich, friendless, eccentric bachelor a suitable subject for a crime which he had probably already considered in general terms. I should think that they were probably somewhat alike in appearance and that the idea of personation was first suggested by the circumstance that they both wore gloves habitually. Maddock will have learned of Reinhardt’s intended visit to England and immediately begun his preparations. His scheme—and a most ingenious one it was, I must confess—was clearly to cause Reinhardt to disappear in one locality and produce his body after a considerable interval in another at some distance; and the house on the Heath was apparently taken with this object and to be near Reinhardt’s haunts. I take it, that on the night of the murder, Reinhardt had an appointment to visit him at that house, but that, having learned at Miss Vyne’s of the sudden illness of Brother Bartholomew, he suddenly altered his plans and refused to go. Then Maddock—who had probably waited for him on the road—seeing his scheme on the point of being wrecked, walked with him as he was going home and took the risk of killing him in Millfield Lane. The risk was not great, considering the time of night and the solitary character of the place, and the distance from the house was not too great for a strong man, as Maddock seems to have been, to carry the body.

“Death was almost certainly produced by a stab in the back; and Maddock was probably just about to carry the body away when destiny, in the form of Jardine, appeared. Then Maddock must have lurked, probably behind the fence which had the large hole in it, until Jardine went away, when he must instantly have picked up the body, carried it down the lane, pushed it over the fence—detaching the reliquary as he did so—carried it away to the house, stripped it and proceeded at once to freeze it, having provided a bottle of the gas in readiness.

“The next morning he will have gone to Marchmont’s office, probably dressed in Reinhardt’s clothes, from thence to Charing Cross, and, with Reinhardt’s luggage, gone straight on to Paris, leaving the body packed in an abundance of the carbonic acid snow. At Paris he will have made his arrangements with Desire and then disappeared, returning in disguise to England to carry out the rest of the plan. And a wonderfully clever plan it was, and most ingeniously and resolutely executed. If it had succeeded—and it was within a hair’s breath of succeeding—the hunted criminal, Maddock, would have been beyond the reach of Justice for ever, and the fictitious Reinhardt might have lived out his life in luxury and absolute security.”

As Thorndyke concluded, he rose from his chair, and, stepping over to a cabinet, drew from some inner recess a cigar of melanotic complexion and repulsive aspect.

Jervis looked at it and chuckled. “Thorndyke’s one dissipation,” said he. “At the close of every successful case he proceeds, as a sort of thanksgiving ceremony, to funk us out of these chambers with the smoke of a Trichinopoly cheroot. But listen! Don’t light it yet, Thorndyke. Here comes some harmless and inoffensive stranger.”

Thorndyke paused with the cigar in his fingers. A quick step ascended the stairs and then came a sharp, official rat-tat from the little brass knocker. Thorndyke laid the cigar on the mantelpiece and strode over to the door. I saw him take in a telegram, open it, glance at the paper and dismiss the messenger. Then, closing the door, he came back to the fireside with the “flimsy” in his hand. “There, Jardine,” said he, laying it on my knee; “there is your order of release.”

I picked up the paper and read aloud its curt message. “Maddock arrested Folkestone now in custody Bow Street. Miller.”

“That means to say,” said Thorndyke, “that the halter is already around his neck. I think I may light my Trichinopoly now.”

And he did so.

There is little more to tell. This has been a history of coincidences and one more coincidence brings it to a close. The very day on which my formal engagement to Sylvia was made public, chanced to be the day on which the execution of Septimus Maddock was described in the papers. On that day, too, the portrait of poor Letitia, painted by that skilful and murderous hand, was placed in the handsome ebony frame that I had caused to be made for it. As I write these closing words, it hangs before me, flanked on either side by the little jar of violets that are renewed religiously from day to day by my wife or me. The pale, inscrutable eyes look out on me, her friend whom she loved so faithfully and who so little merited her love; but as I look into them, the picture fades and shows me the same face glorified, waxen, pallid, drowsy-eyed, peaceful and sweet—the dead face of the woman who gave her heart’s blood as the price of my ransom, and who was fated then to pass—out of my life indeed, but out of my heart’s shrine and my most loving remembrance, never.

THE END
XV. — THE MISSING MORTGAGEE

PART I

EARLY in the afternoon of a warm, humid November day, Thomas Elton sauntered dejectedly along the Margate esplanade, casting an eye now on the slate-coloured sea with its pall of slate-coloured sky, and now on the harbour, where the ebb tide was just beginning to expose the mud. It was a dreary prospect, and Elton varied it by observing the few fishermen and fewer promenaders who walked foot to foot with their distorted reflections in the wet pavement; and thus it was that his eye fell on a smartly-dressed man who had just stepped into a shelter to light a cigar.

A contemporary joker has classified the Scotsmen who abound in South Africa into two groups: those, namely, who hail from Scotland, and those who hail from Palestine. Now, something in the aspect of the broad back that was presented to his view, in that of the curly, black hair and the exuberant raiment, suggested to Elton a Scotsman of the latter type. In fact, there was a suspicion of disagreeable familiarity in the figure which caused him to watch it and slacken his pace. The man backed out of the shelter, diffusing azure clouds, and, drawing an envelope from his pocket, read something that was written on it. Then he turned quickly—and so did Elton, but not quickly enough. For he was a solitary figure on that bald and empty expanse, and the other had seen him at the first glance. Elton walked away slowly, but he had not gone a dozen paces when he felt the anticipated slap on the shoulder and heard the too well-remembered voice.
“Blow me, if I don’t believe you were trying to cut me, Tom,” it said.

Elton looked round with ill-assumed surprise. “Hallo, Gordon! Who the deuce would have thought of seeing you here?”

Gordon laughed thickly. “Not you, apparently; and you don’t look as pleased as you might now you have seen me. Whereas I’m delighted to see you, and especially to see that things are going so well with you.”

“What do you mean?” asked Elton.

“Taking your winter holiday by the sea, like a blooming duke.”

“I’m not taking a holiday,” said Elton. “I was so worn out that I had to have some sort of change; but I’ve brought my work down with me, and I put in a full seven hours every day.”

“That’s right,” said Gordon. “Consider the ant. Nothing like steady industry! I’ve brought my work down with me too; a little slip of paper with a stamp on it. You know the article, Tom.”

“I know. But it isn’t due till to-morrow, is it?”

“Isn’t it, by gum! It’s due this very day, the twentieth of the month. That’s why I’m here. Knowing your little weakness in the matter of dates, and having a small item to collect in Canterbury, I thought I’d just come on, and save you the useless expense that results from forgetfulness.”

Elton understood the hint, and his face grew rigid.

“I can’t do it, Gordon; I can’t really. Haven’t got it, and shan’t have it until I’m paid for the batch of drawings that I’m working on now.”

“Oh, but what a pity!” exclaimed Gordon, taking the cigar from his thick, pouting lips to utter the exclamation. “Here you are, blueing your capital on seaside jaunts and reducing your income at a stroke by a clear four pounds a year.”

“How do you make that out?” demanded Elton.

“Tut, tut,” protested Gordon, “what an unbusinesslike chap you are! Here’s a little matter of twenty pounds quarter’s interest. If it’s paid now, it’s twenty. If it isn’t, it goes on to the principal and there’s another four pounds a year to be paid. Why don’t you try to be more economical, dear boy?”

Elton looked askance at the vampire by his side; at the plump blue-shaven cheeks, the thick black eyebrows, the drooping nose, and the full, red lips that embraced the cigar, and though he was a mild tempered man he felt that he could have batted that sensual, complacent face out of all human likeness, with something uncommonly like enjoyment. But of these thoughts nothing appeared in his reply, for a man cannot afford to say all he would wish to a creditor who could ruin him with a word.

“You mustn’t be too hard on me, Gordon,” said he. “Give me a little time. I’m doing all I can, you know. I earn every penny that I am able, and I have kept my insurance paid up regularly. I shall be paid for this work in a week or two and then we can settle up.”

Gordon made no immediate reply, and the two men walked slowly eastward, a curiously ill-assorted pair: the one prosperous, jaunty, overdressed; the other pale and dejected, and, with his well-brushed but napless clothes, his patched boots and shiny-brimmed hat, the very type of decent, struggling poverty.

They had just passed the pier, and were coming to the base of the jetty, when Gordon next spoke.

“Can’t we get off this beastly wet pavement?” he asked, looking down at his dainty and highly-polished boots. “What’s it like down on the sands?”

“Oh, it’s very good walking,” said Elton, “between here and Foreness, and probably drier than the pavement.”

“Then,” said Gordon, “I vote we go down;” and accordingly they descended the sloping way beyond the jetty. The stretch of sand left by the retiring tide was as smooth and firm as a sheet of asphalt, and far more pleasant to walk upon.

“We seem to have the place all to ourselves,” remarked Gordon, “with the exception of some half-dozen dukes like yourself.”

As he spoke, he cast a cunning black eye furtively at the dejected man by his side, considering how much further squeezing was possible, and what would be the probable product of a further squeeze; but he quickly averted his gaze as Elton turned on him a look eloquent of contempt and dislike. There was another pause, for Elton made no reply to the last observation; then Gordon changed over from one arm to the other the heavy fur overcoat that he was carrying. “Needn’t have brought this beastly thing,” he remarked, “if I’d known it was going to be so warm.”

“Shall I carry it for you a little way?” asked the naturally polite Elton.

“If you would, dear boy,” replied Gordon. “It’s difficult to manage an overcoat, an umbrella and cigar all at once.”

He handed over the coat with a sigh of relief, and having straightened himself and expanded his chest, remarked: “I suppose you’re beginning to do quite well now, Tom?”

Elton shook his head gloomily. “No,” he answered, “it’s the same old grind.”

“But surely they’re beginning to recognise your talents by this time,” said Gordon, with the persuasive air of a counsel.
“That’s just the trouble,” said Elton. “You see, I haven’t any, and they recognised the fact long ago. I’m just a journeyman, and journeyman’s work is what I get given to me.”

“You mean to say that the editors don’t appreciate talent when they see it.”

“I don’t know about that,” said Elton, “but they’re most infernally appreciative of the lack of it.”

Gordon blew out a great cloud of smoke, and raised his eyebrows reflectively. “Do you think,” he said after a brief pause, “you give ‘em a fair chance? I’ve seen some of your stuff. It’s blooming prim, you know. Why don’t you try something more lively? More skittish, you know, old chap; something with legs, you know, and high shoes. See what I mean, old chap? High with good full calves and not too fat in the ankle. That ought to fetch ‘em; don’t you think so?”

Elton scowled. “You’re thinking of the drawings in ‘Hold Me Up,’” he said scornfully, “but you’re mistaken. Any fool can draw a champagne bottle upside down with a French shoe at the end of it.”

“No doubt, dear boy,” said Gordon, “but I expect that sort of fool knows what pays.”

“A good many fools seem to know that much,” retorted Elton; and then he was sorry he had spoken, for Gordon was not really an amiable man, and the expression of his face suggested that he had read a personal application into the rejoinder. So, once more, the two men walked on in silence.

Presently their footsteps led them to the margin of the weed-covered rocks, and here, from under a high heap of bladder-wrack, a large green shorecrab rushed out and menaced them with uplifted claws. Gordon stopped and stared at the creature with Cockney surprise, prodding it with his umbrella, and speculating aloud as to whether it was good to eat. The crab, as if alarmed at the suggestion, suddenly darted away and began to scuttle over the green-clad rocks, finally plunging into a large, deep pool. Gordon pursued it, hobbling awkwardly over the slippery rocks, until he came to the edge of the pool, over which he stooped, raking inquisitively among the weedy fringe with his umbrella. He was so much interested in his quarry that he failed to allow for the slippery surface on which he stood. The result was disastrous. Of a sudden, one foot began to slide forward, and when he tried to recover his balance, was instantly followed by the other. For a moment he struggled frantically to regain his footing, executing a sort of splashing, stamping dance on the margin. Then, the circling sea birds were startled by a yell of terror, an ivory-handled umbrella flew across the rocks, and Mr. Solomon Gordon took a complete header into the deepest part of the pool. What the crab thought of it history does not relate. What Mr. Gordon thought of it is unsuitable for publication; but, as he rose, like an extremely up-to-date merman, he expressed his sentiments with a wealth of adjectives that brought Elton in the verge of hysteria.

“It’s a good job you brought your overcoat, after all,” Elton remarked for the sake of saying something, and thereby avoiding the risk of exploding into undeniable laughter. The Hebrew made no reply—at least, no reply that lends itself to verbatim report—but staggered towards the hospitable overcoat, holding out his dripping arms. Having inducted him into the garment and buttoned him up, Elton hurried off to recover the umbrella (and, incidentally, to indulge himself in a broad grin), and, having secured it, angled with it for the smart billycock which was floating across the pool.

It was surprising what a change the last minute or two had wrought. The positions of the two men were now quite reversed. Despite his shabby clothing, Elton seemed to walk quite jauntily as compared with his shuddering companion who trotted by his side with short miserable steps, shrinking into the uttermost depths of his enveloping coat, like an alarmed wrinkle into its shell, puffing out his cheeks and anathematizing the Universe in general as well as his chattering teeth would let him.

For some time they hurried along towards the slope by the jetty without exchanging any further remarks; then suddenly, Elton asked: “What are you going to do, Gordon? You can’t travel like that.”

“Can’t you lend me a change?” asked Gordon. Elton reflected. He had another suit, his best suit, which he had been careful to preserve in good condition for use on those occasions when a decent appearance was indispensable. He looked askance at the man by his side and something told him that the treasured suit would probably receive less careful treatment than it was accustomed to. Still the man couldn’t be allowed to go about in wet clothes.

“I’ve got a spare suit,” he said. “It isn’t quite up to your style, and may not be much of a fit, but I daresay you’ll be able to put up with it for an hour or two.”

“It’ll be dry anyhow,” mumbled Gordon, “so we won’t trouble about the style. How far is it to your rooms?”

The plural number was superfluous. Elton’s room was in a little ancient flint house at the bottom of a narrow close in the old quarter of the town. You reached it without any formal preliminaries of bell or knocker by simply letting yourself in by a street door, crossing a tiny room, opening the door of what looked like a narrow cupboard, and squeezing up a diminutive flight of stairs, which was unexpectedly exposed to view. By following this procedure, the two men reached a small bed-sitting-room; that is to say, it was a bed room, but by sitting down on the bed, you converted it into a sitting-room.

Gordon puffed out his cheeks and looked round distastefully.

“You might just ring for some hot water, old chappie,” he said.

Elton laughed aloud. “Ring!” he exclaimed. “Ring what? Your clothes are the only things that are likely to get wrung.”

“Well, then, sing out for the servant,” said Gordon.
Elton laughed again. “My dear fellow,” said he, “we don’t go in for servants. There is only my landlady and she never comes up here. She’s too fat to get up the stairs, and besides, she’s got a game leg. I look after my room myself. You’ll be all right if you have a good rub down.”

Gordon groaned, and emerged reluctantly from the depths of his overcoat, while Elton brought forth from the chest of drawers the promised suit and the necessary undergarments. One of these latter Gordon held up with a sour smile, as he regarded it with extreme disfavour.

“I shouldn’t think,” said he, “you need have been at the trouble of marking them so plainly. No one’s likely to want to run away with them.”

The undergarments certainly contrasted very unfavourably with the delicate garments which he was peeling off, excepting in one respect; they were dry; and that had to console him for the ignominious change.

The clothes fitted quite fairly, notwithstanding the difference between the figures of the two men; for while Gordon was a slender man grown fat, Elton was a broad man grown thin; which, in a way, averaged their superficial area.

Elton watched the process of investment and noted the caution with which Gordon smuggled the various articles from his own pockets into those of the borrowed garments without exposing them to view; heard the jingle of money; saw the sumptuous gold watch and massive chain transplanted and noted with interest the large leather wallet that came forth from the breast pocket of the wet coat. He got a better view of this from the fact that Gordon himself examined it narrowly, and even opened it to inspect its contents.

“Lucky that wasn’t an ordinary pocketbook.” he remarked. “If it had been, your receipt would have got wet, and so would one or two other little articles that wouldn’t have been improved by salt water. And, talking of the receipt, Tom, shall I hand it over now?”

“You can if you like,” said Elton; “but as I told you, I haven’t got the money;” on which Gordon muttered: “Pity, pity,” and thrust the wallet into his, or rather, Elton’s breast pocket.

A few minutes later, the two men came out together into the gathering darkness, and as they walked slowly up the close, Elton asked: “Are you going up to town to-night, Gordon?”

“How can I?” was the reply. “I can’t go without my clothes. No, I shall run over to Broadstairs. A client of mine keeps a boarding-house there. He’ll have to put me up for the night, and if you can get my clothes cleaned and dried I can come over for them to-morrow.”

These arrangements having been settled, the two men adjourned, at Gordon’s suggestion, for tea at one of the restaurants on the Front; and after that, again at Gordon’s suggestion, they set forth together along the cliff path that leads to Broadstairs by way of Kingsgate.

“You may as well walk with me into Broadstairs,” said Gordon; “I’ll stand you the fare back by rail;” and to this Elton had agreed, not because he was desirous of the other man’s company, but because he still had some lingering hopes of being able to adjust the little difficulty respecting the instalment.

He did not, however, open the subject at once. Profoundly as he loathed and despised the human spider whom necessity made his associate for the moment, he exerted himself to keep up a current of amusing conversation. It was not easy; for Gordon, like most men whose attention is focussed on the mere acquirement of money, looked with a dull eye on the ordinary interests of life. His tastes in art he had already hinted at, and his other tastes lay much in the same direction. Money first, for its own sake, and then those coarser and more primitive gratifications that it was capable of purchasing. This was the horizon that bounded Mr. Solomon Gordon’s field of vision.

Nevertheless, they were well on their way before Elton alluded to the subject that was uppermost in both their minds.

“Look here, Gordon,” he said at length, “can’t you manage to give me a bit more time to pay up this instalment? It doesn’t seem quite fair to keep sending up the principal like this.”

“Well, dear boy,” replied Gordon, “it’s your own fault, you know. If you would only bear the dates in mind, it wouldn’t happen.”

“But,” pleaded Elton, “just consider what I’m paying you. I originally borrowed fifty pounds from you, and I’m now paying you eighty pounds a year in addition to the insurance premium. That’s close on a hundred a year; just about half that I manage to earn by slaving like a nigger. If you stick it up any farther you won’t leave me enough to keep body and soul together; which really means that I shan’t be able to pay you at all.”

There was a brief pause; then Gordon said dryly: “You talk about not paying, dear boy, as if you had forgotten about that promissory note.”

Elton set his teeth. His temper was rising rapidly. But he restrained himself.

“I should have a pretty poor memory if I had,” he replied, “considering the number of reminders you’ve given me.”

“You’ve needed them, Tom,” said the other. “I’ve never met a slacker man in keeping to his engagements.”

At this Elton lost his temper completely.

“That’s a damned lie!” he exclaimed, “and you know it, you infernal, dirty, blood-sucking parasite.”
Gordon stopped dead.

"Look here, my friend," said he; "none of that. If I've any of your damned sauce, I'll give you a sound good hammering."

"The deuce you will!" said Elton, whose fingers were itching, not for the first time, to take some recompense for all that he had suffered from the insatiable usurer. "Nothing's preventing you now, you know, but I fancy cent. per cent. is more in your line than fighting."

"Give me any more sauce and you'll see," said Gordon.

"Very well," was the quiet rejoinder. "I have great pleasure in informing you that you are a human maw-worm. How does that suit you?"

For reply, Gordon threw down his overcoat and umbrella on the grass at the side of the path, and deliberately slapped Elton on the cheek.

The reply followed instantly in the form of a smart left-hander, which took effect on the bridge of the Hebrew's rather prominent nose. Thus the battle was fairly started, and it proceeded with all the fury of accumulated hatred on the one side and sharp physical pain on the other. What little science there was appertained to Elton, in spite of which, however, he had to give way to his heavier, better nourished and more excitible opponent. Regardless of the punishment he received, the infuriated Jew rushed at him and, by sheer weight of onslaught, drove him backward across the little green.

Suddenly, Elton, who knew the place by daylight, called out in alarm.

"Look out, Gordon! Get back, you fool!"

But Gordon, blind with fury, and taking this as attempt to escape, only pressed him harder. Elton's pugnacity died out instantly in mortal terror. He shouted out another warning and as Gordon still pressed him, battering furiously, he did the only thing that was possible: he dropped to the ground. And then, in the twinkling of an eye came the catastrophe. Borne forward by his own momentum, Gordon stumbled over Elton's prostrate body, staggered forward a few paces, and fell. Elton heard a muffled groan that faded quickly, and mingled with the sound of falling earth and stones. He sprang to his feet and looked round and saw that he was alone.

For some moments he was dazed by the suddenness of the awful thing that had happened. He crept timorously towards the unseen edge of the cliff, and listened.

There was no sound save the distant surge of the breakers, and the scream of an invisible sea-bird. It was useless to try to look over. Near as he was, he could not, even now, distinguish the edge of the cliff from the dark beach below. Suddenly he bethought him of a narrow cutting that led down from the cliff to the shore. Quickly crossing the green, and mechanically stooping to pick up Gordon's overcoat and umbrella, he made his way to the head of the cutting and ran down the rough chalk roadway. At the bottom he turned to the right and, striding hurriedly over the smooth sand, peered into the darkness at the foot of the cliff.

Soon there loomed up against the murky sky the shadowy form of the little headland on which he and Gordon had stood; and, almost at the same moment, there grew out of the darkness of the beach a darker spot amidst a constellation of smaller spots of white. As he drew nearer the dark spot took shape; a horrid shape with sprawling limbs and a head strangely awry. He stepped forward, trembling, and spoke the name that the thing had borne. He grasped the flabby hand, and laid his fingers on the wrist; but it only told him the same tale as did that strangely misplaced head. The body lay face downwards, and he had not the courage to turn it over; but that his enemy was dead he had not the faintest doubt. He stood up amidst the litter of fallen chalk and earth and looked down at the horrible, motionless thing, wondering numbly and vaguely what he should do. Should he go and seek assistance? The answer to that came in another question. How came that body to be lying on the beach? And what answer should he give to the inevitable questions? And swiftly there grew up in his mind, born of the horror of the thing that was, a yet greater horror of the thing that might be.

A minute later, a panic-stricken man stole with stealthy swiftness up the narrow cutting and set forth towards Margate, stopping anon to listen, and stealing away off the path into the darkness, to enter the town by the inland road.

Little sleep was there that night for Elton in his room in the old flint house. The dead man's clothes, which greeted him on his arrival, hanging limply on the towel-horse where he had left them, haunted him through the night. In the darkness, the sour smell of damp cloth assailed him with an endless reminder of their presence, and after each brief doze, he would start up in alarm and hastily light his candle; only to throw its flickering light on those dank, drowned-looking vestments. His thoughts, half-controlled, as night thoughts are, flitted erratically from the unhappy past to the unstable present, and thence to the incalculable future. Once he lighted the candle specially to look at his watch to see if the tide had yet crept up to that solitary figure on the beach; nor could he rest again until the time of high water was well past. And all through these wanderings of his thoughts there came, recurring like a horrible refrain, the question what would happen when the body was found? Could he be connected with it and, if so, would he be charged with murder? At last he fell asleep and slumbered on until the landlady thumped at the staircase door to announce that she had brought his breakfast.

As soon as he was dressed he went out. Not, however, until he had stuffed Gordon's still damp clothes and boots, the cumbrous overcoat and the smart billy-cock hat into his trunk, and put the umbrella into the darkest corner of the cupboard. Not that anyone ever came up to the room, but that, already, he was possessed with the uneasy secretiveness of the criminal. He went straight down to the beach; with what purpose he could hardly have said, but an irresistible impulse drove him thither to see if it was there. He went down by the jetty and struck out eastward over the smooth sand, looking
about him with dreadful expectation for some small crowd or hurrying messenger. From the foot of the cliffs, over the rocks to the distant line of breakers, his eye roved with eager dread, and still he hurried eastward, always drawing nearer to the place that he feared to look on. As he left the town behind, so he left behind the one or two idlers on the beach, and when he turned Foreness Point he lost sight of the last of them and went forward alone. It was less than half an hour later that the fatal headland opened out beyond Whiteness.

Not a soul had he met along that solitary beach, and though, once or twice, he had started at the sight of some mass of drift wood or heap of seaweed, the dreadful thing that he was seeking had not yet appeared. He passed the opening of the cutting and approached the headland, breathing fast and looking about him fearfully. Already he could see the larger lumps of chalk that had fallen, and looking up, he saw a clean, white patch at the summit of the cliff. But still there was no sign of the corpse. He walked on more slowly now, considering whether it could have drifted out to sea, or whether he should find it in the next bay. And then, rounding the headland, he came in sight of a black hole at the cliff foot, the entrance to a deep cave. He approached yet more slowly, sweeping his eye round the little bay, and looking apprehensively at the cavity before him. Suppose the thing should have washed in there. It was quite possible. Many things did wash into that cave, for he had once visited it and had been astonished at the quantity of seaweed and jetsam that had accumulated within it. But it was an uncomfortable thought. It would be doubly horrible to meet the awful thing in the dim twilight of the cavern. And yet, the black archway seemed to draw him on, step by step, until he stood at the portal and looked in. It was an eerie place, chillly and damp, the clammy walls and roof stained green and purple and black with encrusting lichens. At one time, Elton had been told, it used to be haunted by smugglers, and then communicated with an underground passage; and the old smuggler’s look-out still remained; a narrow tunnel, high up the cliff, looking out into Kingsgate Bay; and even some vestiges of the rude steps that led up to the look-out platform could still be traced, and were not impossible to climb. Indeed, Elton had, at his last visit, climbed to the platform and looked out through the spy-hole. He recalled the circumstance now, as he stood, peering nervously into the darkness, and straining his eyes to see what jetsam the ocean had brought since then.

At first he could see nothing but the smooth sand near the opening; then, as his eyes grew more accustomed to the gloom, he could make out the great heap of seaweed on the floor of the cave. Insensibly, he crept in, with his eyes riveted on the weedy mass and, as he left the daylight behind him, so did the twilight of the cave grow clearer. His feet left the firm sand and trod the springy mass of weed, and in the silence of the cave he could now hear plainly the rain-like patter of the leaping sand-hoppers. He stopped for a moment to listen to the unfamiliar sound, and still the gloom of the cave grew lighter to his more accustomed eyes.

And then, in an instant, he saw it. From a heap of weed, a few paces ahead, projected a boot; his own boot; he recognised the patch on the sole; and at the sight, his heart seemed to stand still. Though he had somehow expected to find it here, its presence seemed to strike him with a greater shock of horror from that very circumstance.

He was standing stock still, gazing with fearful fascination at the boot and the swelling mound of weed, when, suddenly, there struck upon his ear the voice of a woman, singing.

He started violently. His first impulse was to run out of the cave. But a moment’s reflection told him what madness this would be. And then the voice drew nearer, and there broke out the high, rippling laughter of a child. Elton looked in terror at the bright opening of the cavern’s mouth, expecting every moment to see it frame a group of figures. If that happened, he was lost, for he would have been seen actually with the body. Suddenly he betook him of the spy-hole and the platform, both of which were invisible from the entrance; and turning, he ran quickly over the sodden weed till he came to the remains of the steps. Climbing hurriedly up these, he reached the platform, which was enclosed in a large niche, just as the reverberating sound of voices told him that the strangers were within the mouth of the cave. He strained his ears to catch what they were saying and to make out if they were entering farther. It was a child’s voice that he had first heard, and very weird were the hollow echoes of the thin treble that were flung back from the rugged walls. But he could not hear what the child had said. The woman’s voice, however, was quite distinct, and the words seemed significant in more senses than one.

“No, dear,” it said, “you had better not go in. It’s cold and damp. Come out into the sunshine.”

Elton breathed more freely. But the woman was more right than she knew. It was cold and damp, that thing under the black tangle of weed. Better far to be out in the sunshine. He himself was already longing to escape from the chill and gloom, of the cavern. But he could not escape yet. Innocent as he actually was, his position was that of a murderer. He must wait until the coast was clear, and then steal out, to hurry away unobserved.

He crept up cautiously to the short tunnel and peered out through the opening across the bay. And then his heart sank. Below him, on the sunny beach, a small party of visitors had established themselves just within view of the mouth of the cave; and even as he looked, a man approached from the wooden stairway down the cliff, carrying a couple of deck chairs. So, for the present his escape was hopelessly cut off.

He went back to the platform and sat down to wait for his release; and, as he sat, his thoughts went back once more to the thing that lay under the weed. How long would it lie there undiscovered? And what would happen when it was found? What was there to connect him with it? Of course, there was his name on the clothing, but there was nothing incriminating in that, if he had only had the courage to give information at once. But it was too late to think of that now. Besides, it suddenly flashed upon him, there was the receipt in the wallet. That receipt mentioned him by name and referred to a loan. Obviously, its suggestion was most sinister, coupled with his silence. It was a deadly item of evidence against him. But no sooner had he realised the appalling significance of this document than he also realised that it was still within his reach.
Why should he leave it there to be brought in evidence—in false evidence, too—against him?

Slowly he rose and, creeping down the tunnel, once more looked out. The people were sitting quietly in their chairs, the man was reading, and the child was digging in the sand. Elton looked across the bay to make sure that no other person was approaching, and then, hastily climbing down the steps, walked across the great bed of weed, driving an army of sand-hoppers before him. He shuddered at the thought of what he was going to do, and the clammy chill of the cave seemed to settle on him in a cold sweat.

He came to the little mound from which the boot projected, and began, shudderingly and with faltering hand, to lift the slimy, tangled weed. As he drew aside the first bunch, he gave a gasp of horror and quickly replaced it. The body was lying on its back, and, as he lifted the weed he had uncovered—not the face, for the thing had no face. It had struck either the cliff or a stone upon the beach and—but there is no need to go into particulars: it had no face. When he had recovered a little, Elton groped shudderingly among the weed until he found the breast-pocket from which he quickly drew out the wallet, now clammy, sodden and loathsome. He was rising with it in his hand when an apparition, seen through the opening of the cave, arrested his movement as if he had been suddenly turned into stone. A man, apparently a fisherman or sailor, was sauntering past some thirty yards from the mouth of the cave, and at his heels trotted a mongrel dog. The dog stopped, and, lifting his nose, seemed to sniff the air; and then he began to walk slowly and suspiciously towards the cave. The man sauntered on and soon passed out of view; but the dog still came on towards the cave, stopping now and again with upraised nose.

The catastrophe seemed inevitable. But just at that moment the man's voice rose, loud and angry, evidently calling the dog. The animal hesitated, looking wistfully from his master to the cave; but when the summons was repeated, he turned reluctantly and trotted away.

Elton stood up and took a deep breath. The chilly sweat was running down his face, his heart was thumping and his knees trembled, so that he could hardly get back to the platform. What hideous peril had he escaped and how narrowly! For there he had stood; and had the man entered, he would have been caught in the very act of stealing the incriminating document from the body. For that matter, he was little better off now, with the dead man's property and the wallet. For that matter, he was little better off now, with the dead man's property and the wallet. He resolved instantly to take out and destroy the receipt and put back the wallet. But this was easier thought of than done. The receipt was soaked with sea water, and refused utterly to light when he applied a match to it. In the end, he tore it up into little fragments and deliberately swallowed them, one by one.

But to restore the wallet was more than he was equal to just now. He would wait until the people had gone home to lunch, and then he would thrust it under the weed as he ran past. So he sat down again and once more took up the endless thread of his thoughts.

The receipt was gone now, and with it the immediate suggestion of motive. There remained only the clothes with their too legible markings. They certainly connected him with the body, but they offered no proof of his presence at the catastrophe. And then, suddenly, another most startling idea occurred to him. Who could identify the body—the body that had no face? There was the wallet, it was true, but he could take that away with him, and there was only one ring on the finger and some articles in the pockets which might be identified. But—a voice seemed to whisper to him—these things were removable, too. And if he removed them, what then? Why, then, the body was that of Thomas Elton, a friendless, poverty-stricken artist, about whom no one would trouble to ask any questions.

He pondered on this new situation profoundly. It offered him a choice of alternatives. Either he might choose the imminent risk of being hanged for a murder that he had not committed, or he might surrender his identity for ever and move away to a new environment.

He smiled faintly. His identity! What might that be worth to barter against his life? Only yesterday he would gladly have surrendered it as the bare price of emancipation from the vampire who had fastened on to him.

He thrust the wallet into his pocket and buttoned his coat. Thomas Elton was dead; and that other man, as yet unnamed, should go forth, as the woman had said, into the sunshine.

PART II

FROM various causes, the insurance business that passed through Thorndyke's hands had, of late, considerably increased. The number of societies which regularly employed him had grown larger, and, since the remarkable case of Percival Bland, the Griffin had made it a routine practice to send all inquest cases to us for report.

[Compiler's note: the Percival Bland case actually follows directly after this one in the book: clearly the order of stories has been transposed.]

It was in reference to one of these latter that Mr. Stalker, a senior member of the staff of that office, called on us one afternoon in December; and when he had laid his bag on the table and settled himself comfortably before the fire, he opened the business without preamble.

"I've brought you another inquest case," said he; "a rather queer one, quite interesting from your point of view. As far as we can see, it has no particular interest for us excepting that it does rather look as if our examining medical officer had been a little casual."
"What is the special interest of the case from our point of view?" asked Thorndyke.

"I'll just give you a sketch of it," said Stalker, "and I think you will agree that it's a case after your own heart.

"On the 24th of last month, some men were collecting seaweed, to use as manure, discovered in a cave at Kingsgate, in the Isle of Thanet, the body of a man, lying under a mass of accumulated weed. As the tide was rising, they put the body into their cart and conveyed it to Margate, where, of course, an inquest was held, and the following facts were elicited. The body was that of a man named Thomas Elton. It was identified by the name-marks on the clothing, by the visiting-cards and a couple of letters which were found in the pockets. From the address on the letters it was seen that Elton had been staying in Margate, and on inquiry at that address, it was learnt from the old woman who let the lodgings, that he had been missing about four days. The landlady was taken to the mortuary, and at once identified the body as that of her lodger. It remained only to decide how the body came into the cave; and this did not seem to present much difficulty; for the neck had been broken by a tremendous blow, which had practically destroyed the face, and there were distinct evidences of a breaking away of a portion of the top of the cliff, only a few yards from the position of the cave. There was apparently no doubt that Elton had fallen sheer from the top of the overhanging cliff on to the beach. Now, one would suppose with the evidence of this fall of about a hundred and fifty feet, the smashed face and broken neck, there was not much room for doubt as to the cause of death. I think you will agree with me, Dr. Jervis?"

"Certainly," I replied; "it must be admitted that a broken neck is a condition that tends to shorten life."

"Quite so," agreed Stalker; "but our friend, the local coroner, is a gentleman who takes nothing for granted—a very Thomas Didymus, who apparently agrees with Dr. Thorndyke that if there is no post mortem, there is no inquest. So he ordered a post mortem, which would have appeared to me an absurdly unnecessary proceeding, and I think that even you will agree with me, Dr. Thorndyke."

But Thorndyke shook his head.

"Not at all," said he. "It might, for instance, be much more easy to push a drugged or poisoned man over a cliff than to put over the same man in his normal state. The appearance of violent accident is an excellent mask for the less obvious forms of murder."

"That's perfectly true," said Stalker; "and I suppose that is what the coroner thought. At any rate, he had the post-mortem made, and the result was most curious; for it was found, on opening the body, that the deceased had suffered from a smallish thoracic aneurism, which had burst. Now, as the aneurism must obviously have burst during life, it leaves the cause of death—so I understand—uncertain; at any rate, the medical witness was unable to say whether the deceased fell over the cliff in consequence of the bursting of the aneurism or burst the aneurism in consequence of falling over the cliff. Of course, it doesn't matter to us which way the thing happened; the only question which interests us is, whether a comparatively recently insured man ought to have had an aneurism at all."

"Have you paid the claim?" asked Thorndyke.

"No, certainly not. We never pay a claim until we have had your report. But, as a matter of fact, there is another circumstance that is causing delay. It seems that Elton had mortgaged his policy to a money lender, named Gordon, and it is by him that the claim has been made, or rather, by a clerk of his, named Hyams. Now, we have had a good many dealings with this man Gordon, and hitherto he has always acted in person; and as he is a somewhat slippery gentleman we have thought it desirable to have the claim actually signed by him. And that is the difficulty. For it seems that Mr. Gordon is abroad, and his whereabouts unknown to Hyams; so, as we certainly couldn't take Hyams's receipt for payment, the matter is in abeyance until Hyams can communicate with his principal. And now, I must be running away. I have brought you, as you will see, all the papers, including the policy and the mortgage deed."

As soon as he was gone, Thorndyke gathered up the bundle of papers and sorted them out in what he apparently considered the order of their importance. First he glanced quickly through the proposal form, and then took up the copy of the coroner's depositions.

"The medical evidence," he remarked, "is very full and complete. Both the coroner and the doctor seem to know their business."

"Seeing that the man apparently fell over a cliff," said I, "the medical evidence would not seem to be of first importance. It would seem to be more to the point to ascertain how he came to fall over."

"That's quite true," replied Thorndyke; "and yet, this report contains some rather curious matter. The deceased had an aneurism of the arch; that was probably rather recent. But he also had some slight, old-standing aortic disease, with full compensatory hypertrophy. He also had a nearly complete set of false teeth. Now, doesn't it strike you, Jervis, as rather odd that a man who was passed only five years ago as a first-class life, should, in that short interval, have become actually uninsurable?"

"Yes, it certainly does look," said I, "as if the fellow had had rather bad luck. What does the proposal form say?"

I took the document up and ran my eyes over it. On Thorndyke's advice, medical examiners for the Griffin were instructed to make a somewhat fuller report than is usual in some companies. In this case, the ordinary answers to questions set forth that the heart was perfectly healthy and the teeth rather exceptionally good, and then, in the summary at the end, the examiner remarked: "the proposer seems to be a completely sound and healthy man; he presents no physical defects whatever, with the exception of a bony ankylosis of the first joint of the third finger of the left hand, which
he states to have been due to an injury.”

Thorndyke looked up quickly. “Which finger, did you say?” he asked.

“The third finger of the left hand,” I replied.

Thorndyke looked thoughtfully at the paper that he was reading. “It’s very singular,” said he, “for I see that the Margate doctor states that the deceased wore a signet ring on the third finger of the left hand. Now, of course, you couldn’t get a ring on to a finger with bony ankylosis of the joint.”

“He must have mistaken the finger,” said I, “or else the insurance examiner did.”

“That is quite possible,” Thorndyke replied; “but, doesn’t it strike you as very singular that, whereas the insurance examiner mentions the ankylosis, which was of no importance from an insurance point of view, the very careful man who made the post-mortem should not have mentioned it, though, owing to the unrecognisable condition of the face, it was of vital importance for the purpose of identification?”

I admitted that it was very singular indeed, and we then resumed our study of the respective papers. But presently I noticed that Thorndyke had laid the report upon his knee, and was gazing speculatively into the fire.

“I gather,” said I, “that my learned friend finds some matter of interest in this case.”

For reply, he handed me the bundle of papers, recommending me to look through them.

“Thank you,” said I, rejecting them firmly, “but I think I can trust you to have picked out all the plums.”

Thorndyke smiled indulgently. “They’re not plums, Jervis,” said he; “they’re only currants, but they make quite a substantial little heap.”

I disposed myself in a receptive attitude (somewhat after the fashion of the juvenile pelican) and he continued: “If we take the small and unimpressive items and add them together, you will see that a quite considerable sum of discrepancy results, thus:

“In 1903, Thomas Elton, aged thirty-one, had a set of sound teeth. In 1908, at the age of thirty-six, he was more than half toothless. Again, at the age of thirty-one, his heart was perfectly healthy. At the age of thirty-six, he had old aortic disease, with fully established compensation, and an aneurism that was possibly due to it. When he was examined he had a noticeable incurable malformation; no such malformation is mentioned in connection with the body.

“He appears to have fallen over a cliff; and he had also burst an aneurism. Now, the bursting of the aneurism must obviously have occurred during life; but it would occasion practically instantaneous death. Therefore, if the fall was accidental, the rupture must have occurred either as he stood at the edge of the cliff, as he was in the act of falling, or on striking the beach.

“At the place where he apparently fell, the footpath is some thirty yards distant from the edge of the cliff. It is not known how he came to that spot, or whether he was alone at the time.

“Someone is claiming five hundred pounds as the immediate result of his death.

“There, you see, Jervis, are seven propositions, none of them extremely striking, but rather suggestive when taken together.”

“You seem,” said I, “to suggest a doubt as to the identity of the body.”

“I do,” he replied. “The identity was not clearly established.”

“You don’t think the clothing and the visiting-cards conclusive.”

“They’re not parts of the body,” he replied. “Of course, substitution is highly improbable. But it is not impossible.”

“And the old woman—” I suggested, but he interrupted me.

“My dear Jervis,” he exclaimed; “I’m surprised at you. How many times has it happened within our knowledge that women have identified the bodies of total strangers as those of their husbands, fathers or brothers? The thing happens almost every year. As to this old woman, she saw a body with an unrecognisable face, dressed in the clothes of her missing lodger. Of course, it was the clothes that she identified.”

“I suppose it was,” I agreed; and then I said: “You seem to suggest the possibility of foul play.”

“Well,” he replied, “if you consider those seven points, you will agree with me that they present a cumulative discrepancy which it is impossible to ignore. The whole significance of the case turns on the question of identity; for, if this was not the body of Thomas Elton, it would appear to have been deliberately prepared to counterfeit that body. And such deliberate preparation would manifestly imply an attempt to conceal the identity of some other body.

“Then,” he continued, after a pause, “there is this deed. It looks quite regular and is correctly stamped, but it seems to me that the surface of the paper is slightly altered in one or two places and if one holds the document up to the light, the paper looks a little more transparent in those places.” He examined the document for a few seconds with his pocket lens, and then passing lens and document to me, said: “Have a look at it, Jervis, and tell me what you think.”

I scrutinised the paper closely, taking it over to the window to get a better light; and to me, also, the paper appeared to
be changed in certain places.

"Are we agreed as to the position of the altered places?" Thorndyke asked when I announced the fact.

"I only see three patches," I answered. "Two correspond to the name, Thomas Elton, and the third to one of the figures in the policy number."

"Exactly," said Thorndyke, "and the significance is obvious. If the paper has really been altered, it means that some other name has been erased and Elton's substituted; by which arrangement, of course, the correctly dated stamp would be secured. And this—the alteration of an old document—is the only form of forgery that is possible with a dated, impressed stamp."

"Wouldn't it be rather a stroke of luck," I asked, "for a forger to happen to have in his possession a document needing only these two alterations?"

"I see nothing remarkable in it," Thorndyke replied. "A moneylender would have a number of documents of this kind in hand, and you observe that he was not bound down to any particular date. Any date within a year or so of the issue of the policy would answer his purpose. This document is, in fact, dated, as you see, about six months after the issue of the policy."

"I suppose," said I, "that you will draw Stalker's attention to this matter."

"He will have to be informed, of course," Thorndyke replied; "but I think it would be interesting in the first place to call on Mr. Hyams. You will have noticed that there are some rather mysterious features in this case, and Mr. Hyams's conduct, especially if this document should turn out to be really a forgery, suggests that he may have some special information on the subject." He glanced at his watch and, after a few moments' reflection, added: "I don't see why we shouldn't make our little ceremonial call at once. But it will be a delicate business, for we have mighty little to go upon. Are you coming with me?"

If I had had any doubts, Thorndyke's last remark disposed of them; for the interview promised to be quite a sporting event. Mr. Hyams was presumably not quite newly-hatched, and Thorndyke, who utterly despised bluff of any kind, and whose exact mind refused either to act or speak one hair's breadth beyond his knowledge, was admittedly in somewhat of a fog. The meeting promised to be really entertaining.

Mr. Hyams was "discovered," as the playwrights have it, in a small office at the top of a high building in Queen Victoria Street. He was a small gentleman, of sallow and greasy aspect, with heavy eyebrows and a still heavier nose.

"Are you Mr. Gordon?" Thorndyke suavely inquired as we entered.

Mr. Hyams seemed to experience a momentary doubt on the subject, but finally decided that he was not. "But perhaps," he added brightly, "I can do your business for you as well."

"I daresay you can," Thorndyke agreed significantly; on which we were conducted into an inner den, where I noticed Thorndyke's eye rest for an instant on a large iron safe.

"Now," said Mr. Hyams, shutting the door ostentatiously, "what can I do for you?"

"I want you," Thorndyke replied, "to answer one or two questions with reference to the claim made by you on the Griffin Office in respect of Thomas Elton."

Mr. Hyams's manner underwent a sudden change. He began rapidly to turn over papers, and opened and shut the drawers of his desk, with an air of restless preoccupation.

"Did the Griffin people send you here?" he demanded brusquely.

"They did not specially instruct me to call on you," replied Thorndyke.

"Then," said Hyams bouncing out of his chair, "I can't let you occupy my time. I'm not here to answer conundrums from Tom, Dick or Harry."

Thorndyke rose from his chair. "Then I am to understand," he said, with unruffled suavity, "that you would prefer me to communicate with the Directors, and leave them to take any necessary action."

This gave Mr. Hyams pause. "What action do you refer to?" he asked. "And, who are you?"

Thorndyke produced a card and laid it on the table. Mr. Hyams had apparently seen the name before, for he suddenly grew rather pale and very serious.

"What is the nature of the questions that you wished to ask?" he inquired.

"They refer to this claim," replied Thorndyke. "The first question is, where is Mr. Gordon?"

"I don't know," said Hyams.

"Where do you think he is?" asked Thorndyke.

"I don't think at all," replied Hyams, turning a shade paler and looking everywhere but at Thorndyke.

"Very well," said the latter, "then the next question is, are you satisfied that this claim is really payable?"
“I shouldn’t have made it if I hadn’t been,” replied Hyams.

“Quite so,” said Thorndyke; “and the third question is, are you satisfied that the mortgage deed was executed as it purports to have been?”

“I can’t say anything about that,” replied Hyams, who was growing every moment paler and more fidgety, “it was done before my time.”

“Thank you,” said Thorndyke. “You will, of course, understand why I am making these inquiries.”

“I don’t,” said Hyams.

“Then,” said Thorndyke, “perhaps I had better explain. We are dealing, you observe, Mr. Hyams, with the case of a man who has met with a violent death under somewhat mysterious circumstances. We are dealing, also, with another man who has disappeared, leaving his affairs to take care of themselves; and with a claim, put forward by a third party, on behalf of the one man in respect of the other. When I say that the dead man has been imperfectly identified, and that the document supporting the claim presents certain peculiarities, you will see that the matter calls for further inquiry.”

There was an appreciable interval of silence. Mr. Hyams had turned a tallowy white, and looked furtively about the room, as if anxious to avoid the stony gaze that my colleague had fixed on him.

“Can you give us no assistance?” Thorndyke inquired, at length.

Mr. Hyams chewed a pen-holder ravenously, as he considered the question. At length, he burst out in an agitated voice:

“Look here, sir, if I tell you what I know, will you treat the information as confidential?”

“I can’t agree to that, Mr. Hyams,” replied Thorndyke. “It might amount to compounding a felony. But you will be wiser to tell me what you know. The document is a side-issue, which my clients may never raise, and my own concern is with the death of this man.”

Hyams looked distinctly relieved. “If that’s so,” said he, “I’ll tell you all I know, which is precious little, and which just amounts to this: Two days after Elton was killed, someone came to this office in my absence and opened the safe. I discovered the fact the next morning. Someone had been to the safe and rummaged over all the papers. It wasn’t Gordon, because he knew where to find everything; and it wasn’t an ordinary thief, because no cash or valuables had been taken. In fact, the only thing that I missed was a promissory note, drawn by Elton.”

“You didn’t miss a mortgage deed?” suggested Thorndyke, and Hyams, having snatched a little further refreshment from the pen-holder, said he did not.

“And the policy,” suggested Thorndyke, “was apparently not taken?”

“No,” replied Hyams “but it was looked for. Three bundles of policies had been untied, but this one happened to be in a drawer of my desk and I had the only key.”

“And what do you infer from this visit?” Thorndyke asked.

“Well,” replied Hyams, “the safe was opened with keys, and they were Gordon’s keys—or at any rate, they weren’t mine—and the person who opened it wasn’t Gordon; and the things that were taken—at least the thing, I mean—chiefly concerned Elton. Naturally I smelt a rat; and when I read of the finding of the body, I smelt a fox.”

“And have you formed any opinion about the body that was found?”

“Yes, I have,” he replied. “My opinion is that it was Gordon’s body: that Gordon had been putting the screw on Elton, and Elton had just pitched him over the cliff and gone down and changed clothes with the body. Of course, that’s only my opinion. I may be wrong; but I don’t think I am.”

As a matter of fact, Mr. Hyams was not wrong. An exhumation, consequent on Thorndyke’s challenge of the identity of the deceased, showed that the body was that of Solomon Gordon. A hundred pounds reward was offered for information as to Elton’s whereabouts. But no one ever earnt it. A letter, bearing the post mark of Marseilles, and addressed by the missing man to Thorndyke, gave a plausible account of Gordon’s death; which was represented as having occurred accidentally at the moment when Gordon chanced to be wearing a suit of Elton’s clothes.

Of course, this account may have been correct, or again, it may have been false; but whether it was true or false, Elton, from that moment, vanished from our ken and has never since been heard of.
MR. PERCIVAL BLAND was a somewhat uncommon type of criminal. In the first place he really had an appreciable amount of common-sense. If he had only had a little more, he would not have been a criminal at all. As it was, he had just sufficient judgment to perceive that the consequences of unlawful acts accumulate as the acts are repeated; to realise that the criminal's position must, at length, become untenable; and to take what he considered fair precautions against the inevitable catastrophe.

But in spite of these estimable traits of character and the precautions aforesaid, Mr. Bland found himself in rather a tight place and with a prospect of increasing tightness. The causes of this uncomfortable tension do not concern us, and may be dismissed with the remark, that, if one perseveringly distributes flash Bank of England notes among the money-changers of the Continent, there will come a day of reckoning when those notes are tendered to the exceedingly knowing old lady who lives in Threadneedle Street.

Mr. Bland considered uneasily the approaching storm-cloud as he raked over the “miscellaneous property” in the Sale-rooms of Messrs. Plimpton. He was a confirmed frequenter of auctions, as was not unnatural, for the criminal is essentially a gambler. And criminal and gambler have one quality in common: each hopes to get something of value without paying the market price for it.

So Percival turned over the dusty oddments and his own difficulties at one and the same time. The vital questions were: When would the storm burst? And would it pass by the harbour of refuge that he had been at such pains to construct? Let us inspect that harbour of refuge.

A quiet flat in the pleasant neighbourhood of Battersea bore a name-plate inscribed, Mr. Robert Lindsay; and the tenant was known to the porter and the char woman who attended to the flat, as a fair-haired gentleman who was engaged in the book trade as a travelling agent, and was consequently a good deal away from home. Now Mr. Robert Lindsay bore a distinct resemblance to Percival Bland; which was not surprising seeing that they were first cousins (or, at any rate, they said they were; and we may presume that they knew. But they were not very much alike. Mr. Lindsay had flaxen, or rather sandy, hair; Mr. Bland’s hair was black. Mr. Bland had a mole under his left eye; Mr. Lindsay had no mole under his eye—but carried one in a small box in his waistcoat pocket.

At somewhat rare intervals the Cousins called on one another; but they had the very worst of luck, for neither of them ever seemed to find the other at home. And what was even more odd was that whenever Mr. Bland spent an evening at home in his lodgings over the oil shop in Bloomsbury, Mr. Lindsay’s flat was empty; and as sure as Mr. Lindsay was at home in his flat so surely were Mr. Bland’s lodgings vacant for the time being. It was a queer coincidence, if anyone had noticed it; but nobody ever did.

However, if Percival saw little of his cousin, it was not a case of “out of sight, out of mind.” On the contrary; so great was
Mr. Bland continued his perambulations, pawing over the miscellaneous raffle from sheer force of habit, reflecting on the coming crisis in his own affairs, and on the provisions that he had made for his cousin Robert. As for the latter, they were excellent as far as they went, but they lacked definiteness and perfect completeness. There was the contingency of a "stretch," for instance; say fourteen years' penal servitude. The insurance policy did not cover that. And, meanwhile, what was to become of the estimable Robert?

He had bruised his thumb somewhat severely in a screw-cutting lathe, and had abstractedly turned the handle of a bird-organ until politely requested by an attendant to desist, when he came upon a series of boxes containing, according to the catalogue, "a collection of surgical instruments the property of a lately deceased practitioner." To judge by the appearance of the instruments, the practitioner must have commenced practice in his early youth and died at a very advanced age. They were an uncouth set of tools, of no value whatever excepting as testimonials to the amazing tenacity of life of our ancestors; but Percival fingered them over according to his wont, working the handle of a complicated brass syringe and ejecting a drop of greenish fluid on to the shirt of a dressy Hebrew (who requested him to "point the dam' thing at the one of theelth neathth time"), opening musty leather cases, clicking off spring scarifiers and feeling the edges of strange, crooked, knives. Then he came upon a largish black box, which, when he raised the lid, breathed out an ancient and fish-like aroma and exhibited a collection of bones, yellow, greasy and spotted in places with mildew. The catalogue described them as "a complete set of human osteology" but they were not an ordinary "student's set," for the bones of the hands and feet, instead of being strung together on cat-gut, were united by their original ligaments and were of an unsavoury brown colour.

"I thay, misther," expostulated the Hebrew, "shut that booth. Thmelth like a blooming inqueught."

But the contents of the black box seemed to have a fascination for Percival. He looked in at those greasy remnants of mortality, at the brown and mouldy hands and feet and the skull that peepd forth eerily from the folds of a flannel wrapping; and they breathed out something more than that stale and musty odour. A suggestion—vague and general at first, but rapidly crystallising into distinct shape—seemed to steal out of the black box into his consciousness; a suggestion that somehow seemed to connect itself with his estimable cousin Robert.

For upwards of a minute he stood motionless, as one immersed in reverie, the lid poised in his hand and a dreamy eye fixed on the half skull. A stir in the room roused him. The sale was about to begin. The members of the knock-out and other habitues seated themselves on benches around a long, baize table; the attendants took possession of the first lots and opened their catalogues as if about to sing an introductory chorus; and a gentleman with a waxed moustache and a striking resemblance to his late Majesty, the third Napoleon, having ascended to the rostrum bespoke the attention of the assembly by a premonitory tap with his hammer.

How odd are some of the effects of a guilty conscience! With what absurd self-consciousness do we read into the minds of others our own undeclared intentions, when those intentions are unlawful! Had Percival Bland wanted a set of human bones for any legitimate purpose—such as anatomical study—he would have bought it openly and unembarrassed. Now, he found himself earnestly debating whether he should not bid for some of the surgical instruments, just for the sake of appearances; and there being little time in which to make up his mind—for the deceased practitioner's effects came first in the catalogue—he was already the richer by a set of cupping-glasses, a tooth-key, and an instrument of unknown use and diabolical aspect, before the fateful lot was called.

At length the black box was laid on the table, an object of obscene mirth to the knockers-out, and the auctioneer read the entry: "Lot seventeen; a complete set of human osteology. A very useful and valuable set of specimens, gentlemen."

He looked round at the assembly majestically, oblivious of sundry inquiries as to the identity of the deceased and the verdict of the coroner's jury, and finally suggested five shillings.

"Six," said Percival.

An attendant held the box open, and, chanting the mystic word "Loddlemen!" (which, being interpreted, meant "Lot, gentlemen"), thrust it under the rather bulbous nose of the smart Hebrew; who remarked that "they 'ummed a bit too much to thoot him" and pushed it away.

"Going at six shillings," said the auctioneer, reproachfully; and as nobody contradicted him, he smote the rostrum with his hammer and the box was delivered into the hands of Percival on the payment of that modest sum.

Having crammed the cupping-glasses, the tooth-key and the unknown instrument into the box, Percival obtained from one of the attendants a length of cord, with which he secured the lid. Then he carried his treasure out into the street, and, chartering a four-wheeler, directed the driver to proceed to Charing Cross Station. At the station he booked the box in the cloak (in the name of Simpson) and left it for a couple of hours; at the expiration of which he returned, and, employing a different porters had it conveyed to a hansom, in which it was borne to his lodgings over the oil-shop in Bloomsbury. There he, himself, carried it, unobserved, up the stairs, and, depositing it in a large cupboard, locked the door and pocketed the key.
And thus was the curtain rung down on the first act. The second act opened only a couple of days later, the office of callboy—to pursue the metaphor to the bitter end—being discharged by a Belgian police official who emerged from the main entrance to the Bank of England. What should have led Percival Bland into so unsafe a neighbourhood it is difficult to imagine, unless it was that strange fascination that seems so frequently to lure the criminal to places associated with his crime. But there he was within a dozen paces of the entrance when the officer came forth, and mutual recognition was instant. Almost equally instantaneous was the self-possessed Percival’s decision to cross the road.

It is not a nice road to cross. The old horse would condescend to shout a warning to the indiscreet wayfarer. Not so the modern chauffeur, who looks stonily before him and leaves you to get out of the way of Juggernaut. He knows his “exonerating” coroner’s jury. At the moment, however, the procession of Juggernauts was at rest; but Percival had seen the presiding policeman turn to move away and he darted across the fronts of the vehicles even as they started. The foreign officer followed. But in that moment the whole procession had got in motion. A motor omnibus thundered past in front of him; another was bearing down on him relentlessly. He hesitated, and sprang back; and then a taxi-cab, darting out from behind, butted him heavily, sending him sprawling in the road, whence he scrambled as best he could back on to the pavement.

Percival, meanwhile, had swung himself lightly on to the footboard of the first omnibus just as it was gathering speed. A few seconds saw him safely across at the Mansion House, and in a few more, he was whirling down Queen Victoria Street. The danger was practically over, though he took the precaution to alight at St. Paul’s, and, crossing to Newgate Street, board another west-bound omnibus.

That night he sat in his lodgings turning over his late experience. It had been a narrow shave. That sort of thing mustn’t happen again. In fact, seeing that the law was undoubtedly about to be set in motion, it was high time that certain little plans of his should be set in motion, too. Only, there was a difficulty; a serious difficulty. And as Percival thought round and round that difficulty his brows wrinkled and he hummed a soft refrain.

“Then is the time for disappearing,
Take a header—down you go—”

A tap at the door cut his song short. It was his landlady, Mrs. Brattle; a civil woman, and particularly civil just now. For she had a little request to make.

“It was about Christmas Night, Mr. Bland,” said Mrs. Brattle. “My husband and me thought of spending the evening with his brother at Hornsey, and we were going to let the maid go home to her mother’s for the night, if it wouldn’t put you out.”

“Wouldn’t put me out in the least, Mrs. Brattle,” said Percival.

“You needn’t sit up for us, you see,” pursued Mrs. Brattle, “if you just leave the side door unbolts. We shan’t be home before two or three; but we’ll come in quiet not to disturb you.”

“You won’t disturb me,” Percival replied with a genial laugh. “I’m a sober man in general but ‘Christmas comes but once a year’. When once I’m tucked up in bed, I shall take a bit of waking on Christmas Night.”

Mrs. Brattle smiled indulgently. “And you won’t feel lonely, all alone in the house?”

“Lonely!” exclaimed Percival. “Lonely! With a roaring fire, a jolly book, a box of good cigars and a bottle of sound port—ah, and a second bottle if need be. Not I.”

Mrs. Brattle shook her head. “Ah,” said she, “you bachelors! Well, well. It’s a good thing to be independent,” and with this profound reflection she smiled herself out of the room and descended the stairs.

As her footsteps died away Percival sprang from his chair and began excitedly to pace the room. His eyes sparkled and his face was wreathed with smiles. Presently he halted before the fireplace and, gazing into the embers, laughed aloud.

“Damn funny!” said he. “Deuced rich! Neat! Very neat! Ha! Ha!” And here he resumed his interrupted song: “When the sky above is clearing, When the sky above is clearing, Bob up serenely, Bob up serenely, Bob up serenely from below!”

Which may be regarded as closing the first scene, of the second act.

During the few days that intervened before Christmas Percival went abroad but little; and yet he was a busy man. He did a little surreptitious shopping, venturing out as far as Charing Cross Road; and his purchases were decidedly miscellaneous. A porridge saucepan, a second-hand copy of “Gray’s Anatomy,” a rabbit skin, a large supply of glue and upwards of ten pounds of shin of beef seems a rather odd assortment; and it was a mercy that the weather was frosty, for otherwise Percival’s bedroom, in which these delicacies were deposited under lock and key, would have yielded odorous traces of its wealth.

But it was in the long evenings that his industry was most conspicuous; and then it was that the big cupboard with the excellent lever lock, which he himself had fixed on, began to fill up with the fruits of his labours. In those evenings the porridge saucepan would simmer on the hob with a rich lading of good Scotch glue, the black box of the deceased practitioner would be hauled forth from its hiding-place, and the well-thumbed “Gray” laid open on the table.

It was an arduous business though; a stiffer task than he had bargained for. The right and left bones were so confoundedly alike, and the bones that joined were so difficult to fit together. However, the plates in “Gray” were large and very clear, so it was only a question of taking enough trouble.
His method of work was simple and practical. Having fished a bone out of the box, he would compare it with the illustrations in the book until he had identified it beyond all doubt, when he would tie on it a paper label with its name and side—right or left. Then he would search for the adjoining bone, and, having fitted the two together, would secure them with a good daub of glue and lay them in the fender to dry. It was a crude and horrible method of articulation that would have made a museum curator shudder. But it seemed to answer Percival’s purpose—whatever that may have been—for gradually the loose “items” came together into recognisable members such as arms and legs, the vertebra—which were, fortunately, strung in their order on a thick cord—were joined up into a solid backbone, and even the ribs, which were the toughest job of all, fixed on in some semblance of a thorax. It was a wretched performance. The bones were plastered with gouts of glue and yet would have broken apart at a touch. But, as we have said, Percival seemed satisfied, and as he was the only person concerned, there was no more to be said.

In due course, Christmas Day arrived. Percival dined with the Brattles at two, dozed after dinner, woke up for tea, and then, as Mrs. Brattle, in purple and fine raiment, came in to remove the tea-tray, he spread out on the table the materials for the night’s carouse. A quarter of an hour later, the side slammed, and, peering out of the window, he saw the shopkeeper and his wife hurrying away up the gas-lit street towards the nearest omnibus route.

Then Mr. Percival Bland began his evening’s entertainment; and a most remark entertainment it was, even for a solitary bachelor, left alone in a house on Christmas Night. First, he took off his clothing and dressed himself in a fresh suit. Then, from the cupboard he brought forth the reconstituted “set of osteology” and, laying the various members on the table, returned to the bedroom, whence he presently reappeared with a large, savoury parcel which he had disinterred from a trunk. The parcel being opened revealed his accumulated purchases in the matter of shin of beef.

With a large knife, providently sharpened before hand, he cut the beef into large, thin slices which he proceeded to wrap around the various bones that formed the “complete set;” whereby their nakedness was certainly mitigated though their attractiveness was by no means increased. Having thus “clothed the dry bones,” he gathered up the scraps of offal that were left, to be placed presently inside the trunk. It was an extraordinary proceeding, but the next was more extraordinary still.

Taking up the newly clothed members one by one, he began very carefully to insinuate them into the garments that he had recently shed. It was a ticklish business, for the glued joints were as brittle as glass. Very cautiously the legs were separately inducted, first into underclothing and then into trousers, the skeleton feet were fitted with the cast-off socks and delicately persuaded into the boots. The arms, in like manner, were gingerly pressed into their various sleeves and through the arm-holes of the waistcoat; and then came the most difficult task of all—to fit the garments on the trunk. For the skull and ribs, secured to the back-bone with mere spots of glue, were ready to drop off at a shake; and yet the garments had to be drawn over them with the arms enclosed in the sleeves. But Percival managed it at last by resting his “restoration” in the big, padded arm-chair and easing the garments on inch by inch.

It now remained only to give the finishing touch; which was done by cutting the rabbit-skin to the requisite shape and affixing it to the skull with a thin coat of stiff glue; and when the skull had thus been finished with a sort of crude, makeshift wig, its appearance was so appalling as even to disturb the nerves of the matter-of-fact Percival. However, this was no occasion for plundering sentiment. A skull in an extemporised wig or false scalp might be, and in fact was, a highly unpleasant object; but so was a Belgian police officer.

Having finished the “restoration,” Percival fetched the water-jug from his bedroom, and, descending to the shop, the door of which had been left unlooked, tried the taps of the various drums and barrels until he came to the one which contained methylated spirit; and from this he filled his jug and returned to the bedroom. Pouring the spirit out into the basin, he tucked a towel round his neck and filling his sponge with spirit proceeded very vigorously to wash his hair and eyebrows; and as, by degrees, the spirit in the basin grew dark and turbid, so did his hair and eyebrows grow lighter in colour until, after a final energetic rub with a towel, they had acquired a golden or sandy hue indistinguishable from that of the hair of his cousin Robert. Even the mole under his eye was susceptible to the changing conditions, for when he had wetted it thoroughly with spirit, he was able, with the blade of a penknife to peel it off as neatly as if it had been stuck on with spirit-gum. Having done which, he deposited it in a tiny box which he carried in his waistcoat pocket.

The proceedings which followed were unmistakable as to their object. First he carried the basin of spirit through into the sitting-room and deliberately poured its contents on to the floor by the arm-chair. Then, having returned the basin to the bedroom, he again went down to the shop, where he selected a couple of galvanised buckets from the stock, filled them with paraffin oil from one of the great drums and carried them upstairs. The oil from one bucket he poured over the armchair and its repulsive occupant; the other bucket he simply emptied on the carpet, and then went down to the shop for a fresh supply.

When this proceeding had been repeated once or twice the entire floor and all the furniture were saturated, and such a reek of paraffin filled the air of the room that Percival thought it wise to turn out the gas. Returning to the shop, he poured a bucketful of oil over the stack of bundles of firewood, another over the counter and floor and a third over the loose articles on the walls and hanging from the ceiling. Looking up at the latter be now perceived a number of greasy patches where the oil had soaked through from the floor above, and some of these were beginning to drip on to the shop floor.

He now made his final preparations. Taking a bundle of “Wheel” firelighters, he made a small pile against the stack of firewood. In the midst of the firelighters he placed a ball of string saturated in paraffin; and in the central hole of the ball he stuck a half-dozen diminutive Christmas candles. This mine was now ready. Providing himself with a stock of
firelighters, a few balls of paraffined string and a dozen or so of the little candles, he went upstairs to the sitting-room, which was immediately above the shop. Here, by the glow of the fire, he built up one or two piles of firelighters around and partly under the arm-chair, placed the balls of string on the piles and stuck two or three bundles in each ball. Everything was now ready. Stepping into the bedroom, he took from the cupboard a spare overcoat, a new hat and a new umbrella—for he must leave his old hats, coat and umbrella in the hall. He put on the coat and hat, and, with the umbrella in his hand, returned to the sitting-room.

Opposite the arm-chair he stood awhile, irresolute, and a pang of horror shot through him. It was a terrible thing that he was going to do; a thing the consequences of which no one could foresee. He glanced furtively at the awful shape that sat huddled in the chair, its horrible head all awry and its rigid limbs sprawling in hideous grotesque deformity. It was but a dummy, a mere scarecrow; but yet, in the dim firelight, the grisly face under that horrid wig seemed to leer intelligently, to watch him with secret malice out of its shadowy eye-sockets, until he looked away with clammy skin and a shiver of half-superstitious terror.

But this would never do. The evening had run out, consumed by these engrossing labours; it was nearly eleven o’clock, and high time for him to be gone. For if the Brattles should return prematurely he was lost. Pulling himself together with an effort, he struck a match and lit the little candles one after the other. In a quarter of an hour or so, they would have burned down to the balls of string, and then—He walked quickly out of the room; but, at the door, he paused for a moment to look back at the ghastly figure, seated rigidly in the chair with the lighted candles at its feet, like some foul fiend appeared by votive fires. The unsteady flames threw flickering shadows on its face that made it seem to mow and gibber and grin in mockery of all his care and caution. So he turned and tremblingly ran down the stairs—opening the staircase window as he went. Running into the shop, he lit the candles there and ran out again, shutting the door after him.

Secretly and guiltily he crept down the hall, and opening the door a few inches peered out. A blast of icy wind poured in with a light powdering of dry snow. He opened his umbrella, flung open the door, looked up and down the empty street, stepped out, closed the door softly and strode away over the whitening pavement.

PART II

(Related by Christopher Jervis, M.D.)

IT was one of the axioms of medico-legal practice laid down by my colleague, John Thorndyke, that the investigator should be constantly on his guard against the effect of suggestion. Not only must all prejudices and preconceptions be avoided, but when information is received from outside, the actual, undeniable facts must be carefully sifted from the inferences which usually accompany them. Of the necessity for this precaution our insurance practice furnished an excellent instance in the case of the fire at Mr. Brattle’s oil-shop.

The case was brought to our notice by Mr. Stalker of the Griffin Fire and Life Insurance Society a few days after Christmas. He dropped in, ostensibly to wish us a Happy New Year, but a discreet pause in the conversation on Thorndyke’s part elicited a further purpose.

“Did you see the account of that fire in Bloomsbury?” Mr. Stalker asked.

“The oil-shop? Yes. But I didn’t note any details, excepting that a man was apparently burnt to death and that the affair happened on the twenty-fifth of December.”

“Yes, I know,” said Mr. Stalker. “It seems uncharitable, but one can’t help looking a little askance at these quarter-day fires. And the date isn’t the only doubtful feature in this one; the Divisional Officer of the Fire Brigade, who has looked over the ruins, tells me that there are some appearances suggesting that the fire broke out in two different places—the shop and the first-floor room over it. Mind you, he doesn’t say that it actually did. The place is so thoroughly gutted that very little is to be learned from it; but that is his impression; and it occurred to me that if you were to take a look at the ruins, your radiographic eye might detect something that he had overlooked.”

“It isn’t very likely,” said Thorndyke. “Every man to his trade. The Divisional Officer looks at a burnt house with an expert eye, which I do not. My evidence would not carry much weight if you were contesting the claim.”

“Perhaps not,” replied Mr. Stalker, “and we are not anxious to contest the claim unless there is manifest fraud. Arson is a serious matter.”

“It is wilful murder in this case,” remarked Thorndyke.

“I know,” said Stalker. “And that reminds me that the man who was burnt happens to have been insured in our office, too. So we stand a double loss.”

“How much?” asked Thorndyke.

“The dead man, Percival Bland, had insured his life for three thousand pounds.”

Thorndyke became thoughtful. The last statement had apparently made more impression on him than the former ones.

“If you want me to look into the case for you,” said he, “you had better let me have all the papers connected with it, including the proposal forms.”

Mr. Stalker smiled. “I thought you would say that—I know you of old, you see—so I slipped the papers in my pocket before coming here.”
He laid the documents on the table and asked: “Is there anything that you want to know about the case?”

“Yes,” replied Thorndyke. “I want to know all that you can tell me.”

“Which is mighty little,” said Stalker; “but such as it is, you shall have it.

“The oil-shop man’s name is Brattle and the dead man, Bland, was his lodger. Bland appears to have been a perfectly steady, sober man in general; but it seems that he had announced his intention of spending a jovial Christmas Night and giving himself a little extra indulgence. He was last seen by Mrs. Brattle at about half-past six, sitting by a blazing fire, with a couple of unopened bottles of port on the table and a box of cigars. He had a book in his hand and two or three newspapers lay on the floor by his chair. Shortly after this, Mr. and Mrs. Brattle went out on a visit to Hornsey, leaving him alone in the house.”

“Was there no servant?” asked Thorndyke.

“The servant had the day and night off duty to go to her mother’s. That, by the way, looks a trifle fishy. However, to return to the Brattles; they spent the evening at Hornsey and did not get home until past three in the morning, by which time their house was a heap of smoking ruins. Mrs. Brattle’s idea is that Bland must have drunk himself sleepy, and dropped one of the newspapers into the fender, where a chance cinder may have started the blaze. Which may or may not be the true explanation. Of course, an habitually sober man can get pretty mimsey on two bottles of port.”

“What time did the fire break out?” asked Thorndyke.

“It was noticed about half-past eleven that flames were issuing from one of the chimneys, and the alarm was given at once. The first engine arrived ten minutes later, but, by that time, the place was roaring like a furnace. Then the water-plugs were found to be frozen hard, which caused some delay; in fact, before the engines were able to get to the roof had fallen in, and the place was a mere shell. You know what an oil-shop is, when once it gets a fair start.”

“And Mr. Bland’s body was found in the ruins, I suppose?”

“Body!” exclaimed Mr. Stalker; “there wasn’t much body! Just a few charred bones, which they dug out of the ashes next day.”

“And the question of identity?”

“We shall leave that to the coroner. But there really isn’t any question. To begin with, there was no one else in the house; and then the remains were found mixed up with the springs and castors of the chair that Bland was sitting in when he was last seen. Moreover, there were found, with the bones, a pocket knife, a bunch of keys and a set of steel waistcoat buttons, all identified by Mrs. Brattle as belonging to Bland. She noticed the cut steel buttons on his waistcoat when she wished him ‘good-night.'”

“By the way,” said Thorndyke, “was Bland reading by the light of an oil lamp?”

“No,” replied Stalker. “There was a two-branch gasalier with a porcelain shade to one burner, and he had that burner alight when Mrs. Brattle left.”

Thorndyke reflectively picked up the proposal form, and, having glanced through it, remarked: “I see that Bland is described as unmarried. Do you know why he insured his life for this large amount?”

“No; we assumed that it was probably in connection with some loan that he had raised. I learn from the solicitor who notified us of the death, that the whole of Bland’s property is left to a cousin—a Mr. Lindsay, I think. So the probability is that this cousin had lent him money. But it is not the life claim that is interesting us. We must pay that in any case. It is the fire claim that we want you to look into.”

“Very well,” said Thorndyke; “I will go round presently and look over the ruins, and see if I can detect any substantial evidence of fraud.”

“If you would,” said Mr. Stalker, rising to take his departure, “we should be very much obliged. Not that we shall probably contest the claim in any case.”

When he had gone, my colleague and I glanced through the papers, and I ventured to remark: “It seems to me that Stalker doesn’t quite appreciate the possibilities of this case.”

“No,” Thorndyke agreed. “But, of course, it is an insurance company’s business to pay, and not to boggle at anything short of glaring fraud. And we specialists too,” he added with a smile, “must beware of seeing too much. I suppose that, to a rhinologist, there is hardly such a thing as a healthy nose—unless it is his own—and the uric acid specialist is very apt to find the firmament studded with dumb-bell crystals. We mustn’t forget that normal cases do exist, after all.”

“That is true,” said I; “but, on the other hand, the rhinologist’s business is with the unhealthy nose, and our concern is with abnormal cases.”

Thorndyke laughed. “‘A Daniel come to judgement,’” said he. “But my learned friend is quite right. Our function is to pick holes. So let us pocket the documents and wend Bloomsbury way. We can talk the case over as we go.”

We walked at an easy pace, for there was no hurry, and a little preliminary thought was useful. After a while, as Thorndyke made no remark, I reopened the subject.
“How does the case present itself to you?” I asked.

“Much as it does to you, I expect,” he replied. “The circumstances invite inquiry, and I do not find myself connecting them with the shopkeeper. It is true that the fire occurred on quarter-day; but there is nothing to show that the insurance will do more than cover the loss of stock, chattels and the profits of trade. The other circumstances are much more suggestive. Here is a house burned down and a man killed. That man was insured for three thousand pounds, and, consequently, some person stands to gain by his death to that amount. The whole set of circumstances is highly favourable to the idea of homicide. The man was alone in the house when he died; and the total destruction of both the body and its surroundings seems to render investigation impossible. The cause of death can only be inferred; it cannot be proved; and the most glaring evidence of a crime will have vanished utterly. I think that there is a quite strong prima facie suggestion of murder. Under the known conditions, the perpetration of a murder would have been easy, it would have been safe from detection, and there is an adequate motive.

“On the other hand, suicide is not impossible. The man might have set fire to the house and then killed himself by poison or otherwise. But it is intrinsically less probable that a man should kill him self for another person’s benefit than that he should kill another man for his own benefit.

“Finally, there is the possibility that the fire and the man’s death were the result of accident; against which is the official opinion that the fire started in two places. If this opinion is correct, it establishes, in my opinion, a strong presumption of murder against some person who may have obtained access to the house.”

This point in the discussion brought us to the ruined house, which stood at the corner of two small streets. One of the firemen in charge admitted us, when we had shown our credentials, through a temporary door and down a ladder into the basement, where we found a number of men treading gingerly, ankle deep in white ash, among a litter of charred wood-work, fused glass, warped and broken china, and more or less recognisable metal objects.

“The coroner and the jury,” the fireman explained; “come to view the scene of the disaster.” He introduced us to the former, who bowed stiffly and continued his investigations.

“These,” said the other fireman, “are the springs of the chair that the deceased was sitting in. We found the body—or rather the bones—lying among them under a heap of hot ashes; and we found the buttons of his clothes and the things from his pockets among the ashes, too. You'll see them in the mortuary with the remains.”

“It must have been a terrific blaze,” one of the jurymen remarked. “Just look at this, sir,” and he handed to Thorndyke what looked like part of a gas-fitting, of which the greater part was melted into shapeless lumps and the remainder encrusted into fused porcelain.

“That,” said the fireman, “was the gasalier of the first-floor room, where Mr. Bland was sitting. Ah! you won’t turn that tap, sir; nobody’ll ever turn that tap again.”

Thorndyke held the twisted mass of brass towards me in silence, and, glancing up the blackened walls, remarked: “I think we shall have to come here again with the Divisional Officer, but meanwhile, we had better see the remains of the body. It is just possible that we may learn something from them.”

He applied to the coroner for the necessary authority to make the inspection, and, having obtained a rather ungracious and grudging permission to examine the remains when the jury had “viewed” them, began to ascend the ladder.

“Our friend would have liked to refuse permission,” he remarked when we had emerged into the street, “but he knew that I could and should have insisted.”

“So I gathered from his manner,” said I. “But what is he doing here? This isn’t his district.”

“No; he is acting for Bettsford, who is laid up just now; and a very poor substitute he is. A non-medical coroner is an absurdity in any case, and a coroner who is hostile to the medical profession is a public scandal. By the way, that gas-tap offers a curious problem. You noticed that it was turned off?”

“Yes.”

“And consequently that the deceased was sitting in the dark when the fire broke out. I don’t see the bearing of the fact, but it is certainly rather odd. Here is the mortuary. We had better wait and let the jury go in first.”

We had not long to wait. In a couple of minutes or so the “twelve good men and true” made their appearance with a small attendant crowd of ragamuffins. We let them enter first, and then we followed. The mortuary was a good-sized room, well lighted by a glass roof, and having at its centre a long table on which lay the shell containing the remains. There was also a sheet of paper on which had been laid out a set of blackened steel waistcoat buttons, a bunch of keys, a steel-handled pocket-knife, a steel-cased watch on a partly-fused rolled-gold chain, and a pocket corkscrew. The coroner drew the attention of the jury to these objects, and then took possession of them, that they might be identified by witnesses. And meanwhile the jurymen gathered round the shell and stared shudderingly at its gruesome contents.

“I am sorry, gentlemen,” said the coroner, “to have to subject you to this painful ordeal. But duty is duty. We must hope, as I think we may, that this poor creature met a painless if in some respects a rather terrible death.”

At this point, Thorndyke, who had drawn near to the table, cast a long and steady glance down into the shell; and immediately his ordinarily rather impassive face seemed to congeal; all expression faded from it, leaving it as immovable
and uncommunicative as the granite face of an Egyptian statue. I knew the symptom of old and began to speculate on its present significance.

"Are you taking any medical evidence?" he asked.

"Medical evidence!" the coroner repeated, scornfully. "Certainly not, sir! I do not waste the public money by employing so-called experts to tell the jury what each of them can see quite plainly for himself. I imagine," he added, turning to the foreman, "that you will not require a learned doctor to explain to you how that poor fellow mortal met his death?"

And the foreman, glancing askance at the skull, replied, with a pallid and sickly smile, that "he thought not."

"Do you, sir," the coroner continued, with a dramatic wave of the hand towards the plain coffin, "suppose that we shall find any difficulty in determining how that man came by his death?"

"I imagine," replied Thorndyke, without moving a muscle, or, indeed, appearing to have any muscles to move, "I imagine you will find no difficulty what ever."

"So do I," said the coroner.

"Then," retorted Thorndyke, with a faint, inscrutable smile, "we are, for once, in complete agreement."

As the coroner and jury retired, leaving my colleague and me alone in the mortuary, Thorndyke remarked: "I suppose this kind of farce will be repeated periodically so long as these highly technical medical inquiries continue to be conducted by lay persons."

I made no reply, for I had taken a long look into the shell, and was lost in astonishment.

"But my dear Thorndyke!" I exclaimed; "what on earth does it mean? Are we to suppose that a woman can have palmed herself off as a man on the examining medical officer of a London Life Assurance Society?"

Thorndyke shook his head. "I think not," said he. "Our friend, Mr. Bland, may conceivably have been a woman in disguise, but he certainly was not a negress."

"A negress!" I gasped. "By Jove! So it is! I hadn’t looked at the skull. But that only makes the mystery more mysterious. Because, you remember, the body was certainly dressed in Bland’s clothes."

"Yes, there seems to be no doubt about that. And you may have noticed, as I did," Thorndyke continued dryly, "the remarkably fire-proof character of the waistcoat buttons, watch-case, knife-handle, and other identifiable objects."

"But what a horrible affair!" I exclaimed. "The brute must have gone out and enticed some poor devil of a negress into the house, have murdered her in cold blood and then deliberately dressed the corpse in his own clothes! It is perfectly frightful!"

Again Thorndyke shook his head. "It wasn’t as bad as that, Jervis," said he, "though I must confess that I feel strongly tempted to let your hypothesis stand. It would be quite amusing to put Mr. Bland on trial for the murder of an unknown negress, and let him explain the facts himself. But our reputation is at stake. Look at the bones again and a little more critically. You very probably looked for the sex first; then you looked for racial characters. Now carry your investigations a step farther."

"There is the stature," said I. "But that is of no importance, as these are not Bland’s bones. The only other point that I notice is that the fire seems to have acted very unequally on the different parts of the body."

"Yes," agreed Thorndyke, "and that is the point. Some parts are more burnt than others; and the parts which are burnt most are the wrong parts. Look at the back-bone, for instance. The vertebrae are as white as chalk. They are mere masses of bone ash. But, of all parts of the skeleton, there is none so completely protected from fire as the back-bone, with the great dorsal muscles behind, and the whole mass of the viscera in front. Then look at the skull. Its appearance is quite inconsistent with the suggested facts. The bones of the face are bare and calcined and the orbits contain not a trace of the eyes or other structures; and yet there is a charred mass of what may or may not be scalp adhering to the crown. But the scalp, as the most exposed and the thinnest covering, would be the first to be destroyed, while the last to be consumed would be the structures about the jaws and the base, of which, you see, not a vestige is left."

Here he lifted the skull carefully from the shell, and, peering in through the great foramen at the base, handed it to me.

"Look in," he said, "through the Foramen Magnum—you will see better if you hold the orbits towards the skylight—and notice an even more extreme inconsistency with the supposed conditions. The brain and membranes have vanished without leaving a trace. The inside of the skull is as clean as if it had been macerated. But this is impossible. The brain is not only protected from the fire; it is also protected from contact with the air. But without access of oxygen, although it might become carbonised, it could not be consumed. No, Jervis; it won’t do."

I replaced the skull in the coffin and looked at him in surprise. "What is it that you are suggesting?" I asked.

"I suggest that this was not a body at all, but merely a dry skeleton."

"But," I objected, "what about those masses of what looks like charred muscle adhering to the bones?"

"Yes," he replied, "I have been noticing them. They do, as you say, look like masses of charred muscle. But they are quite shapeless and structureless; I cannot identify a single muscle or muscular group; and there is not a vestige of any of the
tendons. Moreover, the distribution is false. For instance, will you tell me what muscle you think that is?"

He pointed to a thick, charred mass on the inner surface of the left tibia or shin-bone. "Now this portion of the bone—as many a hockey-player has had reason to realise—has no muscular covering at all. It lies immediately under the skin."

"I think you are right, Thorndyke," said I. "That lump of muscle in the wrong place gives the whole fraud away. But it was really a rather smart dodge. This fellow Bland must be an ingenious rascal."

"Yes," agreed Thorndyke; "but an unscrupulous villain too. He might have burned down half the street and killed a score of people. He'll have to pay the piper for this little frolic."

"What shall you do now? Are you going to notify the coroner?"

"No; that is not my business. I think we will verify our conclusions and then inform our clients and the police. We must measure the skull as well as we can without callipers, but it is, fortunately, quite typical. The short, broad, flat nasal bones, with the 'Simian groove,' and those large, strong teeth, worn flat by hard and gritty food, are highly characteristic." He once more lifted out the skull, and, with a spring tape, made a few measurements, while I noted the lengths of the principal long bones and the width across the hips.

"I make the cranial-nasal index 55," said he, as he replaced the skull, "and the cranial index about 72, which are quite representative numbers; and, as I see that your notes show the usual disproportionate length of arm and the characteristic curve of the tibia, we may be satisfied. But it is fortunate that the specimen is so typical. To the experienced eye, racial types have a physiognomy which is unmistakable on mere inspection. But you cannot transfer the experienced eye. You can only express personal conviction and back it up with measurements.

"And now we will go and look in on Stalker, and inform him that his office has saved three thousand pounds by employing us. After which it will be Westward Ho! for Scotland Yard, to prepare an unpleasant little surprise for Mr. Percival Bland."

There was joy among the journalists on the following day. Each of the morning papers devoted an entire column to an unusually detailed account of the inquest on the late Percival Bland—who, it appeared, met his death by misadventure—and a verbatim report of the coroner's eloquent remarks on the danger of solitary, fireside tippling, and the stupefying effects of port wine. An adjacent column contained an equally detailed account of the appearance of the deceased at Bow Street Police Court to answer complicated charges of arson, fraud and forgery; while a third collated the two accounts with gleeful commentaries.

Mr. Percival Bland, alias Robert Lindsay, now resides on the breezy uplands of Dartmoor, where, in his abundant leisure, he, no doubt, regrets his misdirected ingenuity. But he has not laboured in vain. To the Lord Chancellor he has furnished an admirable illustration of the danger of appointing lay coroners; and to me an unforgettable warning against the effects of suggestion.
THE CONFESSION OF HELEN VARDON

PROLOGUE

TO every woman there comes a day (and that all too soon) when she receives the first hint that Time, the harvester, has not passed her by unnoticed. The waning of actual youth may have passed with but the faintest regret, if any; regret for the lost bud being merged in the triumph at the glory of the opening blossom. But the waning of womanhood is another matter. Old age has no compensations to offer for those delights that it steals away. At least, that is what I understand from those who know, for I must still speak on the subject from hearsay, having received from Father Time but the very faintest and most delicate hint on the subject.

I was sitting at my dressing-table brushing out my hair, which is of a docile habit, though a thought bulky, when amidst the black tress—blacker than it used to be when I was a girl—I noticed a single white hair. It was the first that I had seen, and I looked at it dubiously, picking it out from its fellows to see if it were all white, and noticing how like it was to a thread of glass. Should I pluck it out and pretend that it was never there? Or should I, more thriftily—for a hair is a hair after all, and enough of them will make a wig—should I dye it and hush up its treason?

I smiled at the foolish thought. What a to-do about a single white hair! I have seen girls in their twenties with snow-white hair and looking as sweet as lavender. As to this one, I would think of it as a souvenir from the troubled past rather than a harbinger of approaching age; and with this I swept my brush over it and buried it even as I had buried those sorrows and those dreadful experiences which might have left me white-headed years before.

But that glassy thread, buried once more amid the black, left a legacy of suggestion. Those hideous days were long past now. I could look back on them unmoved—nay, with a certain serene interest. Suppose I should write the history of them? Why not? To write is not necessarily to publish. And if, perchance, no eye but mine shall see these lines until the little taper of my life has burned down into its socket, then what matters it to me whether praise or blame, sympathy or condemnation, be my portion. Posterity has no gifts to offer that I need court its suffrages.
BOOK I. — TRAGEDY

I. — THE CRACK OF DOOM

THERE is no difficulty whatever in deciding upon the exact moment at which to open this history. Into some lives the fateful and significant creep by degrees, unnoticed till by the development of their consequences the mind is aroused and memory is set, like a sleuth-hound, to retrace the course of events and track the present to its origin in the past. Not so has it been with mine. Serene, eventless, its quiet years had slipped away unnumbered, from childhood to youth, from youth to womanhood, when, at the appointed moment, the voice of Destiny rang out, trumpet-tongued; and behold! in the twinkling of an eye all was changed.

“Happy,” it has been said, “is the nation which has no history!” And surely the same may be said with equal truth of individuals. So, at any rate, experience teaches me; for the very moment wherein I may be said to have begun to have a history saw a life-long peace shattered into a chaos of misery and disaster.

How well I remember the day—yea, and the very moment—when the blow fell, like a thunderbolt crashing down out of a cloudless sky. I had been sitting in my little room upstairs, reading very studiously and pausing now and again to think over what I had read. The book was Lecky’s “History of England in the Eighteenth Century,” and the period on which I was engaged was that of Queen Anne. And here, coming presently upon a footnote containing a short quotation from “The Spectator,” it occurred to me that I should like to look over the original letter. Accordingly, laying aside my book, I began to descend the stairs—very softly, because I knew that my father had a visitor—possibly a client—with him in his study. And when I came to the turn of the stair and saw that the study door was ajar, I stepped more lightly still, though I stole down quickly lest I should overhear what was being said.

The library, or book-room as we called it, was next to the study, and to reach it I had to pass the half-opened door, which I did swiftly on tip-toe, without hearing more than the vague murmur of conversation from within. “The Spectators” stood on a shelf close to the door; a goodly row clothed in rusty calf to which the worn gilt tooling imparted a certain sumptuousness that had always seemed very pleasant to my eye. My hand was on the third volume when I heard my father say:

“So that’s how the matter stands.”

I plucked the volume from the shelf, and, tucking it under my arm, stole out of the book-room, intending to dart up the stairs before there should be time for anything more to be said; but I had hardly crossed the threshold, and was, in fact, exactly opposite the study door, when a voice said very distinctly, though not at all loudly:

“Do you realise, Vardon, that this renders you liable to seven years’ penal servitude?”

At those terrible words I stopped as though I had been, in a moment, turned into stone: stopped with my lips parted, my very breathing arrested, clutching at the book under my arm, with no sign of life or movement save the tumultuous thumping of my heart. There was what seemed an interminable pause, and then my father replied: “Hardly, I think, Otway. Technically, perhaps, it amounts to a misdemeanour—”

“Technically!” repeated Mr. Otway.

“Yes, technically. The absence of any intent to defraud modifies the position considerably. Still, for the purpose of argument, we may admit that it amounts to a misdemeanour.”

“And,” said Mr. Otway, “the maximum punishment of that misdemeanour is seven years’ penal servitude. As to your plea of absence of fraudulent intent, you, as a lawyer of experience, must know well that judges are not apt to be very sympathetic with trustees who misappropriate property placed in their custody.”

“Misappropriate!” my father exclaimed.

“Yes, Mr. Otway, I say misappropriate. What other word could you apply? Here is a sum of money which has been placed in your custody. I come here with the intention to receive that money from you on behalf of the trustees, and you tell me that you haven’t got it. You are not only unable to produce it, but you are unable to give any date on which you could produce it. And meanwhile it seems that you have applied it to your own uses.”

“I haven’t spent it,” my father objected. “The money is locked up for the present, but it isn’t lost.”

“What is the use of saying that?” demanded Mr. Otway. “You haven’t got the money, and you can’t give any satisfactory account of it. The plain English of it is that you have used this trust money for your own private purposes, and that when the trustors ask to have it restored to them, you are unable to produce it.”

To this my father made no immediate reply; and in the silence that ensued I could hear my heart throbbing and the blood humming in the veins of my neck. At length my father asked: “Well, Otway, what are you going to do?”

“Do!” repeated Mr. Otway. “What can I do? As a trustee, it is my duty to get this money from you. I have to protect the interests of those whom I represent. And if you have misapplied these funds—well, you must see for yourself that I have no choice.”
“You mean that you’ll prosecute?”

“What else can I do? I can’t introduce personal considerations into the business of a trust; and even if I should decline to move in the matter, the trustors themselves would undoubtedly take action.”

Here there followed a silence which seemed to me of endless duration; then Mr. Otway said, in a somewhat different tone: “There is just one way for you out of this mess, Vardon.”

“Indeed!” said my father.

“Yes, I am going to make you a proposal, and I may as well put it quite bluntly. It is this. I am prepared to take over your liabilities, for the time being, on condition that I marry your daughter. If you agree, then on the day on which the marriage takes place, I pay into your bank the sum of five thousand pounds, you giving me an undertaking to repay the loan if and when you can.”

“Have you any reason to suppose that my daughter wishes to marry you?” my father asked.

“Not the slightest,” replied Mr. Otway; “but I think it probable that, if the case were put to her—”

“It is not going to be,” my father interrupted. “I would rather go to gaol than connive at the sacrifice of my daughter’s happiness.”

“You might have thought of her happiness a little sooner, Vardon,” Mr. Otway remarked. “We are not quite of an age, but she might easily find it more agreeable to be the wife of an elderly man than the daughter of a convict. At any rate, it would be only fair to give her the choice.”

“It would be entirely unfair,” my father retorted. “In effect, it would be asking her to make the sacrifice, and she might be fool enough to consent. And please bear in mind, Otway, that I am not a convict yet, and possibly may never be one. There are certain conceivable alternatives, you know.”

“Oh,” said Mr. Otway, “if you have resources that you have not mentioned, that is quite another matter. I understood that you had none. And as to sacrifice, there is no need to harp on that string so persistently. Your daughter might be happy enough as my wife.”

“What infernal nonsense you are talking!” my father exclaimed, impatiently. “Do you suppose that Helen is a fool?”

“No, I certainly do not,” Mr. Otway replied.

“Very well, then: what do you mean by her being happy as your wife? Here am I, standing over a mine—”

“Of your own laying,” interrupted Mr. Otway.

“Quite so; of my own laying. And here you come with a lighted match and say to my daughter, in effect: ‘My dear young lady, I am your devoted lover. Be my wife—consent this very instant or I fire this mine and blow you and your father to smithereens.’ And then, you think, she would settle down with you and live happy ever after. By the Lord, Otway, you must be a devilish poor judge of character.”

“I am quite willing to take the risk,” said Mr. Otway.

“So you may be,” my father retorted angrily, “but I’m not. I would rather see the poor girl in her grave than know that she was chained for life to a cold-blooded, blackmailing scoundrel—”

“Softly, Vardon!” Mr. Otway interrupted. “There is no need for that sort of language. And perhaps we had better shut the door.”

Here, as I drew back hastily into the book-room, quick footsteps crossed the study floor and I heard the door close. The interruption brought me back to some sense of my position; though, to be sure, what I had overheard concerned me as much as it concerned anyone. Quickly slipping the book back on the shelf, I ran on tip-toe past the study door and up the stairs; and even then I was none too soon; for, as I halted on the threshold of my room, the study door opened again and the two men strode across the hall.

“You are taking a ridiculously wrong-headed view of the whole affair,” I heard Mr. Otway declare.

“Possibly,” my father replied, stiffly. “And if I do, I am prepared to take the consequences.”

“Only the consequences won’t fall on you alone,” said Mr. Otway.

“Good afternoon,” was the dry and final response. Then the hall door slammed, and I heard my father walk slowly back to the study.

II. — ATRA CURA

As the study door closed, I sank into my easy chair with a sudden feeling of faintness and bodily exhaustion. The momentary shock of horror and amazement had passed, giving place to a numb and chilly dread that made me feel sick and weak. Scraps of the astounding conversation that I had heard came back to me, incoherently and yet with hideous distinctness, like the whisperings of some malignant spirit. Disjointed words and phrases repeated themselves again and
again, almost meaninglessly, but still with a vague undertone of menace.

And then, by degrees, as I sat gazing at the blurred pages of the book that still lay open on the reading-stand, my thoughts grew less chaotic; the words of that dreadful dialogue arranged themselves anew, and I began with more distinctness to gather their meaning.

Seven years penal servitude!

That was the dreadful refrain of this song of doom that was being chanted in my ear by the Spirit of Misfortune. And ruin—black, hideous ruin—for my father and me was the burden of that refrain; no mere loss, no paltry plunge into endurable poverty, but a descent into the bottomless pit of social degradation, from which there could be no hope of resurrection.

Nor was this the worst. For, gradually, as my thoughts began to arrange themselves into a coherent sequence, I realised that it was not the implied poverty and social disgrace that gave to that sentence its dreadful import. Poverty might be overcome, and disgrace could be endured; but when I thought of my father dragged away from me to be cast into gaol; when, in my mind's eye, I saw him clothed in the horrible livery of shame, wearing out his life within the prison walls and behind the fast-bolted prison doors; the thought and the imagined sight were unendurable. It was death—for him at least; for he was not a strong man. And for me?

Here, of a sudden, there came back to me the rather enigmatical speech of my father's, which I had heard without at the moment fully comprehending, but which I now recalled with a shock of alarm.

"Please bear in mind, Otway, that I am not a convict yet, and possibly may never be one. There are certain conceivable alternatives, you know."

The cryptic utterance had evidently puzzled Mr. Otway, who had clearly misunderstood it as referring to some unknown resources. To me, no such misunderstanding was possible. More than once my father had discussed with me the ethics of suicide, on which subject he held somewhat unorthodox opinions; and I now recalled with terrible distinction the very definite statement that he had made on the occasion of our last talks "For my part," he had said, "if I should ever find myself in such a position that the continuance of life was less desirable than its termination, I should not hesitate to take the appropriate measures for exchanging the less desirable state for the more desirable."

In the face of such a statement, made, as I felt sure, in all sincerity and with sober judgment, how could I entertain any doubt as to the interpretation of that reference to "certain conceivable alternatives?" To a man of culture and some position and none too robust in health, what would be the aspect of life with its immediate future occupied by a criminal prosecution ending in an inevitable conviction and a term of penal servitude? Could the continuance of such a life be conceived as desirable? Assuredly not.

And then imagination began to torture me by filling in with hideous ingenuity the dreadful details. Now it was a pistol shot, heard in the night, and a group of terrified servants huddled together in the corridor. But no; that was not like my poor father. Such crude and bloody methods appertain rather to the terror-stricken fugitive than to one who is executing a considered and orderly retreat. Then I saw myself, in the grey of the morning, tapping at his bedroom door: tapping—and at last opening the door, or perhaps bursting it open. I saw the dim room—Oh! How horribly plain and vivid it was! With the cold light of the dawn glimmering through the blind, the curtained bed, the half-seen figure, still and silent in the shadow. Horrible! Horrible!

And then, in instant, the scene changed. I saw a man in our hall a man in uniform; a railway porter or inspector. I heard him tell, in a hushed, embarrassed voice, of a strange and dreadful accident down on the line...And yet again this awful phantasmagoria shifted the scene and showed me a new picture: a search party, prowling with lantern around a chalk pit; and anon a group of four men, treading softly and carrying something on a hurdle.

"Dear God!" I gasped, with my hands pressed to my forehead, "must I be—this awful thing! Is there no other way?"

And with that there fell on me a great calm. A chilly calm, bringing no comfort, and yet, in a manner, a relief. For, perhaps, after all, there was another way. It was true that my father had rejected Mr. Otway's proposal, and such was my habit of implicit obedience that, with his definite rejection of it, the alternative had, for me, ceased to exist. But now, with the horror of this dreadful menace upon me, I recalled the words that had been spoken, and asked myself if that avenue of escape were really closed. As to my father, I had no doubt; he would never consent; and even to raise the question might only be to precipitate the catastrophe. But with regard to Mr. Otway the manner in which my father had met and rejected his proposal seemed to close the subject finally. He had called him a blackmailing scoundrel and used other injurious expressions, which might make it difficult or, at least, uncomfortable to reopen the question. Still that was a small matter. When one is walking to the gallows, one does not boggle at an uncomfortable shoe.

As to my own inclinations, they were beside the mark. My father's life and good name must be saved if it were possible; and it seemed that it might be possible—at a price. Whether it were possible or not depended on Mr. Otway.

I recalled what I knew of this man who had thus in a moment become the arbiter of my father's fate and mine. My acquaintance with him was but slight, though I had met him pretty frequently and had sometimes wondered what his profession was, if he had any. I had assumed, from his evident acquaintance with legal matters, that he was a lawyer. But he was not in ordinary practice; and his business, whatever it was, seemed to involve a good deal of travelling. That was all I knew about him. As to his appearance, he was a huge, unwieldy man of a somewhat Jewish cast of face, some years older, I should think, than my father; pleasant spoken and genial in a somewhat heavy fashion, but quite uninteresting. Hitherto
I had neither liked nor disliked him. Now, it need hardly be said, I regarded him with decided aversion; for if he were not, as my father had said, "a blackmailing scoundrel," he had, at any rate, taken the meanest, the most ungenerous advantage of my father's difficulties, to say nothing of the callous, cynical indifference that he had shown in regard to me and my wishes and interests.

It may seem a little odd that I found myself attaching no blame to my father. Yet so it was. To me he appeared as merely the victim of circumstances. No doubt he had done something indiscreet—perhaps incorrect. But discretion and correctness are not qualities that appeal to a woman: whereas generosity—and my father was generous almost to a fault—makes the most powerful appeal to feminine sympathies. As to his honesty and good faith, I never doubted them for an instant; besides, he had plainly said that no fraudulent intent could be ascribed to him. What he had done I had not the least idea. Nor did I particularly care. It was not the act, but its consequences with which I was concerned.

My meditations were interrupted at length by an apologetic tap at the door, followed by the appearance of our housemaid.

"If you please, Miss Helen, shall I take Mr. Vardon's tea to the study, or is he going to have it with you?"

The question brought me back from the region of tragedy and disaster in which my thoughts had been straying, to the homely commonplaces of everyday life.

"I'll just run down and ask him, Jessie," I answered; "and you needn't wait. I'll come and tell you what he says."

I ran quietly down the stairs, but at the study door I paused with a sudden revival of those terrors that had so lately assailed me. Suppose he should open the subject and have something dreadful to tell me? Or suppose that, even now, already—at the half-formed thought, I raised a trembling hand, and, tapping lightly at the door, opened it and entered. He was sitting at the table with a small pile of sealed and stamped letters before him, and, as I stood, steadying my hand on the door knob, he looked up with his customary smile of friendly welcome.

"Hail! O Dame of the azure hosen," said he, swinging round on his revolving chair, "and how fares it with our liege lady, Queen Anne?"

"She is quite well, thank you," I replied.

"The Lord be praised!" he rejoined. "I seemed to have heard some rumour of her untimely decease. A mere canard, it would seem; a fiction of these confounded newspaper men. Or perchance I have been misled by the jocose and boisterous Lecky."

The whimsical playfulness of speech, habitual as it was to him, impressed me—perhaps for that very reason—with a vague uneasiness. It was not what I had expected after that terrible conversation. The anti-climax to my own tragic thoughts was too sudden; the descent to the ordinary too uncomfortably steep. I perched myself on his knee, as I often did, despite my rather excessive size, and passed my hand over his thin, grey hair.

"Do you know," I said, clinging desperately to the common-place, "that you are going bald? I can see the skin of your head quite plainly."

"And why not?" he demanded. "Did you think my hair grew out of my cranium? But you won't see it long. I've heard of an infallible hair-restorer."

"Indeed!"

"Yes, indeed! Guaranteed to grow a crop of ringlets on a bladder of lard. We'll get a bottle and try it on the carpet broom; and if the result is satisfactory—well, we'll just put Esau in his place in the second row."

"You are a very frivolous old person, Mr. Pater," said I. "Do you know that?"

"I hope so," he replied. "And again I say, why not? When a man is too old to play the fool, it is time to carry him to the bone-yard. Am I going to have any tea?"

"Of course you are. Will you have it here alone or shall we have tea together?"

"What a question!" he exclaimed. "Am I in my dotage? Should I drink tea in musty solitude when I might bask in the smiles of a lovely maiden? Avaunt! No, I'll tell you what we'll do, Jimmy. I'll just telephone down to the office and see if there is any silly nonsense there that may distract me from serious pursuits, and, if there isn't, we'll have tea in the workroom and then we'll polish off that coal-scuttle."

"Finish it! But there's quite a lot to do."

"Then we'll do the lot."

"But why this hurry? There's no particular reason for getting it finished to-night, is there?"

"I don't know that there is; but we've had the thing hanging about long enough. Better get it finished and start on something else. Now you trot off and see about tea while I ring up Jackson."

As he turned to the telephone, I hurried away to give instructions to the maid and to set the workshop in order so that we might start without delay on our evening's task, concerning which a few words of explanation would seem to be called for.

My father was by nature designed to be a craftsman. He was never so happy as when he was making something or in
some way working with his hands; and remarkably skilful hands they were, with an inborn capacity for the dexterous manipulation of every kind of material, tool or appliance. And to his natural skill he had added a vast amount of knowledge of methods and processes. He was an excellent woodworker, an admirable mechanic, and a quite passable potter. Our house abounded in the products of his industry; stools, cupboards, clocks, fenders, earthen ware jars; even our bicycles had been built, or, at least, “assembled” by him, and a bronze knocker on our door had been finished by him from castings made in our workshop. If his powers of design had been equal to his manual skill, he would have been a first-class art craftsman. Unfortunately they were not. Left to himself, his tendency was to aim at a neat trade finish, at smooth surfaces and mechanical precision. But he knew his limitations, and had been at great pains to have me instructed in the arts of design; and, as I apparently had some natural aptitude in that direction, I was able to help him by making sketches and working drawings and by criticising the work as it progressed. But my duties did not stop at that. In our happy, united life, I was his apprentice, his journeyman, his assistant—or foreman, as he pleased to call me—and his constant companion, in the house, in the workshop, and in our walks abroad.

As our maid, Jessie, laid the tea-tray on a vacant corner of the work-bench, I examined our latest joint-production, a bronze coal-scuttle, the design of which was based on a Roman helmet that I had seen in the British Museum. There was a good deal more than an ordinary evening’s work to be done before it could be finished. A portion of the embossed ornament on the foot required touching up, the foot itself had to be brazed to the body and the handle had to be riveted to the lugs, to say nothing of the “pickling,” scouring, and oxidizing. It was a colossal evening’s work.

But it was not the magnitude of the task that troubled me, for I shared my father’s love of manual work. What had instantly impressed me with a vague discomfort was the urgency of my father’s desire to get this piece of work finished and done with. That was not like him at all. Not only had he the genuine craftsman’s inexhaustible patience, but he had a habit of keeping an apparently finished work on hand, that he might tinker at it lovingly, smooth and polish it, and bring it to a state of even greater completeness and finish.

Why, then, this strange urgency and impatience? And, as I asked myself the question, all my fears came crowding back on me. Again there came that dreadful sinking at the heart, that strangling terror of the storm-cloud that hung over us, unseen but ready to burst and overwhelm us in ruin at any moment.

But I had little time for these gloomy and disquieting thoughts. The tinkling of the telephone bell in the study told me that my father had finished his talk with his managing clerk, and a few moments later he strode into the workshop and began taking off his coat.

“What’s your apron, Jimmy?” he asked (the pet name “Jimmy” had been evolved out of an ancient fiction that my name was Jemima).

“There’s no hurry, Pater, dear,” said I. “Let a person have her tea in peace. And do sit down like a Christian man.”

He obediently perched himself on a stool as I handed him his tea, but in less than a minute he was on his feet again, prowling, cup in hand, around the end of the bench where the work lay.

“Wonder if I’d better anneal it a bit,” he mused, picking up the bronze foot and examining the unfinished space. “Mustn’t make it too soft. Think I will, though. We can hammer it up a little on the stake after it’s brazed on. That will harden it enough.”

He laid the foot down, but only that he might apply a match to the great gas blowpipe; and I watched him with a sinking heart as he stood with his teacup in one hand, while with the other he held the foot, gripped in a pair of tongs, in the roaring purple flame. What did it mean, this strange, restless haste to finish what was, after all, but a work of pleasure? Did it portend some change that he saw more clearly than I? Was he, impelled by the craftsman’s instinct, turning in this fashion a page of the book of life? Or was it—Oh! dreadful thought!—was it that he was deliberately writing “Finis” before closing the volume?

But whatever was in his secret mind, he chatted cheerfully as he worked, and submitted to be fed with scraps of bread and butter and to have cups of tea administered at intervals; yet still I noted that the chasine hammer flew at unwonted speed, and the depth of the punch-marks on the work that rested on the sand-bag told of an unusual weight in the blows.

“What a pity it is,” he remarked, “that social prejudices prevent a middle-class man from earning a livelihood with his hands. Now, here I am, a third-rate solicitor perforce, whereas, if I followed my bent, I should be a first-rate coppersmith. Shouldn’t I?”

“Quite first-rate,” I replied.

“Or even a silversmith,” he continued, “if I could have my mate, Jim, to do the art with a capital A while I did the work with a capital W. Hm?”

He looked up at me with a twinkle, and I took the opportunity to pop a piece of bread and butter into his mouth, which occasioned a pause in the conversation.

I had entertained faint—very faint—hopes that he might say something to me about his difficulties. Not that I was inquisitive on the subject; but, in view of a resolution that was slowly forming in my mind, I should have liked to have some idea what his position really was. It seemed pretty plain, however, that he did not intend to take me into his confidence; notwithstanding which I decided in a tentative way to give him an opening.
“Wasn’t that Mr. Otway who was with you this afternoon?” I asked.

“Yes,” he replied. “How did you know?”

“I heard his voice in the hall as you let him out,” I answered, with something of a gulp at the implied untruth.

The chasing hammer was arrested for a moment in mid-air, and, as my father’s eye fixed itself reflectively on the punch that he held, I could see that he was trying to remember what Mr. Otway had said in the hall.

“Yes,” he replied, after a brief pause, “it was Mr. Otway. I should hardly have thought you would have known his voice.

Queer fellow, Otway. No brains to speak of, but yet an excellent man of business in his way.”

“What does he do—by way of profession, I mean?”

“The Lord knows. He was originally a solicitor, but he hasn’t practised for years. Now he is what is called a financier, which is a little vague, but apparently profitable. And I think he does something in the way of precious stones.”

“Do you mean that he deals in them?”

“Yes, occasionally; at least, so I have heard. I know that he is something of a connoisseur in stones, and that he had a collection, which he sold some time ago. I have also heard—and I believe it is a fact—that his name was originally Levy, and that he is one of the Chosen. But why he changed his name I have no notion, unless it was an undesirable one to present to the financial world.”

I was half disposed to pursue my enquiries further, but as he finished speaking, he once more began to ply the hammer with such furious energy that I became quite uneasy.

“You mustn’t exert yourself so much, Pater,” I remarked. “Remember what Dr. Sharpe said.”

“Bah!” he replied. “Sharpe is an old woman. My heart is sound enough. At any rate, it will last as long as the rest of me. An old fellow like me cannot expect to go in for sprinting or high jumping, but there’s no need for him to live in splints and cotton wool.”

“Nor to endanger his health by perfectly unnecessary exertion. Why on earth are you in such a fever to get this thing finished?”

“I’m not in a fever, my dear,” he answered; “I’m only tired of seeing this thing lying about unfinished. You see, as it stands, it is only so many pounds of old bronze, whereas a couple of hours’ work turns it into a valuable piece of furniture, fit to take a dignified place in the catalogue when we are sold up. Just consider how finely it would read:

‘‘Handsome bronze scuttle, in form of Roman helmet, the work of the late owner and his charming and talented daughter, capable of serving either as a convenient receptacle for coal or as a becoming head-dress for a person with a suitable cranium. Don’t you think that would sound rather alluring?’”

“‘Very,’” I replied; “but as we are not going to be sold up—”

The rest of my sentence was drowned in the din of the beaten metal as my father returned to his hammering, and I only watched in mute discomfort until this part of the work was done and the great brazing jet was once more set a-roaring.

The work progressed apace, for my father was not only skilful and neat, but could be very quick on occasion; and as I watched the completion of stage after stage, I was conscious of a growing uneasiness, a vague fear of seeing the work actually finished; as if this mere toy—for it was little more—held some deep and tragic symbolism. I felt like one looking on at the slow wasting of one of those waxen effigies which the sorceresses of old prepared with magical rites for the destruction of some victim, whose life should slowly wane and flicker away with the wasting of the wax.

And meanwhile, above the roar of the blowpipe flame, my father’s voice sounded, now in a cheerful stave of song, and now in lively jest or playful badinage. But yet he did not deceive me. Behind all this show of high spirits was a sombre background that was never quite hidden. For the eye of love is very keen and can see plainly, despite quip or joke or jovial carol, when “Black Care rides behind the horseman.”

What a miserable affair it was, this pitiful acting of two poor, leaden-hearted mortals, each hiding from each the desperate resolve with smiles and jests that were more bitter than tears! For I, too, had now my secret, and must needs preserve it with such a show of gaiety as I could muster by sheer effort of will. The resolution of which I have spoken was growing—growing, even as the toy that we were making was growing towards completion, and as I seemed to see, as if symbolized by it, the sands of destiny trickling out before my eyes. So I, too, had my part to play in this harrowing comedy.

Works which have consumed much time in the doing have a way of coming to an end with disconcerting suddenness. When I mixed the acid for the “pickle” in the great earthenware pan, it seemed that a great deal still remained to be done, in spite of my father’s feverish energy and swift dexterity. And then, but a few minutes later, as it appeared to me, behold the finished piece standing on the bench its embossed ornament telling boldly against the sulphur-browned background, and my father stretching himself and wiping the blackened oil from his hands; and it was borne in on me that, with the final touch, his interest in the thing had fallen dead.

“Nunc dimittis!” he murmured. “It’s finished at last. ‘Now lettest Thou Thy servant depart in peace.’ And that reminds me, Jim; don’t the shops keep open late to-night?”

“Some of them do,” I replied.
“Good,” said he. “Tell Jessie to bring up the supper while I’m washing. I’ve got to make a business call to-night, and I want to get some things, so we won’t make it a ceremonious meal. Not that I want to put you on short allowance, for I expect you are hungry after your Titanic labours. You mustn’t take any notice of me.”

As he hurried away, I rang the bell, and, when I had given the necessary instructions, I went up to my bedroom to remove the traces of the evening’s work and make myself presentable.

At the supper table my father preserved the same quiet gaiety of manner—his usual manner, in fact; for he was always cheerful and companionable—though, on this occasion, the speed with which he disposed of his food gave little opportunity for conversation. After a very hurried meal, he rose, and, pushing back his chair, glanced at his watch.

“You mustn’t mind my running away,” said he. “Time, tide and the shopkeeper wait for no man.”

He moved away toward the door, but before he reached it he paused and then came back and stood beside my chair.

“You needn’t sit up for me,” he said. “I may possibly be rather late. I’d better say ‘good-night’ now.” He took my head in his hands, and, looking earnestly into my eyes, murmured: “Dear little Jim; best and most loyal of apprentices.” Then he kissed me very tenderly and passed his hands over my hair.

“Good-night, sweetheart,” said he. “Don’t sit up reading, but go to bed early like a sensible girlie—if you will pardon my hopping into Weggish poetry without notice.”

He turned away and walked quickly to the door, where he stood for a moment to wave his hand. I heard him go to the study, and sat stiffly in my chair listening. In a few moments he came out and stepped quietly across the hall; there was a brief pause, and then the outer door closed.

He was gone.

At the sound of the closing door, I sprang to my feet with all my terrors revived. Whither had he gone? It was unusual for him to leave his home at night. What was it that had taken him abroad on this night of all others? And what was it that he wanted to buy? And wanted so urgently that he could not wait until the morrow? And why had he wished me “good-night” with such tender earnestness? A foolish question, this, for he was a loving father, and never sought to veil his affection. But to-night I was unstrung; haunted by nameless fears that gave a dreadful significance to every passing incident. And as the chill of mortal terror crept round my heart, the resolution that had been growing—growing, came to its final completion.

It had to be. Horrible, loathsome as, even then, I felt it to be, it was the only alternative to that other nameless and unthinkable. The sacrifice must be made by us both for both our sakes—if it were not too late already.

Too late? Even as the dreadful thought smote like a hammer on my heart, I ran from the room and sped up the stairs on the wings of terror. With trembling fingers I took my hat and cloak from the wardrobe and hurried down stairs, putting them on as I went. At the dining-room door I called out a hasty message to the maid, and then, snatching up my gloves from the hall table, I opened the door and ran out into darkness.

III. — THE COVENANT

As I sped swiftly along the quiet roads on the outskirts of the town the confusion and sense of helplessness began to subside under the influence of action and a definite purpose; by degrees my thoughts clarified, and I found myself shaping out, with surprising deliberation and judgment, the course that I intended to pursue. Mr. Otway’s house was about a mile distant from ours, somewhat farther out of town, though on a frequented road; a short distance and quickly covered by my flying feet. Yet, short as it was, and traversed with a phantom of terror in close pursuit, it gave me time to collect my faculties, so that, when I opened the gate and walked up the little drive, I had already to a large extent recovered my self-possession, though I was still trembling with the fear of what might be happening else where at this very moment.

The door was opened by a small frail-looking woman of about fifty, who did not look quite like an ordinary servant, and whose appearance instantly impressed me disagreeably. She stood with her face slightly averted, looking at me out of the corners of her eyes, and holding the door open as she asked, with a slight Scotch accent:

“Who would you be wanting?”

“I wish to see Mr. Otway, if he is at home?” I replied.

“If ye’ll come in and give me your name, I’ll tell him,” said she; and with this she showed me into a small room that opened out of the hall, where, when I had told her my name, she left me. In less than a minute Mr. Otway entered, and having carefully closed the door, shook hands gravely and offered me a chair.

“This is quite an unexpected pleasure, Miss Vardon,” said he. “Oddly enough, I was just thinking about you. I called on your father only this afternoon.”

“I know,” said I. “It was about that that I came to see you.”

“Your father, then,” said Mr. Otway, “has mentioned to you the subject of our not entirely pleasant interview?”

“No, he has not,” I replied. “Nothing has passed between us on the subject, and he is not aware that I have come here. The fact is, I overheard a part of your conversation and made it my business to hear as much of the rest as I could.”
“Ha! Indeed!” He gave me a quick glance, half enquiring, half suspicious, and added: “Perhaps, Miss Vardon, you had better tell me what you heard.”

“There is no need for me to repeat it in detail,” said I; “but, from what I heard, I gathered that your father had rendered himself liable to a prosecution. Is that correct?”

“Yes,” said Mr. Otway, “that is unfortunately—most unfortunately—the case.”

“And that the proceedings will be taken by you, and that you have the power to stay them if you choose?”

“I wouldn’t put it that way, Miss Vardon. That hardly states the position fairly. Do you know nothing of the circumstances at all? Has your father not told you anything about this unfortunate affair?”

“He has not spoken a word to me on the subject, and he has no idea that I know anything about it.”

“I’m,” Mr. Otway grunted, reflectively. “Yes. Well, Miss Vardon, if you wish to talk the matter over with me, perhaps I had better just let you know how the land lies, although, really, your father is the proper person to tell you.”

“I think you had better tell me, if you don’t mind,” said I.

“Very well, Miss Vardon,” he agreed. “Then the position is this: A sum of money—five thousand pounds, to be exact—was handed to your father by the trustees of a certain estate, to be invested by him on behalf of the trust; and the manner of its disposal—into which we need not enter—was quite clearly specified. But your father, instead of disposing of the money as directed, chose to make over the whole of it as a loan to a friend of his who was in temporary difficulties; a manufacturer, as I understand, who had suffered an unexpected loss and was on the verge of bankruptcy. There was no proper security, nor even, as I understand, any satisfactory arrangement as to the payment of interest. The whole affair was most improper; a gross violation of trust. In effect, your father converted this money and made use of it for his own purposes.”

“Is the money lost?” I enquired.

Mr. Otway shrugged his shoulders. “Who can say? It may be recoverable some day, or it may not. But that is very little to the point. The position is that it is now demanded of your father and that he can’t produce it.”

“And so you are going to prosecute him?”

“Oh, please don’t put it that way, Miss Vardon. I am a quite involuntary agent. My position is that I am instructed to get this money from your father and dispose of it in a particular way. But I can’t get it; and when I report that fact, I shall, of course, be urged—in fact, compelled—to take criminal proceedings. I shall have no choice. It isn’t my money, you know.”

“But why criminal proceedings?” I asked. “It seems to me that a civil action to recover the money would be the natural course.”

Again Mr. Otway shrugged his shoulders. “I don’t see that it makes much difference,” said he. “The money has been made away with. Even if the trustees took no criminal action, there is the Public Prosecutor and there is the Incorporated Law Society. A prosecution is inevitable.”

“And supposing my father is convicted?”

“It is hardly necessary to suppose,” said Mr. Otway. “He will be. There is no defence. As to the sentence, I don’t imagine that the maximum punishment of seven years penal servitude is likely to be inflicted. Still, your father is a solicitor, and the law is, quite properly, very severe in the case of solicitors who misappropriate their clients’ property. He is almost certain to get a term of imprisonment.”

To this I made no reply. There was nothing to say. It was only too clear that every avenue of escape was closed—save one; and realizing more fully every moment where that one led, I could not bring myself to make the fateful move. So, for a while, we sat in a hideous silence through which the ticking of a clock penetrated noisily and seemed to keep pace with the thumping of my heart.

As I sat, bracing myself for the effort that had to be made, my eyes travelled, half unconsciously, over the person of my companion. His appearance was not prepossessing. Huge, unwieldy and shapeless, although by no means grossly fat, his great size carried no dignity; nor did his very marked and prominent features impart to his face anything of distinction or nobility. He was of a distinctly oriental type, with black and rather curly hair, oiled and combed over a slightly bald head, a large aquiline nose, a wide mouth, rather full and fleshy, and very dark eyes, under which were baggy folds of skin creased by innumerable tiny wrinkles. As I looked at him with growing distaste, I found myself comparing him to a gigantic spider. Suddenly it was borne in on me—perhaps by the measured ticking of the clock—that time was passing; time which might be infinitely precious. To delay further were mere cowardice. Nevertheless, when I spoke, it was in a voice so husky that I had to stop and begin again.

“You spoke, Mr. Otway—I heard you mention to my father that—that on certain conditions, you would—would be prepared to abandon your intention of prosecuting—Or, at least—”

I could get no farther. Fear and shame and loathing of this thing that I was going to do, overpowered me utterly. It was only by the most strenuous effort that I choked down the sob that was rising in my throat. But I had said enough, for Mr. Otway now came to my assistance.

“I told your father that I was prepared to take over his liabilities, for the time being, at least, on condition that you
became my wife. He refused, as perhaps you know refused very definitely, I may say.”

“And rather rudely, I am afraid.”

“He was not at any great pains to wrap his refusal up delicately. But we may let that pass. Is it in respect of this proposal of mine that you have done me the very great honour of calling on me, Miss Vardon?”

I felt myself turn scarlet, but nevertheless I answered, resolutely:

“Yes, I came to ask if my father’s very blunt refusal had closed the matter finally, or whether you were prepared to—to re-open it.”

“We won’t talk about re-opening it. It was never closed, by me. The proposal that I made to your father I now make to you; and if you should see your way to accepting it, I believe you would never have occasion to regret your decision.”

He spoke in a dry, commercial tone, as if he were trying to sell me something at a rather high price; as, in fact, he was. And meanwhile I found myself wondering dimly why on earth he wanted to marry me.

“May I ask,” he continued, after a pause, “if you are disposed to entertain my proposal?

“I would do anything to save my father,” I replied.

“That,” said he, “is what I thought, judging from my previous knowledge of you; and it was the knowledge of your devotion to your father that encouraged me to make the proposal. For it seemed to me that a young lady of your attractions who could so completely devote herself to an elderly father might find it possible to devote herself to an elderly husband.”

His reasoning did not impress me as very sound, seeing that it took no account of the respective personalities of the father and the proposed husband. But I made no reply, and, after a further pause, he asked:

“Am I to understand that you—that you regard my proposal favourably?”

“I can’t say that,” I replied. “But I came here to-night prepared to accept your conditions, and I am ready to accept them now. But, of course, you understand that I do so under compulsion and not of my own free choice.”

“I quite realise that,” said he; “but I take it that you will carry out fairly any covenant into which you may enter.”

“Certainly I shall,” was my reply.

“Then may I take it that you are willing to marry me, on the conditions that I named?”

“Yes, Mr. Otway. I consent to marry you on those conditions and on certain others that I will propose.”

“Let us hear the other conditions,” said he.

“The first is that you give me a promise in writing that, in consideration of my consent to marry you, you will do what is necessary to get my father out of his present difficulties.”

“That is quite fair, though it is rather unnecessary. I shouldn’t want a convict for a father-in-law, you know. But, anyhow, I’ll agree, as soon as the marriage is over, to pay into your father’s bank a cheque for five thousand pounds, or, if he prefers it, to give him a full discharge for that amount. And I will give you an undertaking in writing to that effect before you leave here to-night. Will that do?”

“It will do quite well,” I answered. “But I wish you also to add to that undertaking a proviso to the effect that, if at any time before the marriage takes place, any circumstances shall arise by which your pecuniary help shall become unnecessary, then this agreement between you and me shall not take effect, and you shall have no claim of any kind on me.”

Mr. Otway looked at me in some surprise, and, indeed, I was somewhat surprised myself at the completeness with which my judgment and self-possession had revived as soon as it came to making terms; though I had considered the matter very carefully on my way to Mr. Otway’s house.

“You are a true lawyer’s daughter, Miss Vardon,” said he, with a somewhat wry smile. “You are not going to give yourself away gratis. No play, no pay, h’m? How ever, you are quite right. You agree to marry me for a certain consideration. If you don’t receive the consideration, you don’t marry me. Very well. That is a perfectly business-like proposition, and I agree to it. You think that perhaps your father may be able to meet his liabilities, after all?”

“I do not think anything of the kind. The proviso was introduced by me in view of a very different contingency. I was making this sacrifice to save my father’s life. If I failed in that, the sacrifice would be useless. But I did not think it necessary to mention this to Mr. Otway. I therefore replied that, as I knew very little about my father’s affairs, I thought it wise to provide even against the improbable.”

“Quite so, Miss Vardon, quite so,” he agreed. “One should always make provision for the unexpected. Well, I have said that I accept your first two conditions. What is the next one?”

“I want you to write my father a letter which shall relieve him of all present anxieties, and I want you to give me that letter so that it may be delivered to-night.”

At this Mr. Otway’s countenance fell somewhat. He pursed up his lips disapprovingly, and, after some moments of reflection, said gravely: “That, you know, Miss Vardon, really anticipates the fulfilment of the contract on my side. Such a
letter would commit me to a withdrawal of my demand for immediate payment of this money.

“But,” said I, “you have my promise, which I am willing to give you in writing, if you wish me to.”

“Well,” he replied, dubiously, “that would seem to meet the difficulty, not that I am suspecting you of trying to evade fulfilment. But, you see, your father has refused his consent and will probably continue to refuse, so that one would rather not raise the question. By the way, I suppose you are over twenty-one?”

“I was twenty-three last birthday.”

“Then, of course, his consent is not necessary. Still, one doesn’t want a fuss; and if you delivered this letter to him, he would be in possession of the facts, and then there would be trouble.”

“I was not proposing to deliver it to him. I should drop it in the letter-box and let him think that you had sent or left it. He would know nothing of my visit to you or of the arrangement we have come to.”

“I see. That alters the position somewhat. But is it really necessary? I can understand your wish to relieve his anxiety; but still, it need be only a day or two. Do you really think it is essential?”

“I do, Mr. Otway. I think it absolutely essential. If I had not, I should not have come here to-night. My father is in a desperate position, and one never knows what a desperate man may do.”

Mr. Otway gave me a quick glance, and I could see that he was considerably startled. The possibility at which I had hinted would have consequences for him as well as for me, and I saw that he fully realized this. But he did not answer hastily. Perhaps he saw more in my suggestion than I did myself. At any rate, he pondered for some seconds before he finally replied:

“Perhaps you are right, Miss Vardon. I’m sure I shall be very glad to put an end to his suspense. Yes, I’ll write the letter and give it to you. Are there any more conditions?”

“No; that is all. So if you will write the letter and the agreement and draft out what you want me to say, we shall have done. And please make as much haste as you can. It is rather late, and I am anxious to get home before my father if possible.”

My anxiety apparently communicated itself to Mr. Otway, for he immediately swung his chair round to his desk, and, taking one or two sheets of paper from the rack, began to write rapidly. In two or three minutes he turned, and, handing me what he had written, together with a blank sheet of paper and a pen and ink-bottle, took a fresh sheet himself, and, without a word, began once more to write. The draft which he had handed me was simply and concisely worded as follows:

“I, Helen Vardon, of Stonebury, Maidstone, in the county of Kent, spinster, hereby promise to marry Lewis Otway, of the Beeches, Maidstone, in the county of Kent, attorney-at-law, within fourteen days from this present date, in consideration of his assuming the present liabilities of my father, William Henry Vardon, in respect of the estate of James Collis-Hardy deceased, this promise to be subject to the conditions set forth in a letter written to me by the said Lewis Otway and dated the 2 of April, 1908.

“(Signed) HELEN VARDON. Maidstone, Kent. 21st April, 1908.”

I read the draft through carefully, noting that it was not only quite simple and lucid, but that it embodied the terms of our agreement with scrupulous fairness and took over my father’s liabilities without any limit as to time; then I dipped the pen in the ink and made a fair copy on the blank sheet which I signed, and laid on the corner of the desk.

By the time I had finished my copy, Mr. Otway had completed the first of the documents, which he now handed to me; and as I read it, he took up the paper that I had written, and, having glanced through it, placed it in a drawer and began once more to write. The paper that he had given to me was in the form of a letter, and read thus:

“Dear Miss Vardon,

“At your request I put on record the terms of the arrangement which has been made between us to-day, and which are:

“1. That in consideration of my taking over your father’s liabilities in respect of the Collis-Hardy Estate, you agree to marry me within fourteen days of this present date.

“2. That on the completion of the marriage ceremony, or at such time thereafter as you may decide upon, I shall pay into your father’s bank the sum of five thousand pounds, or, if he prefers it, give him a full discharge of all liabilities in respect of the Collis-Hardy Estate aforesaid.

“3. Provided that if at any time prior to the said marriage your father shall discharge the said liabilities, or any circumstances shall arise by which the said payment or discharge by me shall become unnecessary, then the agreement between you and me which is herein recorded shall become void, and neither of us, the contracting parties, shall have any claim upon the other.

“I am, dear Miss Vardon,

“Your obedient servant,

“LEWIS OTWAY.”
Mr Otway glanced up from his desk as I folded the paper and bestowed it in my purse, and asked: “Will that do? I think it covers the terms of our arrangement.”

“Thank you,” I answered; “it will do quite well.”

He made no rejoinder, but went on with the letter that he was writing; and meanwhile I sat and watched him, with a strong distaste of his appearance, dimly wondering at this strange interview and at my own curious self-possession and mental alertness. But behind these hazy reflections was a background of haunting terror that had never quite faded even when I was putting the utmost strain upon my wits; terror lest all this bargaining should be useless after all; lest I should arrive home to find that my help had come too late.

These disquieting thoughts were presently interrupted by Mr. Otway, who, laying down his pen and swinging round in his revolving chair, took up the letter that he had just written.

“This is what I have said to your father, Miss Vardon. I think it will make his mind quite easy for the present, which is all we want.

“Dear Vardon,

“Since my talk with you this afternoon, I have been thinking over matters and considering whether it is not possible to give you more time. On looking into the affairs of the trust more closely, I think it can be done; in fact, I am sure it can, with some careful management on my part. So you may take it from me that the demand, which I felt compelled to make, is withdrawn for the time being. When you are in a position to surrender the money, you had better notify me; and in the meantime you have my assurance that no further demand will be made without reasonable notice.

“I hope this will relieve your natural anxiety, concerning which I have been a little uncomfortable since I left you.

“The Beeches.

“2 April, 1908.

“Yours sincerely,

“LEWIS OTWAY.”

He handed me the letter when he had finished reading, and I glanced through it quickly before returning it to him.

“I think that ought to relieve him of all anxiety,” said he.

“Yes,” I answered. “It will do admirably. And if you will kindly seal it and let me have it, I will go at once and drop it in the letter-box. It is most important that it should be in his hands as soon as possible.”

“Quite so,” he agreed; “and I won’t detain you further excepting to point out that, by giving you this letter, I am putting myself entirely in your hands. You will observe that this amounts to a surrender of my claim on your father for the time being. He will, of course, keep the letter, and could produce it in answer to any sudden demand for the restitution of the money. So I am really carrying out my part of the agreement in advance.”

“Yes, I see that,” I replied, “and I thank you most sincerely; but,” I added, rising and holding out my hand for the letter, “you have my solemn promise to carry out my part. If you were better acquainted with me, you would consider that enough.”

“But I do, Miss Vardon,” he rejoined, hastily; “I do. If I did not trust you implicitly, I should not have written this letter. However, I mustn’t delay you. I will make all the necessary arrangements and let you know when everything is ready. Will next Thursday be too soon?”

At the mention of an actual date, and one so near, too, something like a complete realisation of what I was doing flashed into my mind and set my heart thumping painfully. But it had to be, so why haggle for terms? Nor, indeed, since it must be, was there any use in trying to put off the evil day. The urgent need of the moment was to get this letter into my father’s hands, if it were not already too late.

“I must leave the arrangement of the affair to you, Mr. Otway,” I murmured, shakily. “Do as you think best. And now I must really go.”

He shook my hand in a drolly courteous fashion and let me out, accompanying me down the drive to the outer gate, which he opened for me with a ceremonious bow. I wished him a hurried “good-night,” and, as soon as I was outside the gate, ran off in the direction of home, holding the precious letter in the little pocket of my cloak.

**IV. — THE ELEVENTH HOUR**

As I drew near the neighbourhood of our house my fears grew so that I was compelled by sheer breathlessness and the trembling of my limbs to slacken my pace. I was sick with terror. In my mind, pictures, vague and nebulous but unspeakably dreadful, rose like the visions of a nightmare. I clutched the precious order of release in my pocket and set my
teeth, trying not to think of what I might find at my journey's end.

At last I came in sight of the house. It was all dark save two of the upper windows—those of the servants' bedrooms. The servants, then, were going to bed as usual, for ours was an early household. This seemed reassuring, but only to a slight degree; for even—if I opened the gate softly—I do not know why, but some how I instinctively avoided noise of any kind—and running up the garden path, let myself in quietly with my latch-key. With one quick and fearful glance around the darkened hall, I stole up to the hat-stand. Apparently my father had not yet come home, for his stick was not in the stand, and one of his hats was missing. I looked at the tall clock and noted that it was not yet half-past ten; I peered out through the open doorway, down the dark road, and listened awhile for the sound of footsteps; then, slipping the letter into the letter-box—which I could see contained no other missives—I lit one of the candles from the hall table, and, having peeped into the study, the book-room and the workshop, stole silently up the stairs.

First, I went to my father's bedroom, and, by the glimmer of gas that the maid had left burning, and the light of my candle, inspected it narrowly. I looked over the truffles on the mantelpiece and on the dressing-table, and even opened the little medicine-cupboard to run my eye over the collection of bottles and boxes, pausing from time to time that I might listen for footsteps, strange or familiar, as Fate might decree. But pry as I would, there was nothing unusual, nothing on which the most eager suspicion might fasten. All the details of that room were familiar to me, for it had been my daily task since my girlhood to look them over and see that my father's orderly arrangements were not disturbed by the servants; and everything was in its place, and nothing new or strange or sinister had made its appearance.

When I had finished my inspection, I stole softly along the corridor to my own bedroom, which was at the head of the stairs, and, turning up the gas, but leaving the door ajar, began slowly to undress, listening intently the while for any sounds that might confirm or dispel my fears. The house was very quiet and still; so quiet that the tinkle of the water, as I poured it out from the ewer, struck with disturbing harshness on my ear, and even the ticking of the little clock and my own slippered footfalls seemed an impertinent intrusion into that expectant silence.

It was a few minutes past eleven when the sound of a latch-key and the gentle closing of the hall door sent the blood tingling to my very finger-tips. No footsteps had been audible on the garden path, but this, in itself, was characteristic; for my father and I were alike in that we both tingled to my very own slippered footfalls seemed an an

I crept on tip-toe to the door and listened. A stick was carefully put down in the hall-stand, and then I thought—but was not quite sure—that I heard my father unlock the letter-box. A few seconds later I caught a faint creak, which I recognised as proceeding from the study door, and, after a short interval, the creak was repeated and the door closed. Then the hall gas was turned out and soft footfalls began to ascend the stairs.

"Is that you, Pater, dear?" I asked.

"Is it I, indeed, O! wicked and disobedient child and likewise minx!" was the welcome answer. "Didn't I tell you to go to bed?"

"Yes, you did; and I am going. But I thought I would like to see you safely home from your roysterings."

"Mures rathil" he exclaimed, as he came into the light from my open door. "It is poor old Queen Anne who has been keeping you out of your little nest. I know you."

Here he gave a gentle tug at one of the tails into which I had plaisted my hair, and, having kissed me on the tip of my nose, continued:

"And you look as tired as the proverbial dog—which is the only kind of dog that ever does get tired. Now go to bed and sleep like a young dormouse. Good-night, Jimmy, dear."

With the aid of the convenient tail, he drew my face to his and kissed me again; then he went off along the corridor singing very softly, but just audibly to me:

"Her father he makes cabbage nets And in the streets does cry 'em; Her mother she sells laces long—"

Here a rapid diminuendo indicated the closing of the door, and the silence that had been so agreeably broken once again settled down upon the house. Still, I stood at the open door, looking out into the darkness. Had my father seen the letter? He had seemed very cheerful. But then, he would have seemed very cheerful if he had been walking to the scaffold or the stake. That was his nature. Yet his gaiety had appeared to me more genuine than that which he had exhibited earlier in the evening. However, there was no need to speculate; the question could easily be set at rest. Taking the match-box from my candlestick, I stole silently down the stairs, steadying myself by the hand-rail, and groped my way across the hall until I reached the door. Then I struck a match, and by its light, peered through the wire grating into the letter-box.

It was empty. The letter had been taken out.

I blew out the match, and, having dropped it into the salver on the table, crept back up the stairs to my room. Closing the door silently, I made my final preparations, turned out the light and crept into bed, feeling in the sudden ecstasy of relief that I could now shake off all care and bury the anxieties and alarms of this dreadful day in slumber.

My father was saved! No haunting fear of imminent tragedy, no dread of impending ruin and disgrace, remained to murder sleep or mingle it with frightful visions. My father was saved. At the eleventh hour I had made my bid for his life and liberty; and the eleventh hour had not been too late.
But it was long—very long before sleep came to shut out for a time the realities of life. The blessed feeling of escape from this appalling peril, the sense of restored security, was presently followed by the chill of reaction. For the end was not yet. I had bid for my father's life and had bought it in; but the price remained to be paid. And only now, when I could consider it undisturbed by terror for my father's safety, did I begin to realise fully how bitter a price it was. Not that I would have gone back on my bargain, for I had made it with my eyes open; and would have made it over again if the need had been. But it was a terrible price. I had sold my birth-right—my precious woman's birth-right to choose my own mate—for a mess of pottage. It was a price that I should have to pay, and go on paying as long as life lasted.

Hour after hour did I lie, gazing wide-eyed into the darkness, letting my thoughts flit hither and thither, now into the quiet, untroubled past, now into the desolate future, whence they would come hurrying back affrighted. But always, whithersoever they wandered, behind them rose, now vague and remote, now horribly distinct, that unwieldy figure with the impassive oriental face; even, as to the eyes of the fisherman in the Arabian tale, the smoke from the magic jar shaped itself into the menacing form of the gigantic Jinn.

I tried to consider dispassionately the character of Mr. Otway. It was very difficult. For had he not come into our life like some malignant spirit, to dispel with a word and in the twinkling of an eye, all the peace and happiness of our quiet home? To snap off short my serene companionship with my father? To turn into dust and ashes all the vaguely-sweet dreams of maidenhood? To shut out the warm and hazy sunshine from my future and fill the firmament with unrelieved, leaden greyness? Still, I tried to consider him fairly. Callously, cynically, he had driven his Juggernaut car over my father and me, his eyes fixed upon his own desires and seeing nothing else. He was an absolute egoist. That was undeniable. For some reason, he wished to marry me; and to achieve that wish he had been willing to put us both on the rack, and, with passionless composure, to turn the screw until we yielded. It was not a pleasant thing to think of.

On the other hand, he seemed, in his way, to be a just man. By no hair's breadth had he sought to modify the terms that he had first proposed; indeed, in his letter to me he had treated the loan to my father as an almost unconditional gift, and the other details of our agreement he had expressed in writing fully and fairly, with no attempt at evasion. Nor was he niggardly. Five thousand pounds is a large sum to pay for the privilege of marrying an unwilling bride. Under other circumstances I might have appreciated the implied compliment. Now, I could only admit that, according to his lights, he seemed not ungenerous.

But when I considered him as the companion with whom I must share the remainder of my life—or, at least, that part of it which mattered—the thought was almost unendurable. To live, day after day and year after year, under the same roof with this huge, dull, uncomely man; to sit at table with him, to walk abroad by his side, to spend interminable evenings alone with him: it was appalling. I could hardly bear to think of it. And yet the horrible reality would be upon me in the course of a few swiftly-passing days.

Nor was it a question of mere companionship—but from this aspect I hurriedly averted my thoughts in sheer cowardice. I dared not let myself think even for a moment of what marriage actually meant. Under normal conditions it may be permitted to the modesty of an unwedded girl to cast an occasional glance, half-shy and not wholly unpleasurable, at the more intimate relations of married life: but to me, if the thought would rise unbidden, it could call up nought but the quick flush of shame and loathing whereat I would bury my face in the pillow with a moan of shuddering disgust.

It was a relief to turn from the distressful present and the unthinkable future to the past, or even to the future that might have been. For, like most other girls, I had had my day-dreams. The companionship with my father had been happy and full of interest; but it had never seemed final. I had looked on it as no more than the prologue to the real life, which lay, for the moment, hidden behind the near horizon of my maidenhood. And as to that reality, though it offered but a vague picture, yet it had a certain definiteness. To many modern girls, ambition seems to connect itself with the academy and the laboratory, with the platform and the forum. They appear to hanker after fame, or even mere notoriety, and would contend with men—who have nothing better to do—for the high places in politics, in science or in literature. I had read the impassioned demands of some of these women for political and economic equality with men, and had looked at them with a certain dim surprise to see them so eager to gather this Dead Sea fruit and turn their backs upon the Tree of Life, with its golden burden of love and blessed motherhood. Ambition of that kind had no message for me. So far my mind was perfectly clear. As to the terms in which I conceived the realities, the blossom and fructification of a woman's life, I am less clear. A home of my own like the pleasant, peaceful home that my father had made; a man of my own, in whom I could feel pride and by whom I could be linked to the greater world outside; and a sweet brood of little people in whom my youth could be renewed and for whom I could even cherish wider ambitions: this was probably what my rambling thoughts would have pictured if they could have been gathered up and brought to a definite focus. But they never had been the necessary refracting medium had been absent. For what the burning-glass is to the sunbeam, the actual love of some particular man is to the opening mind of a young girl, bringing the scattered rays of thought to a single bright spot in which the wished-for future becomes sharp and distinct. And this influence, in its completeness, had never come into my life. The undoubted liking that I had for the society of men was due, chiefly, to their larger interests and wider knowledge. Of experiences sentimental or romantic there had been none.

And yet the little god had not entirely forgotten me. Indeed, his winged shaft had missed me so narrowly that I could hardly yet be certain that I had passed quite unscathed. That little episode—tame enough in all conscience—had occurred two years ago, when a Mr. Davenant had come from Oxford with a small party of fellow undergraduates, to spend a more or less studious vacation in our neighbourhood. I had met him, in all, three times on the footing of a casual acquaintance, and we had talked “high philosophy” with the eager interest of the very young. That was all. He had been a bird of passage,
alighting for a moment on the very outskirts of my life, only to soar away into the unknown and vanish for ever.

It seemed an insignificant affair. A score of other men had come and gone in the same way. But there was a difference—to me. Those other men, too, had talked “high philosophy,” but I had forgotten utterly what it was that they had said. Not so had it been in the case of Mr. Davenant. Again and again had I found myself thinking over his talks with me, not, I suspect, for the sake of the matter—which, to speak the truth, was neither weighty nor brilliantly original—but rather because I had enjoyed talking to him. And sometimes I had been surprised to notice how clearly I remembered those talks, even to the very words that he had used and the tones of his pleasant, manly voice. Two years had passed since then—a long time in a girl’s life; but still Mr. Davenant—his name, by the way, was Jasper, a pleasant-sounding name I had thought it—remained the one figure that had separated itself from the nebulous mass of humanity that had peopled my short existence. And to-night—on this night of misery and despair, when all that was worth living for seemed to be passing away, as I lay staring up into the darkness, the memory of him came back to me again. Once more I heard his voice—how strangely familiar it sounded!—framing those quaintly-abstruse sentences, I recalled the look in his eyes—clear, hazel eyes, they were, that sparkled with vivacity and the fresh interest of youth—and his smile, as he uttered some mild joke—a queer, humorous smile that drew his mouth just a little to one side and seemed to give an added piquancy to the jest by its own trifling oddity. I remembered it all, clearly, vividly, with the freshness of yesterday; the words of wisdom, the humorous turn of speech, the earnest, almost eager tone, the easy manner, friendly yet deferential—all came back to me as it had done a hundred times before, though it was two years ago.

He had been but a stranger—a mere passing stranger who had come and gone—who had sailed across the rim of my horizon and vanished. But even in that swift passage some virtue had exhaused from him by which it had been given to me to look into the present and the future. It was my one little guide to me, and all that I had; and, to me, he stood for all those things that might have been and now could never be. And so it happened that, on this night, when I seemed to be bidding farewell to my youth and all its dimly-cherished hopes, the memory of him lingered in my thoughts and was with me still when, at last, sleep—the sleep of utter weariness and exhaustion—closed my eyelids and shut out for a time the realities of that life on which I would have been well content never to look again.

V.—ON THE BRINK

Of the four days that followed, I do not, even now, like to think. The dreadful change that was coming into my life loomed up every moment more distinct, more threatening, more terrible. The hideous realities of what was about to happen to me refused to be ignored. They thrust themselves upon me and filled my thoughts every instant of the day and haunted my dreams at night. There were times when I turned a wistful eye upon that solution of the hopeless difficulties of life at which my father had hinted; but alas! even that was no solution as matters stood. Death which would have released me from this bondage into which I had sold myself, would have left my father unencumbranced; and to attain it by my own act would have been a grossly dishonest evasion of the covenant into which I had entered with Mr. Otway. Expediency and honour both demanded that I should carry out the terms of my agreement.

But it was a terrible burden that I bore during those four days, and bore, of necessity, with a cheerful face and as little change as might be from my usual manner. That was the most difficult part of all. To keep up the appearance of quiet gaiety, which was the tone of our house; to smile, to jest, to discuss projected work and to talk over the history which I was supposed still to be reading; and all the time to feel the day of doom creeping upon me, nearer and nearer with every beat of my aching heart. That was the hardest part. But it had to be done and done with thoroughness; for my father’s watchful and sympathetic eye would have detected at once the smallest flutter of a signal of distress. And it was imperative that he should be kept in the dark.

And that, perhaps, was the bitterest drop in this bitter potion. For the first time in my life I had a secret from my father. I was systematically deceiving him. And the secret that I withheld from him and shared with a mere stranger—with an enemy, in fact—was one that concerned him profoundly. And yet that, too, had to be. It was of the essence of the transaction. For, if he had suspected, for one instant, what I proposed to do, he would certainly have interfered; and I knew him well enough to feel sure that his interference would not have taken the form of mere persuasion. He was a quiet man, suave and gentle in manner; even-tempered, patient, forebearing—up to a certain point; but when that point was passed, a change occurred which was apt to surprise those who knew him but slightly. Like a heavy body, he was difficult to move and difficult to stop when moved. If he had suspected Mr. Otway of putting unfair pressure on me—which he would certainly have done—then I would not have answered for the consequences to Mr. Otway.

But strive as I would to keep my secret, the intolerable strain of those days of misery must have made itself visible in some change in my appearance. Once or twice I caught my father looking at me narrowly with something of anxiety in his expression, and hastened to put on a little extra spurt of gaiety and to divert his attention from myself. Still, he was not entirely deceived by my assumed cheerfulness, though he made no remark until the very last evening, when, I suppose, my efforts to conceal the grief and wretchedness that were gnawing at my heart were less successful than usual. Then it was that he took me quite seriously to task.

“I wonder what is the matter with my little girl,” he said, looking at me reflectively as we sat at the supper table. “She has been getting a little pale of late, and looks tired and worn. Is it too much Queen Anne and not enough sleep, think you?”

“I am feeling quite well,” I replied.
“That is an evasion, my dear, and a tarradiddle to boot, I suspect. You are looking quite well. What is it, Jimmy?”

“I don’t think it is anything, Pater, dear,” I answered, not without a qualm of conscience at the direct untruth. “I haven’t been sleeping so very well lately, but that is not due to my sitting up reading. Perhaps it’s the weather.”

“If’m!” he grunted; “perhaps it is—and perhaps it isn’t. Are you sure there is nothing troubling you? No—what shall we say? Well, to put it bluntly, no young man, for instance, competing with the good Queen Anne for your attention?”

I laughed a little, bitterly. If only there had been! But, alas! I was only too well secured against any troubles of that sort. So I was able to reply with a moderately clear conscience.

“No, of course there isn’t. You know that perfectly well. How could there be when you keep me so securely in my little hutch?”

“That’s true, Jimmy,” he answered. “I certainly haven’t noticed any buck rabbit sniffing around. But perhaps it is the hutch itself that is the trouble. It is a dull life for a girl, to be shut up with an old fellow like me. Coal-scuttles and such-like are all very well for an ancient fossil who has sucked all the juice out of life and must needs content himself with a modest nibble at the rind that’s left. But it’s not the sort of thing for a girl. Your orange is still unsucked, Jimmy, dear, and we mustn’t leave it to get over-ripe.”

“I’ve always been very happy with you, dear old Pater,” I said; and a lump rose in my throat as I spoke. How happy I had been! And oh, how thankfully would I have gone on with that serene, peaceful life and never asked for anything different, if only it might have been so!

“I know you have, my dear,” he rejoined; “always contented and cheerful and kind to your old father. But still—well, we mustn’t get too groovy. But it was of no use to think of that now. The bargain had been made, and payment accepted in advance. Nor if it had...
been possible for me to go back on a promise voluntarily given—which it obviously was not—could Mr. Otway have been held to his. The original situation would have been created afresh.

Before undressing, I sat down at my little bureau and wrote a letter to my father in case there should be no time on the morrow. For the arrangements—which Mr. Otway had communicated to me in a letter addressed in a feminine handwriting—were necessarily of a somewhat clandestine character. Mr. Otway had obtained a special license and had given notice to the clergyman of a small church on the outskirts of the town, and on the by-road leading to the church I was to meet him on Thursday morning as near as possible to eleven o’clock. There was not likely to be any difficulty in carrying out my part of the arrangement, but nevertheless, it was as well to leave nothing to be done on the morrow.

The letter that I wrote to my father was quite short. There was no need for a long one, since the facts to be communicated were of the simplest and I should probably see him in the course of the day. What I wrote was as follows:

“My dearest Father,

“I am writing to tell you that I am about to do a thing of which I fear you will disapprove. I am going to marry Mr. Otway; and by the time you get this, the marriage will have taken place.

“You will understand why I have done this when I tell you that I accidentally became aware of your difficulties and of the claim which he had on you and you will understand, too, why I have kept my intention secret from you. It was the only way out for us; and you are not to think that I have done it for you only. I was equally concerned, and have acted in my own interests as well as yours.

“Please, dearest, try to forgive me for taking this step without your sanction. You would never have consented, and yet it had to be.

“Your loving daughter,

“HELEN.”

I sealed the letter, and, having addressed it, placed it in my bureau in readiness for the morning. Then I made various little arrangements of my possessions, tidying up my bureau and wardrobe, tearing up letters that had been answered and packing a small trunk with necessary articles of dress, to be sent on for on the morrow; and all this I did with a curious stony calm and the sense of setting my affairs in order as if preparing to bid farewell to life. And this calm—a calm like that which persons of character often exhibit in the face of unavoidable death, or on the eve of a dangerous operation, continued even after I went to bed, so that, in contrast to the perturbed nights that I had passed since my interview with Mr. Otway, I presently fell into a sound sleep and slept late into the morning.

VI. — A MEETING AND A PARTING

It turned out to be easier than I had expected to keep my appointment with Mr. Otway, for my father had business that took him abroad early, and, when I came down to breakfast, he had already left the house; which was a profound relief to me, since it saved me the added misery of a last farewell and the necessity of further deception.

It was half-past ten when, after placing my letter in the salver on the hall table, I set forth from the house. The most direct way to the church was across the town, but the fear of meeting my father or any of my acquaintances led me to the roads that led out from the environs towards the country, and thus skirt the circumference of the town. I walked at a good pace, unconsciously threading my way through the rather complicated maze of by-roads, and still pervaded by the curious, half-dreamy calm that had possessed me on the preceding evening.

As I approached the vicinity of the little church—which was a kind of mission-chapel, in charge of a supernumerary curate—I glanced at my watch and saw that it was five minutes to eleven; and almost at the same moment, on turning a corner, I came in sight of a figure the very first glance at which so completely shattered my self-possession that I felt ready to sink down upon the pavement. There was no mistaking it, though the back was towards me; a huge, ponderous figure that walked away from me with the peculiar gait of the heavy and unathletic man; a silent, deliberate gait that recalls the action of the hind legs of an elephant.

I followed him breathlessly up the rather sordid-looking street, noting that, from time to time, a thin cloud of blue smoke floated over his shoulder. At length, at the corner of an intersecting road, he turned and saw me; upon which he flung away a cigar, and, retracing his steps towards me, saluted me with a flourish of his hat and held out his hand.

“This is good of you, Miss Vardon,” he said, “to be so punctual. I hardly hoped that you would be able to be here so—er—so punctually.”

I took his hand limply, but made no reply. The shock of the sudden encounter was slowly passing off and giving place to a sort of benumbed indifference mingled with vague curiosity. I felt as if I had been drugged or were walking abroad in a hypnotic trance, half conscious and waiting with dull expectancy to see what would happen next. I walked at Mr. Otway’s side up the mean little street with a feeling somewhat like that with which one would walk in a dream beside some historical or mythical personage, accepting the incongruous situation from mere mental inertia.

Mr. Otway, too, seemed subdued by the strangeness of the position, or perhaps he was embarrassed by my silence. At any rate, although he occasionally cleared his throat as if about to make a remark, he did not actually speak again until we
turned a corner, when there appeared, embedded in a row of mean houses, a small brick building which, in general shape and design, resembled a large dog-kennel.

"That," said he, "is the church, Miss Vardon—or perhaps I should say, Helen. It is a little difficult to—ah—get used to these—these intimacies, I may say, at so short a notice. No doubt you find it so?"

"Yes," I answered.

"I am sure you do. Naturally. My own name, you may remember, is Lewis. My Christian name, I mean," he added, shying slightly at the word "Christian."

"I remember," said I.

"Quite so. I had no doubt you would. Ahem." He cleared his throat once or twice in an embarrassed manner, and then, as we crossed over towards the church, he continued: "I think we shall find the doors open. The law, I believe, requires it. And we shall find my housekeeper, Mrs. Gregg, inside. She will be one of the witnesses, you know. The other will be the sexton."

The outer door was on the latch, as he had said, and, when he had admitted me, he closed and relatched it. From the dark vestibule, I stepped into the bare, comfortless building, from the white-washed wall of which a great, emblazoned text grinned at me, as if in derision, with the words: "I was glad when they said unto me, 'Let us go into the House of the Lord.'"

Near the door, on one of the deal benches, the little, frail-looking woman whom I had seen at Mr. Otway's house was seated, conversing with a very bald and rather seedy elderly man; but, as we entered, the man hurried away towards the vestry and the woman rose and came forward a few paces to meet us.

"This is Miss Vardon, Mrs. Gregg," said Mr. Otway, introducing me in a heavy, embarrassed manner.

Mrs. Gregg stared at me with undisguised curiosity and something of hostility in her expression, as she replied: "Ah've seen her before."

"Yes," said Mr. Otway, "I believe you have. Yes. To be sure. And I—er—hope—in fact, I may say that I—ah—"

What he was going to say I have no idea, and I suspect that he was not very clear himself; but at this moment the man—who was apparently the sexton—emerged from the vestry in company with a young clergyman, vested already in his surplice and carrying a book in his hand.

Apparently everything had been explained and arranged beforehand by Mr. Otway, for, as we advanced up the nave, the curate took his place before the communion table and opened his book. I noticed that he gave me one quick and intense look, full of surprise and curiosity, and thereafter seemed, as far as possible, to avoid even glancing in my direction.

The ceremony began abruptly and without preamble. With dim surprise, I became aware that the clergyman was speaking, or rather reading aloud, in a rapid and indistinct undertone. I listened with but slight attention, and failed, for the most part, to distinguish the words which, I think, was what the curate intended; his half-apologetic mumble being, I believe, designed to mitigate the effect of those coarsely-phrased impertinences with which the service is besprinkled, and which have survived so inappropriately into this age of decent and reticent speech. I tried to fix my thoughts on the ceremony in which I was taking part, but found them constantly wandering away to my father, busying themselves with his present whereabouts and occupation. Was he still at his office? Or had he perchance called in at our house, as he sometimes did, and already seen my letter?

I was brought back to the happenings of the moment by a question addressed to me by name in more distinct tones, and followed by the murmured instruction: "Say I will." I obeyed the gently-spoken command, and then, with my right hand enveloped in a large and flabby grasp, I heard Mr. Otway repeat after the curate the solemn form of words that should mean so much and that was, as now spoken, so empty a mockery; of which the phrase "to have and to hold from this day forward" seemed to separate itself as the only part truly applicable.

Still passive, and conscious only of a certain, dull discomfort and surprise at the incongruity of the whole affair, I permitted my hands to be separated and re-joined, and obediently repeated the form of words as the curate dictated.

"I, Helen Vardon, take thee, Lewis Otway, to my wedded husband, to have and to hold from this day forward, for richer for poorer, in sickness and in health, to love, cherish, and to obey, till death us do part, according to God's holy ordinance; and thereto I give thee my troth."

It was amazing. These burning words, so charged with love, with utter devotion and self-abandonment I was actually addressing to a mere stranger, to a man who, even now, was but a name attached to an unfamiliar, ungracious personality; upon whose corpse, if he had fallen dead at my feet in the very moment of my speaking, I could have looked with no emotion but relief.

It was an astounding situation. The wonder, the incredibility of it filled my mind to the exclusion of all else until, as Mr. Otway began once more to speak at the curate's dictation, and I became aware that a ring had been slipped on my finger, I realised dimly that the ceremony was complete and that the irrevocable change had occurred.

But even then my thoughts quickly flitted away from this significant scene to others that seemed more deeply to concern me. As I knelt at Mr. Otway's side and the monotonous mumble recommenced, I began once more to wonder where my father was and what he was doing. Had he come in and seen my letter, or had the maid noticed it and taken it to the office? And would he be angry or only grieved? Would he think that I had acted rightly? Or would he condemn my action as ill-
considered or even unnecessary? And lastly, was it just barely possible that I had done the wrong thing? Had I sacrificed myself—and him—without sufficient cause?

Thus my thoughts wandered to and fro to the mumbled accompaniment of the interminable prayers and exhortations that rolled past me in an unheeded stream. At last the ceremony came to an end. Rising from our knees, we trooped after the curate to the vestry, where, as I signed the familiar name in the register, the first clear realization of my changed condition came upon me. But even then the vivid flash of perception was but transient. Hardly had I shaken hands with the clergyman and passed out into the street, when my thoughts sped away once more to my home—my real home—and my father.

For some time after leaving the church Mr. Otway and I walked in silence. He hemmed once or twice and seemed on the point of speaking, but either he could find nothing appropriate to say or he found some difficulty in opening the subject of his thoughts. And meanwhile I pursued my own reflections. At length, however, after one or two preliminary hesitations, he managed to make a beginning.

“I am afraid, Helen, you may think that I have put rather unfair pressure on you to marry me.”

I roused myself to consider what he had said, and replied, after a slight pause:

“What I may think, I am not complaining. I don’t forget that I accepted your proposal of my own free will; and I intend to try to carry out honestly my part of the bargain.”

“I am glad to hear you say that, Helen,” he said eagerly. “I was afraid you might feel resentful—might think I had driven a rather hard bargain.”

“Perhaps I do,” I replied. “But that doesn’t affect the terms of the bargain. My feelings towards you were no part of the agreement.”

“No; that’s true,” he agreed hastily; but he was visibly crestfallen, and walked by my side for some time without speaking. My thoughts began to wander again; and then, suddenly, there occurred to me a question that I had already asked myself over and over again without finding any answer. Now, moved by a fresh impulse of curiosity, I put it into words.

“Would you mind telling me, Mr. Otway, why you wished to marry me?”

He looked at me in some surprise and a little confusion.

“Why, my dear Helen,” he replied hesitatingly, “there is nothing remarkable about it, is there? I wished to marry you for the same reason that any other man would; because you are a handsome girl—a beautiful girl, I may say—and clever and bright, and, as far as I could judge from your manner to your father, a good, affectionate girl. I have admired you ever since I first met you, a year and a half ago.”

I suppose I looked surprised—I certainly felt so, seeing that he had made no effort to cultivate our acquaintance—for he continued:

“Yes, Helen, I admired you; but as I had nothing to offer in the way of personal attractions, and I did not suppose that my means would be a sufficient set-off for my—ah—personal disadvantages, I kept my admiration to myself. In fact, I suppose, if it had not been for this lucky chance—lucky for me, I mean—a little unfortunate perhaps for you—though not so unfortunate as it might be—or at least I venture to hope that things may turn out—”

He paused awkwardly, as if expecting me to help him. But I made no comment. My momentary curiosity was satisfied. I had heard his explanation, and a very insufficient one it seemed to be. So the sentence remained unfinished, and, in the silence that ensued, my thoughts went back once more to my father.

When would he get my letter? And what would be his feelings when he realized that his daughter—his companion and playmate, his beloved apprentice—was lost to him for ever? And what would be his attitude to Mr. Otway? Deeply resentful, beyond a doubt. His scornful rejection of the proposal had shown that clearly enough. Yes, he would be angry—furiously angry; for quiet and gentle as his manners were, he was a passionate man. He could even be violent, as I knew from one or two experiences. And our doctor, Dr. Sharpe, knew it, too, and had warned him to be careful, had cautioned him not only to avoid over-exertion, but excessive excitement of any kind. The doctor’s words came back to me now with a qualm of uneasiness. I had not thought of that before. His distress, his grief, his anger against the man who had exacted this price from me—all that I had thought of and fretted over. But the actual physical shock that my letter would inflict on him, utterly unprepared as he was—that I had somehow overlooked. And yet it was palpable enough. He would come home expecting to find me waiting for him as usual; and then, without an instant’s warning, in the very twinkling of an eye, he would learn that I had been spirited away out of his life for ever. It would be a terrible blow.

The more I thought of it the more uneasy I became. Supposing he should become seriously ill on receiving my letter. It was quite possible; it was even very probable. And if he should have got my letter already! If he should be, at this very moment, lying, prostrated by the shock, with none but the servants to tend him! As I thought of this dreadful possibility, my anxiety grew, moment by moment; and I was beginning to consider how soon I could contrive to escape to him, to satisfy myself that all was well, when the voice of Mr. Otway broke in on my thoughts. I did not at first gather clearly what he was saying until, by an effort, I detached my attention from the agitating subject of my reflections.

“Of course,” he was saying as I endeavoured to catch up the thread of his remarks, “it answered my purpose as a solitary bachelor; but it won’t do now. We shall have to get quite a different class of house. And we shall want some other servants.
I shall keep Mrs. Gregg, if you don’t object, as she has been with me so long and knows my ways, but we shall want a couple of maids in addition, I suppose.”

“Is Mrs. Gregg your only servant?” I asked, rather absently.

“Yes,” he replied; “that is to say, the only resident servant. She has a girl to help her in the mornings with the housework and to mind the place when she goes out shopping. That is how she was able to attend at the church this morning.”

As he was speaking, we turned into the quiet, countryed road in which he lived, and a few more steps brought us to the house. Mrs. Gregg, who had apparently hurried on in advance by a different route, was standing at the open door talking to a girl of about sixteen, and, as we ascended the steps, she addressed Mr. Otway.

“I’ve got to see to some things in the town. D’ye want Lizzie to stay or will ye open the door yourself if anyone comes?”

“Oh, she needn’t stay, Mrs. Gregg,” was the reply. “I shan’t be going out. But don’t be any longer than you can help.”

On this Mrs. Gregg dismissed the girl, and followed her out, shutting the door after her. Mr. Otway hung his hat on a peg in the hall, and placing his umbrella in the stand, remarked apologetically:

“Mrs. Gregg’s manner is not all that might be desired in a servant; but she is a capable woman and absolutely trustworthy. She comes from the North, you know, where manners run a little more blunt than with us. Shall I show you your room?”

Without waiting for a reply, he preceded me up the stairs to the first floor, where he ushered me into a bedroom and stood by the door with an embarrassed and rather deprecating air, casting a glance of obvious disapprobation over its somewhat meagre appointments.

“It’s a poor place to bring you to, Helen,” he remarked, “but that can be mended. It was good enough for a bachelor. You’ll find the wardrobe and chest of drawers empty when you send for your things. Mine are in the dressing-room—that little room to the right. And now I’ll leave you in possession for the present.”

With this he went out, closing the door behind him, and I heard his soft, heavy tread descending the stairs.

For some time after he had gone I stood looking about me in absolute dismay. The room was mean almost to sordidness—surprisingly mean for the habitation of an admittedly wealthy man. It was not that which filled me with consternation. Delicately as I had been brought up, the mere surroundings of life were of no great consideration to me. What appalled me utterly was the fact now brought home to me with overwhelming force; that I was no more my own; that I had surrendered myself to the possession of another person, a strange man, towards whom I felt a growing repugnance. This was not my room: it was our room. No longer had I any rights of privacy or of personal reticence. I was his, “to have and to hold from this day forward,” with no power of escape or protest against the most repulsive familiarities. I had voluntarily surrendered, not only my liberty, but even the appearance of security from the most outrageous intrusions.

Of course I had known all this before. But in the hurry and rush, the alarms and agitations of the events that had forced me to my hasty decision, perception had been partly obscured. I had known what I was doing, but had only dimly realized. It had needed the sight of that mean room, with its significant contents and the presence of that man who stood at my side as joint occupier, to light up the vague perception into realization of the most horrid vividness.

Presently I began, with the dull curiosity of a prisoner introduced to a new cell, to explore the room, opening the empty wardrobe and pulling out the ill-fitting drawers of the plain pine chest. Then I peeped into the dressing-room—a bare little closet, furnished with a wash-stand, a dressing-table and a chest of drawers—and even stepped in to glance over the half-blind down into the garden and street beyond. I was about to turn away when I noticed a man approaching the house at a rapid pace; and in an instant my heart leaped with mingled joy and alarm.

It was my father.

I watched him nervously as he strode towards the house, and my fears rose with each step that he took. Every movement was expressive of excitement and anger; the swift stride, the forward-thrust chin, the very set of the shoulders; the way in which he grasped his stick by the middle, as if aiming a blow, was full of menace. As he drew nearer I shrank behind the curtain, but still watched him; watched him with growing alarm, for now I could see that his eyes were wild under the frowning brows, his mouth was set and his face was of a strange, blotchy, purple colour. He looked as if he had been drinking, but I knew he had not.

As he reached the gate, he wrenched it open violently, and, entering, slammed it behind him; a thing I had never before known him to do. He strode up the path, without a glance upwards, and disappeared from my sight, and a moment later there came a wild jangling of the bell, followed by a thundering knock at the door.

I hesitated, undecided what I should do. Should I go down and meet him with appeasing words, or should I wait until the first explosion of his wrath had subsided? I crept out of the bedroom to the landing and stood with my hand on the baluster rail, listening. I heard Mr. Otway walk along the hall, softly and rather slowly. I heard him open the door, and then my father’s voice rose, loud and fierce.

“Where is my daughter, Otway? Is she here?

“Yes,” Mr. Otway replied; “she is upstairs. We have just returned from the church.”
“Do you mean to say,” my father demanded, “that the marriage has actually taken place?”

“Yes,” Mr. Otway answered. “We were married half an hour ago.”

“What!” roared my father. “After my letter! Did you tell her about that letter? You didn’t, you damned scoundrel! You’ve tricked her! You’ve swindled her!

“As to your letter, Mr. Vardon,” I heard Mr. Otway reply, “I haven’t seen it myself, yet. The morning’s correspondence is still—”

Here a door closed, and his voice became inaudible. They had gone into one of the rooms. I staggered back into the bedroom and sank on to a chair, trembling from head to foot. In the name of God, what did my father mean? Trick! Swindled! Could it be true? Was it actually possible that I had been lured into the arms of this ungainly lout by a false pretence? It was incredible. And yet—as the first shock of this amazing statement began to pass off, a storm of anger and indignation arose in my breast; and I was on the point of rising to go down and confront Mr. Otway, when the house shook to a heavy concussion. I sprang from the chair, and flying on the wings of terror down the stairs, opened the first door that I came to.

Years have rolled by since that unforgettable moment, but even now, as I write, the tableau that met my eyes as I opened the door rises before me vivid and distinct as the dreadful reality. I saw it even then but for a single instant, as I darted into the room; but it has remained with me and will remain till my dying day.

My father lay motionless on the floor near the fire-place; his face an awful, livid grey, his eyes staring fixedly at the ceiling; and from a small wound on the right side of his forehead a few drops of dark blood trickled down his temple. Beside him, and stooping over him, stood Mr. Otway, with ashen face and dropped jaw, the very picture of horror and mortal fear; and in Mr. Otway’s right hand was grasped my father’s stick, a stout Malacca, with a heavily-loaded silver knob.

I flew past him and sank on my knees by my father’s side; and in that moment I knew that my father was dead. I had never seen a dead person before. But it was unmistakable. I spoke to him; I called to him in an agonised whisper; I patted his head and touched his face. But all the while I knew that he was dead; that he was gone from me for ever. Even as I looked at him, the livid grey of his face faded to a dead white; the staring eyes relaxed and seemed to sink into their sockets; and the mouth slowly fell open. It was death. I knew it. Dazed, stricken, almost bereft of consciousness and the power of thought, I knew it, with the dull certainty of despair.

As I had entered the room, Mr. Otway had started up with a look of terror, and when I sank at my father’s side, I had heard him move away softly towards the writing-table. He was now back and once more stooping over my father’s body. I felt that he was there, although my eyes were fixed on that pallid face that gave back no answering glance. Presently he spoke, in a hushed, awe-stricken whisper.

“This is terrible, Helen! Can’t we do anything?”

I looked up at him with a sudden flush of loathing and detestation; and as I looked, I noticed that he no longer held the stick. I rose slowly to my feet and faced him.

“No,” I answered. “He is dead. He is dead. Mr. Otway, you have killed my father.”

As I faced him, he shrank away from me, staring at me as if I had been some horrid apparition. His face, blanched to a horrible white and shiny with sweat, was dreadful to look upon; the face of abject, mortal terror.

“Helen!” he gasped. “Helen! For God’s sake don’t look at me like that! It was not I who killed him. I swear to God it was not. He fainted. I was trying to take the stick from him—had to, or he would have killed me—and his head struck the mantelpiece. Then he fainted and fell. I am telling you the truth, Helen. I am, before God!”

To this I made no reply. Whether I believed him or not, I cannot say. Stunned as I was by this frightful thing that had befallen, I could only look at him with utter loathing as the cause of it all.

“Helen!” he continued, imploringly, “say you believe me! I swear I never touched him. And don’t look at me like that! Helen! Why do you look at me in that awful way?”

He clasped his hands, and, casting a fearful glance at my poor father’s corpse, moaned: “My God! my God! but this is horrible! Horrible! Do you think he is really dead? Don’t you think—can’t we do anything? If a doctor were here—if we only had someone to send—Shall I go and fetch a doctor, Helen?”

“Yes,” I answered, “you had better.”

“I will,” he said. “But do you believe me, don’t you? I swear—”

“You had better go at once, Mr. Otway,” I interrupted.

He gave me one pitiful glance of appeal, and then, with a despairing moan, turned and left the room. I heard him hurry along the hall and a moment later the outer door closed.

Once more I sank on my knees beside my father, and, taking the passive hand in mine, looked into the pallid face, dimly surprised to find something new and unfamiliar creeping into it. I did not weep. The blow was too crushing, too overwhelming to call forth common emotion. Nor did I think coherently; but knelt, looking dumbly into the face that was
my father’s, and yet was not, wrapped in a sort of dreadful trance, conscious only of bitter pain and a sense of unutterable loss.

After a time—I do not know how long—I became aware of sounds of movement in the house, and presently soft foot steps approached the room. The door, which Mr. Otway had left ajar, opened with a faint creak, and the voice of Mrs. Gregg ejaculated: “Sakes! What’s this?”

She stole on tip-toe into the room until she stood beside me, looking down with a scared expression as my father’s corpse.

“Why!” she exclaimed, “the man’s dead! Who is he?

“He is my father, Mrs. Gregg,” I replied.

She stood for some time in silence, apparently considering the import of my answer. Then she walked round and looked down curiously at the wound on the forehead.

“Where is Mr. Otway?” she asked.

“He has gone to fetch a doctor,” I answered.

“A doctor!” she repeated. “And what might be the good of a doctor when the man is dead? D’ye know how it happened?”

Before I had time to reply to her question, there came the sound of a latch-key inserted into the hall door. She turned quickly and made as if she would leave the room, but, as she reached the threshold, Mr. Otway entered, followed by the doctor, and she fell back to let them pass. I rose to my feet, and the doctor—a hard-faced, middle-aged man whom I knew by sight—knelt down in my place. He lifted the limp hand and laid his finger on the wrist; he raised the eyelid and touched the glazing eyeball; then drawing out his stethoscope he listened for some time at the chest over the region of the heart. And meanwhile we all stood watching him in a profound silence through which the ticking of the clock broke noisily, as it had done on that fateful night when I had sat in this very room unconsciously preparing the elements of this tragedy.

At length the doctor rose, and, folding his stethoscope, deliberately slipped it into his pocket and turned to Mr. Otway.

“I am sorry to say that it is as you feared,” said he. “He is quite dead. From what you have told me, I should say it was a case of heart failure from over-excitement. Have there been any previous attacks?”

“No,” I answered. “But I think Dr. Sharpe considered that his heart was weak.”

“Oh! He did, did he? Well, I had better call on Dr. Sharpe and hear what he knows about the case.” He walked round, and, stooping down, examined the wound attentively. Then, without looking at Mr. Otway, he asked: “You say he struck his head against the corner of the mantelpiece? This corner, I suppose?”

He touched the right hand corner of the marble shelf, and, as Mr. Otway assented, I saw him place his shoulder against it as if to measure its height.

“Was that when he was in the act of falling?” he asked, with his eyes fixed on the wound.

“Yes,” replied Mr. Otway. “At least, I think so—I should say yes, certainly—that is, to the best of my belief. Of course, Dr. Bury, you will understand that I am a little confused in my recollection. The—ah—the circumstances were very agitating and—ah—confusing. Is the point of any importance?”

“Well, you see,” the doctor replied a little drily, “when a man dies suddenly and only one person is present—as I understand was the case in this instance—every point is of importance.”

“Yes, of course. It would be, naturally.”

Mr. Otway spoke these words in a low, husky voice, and, as I looked at him, I saw that he had turned as pale as death and that his face had again broken out into a greasy sweat. Nor was I the only observer. Mrs. Gregg, who had been standing in the corner by the door, quietly attentive to all that passed, was now watching her employer narrowly and with a very curious expression. There was a brief interval of silence, and then Mr. Otway having cleared his throat once or twice, asked, in the same husky, unsteady voice:

“I suppose, when you have talked the matter over with Dr. Sharpe, you will be able to certify the death in the usual way?”

“In the usual way?” Dr. Bury repeated. “Yes: in the way that is usual in cases of sudden death. Of course, I shan’t be able to give an ordinary certificate. I shall write to the coroner, giving him the facts, and he will decide whether an inquest is necessary or whether he can issue a certificate on my statement.”

“I see,” said Mr. Otway. “You will report the facts—and, I suppose, you will state what your own views on the case are?”

“I shall make any comments that seem to be called for, but, of course, the facts are what the coroner wants.”

“And would you consider that, in a case like this, an inquiry is necessary?”

“I don’t know that I should,” was the reply; “but it doesn’t rest with me. Would you like me to help you to move him? You can’t leave him lying here, and you can hardly have him carried to his own house by daylight.”

“No,” Mr. Otway agreed, “we could not. If you will kindly help me to carry him to the drawing-room, we can lay him on the sofa.”
The two men raised my poor father, and, while I supported his head, they carried him to the drawing-room and laid him on the sofa, when Dr. Bury, having taken an embroidered cover from a table and spread it over him, drew down the blinds.

“Perhaps,” said he, “you had better leave him here until we know what the coroner intends to do. In case he should decide—”

Here he glanced a little uncomfortably at me, and I realised that he would rather speak of the grim details unembarrassed by my presence. Accordingly, I stole from the room and returned to the one from which we had just come. The door was open as we had left it, and, as I came opposite to it, treading softly, as was my habit, I saw Mrs. Gregg standing by the roll-top table with my father’s stick in her hand, apparently testing the weight of the heavy lead loading that the silver knob concealed. She started as she suddenly became aware of my presence, but, quickly recovering her self-possession, asked:

“Will this be your father’s stick?”

I answered that it was, whereupon she remarked, as she stood it in the corner behind the writing-table, whence, I suppose, she had taken it:

“I thought ’twas a stranger to me. A fine stick it is, too, and a trusty companion ’twould be on a dark night and a lonely road.”

To this I made no reply; and when she had glanced at the clock and peered curiously into my father’s hat, which stood on the table, she turned abruptly and left the room.

VII. — THE TERMS OF RELEASE

WHEN Mrs. Gregg had gone, I shut the door, and, sinking on to the chair by the writing-table, tried to collect my thoughts. But though I was vaguely conscious that this dreadful disaster vitally affected my position, and must in some way affect my actions, overwhelming grief and a sense of irreparable loss rendered coherent thought impossible. My father was dead. That was all I could think of. My one perfect friend, who had absorbed all my affection and given me all of his, had gone out of my life. Henceforward I was alone in the world.

Presently I heard Dr. Bury leave the house, and then the door opened, and Mr. Otway came into the room, looking like a man who had risen prematurely after a severe illness. He dropped limply on a chair, and sat, with his hands on his knees, looking at me with a pitiable expression of misery and consternation.

“This is a terrible affair, Helen,” he said in a broken voice. “Terrible! Terrible!”

I made no reply, but looked at him, half-curiously and resentfully. In the extremity of my grief, I had no pity to spare for him who was the cause of this dreadful calamity.

“Won’t you speak to me, Helen?” he said, imploringly. “Won’t you try to give me some comfort? Think of the awful position I am in.”

At his miserable egotism, my grief blazed up into sudden wrath.

“You!” I exclaimed, scornfully. “And what of me? You have robbed me of my father—of all that matters to me in life—and now you ask me to comfort you!”

He stretched out his hands to me with a gesture of entreaty.

“Don’t say that, Helen!” he implored. “Don’t say I robbed you of him. It was an accident that no one could foresee. And after all, you know, Helen,” he added, persuasively, “if you have lost a father, you have gained a devoted husband.”

At these words I gazed at him in utter amazement; and quite suddenly the confusion of my thoughts began to clear up. I began to realise that some action was called for, though what that action was I could not clearly see at the moment. But what I did see quite clearly was that the thing he was suggesting was utterly unthinkable.

“Do you suppose, Mr. Otway,” I demanded, “that I could possibly live with you as your wife after what has happened?”

“But you are my wife, Helen,” he protested.

“I agreed to marry you, Mr. Otway, in order to save my father. My father has not been saved.”

“That was, no doubt, your motive, Helen,” he answered. “I don’t deny that. But, actually, you agreed to be my wife on certain specific conditions, which I carried out—or, at least, was prepared—”

He hesitated with sudden embarrassment; and the embarrassment, with the statement, in the midst of which he had broken off, gave me my cue.

“Mr. Otway,” I said, “you had a letter from my father. What was in that letter?”

At this question his self-possession broke down completely.

“I have had no letter,” he stammered; “at least, that is to say, I haven’t seen—he spoke of a letter, but—but the fact is, in my excitement this morning I forgot to look at my correspondence. If there was a letter, it must be in the box still.”
“Let us go and see if it is there,” said I. My confusion of mind was fast clearing up, and as my wits returned, I found myself shaping a definite course of action. I rose and accompanied him to the hall door and stood by while he unlocked the letter-box. As he opened the trap, I perceived that the box contained a single letter; and even in that agitating moment, the significance of the fact struck me. It was strange, indeed, that the morning’s delivery should bring to a man of business no more than a single letter.

He picked the missive out, and, having glanced at it, handed it to me. I looked at it, and, perceiving that it was in my father’s handwriting, tore open the envelope and drew out the letter, which I read aloud. It ran thus:—

“Stonebury, Maidstone.

“25th April, 1908.

“Dear Otway,

“You will, no doubt, be glad to learn that our little difficulty is at an end. The unexpected has happened. My friend has been able to raise the wherewith to repay the loan that I made to him, and has sent a cheque for the full amount. I have paid it into my bank, but, as a measure of security, in view of the magnitude of the sum, I am waiting until the cheque is cleared before sending you mine. However, you may expect to receive payment in full in the course of three clear days from this date.

“With many thanks for your forbearance,

“I am, yours very truly,

“W. H. VARDON.”

As I finished reading, I looked Mr. Otway sternly in the face.

“You realize,” I said, “that this letter makes our agreement void?”

He did not reply immediately, but stood with his eyes averted from me and his fingers working nervously.

“Well, in a way, yes,” he replied, hesitatingly. “If it had reached me sooner—that is to say, if I had seen it—”

“If you had seen it!” I interrupted, angrily. “What has that to do with the question? The letter was delivered to you, as the post-mark shows, before you left the house. It came by the first post. If you chose to leave it unopened, that is your affair. When you met me this morning, the agreement was already at an end.”

He glanced nervously along the hall towards the kitchen stairs.

“We needn’t stand here,” he said. “Let us go into the study and talk this affair over quietly.”

He led the way back to the room we had left, and, having shut the door, turned to me deprecatingly.

“It’s an unfortunate business, Helen,” he said. “Very unfortunate. Of course, I ought to have looked over the morning’s post, but, in my natural excitement, I overlooked it; and now I don’t see that there is anything for us to do but make the best of it.”

I looked at him in amazement. “But,” I exclaimed, “you don’t seem to realize that our agreement was at an end before the marriage took place.”

“No, I don’t,” he replied. “You see this letter is only a notification—a conditional promise to pay. It doesn’t discharge the debt.”

At this my patience gave out completely. “Let us have no evasions or quibbles, Mr. Otway,” I said. “Our agreement was at an end before the marriage took place, and I have no doubt that you knew it. You obtained my consent by fraud.”

“I don’t admit that,” said he. “But even if it were so, what would you propose?”

“I propose to have the marriage annulled,” I replied.

He shook his head. “That is impossible, Helen,” he said. “The marriage is not voidable. An action for nullity can be sustained only on certain conditions, none of which exist in our case.”

“But,” I exclaimed, “my consent was obtained on a fraudulent pretence! Surely that is a sufficient ground for claiming to have the marriage annulled!”

“I deny the fraud,” he replied, doggedly. “But in any case it is not material. The marriage was perfectly regular, you are of full adult age, you gave your consent without compulsion, and there are none of those impediments which the law recognises. I assure you, Helen, that our marriage is not voidable—that it cannot be annulled by ordinary process.”

Little as I trusted to his truth or honour, I suspected that what he was now saying was true. But yet the position was unthinkable.

“Do you mean to tell me,” I demanded, “that the law would uphold a marriage between a woman and the murderer of her father?”

He winced as if I had struck him a blow, and his face grew sensibly paler.
“For the love of God, Helen,” he entreated, “don’t talk like that! You don’t believe it. I can see you don’t. You know I did not kill your father.”

“I know nothing,” I replied, “but this—that when I came into the room my father was lying dead with a wound on his forehead and that you were standing over him with a formidable weapon in your hand.”

I thought he would have fainted. He sank into a chair with a gasp that was almost a sob, and the sweat streamed down his pallid face. He was a pitiable spectacle; but yet I felt no pity for him. I was bent only on escaping from the net in which he had caught me.

“I swear I never touched him, Helen,” he protested, breathlessly. “I swear it. But you know I did not. You are only saying this to torture me. You don’t believe it. I know you don’t.”

“It is of little importance what I believe, Mr. Otway.” I replied, coldly. “The decision will not rest with me. You will be judged by others on the facts which I have stated.”

He made no immediate reply. He seemed absolutely paralysed by terror, and sat, breathing quickly and staring at me, as if he expected me to kill him then and there. At length he spoke in a husky, indistinct voice.

“Helen. What is it you want of me?”

“I want this marriage set aside,” I answered.

“But,” he protested, “I have told you that is impossible. It cannot be annulled in the ordinary sense. Be reasonable, Helen. Let us talk the matter over and see if we can’t come to terms.”

“What do you mean?” I asked.

“Well,” he said, persuasively, “I should like to meet your wishes if I can. I am not unreasonable. I can see that, as things are, you would not wish to live with me as my wife. We can’t get the marriage annulled, but we can arrange a separation—a temporary separation, say, without prejudice to any future arrangements—by mutual consent. What do you say to that?”

“If the marriage cannot be set aside, I suppose a separation would be the next best thing. Do I understand that you are willing to agree to a separation?”

“Yes,” he replied; “on certain conditions I am willing to agree to a separation—a temporary separation, you know.”

“What are your conditions?” I asked.

He cleared his throat once or twice, as if in doubt how best to put the matter. Then, avoiding my eye, he began, hesitatingly, but with an obsequiously persuasive manner.

“The exact circumstances of your father’s most lamentable death, Helen, are known to you and to me and to no one else. As I have told you, and I am convinced that you believe, the heart attack which killed him came as we were struggling for possession of his stick. It was due to the excitement and the violent exertion. Perhaps the blow on the head from the corner of the mantelpiece may have had something to do with it, for the fainting attack came on almost directly afterwards. He relaxed his hold on the stick and fell, leaving it in my hands. There was no violence on my part. I never struck him or did anything that could in any way make me responsible for his death. That is the truth, Helen, and I am convinced that you believe it, in spite of what you have said.”

“I have only your word that it is the truth,” said I.

“Exactly,” he agreed. “But you believe me. You know what your father’s state of health was, and you know that he was liable, on occasions, to be—or—somewhat violent. So you believe me. But others, who have not the knowledge that you have—ah—might—ah—might not believe me.”

“I haven’t said that I do,” I interposed. “However, we will let that pass. Go on, please.”

He paused to wipe his face with his handkerchief, and then proceeded:

“You said just now that when you entered the room you saw me standing over your father with a weapon in my hand.”

“So I did.”

“I know you did, Helen. You saw me holding your father’s loaded stick. It is quite true. But—it would—ah—greatly simplify matters if—well, if that circumstance were not communicated to—ah—to anyone else.”

“You mean to say,” said I, “that you want me to suppress the fact that I saw you standing over your father’s dead body holding a loaded stick?”

“I wouldn’t use the word ‘suppress,’ Helen,” he replied, passing his handkerchief once more over his haggard face. “I only ask you to refrain—in the interests of justice and—ah—of common humanity—from mentioning a circumstance that—ah—mentioned, might mislead the hearers, and might, conceivably, lead them to quite erroneous conclusions. It is a reasonable thing to ask. No doubt you blame me; you look upon me as the cause of this dreadful trouble—which, in a certain sense, I admit I am. But you would not be vindictive, Helen, or unjust. You would not wish to see me placed in the dock—perhaps even convicted—think of that, Helen! Convicted and sentenced when I am absolutely innocent! My God! It would be an awful thing! You wouldn’t wish to have such a frightful miscarriage of justice as that on your conscience, I am sure.”
“It wouldn’t be on my conscience,” I replied, coldly. “The verdict would not be mine; and besides, I have only your word that you are innocent. You have made the statement to me, and you could make it to others, who would take it for what it is worth.”

He clasped his hands passionately and leaned forward towards me with an imploring gesture.

“Helen!” he exclaimed. “Don’t be so hard, so cold! Have you no pity for me? Think of my awful position—an innocent man, but yet with appearances so horribly against me. And the whole issue is in your hands. You were not present when—when it happened. You have only to say so and to refrain from making any unnecessary additions to that statement, and no miscarriage of justice can occur. I am not asking you to say anything that is not true; I am only asking you to keep irrelevant and misleading matter out of the inquiry. Do this, Helen, and I promise to execute a deed surrendering all claims on you—at least for a time.”

I made no immediate answer. Mr. Otway was perfectly right on one point. I did not believe that he had killed my father. I think I only half believed it, even, at the awful moment of the discovery; for the alarming appearance that my father had presented as he strode up the garden path, with his wild eyes and his strange, blotchy colour, had made me fear a catastrophe; and when the catastrophe had almost immediately followed, it was natural that my mind should refer it to a cause already considered rather than to one totally unexpected. Moreover, Mr. Otway’s account of the tragedy was intrinsically probable; it fitted the facts that were known to me; whereas the supposition that he had killed my father was wildly improbable.

It is not to be supposed, however, that, in my present agitated state, I reasoned the matter out consciously in this methodical fashion. But unconsciously, and perhaps vaguely, my mind had worked along these lines to a conclusion; and that conclusion was that Mr. Otway’s account of what had happened was substantially correct. Nevertheless, I was not prepared to admit this at the moment; indeed, my whole desire was to be rid of the man’s irksome presence—to be alone with my grief.

“I can’t give you an answer now, Mr. Otway,” I said. “I am not in a condition to discuss anything. I want to go home and be quiet.”

He acquiesced with surprising readiness, no doubt encouraged by my tacit abandonment of the accusation.

“Of course you do,” he agreed. “It has been a fearful shock for you. Go home and keep yourself quiet. I shall hear from Dr. Bury, in the course of the day, what the coroner intends to do, and I will call and let you know. And I will bring a draft of the deed for you to look at. The sooner we arrive at a settlement, the better. And, Helen, let me beg you not to say anything to anyone about—anything that might complicate matters. You understand what I mean.”

I nodded wearily and moved towards the door. I was still wearing my outdoor clothes, so I had no preparations to make. Mr. Otway opened the door for me and I passed out into the hall; but before leaving the house, I turned back into the darkened drawing-room, and, raising the cover from my father’s face, kissed his already cold cheek.

“Good-bye, dearest! Good-bye!” I whispered, passionately; and then, feeling the tears rushing to my eyes, I kissed him again, and, replacing the cover, hurried from the room. Mr. Otway was standing at the hall door to let me out, and timidly offered his hand; but I walked quickly past him, and, running down the steps, made my way out through the gate that had admitted me to my ruin and my father to his death.

VIII. — “WHOM GOD HATH JOINED—”

OUR states of mind in certain unforeseen circumstances are sometimes surprising, even, to ourselves. As I walked away from Mr. Otway’s house, I think I was dimly surprised at my own self-possession. The worst had happened. The calamity which I had feared, and which I had made such sacrifices to avert, had befallen; and yet I was comparatively calm. My heart ached, it is true, with a grief such as I had never known before; with a sense of irreparable loss and a feeling of utter loneliness and desolation; but yet, under it all was a certain indefinable peace.

Looking back with more natural knowledge and experience, this state of mind is not difficult to understand. My father’s sudden death was a crushing calamity; but, in the very moment of its happening, the incubus of my relation to Mr. Otway was lifted. For, though I was not at the time conscious of the fact, I now see clearly that, even as I passed out of the house of the man whom the law regarded as my husband, my mind was made up that I had done with Mr. Otway.

Moreover, my new trouble was in other ways more easy to bear than the misery of the last few days. My marriage had seemed, in a manner, to put an end to my life. It had offered nothing but an unending vista of wretchedness, an unending submission to a state of things that was intolerable even to think of. But this new catastrophe was sudden and final. The blow had fallen, once for all; shattering, indeed, my present, but calling upon me instantly to make provision for the future. And in action, the necessity of which forced itself upon me even before I reached home, I found, if not relief from my sorrow, at least some temporary distraction.

As I let myself in with my latch-key, our housemaid met me in the hall to announce that lunch had been waiting for some time, and to ask me if I knew at what time my father would come in.

“My father is dead, Jessie,” I replied. “He died suddenly at Mr. Otway’s house about an hour ago. I can’t tell you any more just now.”
I walked past her and ascended the stairs to my room, leaving her standing in the hall as if petrified; but, before I reached the landing, I heard her rush away towards the kitchen, making the house resound with her hysterical shrieks and lamentations. It was very dreadful and distressing, but yet it had a steadying effect on me, reminding me of my isolated position and of the need for firmness and self-control. In a few minutes I came down, and disregarding Jessie’s sobs and tears, sat out the simple formalities of lunch as a matter of discipline and example, and even compelled myself to take a certain amount of food.

As I sat at my silent and solitary meal, my thoughts were busy with the many things that had to be done. Not willingly, indeed; for I longed to be quiet and nurse my grief—to forget everything but my sorrow and my great bereavement. But that was impossible. I was practically alone in the world, for I had no near relatives, and all that had to be done must be done, or at least directed, by me. There was my father’s funeral to be arranged, the business to be transferred or wound up, the property to be realised—and there was Mr. Otway.

Naturally enough, my thoughts constantly came back to him. As to his moral claim on me, it was null and void. Whether he had, as I suspected, seen my father’s letter and deliberately left it unopened, or whether he had simply neglected to look for it, made no difference. It had been delivered to him, and thereupon our agreement had ceased to exist. But if he had no moral claim, he had, apparently, a legal hold on me which would have to be considered. If he could be induced to surrender that, the position would be greatly simplified. And he was ready to surrender it on a certain condition.

To Mr. Otway’s proposal my thoughts came back again and again. The condition that he had made was not an unreasonable one, or, at least, it did not appear so to me. My father had died when they were alone together. They had admittedly been quarrelling; my father bore the mark of a heavy blow; and Mr. Otway had been found standing over the body with a loaded stick in his hand. The appearances suggested that he had killed my father. And yet I was convinced that he had not. Profoundly loathing him as the cause of all my misfortunes, I still felt that he was, in this respect, an innocent man; and common justice demanded that he should not be made to suffer for a crime that he had not committed.

Now what was my position in the affair? Practically I held the scales of justice. The one absolutely damning fact was in my sole possession; and I alone, in all probability, would appreciate the misleading appearances which that fact created. That was my dilemma. I could make known the fact itself to those who should judge him, but could I make them understand how little it was worth? It seemed very doubtful. I had trembled for my father’s safety and had seen him come in at the gate, already in a dangerous condition. They had not. They might easily fail to weigh his state of health against that one, apparently, sinister fact of the loaded stick. In short, it came to this: that if I mentioned what I had seen, Mr. Otway ran a serious risk of being punished for a crime which he had not committed, whereas if I refrained from mentioning it, justice would take its proper course.

That, I think, is, in effect, how I argued. Neither the logician nor the jurist will commend me. But women have their own ways of looking at things, and of those ways is somewhat to confuse conviction with knowledge. A thing firmly believed is apt to present itself as a thing known. I had come to the conclusion that Mr. Otway was innocent of my father’s death, and having done so, had unconsciously treated his innocence as a fact that was within my knowledge.

After lunch, I telephoned to the office, asking Mr. Jackson, my father’s managing clerk, to come and see me; and while I was waiting for him, I took down from the study shelves a treatise of the Law of Husband and Wife, and turned over those of its unsavoury pages which dealt with suits for nullity. Apparently Mr. Otway was right. So far as I could make out, the circumstances of our marriage afforded no grounds for such a suit. I was married irrevocably. My complete freedom was gone beyond recall; I should have to be content with such incomplete freedom as is conferred by a deed of separation.

I had just returned the book to the shelf when Mr. Jackson arrived and entered the room looking very flurried and uncomfortable.

“What a dreadful thing this is, Miss Vardon!” he exclaimed. “Shocking! Shocking! So unexpected! I need not say how much we all sympathize with you.”

“It is very kind of you,” I said, offering him a chair.

“Not at all,” he rejoined. “It is a terrible misfortune for all of us. Would it distress you very much to tell me how it happened?”

“It was for that purpose that I sent for you, Mr. Jackson; to tell you exactly what has happened and to ask your advice,” and here I gave him a brief account of the events of the morning.

At the mention of my marriage he looked profoundly surprised, but also, I thought, distinctly relieved; but he did not make any comment until I had finished the whole tragic story, when he remarked:

“I am very glad to hear that you are married, Miss Vardon—or rather, I should say, Mrs. Otway—to a man of such very substantial means, if I am rightly informed.”

“Why are you glad?” I asked.

“Because,” he replied, “it disposes of rather a difficulty. Your father was a man of great abilities and an excellent lawyer, but he was somewhat inattentive to the financial side of his profession. I am afraid you would have been left rather badly provided for.”

“I am sorry to hear that,” said I, “because I am not proposing to live with Mr. Otway. I have asked him to agree to a
separation."

Mr Jackson raised his eyebrows. "May I ask why?" he enquired.

"I don’t want to go into details just now," I answered, "but I may say that the marriage was an affair of accommodation; I supposed my father to be in a position of embarrassment, and I made the arrangement with Mr. Otway without his knowledge. It turns out that I was mistaken. He was not embarrassed. When the marriage took place, I was under a misapprehension and I was misled by Mr. Otway. Accordingly, I have asked to have a separation deed drawn up."

"Does he agree to the separation?"

"He has not yet, but I think he will; so I shall have to consider my resources, after all."

"But," Mr Jackson objected, "he will have to make you an allowance."

"That," I said, "is impossible. If I repudiate the marriage, I could not, of course, allow him to support me."

"Why not?" demanded Mr. Jackson. "He is legally bound to. You are his wife. While the marriage stands, you can’t marry anybody else. Besides, he is not likely to raise any objection. He is a lawyer, you know."

"I am not thinking of him: I am thinking of myself. I wish to be under no obligations to Mr. Otway, and I shall not accept any assistance from him."

"I am sorry to hear you say that," Mr. Jackson said, gloomily; "because I am afraid you will be rather badly off. The business is a very personal one, and is worth practically nothing to sell. If I were a qualified solicitor, I might be able to carry it on. But I’m not; and I doubt if anyone would care to buy the good-will at any price. Still, I’ll see what can be done. As to your father’s will, I happen to know that you are the residuary legatee—practically the sole legatee—but what that amounts to, I shouldn’t like to say. Mighty little, I fear. However, it’s of no use to worry you with these matters now. If you will authorize me to look into your father’s affairs, I will let you know exactly how things stand; and if I could be of service to you in any way, I hope you’ll let me know. There’s the funeral, for instance—"

He paused suddenly, and ran an uncomfortable eye along the rows of law books on the shelves.

"You are very kind, Mr. Jackson," I said, "and your help will be invaluable. As my father’s friend, I should like you to take charge of the funeral arrangements, if you would be so good."

The rest of our conversation was concerned with the various things which had to be done during the next day or two, and it left with a feeling of the warmest gratitude to this quiet and rather dry man of business, whose sympathy took such a practical and acceptable form.

It was past six o’clock when the red-eyed Jessie came to the study to announce that Mr. Otway was waiting in the drawing-room; and there I found him wandering restlessly round by the walls and making a show of examining the pictures. He was still very pale and looked haggard and weary, but yet he held out his hand to me with a certain confidence.

"I think, Helen," said he, "that you will be a little relieved at my news. I have seen Dr. Bury, and he tells me that the coroner will be satisfied with his evidence and Dr. Sharpe’s."

"Do you mean that there is to be no inquest?" I demanded, with sudden suspicion.

"No, no," he replied. "Of course, there will be an inquest. But the coroner thinks that the circumstances do not call for a post-mortem. I thought you would be glad to know that. The—er—body will remain where it is until the jury have viewed it, and then it can be brought here for the—ah—the funeral."

I nodded but made no comment on this statement, and he continued after a brief pause:

"I suppose, Helen, you would like me to act for you in regard to the funeral arrangements."

"Thank you, Mr. Otway," I replied, "but Mr. Jackson has very kindly undertaken that for me."

He looked somewhat crestfallen at this, and said, deprecatingly:

"I am sorry you did not leave the arrangements to me. It would have looked better." Which it undeniably would—from his point of view.

As I made no rejoinder, there followed a slightly uncomfortable pause, during which he was evidently bracing himself up for what was the real object of his visit. At length he began nervously:

"Have you been able to give any more consideration to my proposal, Helen?"

"Yes," I answered; "I have thought about it a good deal. Perhaps we had better go into the study, which is more out of the way of the servants than this."

We crossed the hall, and, when we had entered the study and closed the door, I resumed:

"I may as well say, Mr. Otway, that I am prepared to accept your statement. On reflection, I believe that your account of what happened is true."

"Thank God for that!" he ejaculated. "I felt sure you believed me, Helen; but it is an unspeakable relief to hear you say so. And I am sure you will agree with me that the—the apparently incriminating circumstance need not be mentioned."
“I might even agree to that,” I replied; “but there must be a clear understanding. I am not going to say anything that is not strictly true.”

“Oh, certainly not!” he agreed. “All that I ask is that you refrain from volunteering a perfectly unnecessary and misleading statement. Will you promise to do that?”

“I am not sure that I have any right to make such a promise, Mr. Otway; but still, on the conditions that you mentioned, I am prepared to do so.”

His relief was really pathetic. Its intensity made me understand what torments of terror he had been suffering. He flung out his hands as if he would have embraced me, but drew back, as I said, coldly:

“You are prepared on your side, Mr. Otway, to carry out your part? You agree to execute a deed of separation, as I asked?

“If you insist,” he replied. “It’s a hard bargain, but if you hold me to it, I have no choice. Would not a short, informal separation do?”

“No, Mr. Otway,” I replied firmly, “it would not. I am acting somewhat against my conscience in agreeing to suppress this fact, and I want full compensation for doing so. I must have a legally valid deed of separation.”

“Very well, Helen,” said he; “if it must be, it must. I hope that, later, you will take a kinder view of our relations, but meanwhile I will do exactly as you wish. I have drafted out a deed, in a simple form, with as little legal verbiage as possible. If its terms satisfy you, I will copy it out and sign it.”

He handed me a sheet of paper on which the deed was drafted, and I read it through carefully. Like the other documents that he had drawn up, it was lucid, simple and concise, and set forth quite fairly the conditions to which he had agreed, with one exception. It determined automatically at the end of three months.

“I can’t agree to that,” I said. “There must be no specified time; it is to be just a separation.”

“But,” he exclaimed, “you don’t propose that the separation should last for ever, do you?”

That was precisely what I did propose, but I thought it politic not to express myself too definitely.

“It is impossible,” I replied, “to say what may happen in the future; but if you make the separation determinable by mutual consent, that will provide for all eventualities.”

He agreed, with a somewhat wry smile, that this was so, and then asked how soon I should like to have the deed executed.

“As it must be signed before I give my evidence,” I replied, “it had better be done now. If you will make two copies, I will go and fetch the maids to witness the signatures.”

“Dear me, Helen!” he exclaimed. “What an extraordinary business-like young lady you are! But I suppose you are right; only I would suggest that you do not acquaint the witnesses with the nature of the document. We don’t want to take the world into our confidence, especially just now.”

This was reasonable enough, though it would obviously be impossible to keep the world in the dark as to our position, particularly after what I had said to Mr. Jackson. However, I agreed to maintain a discreet reticence, and when he had made the two copies—which I carefully read through—I went out and called Jessie and the cook.

“I want you,” I said, “to witness my signature and Mr. Otway’s to a couple of documents. You have just to see us sign our names and then sign your own underneath.”

The two women came into the study with an air of mystery and awe, gazing furtively from me to Mr. Otway. The two documents lay on the table, each with a sheet of blotting paper spread over it, exposing only the blank spaces which were to receive the signatures, on each of which a red wafer seal had been stuck. Mr. Otway signed first, and then, indicating to the cook the place where she was to write her name, placed the pen in her hand.

“That’s right,” said he, when she had painfully and with protruded tongue, executed the signature of ‘Ivy Stokes.’ ”Now you will do the same with the other paper as soon as Mrs. Otway has signed.”

The cook gazed curiously at me as I signed the second document, and then, in the same strained and laborious fashion, traced the scrawling characters over the name that I had lightly pencilled in for her guidance. Having watched with feverish interest while I marked the next space, she drew back and made way for Jessie, who, by watching her colleague, had learned what was required of her.

When the formalities were completed and the two maids dismissed—to discuss these strange proceedings, doubtless, in the kitchen—Mr. Otway handed me the copy, bearing his signature, and, taking the other, rose to depart.

“Before I go, Helen,” he said, “there is one matter to settle. In the document I thought it best to say nothing about an allowance—”

“You were quite right,” I interrupted. “Of course, I should not ask for, or accept, any allowance under the circumstances.”

“You won’t need one at present,” said he. “We know there are five thousand pounds lying to your father’s credit at his bank—”
“That money was not his,” I said, “and it is not mine. As soon as the will is proved it will be paid to you on behalf of your clients.”

“But that is quite unnecessary, Helen,” said he. “The use, for an unspecified time, of that sum of money was the consideration in respect of which you agreed to marry me. As the marriage has taken place, it is only fair and reasonable that you should receive the consideration. In effect, that five thousand is yours by the terms of our agreement.”

I was on the point of replying that our agreement was null and void, and that I had no intention of carrying out its conditions; but prudence whispered that I had better keep my intentions to myself, at least as to my ultimate conduct. Besides which, Mr. Otway’s statement was not entirely correct, as I proceeded to point out.

“The use of this money,” I said, “was to relieve my father, who was assumed to be insolvent. But it appears that he was not insolvent; and it is my intention that all his debts shall be paid, in so far as there are funds to meet them. It is certainly what he would have wished.”

“But,” Mr. Otway protested, “supposing the payment of these debts should consume all the available assets? How are you going to live?”

“I suppose I shall do as other women do when they have no independent means. I shall work for my living. But it is premature to discuss that until I have had Mr. Jackson’s report. I don’t suppose I shall be absolutely penniless.”

He shook his head gloomily. “You are Quixotic, Helen, and wrong-headed, too. There is no reason why you should work for your living. As a married woman, you are entitled to maintenance, and I am willing, and even anxious, to maintain you. But I won’t press the matter further. If you want money, you know that you can have it, not as a favour but as a right. And now there is just one other matter that I want to speak about. In the deed of separation I said nothing about our relations other than was actually necessary. I made no stipulation as to your keeping me informed of your whereabouts; but I ask you now, if you should be leaving Maidstone, to let me have your address and to allow me to keep up communication with you. It is a reasonable request, Helen, and I am sure you will not hesitate to accede to it.”

I did hesitate, however, for some time. In truth, I was not at all willing to agree to this proposal. My wish was to sponge Mr. Otway, once and for all, out of my life and to make a fresh start. Still, the request was a reasonable one, and could, I suspected, have been enforced as a demand; and, in the end, though very reluctantly, I yielded.

“Thank you, Helen,” said he, holding out his hand; “then I won’t worry you any more just now. It is understood that I am not to lose sight of you, and that if you should want help, pecuniary or other, you will let me know. And I may rely on you to say no more at the inquest than is actually necessary?”

I gave him the required assurance on this point, and, having somewhat frigidly shaken his hand, accompanied him to the hall door and let him out.

As I stood in the open doorway, watching him walk away up the street in his heavy, elephantine fashion, a man entered at the gate, and, approaching with a deferential and rather uncomfortable air, took off his hat and offered me a small, blue envelope, which bore the superscription “Mrs. Lewis Otway.” I took it from him, and, closing the door, went back to the study, where I opened the envelope and extracted the little slip of blue paper that it enclosed; which turned out, as I had expected, to be the subpoena to the Inquest. I glanced through the peremptory phrases of the summons, and, laying the slip of paper on the table, went up to my own room to be quiet and think upon all that lay before me.

But thought—orderly, useful thought—was impossible. Everything around me spoke of the life that had been so tragically broken off, rather than of the future that loomed so vague and empty before me. The open book on the reading-stand, the hastily scribbled notes upon the writing-block, the unanswered letters and a little pile of rough drawings on the table, all seemed to call to me to take up afresh the thread that had been dropped; seemed to interpose the unfinished past before the uncommenced future. Restlessly I wandered down to the workshop—where the coal scuttle still stood on the bench, a mute but eloquent memorial of that tragic final evening—only to gather a fresh sense of loss and desolation. And so, for the rest of the day, I haunted the house like some unquiet spirit, watched with pity, not unmixed with fear, by the awe-stricken servants, tearless and outwardly calm, but inwardly torn by grief and a sense of bereavement that seemed to intensify moment by moment.

And yet, when, in the silence of the night, the tears came at last, and my sorrow, no longer mute, voiced itself in sob and moans of pain, still, under the feeling of utter bereavement and desolation, was a half-lived sense of peace, of repose, and reprise.

IX.—TESTIMONY AND COUNSEL

THOSE who are apt to refer in contemptuous terms to the artificiality of the plots of the novelist must have failed to observe the orderly way in which events arrange themselves in real life; how the circumstances of the vital and essential happenings of our lives may, attentively considered, be separated out in a coherent group of causes and effects as closely knit and inevitably connected as the parts of the story-teller’s plot.

The reflection is suggested to me by the distressing experiences of the inquest on my father’s death. Clearly enough, indeed, did I realise at the time that this would never have been but for those fateful words so calamitously overheard by me, and for my ill-considered, though well-meant, efforts to avert the apparently impending catastrophe. But I realised not
at all—as, indeed, how should I?—that this day of sorrow, of shame and humiliation, was not only the harvest of the irrevocable past but the seed-time of an even more momentous future.

As I approached the school-house in which the inquest was to be held, I observed Mr. Otway pacing slowly up and down the little court-yard. He was pale and haggard, and though he preserved his usual ponderously reposeful manner, it was not difficult to see that he was in a state of intense, nervous excitement and suppressed anxiety.

He was evidently waiting for me, and turned to meet me as I entered the gate.

"I thought we had better go in together, Helen," he said, as we exchanged a formal greeting. "They know that we are married, and, of course, they don't know that our—ah—our arrangements are in—ah—in suspense. And it would perhaps be as well if no reference were made to—ah—to those—ahem—temporary modifications which—ah—in short, to our provisional agreement."

He looked at me deprecatingly and I nodded. There would be quite enough painful detail to be dragged into the light of day without this sordid addition. Besides, any reference to the deed of separation would start enquiries which neither of us desired, as was plainly evident to Mr. Otway; for he continued in a husky undertone, as we approached the schoolroom door:

"And you will fulfil your part of our covenant faithfully, Helen, I am sure."

"Most undoubtedly I shall," I replied. "But you will remember that our covenant does not include false evidence. I shall say as little as is possible, but if I am asked a direct question I must answer it, and answer it truthfully."

"Of course you must," he agreed: "but it is often possible to ward off an inconvenient, question which may lead to others still more inconvenient."

"You make it easy," I said, "that I shall carry out my part of our bargain in the spirit as well as in the letter."

With this assurance he appeared to be satisfied, and we now moved slowly towards the door of the school-house. While we had been talking, a party of men—the coroner and his jury—had filed past us and entered; and when we followed a minute later, we found them already in their places and the proceedings about to begin. We seated ourselves on the two chairs placed for us, which were next to those of the two medical witnesses, and as I glanced round the Court, I observed Mr. Jackson sitting near the coroner, and by his side a gentleman whose face I seemed to recognise, but to whom I could not give a name. Some dim recollection connected the quiet, strong, intellectual face with my father and the happy past, but not until near the close of the inquiry was I able to bring my memory to a clear focus.

The attitude of the coroner and jury alike—they were all local men and most of them known to me—made my difficult task as easy as was possible. They were all anxious to spare me to the utmost and to make the best of what the coroner described as "a grievous and terrible calamity." Moreover, they restrained in the most delicate manner their evident curiosity as to the relations of Mr. Otway and myself. But, of course, the facts had to be given, and very distressing and humiliating it was to me to have to confess to what must have looked like a mere sordid intrigue with the uncouth creature at my side.

As the only person present when the death occurred, Mr. Otway was necessarily the first witness; and a very nervous, hesitating witness he was; and very fortunate was it for him that he had so sympathetic a court. As he stammered out his evidence I noted, again and again, the searching, grey eye of the strange gentleman fixed upon him, not indeed with any obvious distrust, but with the most concentrated attention.

"Do we understand," asked the coroner, "that Mr. Vardon was angry and excited when he arrived at your house?"

"Yes—furiously angry."

"Do you know why he was angry and excited?"

Yes, the witness did know. And as he proceeded to relate, in husky, uncertain tones, the circumstances of the secret marriage, more than one of the jurymen glanced from him to me with hardly-concealed astonishment; and I felt my face burning and my eyes filling with humiliation.

"Was there any reason for this secrecy?" the coroner asked.

"Yes. The deceased had already refused his consent to the marriage."

"But that is hardly a reason for secrecy in the case of an adult. Could he have prevented the marriage from taking place?"

"No. But it seemed better to—ah—to avoid discussion and unpleasantness."

The coroner looked dissatisfied. He considered a few moments, and then asked: "Do you know why the deceased objected to the marriage?"

"I think he considered that the—ah—the inequality of age was undesirable," Mr. Otway replied.

Still the coroner looked dissatisfied, and as he paused to reflect, and the jurymen looked at him expectantly, Mr. Otway furtively wiped his forehead with his handkerchief. Evidently, he was profoundly disturbed, as well he might be; for if this line of inquiry were pursued much farther, it must inevitably lay bare the real nature of the transaction.

At length the coroner turned to the jury. "Well, gentlemen," said he, "I suppose the question is not very material. It is
clear that the deceased was extremely excited and angry. The ultimate cause of his anger is, perhaps, not very relevant to the subject of our inquiry."

To this the foreman of the jury readily agreed, and I could almost see the sigh of relief with which Mr. Otway hailed the passing of this perilous incident—a relief in which I participated to no small extent.

The narrative was now resumed, and as it proceeded, Mr. Otway's voice became more and more husky and his speech more hesitating. He had a difficult course to steer, and his nerves were at their utmost tension. He had to tell a consistent story without telling the whole truth, and he had to bear in mind that my evidence was yet to be given. It was a position that might have shattered the nerve of a much bolder man than Mr. Otway.

"You tell us that the deceased was violent and threatening in his manner. Do you mean that he was physically violent?"

"Yes—at least he threatened to use physical violence."

"He did not actually assault you?"

"Not actually. The blow that he aimed—at least that he was about to aim—ah—did not—er—did not take effect."

The coroner's brows puckered into a puzzled frown. "This is not quite clear," said he. "Did he or did he not aim a blow at you?"

"He did—at least, that is to say, he appeared—" here Mr. Otway mopped his streaming forehead—"well, I think he actually raised his—ah—his—ah—his clenched fist."

"Did you have to restrain him?"

"No," replied Mr. Otway, with rather unnecessary emphasis. "No, I did not. I stepped back, and—ah—the incident—ah—passed. In fact, it was at this moment that the fatal attack occurred."

"Tell us exactly what happened then."

"He suddenly turned very pale," said Mr. Otway, speaking now with more fluency as he got back to the narration of the actual events, "and seemed to stand unsteadily. Then he staggered backwards and fell, striking his head on the corner of the mantelpiece."

"Did he appear to have fainted before he struck his head?"

"I should say, yes, but—ah—I would not—ah—I was very agitated and alarmed—and—ah——"

"Naturally. But you would say that the fainting attack preceded the blow on the head?"

"There was no blow," Mr. Otway exclaimed quickly; and then, perceiving his mistake, he added, hastily, "that is to say, you are referring to his striking the corner of the mantelpiece?"

"That is what you were telling us about."

"Yes. I should say that he struck—or rather that he fainted and staggered and that he struck his head in falling."

Once more the coroner paused and seemed to reflect; and in the intense silence and stillness that enveloped the court my eye travelled from the huge, ungainly figure of the witness to the face of the tall stranger by Mr. Jackson's side. And a very striking face it was: a handsome, symmetrical face, but strangely—almost unhumanly—reposeful and impassive. Yet, though it was as immobile as a mask of stone, it conveyed an impression of intense attention—almost of watchfulness; and the clear, grey eyes never moved from the face of the witness. To me there was something a little uncanny and disturbing in that immovable mask and that steady, unrelaxing gaze. I found myself hoping that those searching grey eyes would not be fixed on me in that relentless observation when my turn came to give my evidence. And even as this thought flitted through my mind, I remembered who this stranger was. He was a Dr. Thorndyke, an old, though not very intimate, friend of my father's, a famous criminal lawyer and a great authority on medical jurisprudence. I had met him only once, when he had dined, many years ago, at our house; but I had often heard my father speak of him in terms of the highest admiration.

When the coroner resumed his interrogation, it seemed that the crisis was past, so far as Mr. Otway was concerned, for his first question was: "What did you do when the deceased fell down?"

"For a moment or two," was the reply, "I was too bewildered to do anything. Then his daughter—my wife—came into the room, and, as he appeared to be dying or dead, I went off to fetch a doctor."

This virtually concluded his evidence, and the next name called was my own, which, in its new form—Helen Otway—I heard with a start of surprise and something like disgust. As I rose to approach the table, I caught an instantaneous glance—a terrified, imploring glance—from Mr. Otway; and as my eye lighted immediately afterwards on Dr. Thorndyke's face, I felt that this momentary look, too, had been noted by that inexorably attentive grey eye. But I was relieved to observe that he did not look at me, but, as I gave my evidence, fixed a steady, introspective gaze upon a spot upon the opposite wall.

My task turned out to be easier than I had hoped, though perhaps it might have been less easy if I had had more time to reflect on the significance of the questions. The coroner began by expressing the sympathy of the court with my bereavement and apologizing for imposing on me the painful duty of attending the inquiry. Then he asked: "You have heard the evidence of Mr. Otway with reference to your marriage and your father's attitude in regard to it. Do you confirm what he has said?"
“I do,” I replied.

“You were not present at the interview of Mr. Otway with the deceased?”

“No, I was not. When I entered the room my father was lying on the floor and appeared to be already dead.”

“Had you seen your father since the solemnization of the marriage?”

“I saw him from the window as he entered Mr. Otway’s garden.”

“Did you notice anything unusual in his appearance?”

“Yes; his appearance alarmed me very much. He seemed excessively excited, and his face was deeply flushed and of a strange, purplish colour.”

“Had you any special reason to be alarmed?”

“Yes. I knew that his doctor had warned him to avoid all excitement and exertion on account of the weak state of his heart.”

“You did not hear what passed between your father and Mr. Otway?”

“I heard my father ask where I was, and I heard Mr. Otway tell him that the marriage had taken place.”

“Did you hear anything more?”

“My father then called Mr. Otway a scoundrel, and was still speaking loudly and angrily when the study door closed and I heard no more.”

“What made you go to the study?”

“I heard and felt the shock when my father fell.”

“Would you mind telling us again in what condition you found your father?”

“He appeared to be dead. His face was at first a livid grey, but it faded to marble whiteness as I looked at him. There was a small wound on the right side of his forehead and a drop of blood had run down on to his cheek and on his temple.”

The coroner glanced at the jurymen. “I think, gentlemen,” he said, “that is all we need ask Mrs. Otway?”

And when the foreman had acquiesced, and he had thanked me for “the very clear and lucid manner” in which I had given my evidence, I was permitted to resume my seat.

“I can never thank you enough, Helen,” whispered Mr. Otway, as I sat down. “You managed admirably—admirably.”

To this I made no reply; for now that the ordeal was over I began to be assailed by certain doubts as to whether I had been quite candid. I had told all that was really material to the inquiry; but—however, at this point Dr. Sharpe approached the table and picked up the Testament.

His evidence practically settled the verdict. He testified that my father had suffered for some years from a dilated heart and arterial degeneration. “I warned him frequently to avoid excitement and undue exertion, for he was inclined to be careless and take liberties with himself.”

“You considered his state of health precarious?”

“I thought he might fall dead at any moment.”

“You have heard the evidence of the two previous witnesses. Does that evidence contain any suggestion to you as to the cause of death?”

“It suggests to me that the deceased hurried to Mr. Otway’s house in a towering rage, and that, during the interview, he worked himself up into a fury. I should say that the combined exertion and excitement brought on a fatal attack of syncope.”

“You think that death was caused by heart failure?”

“I have no doubt of it.”

Dr. Bury’s evidence was much to the same effect, though less positive.

“The deceased had apparently been dead about half an hour when I arrived. The cause of death was not obvious, but the appearances were consistent with the account given by Mr. Otway. There was a small, contused wound at the junction of the forehead and right temple, apparently caused by the violent impact of some hard and blunt body. Judging by the small amount of bleeding, the wound had been sustained immediately before death. A single drop of blood had trickled down on to the cheek, and one or two drops on to the temple.”

“You have heard Mr. Otway’s account of the way in which that wound was occasioned. Do you consider that the appearances are in agreement with that account?”

“There is no disagreement. The appearance of the wound was consistent with its production in the manner described.”

“Would you say that it was probably so produced?”
“That,” replied Dr. Bury, “is a question for the jury. It might have been. I can’t go beyond the appearances.”

“No, of course you can’t. And is that all that you have to tell us?”

“That is all,” was the reply; and this virtually brought the inquiry to an end. After a brief summing-up by the coroner, the jury held an equally brief consultation and then unanimously returned a verdict of “Death from natural causes.”

On the announcement of the verdict everyone rose, including myself and Mr. Otway, and the latter, turning to me, said in a low voice:

“I think I won’t wait. I want to get home and be quiet; but I shall call on you to-morrow, if I may, to make—ah—any—ah—arrangements that—ah—in fact, to speak to you about the—ah—the funeral.”

“Very well,” I said, reluctantly—for, deeply as I loathed him, I could not exclude him even from that sacred ceremony without creating an open scandal. “You had better come early in the forenoon,” and with this I dismissed him with a stiff bow, and made my way to where Mr. Jackson and Dr. Thorndyke were standing. As I held out my hand to the latter and recalled to him our meeting years ago, Mr. Jackson said: “Dr. Thorndyke happened to be in Maidstone to-day and to call at our office, so I prevailed on him to come here and watch the proceedings on our behalf in case any complications should arise. But everything has gone off quite smoothly.”

“Very smoothly indeed,” Dr. Thorndyke agreed, with, as it seemed to me, a certain degree of emphasis.

“Both the coroner and the jury were most considerate,” pursued Mr. Jackson.

“Most considerate,” assented Dr. Thorndyke; and again I seemed to detect a note of emphasis, as also, I think, did Mr. Jackson, for he glanced quickly at our companion, though he made no remark.

“I wonder,” said I, “if you two gentlemen would care to come and take a cup of tea with me?”

Mr. Jackson had an engagement at the office, and as Dr. Thorndyke appeared to hesitate, I added quickly: “I should be very glad if you could, though I don’t wish to take up your time if you are busy.”

“My time is my own for the next three hours,” said Dr. Thorndyke, “and if I should really not be an inopportune visitor, I should like very much to have tea with you.”

“Let us go, then,” said I. “Mr. Jackson will accompany us as far as Gabriel’s Hill, won’t you?” And as my old friend assented with a prim, little bow, we set forth.

“I have offered no condolences, Mrs. Otway,” said Dr. Thorndyke. “I knew your father, I saw you and him together, and I realize what this loss must mean to you. There is nothing to say except that you have my most real sympathy.”

“Thank you,” I said, and for a time we walked on in silence. And as we walked I found myself recalling, with a strong, speculative interest, that curious, subtle emphasis which Dr. Thorndyke had conveyed into his agreement with Mr. Jackson. At length, when we had dropped the latter near the Town Hall, I summoned up courage to raise the question.

“I have an impression, Dr. Thorndyke, which may be quite a mistaken one, that you were not completely satisfied with the way in which the inquest was conducted. Am I mistaken?”

“Well,” he replied, slowly, “the coroner’s methods were not what one would call rigorous.”

“I suppose they were not. But in what respect are you disposed to find fault with them?”

“Principally,” he replied, “in his failure to elicit a really conclusive verdict. The verdict of the jury was based upon Dr. Sharpe’s opinion as to the cause of death. That opinion was probably correct, but it was based upon reasoning which was not sound. His position was this: If certain circumstances—excitement or exertion—should arise, there would be a great probability of their causing sudden death. But those circumstances had actually arisen and sudden death had actually followed. Therefore the death was due to the factors of the said circumstances. But this conclusion is fallacious. It does not prove a fact: it merely indicates a probability.”

“But are not all verdicts statements of probability?”

“Too often they are. But it is a coroner’s business to bring the conclusions of his court, as far as possible, into the region of ascertained fact. The immediate cause of death can usually be demonstrated by scientific methods, and the inquiry can then be built up on a foundation of certainty. Opinion should never be accepted where knowledge is obtainable.”

“Do you think, then, that the verdict was not a proper one?”

“I am not criticizing the verdict,” he replied, “but the methods by which it was arrived at. I think that the cause of death should have been established beyond all doubt before any contributory circumstances were inquired into.”

“But otherwise; apart from that one point?”

“I thought the examination of the witnesses rather easy going. No doubt it elicited all the relevant facts. But that is impossible to decide on. One cannot judge of the relevancy of a fact until one has got the fact. I think, for instance, that most counsel would have pressed your husband a good deal more closely. The coroner appeared to decide that the matter was not relevant without being quite clear as to what matter he was dealing with.”

This, I must confess, had been my own impression, but I had been so relieved at the manner in which the difficult
passages had been allowed to pass that I had been little disposed to criticise the considerate and sympathetic coroner. Nor did it seem quite safe to pursue the present discussion much farther, for it was tending in a rather dangerous direction. My own reservations began to weigh on me somewhat—and Dr. Thorndyke was not quite the same type of listener as the coroner. Nevertheless, the conversation pleased me, though I could not but be struck by the oddity of this detached discussion of a matter which was of such vital moment to me. But that very oddity was itself an element of gratification; for a woman is naturally flattered when an intellectual man appears to credit her with the power of impartial judgment of her own conduct and affairs—that faculty not being one by which our sex is peculiarly distinguished.

But at this point, our discussion was brought naturally to an end by our arrival at my house—as I must now call it; and here a quick glance of surprised recognition on my companion's part gave me a new note of warning and prepared me for the inevitable question.

"You are living at your father's house, I see."

"I am, for the present. Mr. Otway remains in his own house."

"Yes. I suppose it will be more convenient to settle everything up here before joining your husband."

I was on the point of temporising by a vague assent; but my lips refused to frame the implied falsehood. It may have been my natural dislike of secrecy and concealment, it may be that my womanly pride resented the very idea of association with that unwieldy human spider. At any rate, an irresistible impulse drove me to say:

"I am not going to join my husband at all, Dr. Thorndyke. I am not going to live with Mr. Otway."

I did not look at Dr. Thorndyke as I made this statement, and he made no comment beyond a matter-of-fact "Indeed." But I had the feeling that, in the silence that followed, he was fitting this new fact into its place in some ordered scheme; that he was docketting it as an appendix to Mr. Otway's evidence.

Nothing more was said until we had entered the house and I had given instructions for tea to be brought to the study. But in that interval I was aware of a growing impulse to have done with this miserable secrecy—this sordid fencing and dodging, which must come, in the end, to downright lying—and tell this strong, wise man the whole wretched story. Besides, I wanted counsel and guidance: and who was so fit to give dodging, which must come, in the end,

But in that interval I was aware of a growing impulse to have done with this miserable secrecy—this sordid fencing and dodging, which must come, in the end, to downright lying—and tell this strong, wise man the whole wretched story.

Accordingly, when the tray had been laid on the study table, I re-opened the subject.

"I did not mention this matter in my evidence," I said. "It had no bearing on the inquiry."

"I am not clear," he replied, "that you were entitled to make any reservations. A witness's duty is to state the whole truth. The question of relevancy is for the court to consider."

"But unfortunately there were other reservations that had to be made. Dr. Thorndyke, I want to tell you the whole story—in confidence—and to ask your advice."

"I counsel you to make no confidences," he said, gravely, "unless you really wish to consult me in my professional capacity."

"That is what I wish to do," I said.

"Very well," said he. "That places us in the secure relation of lawyer and client; and I need not say that your father's daughter is very welcome to any help or advice that I can give."

With this encouragement, I poured forth the story that I have told in these pages and in almost as much detail. But still I held back one fact. I said nothing of my having found Mr. Otway grasping my father's loaded stick. That single reservation had to be. Not only was I bound by a solemn promise; my silence on that point was the price of my release. The letter of the covenant, indeed, had reference only to my evidence at the inquest; but its spirit sealed my lips even in this my most intimate confidence.

And so, once again, a secret guarded from a friendly eye remained, like a seed dropped in a summer's drought, to germinate and bring forth its fruit in its season.

X. — THE TURNING OF THE PAGE

DR. THORNDYKE listened to my recital of the history of the tragedy, not only with patience, but with close attention and apparently keen interest, interrupting me only at rare intervals to ask a question or elucidate some point that was not quite clear. When I had come to an end I was disposed to be apologetic, for I had told the story in the fullest detail, with only the single reservation that I have noted.

"I am afraid," I said, "that I have been rather victimizing you and trespassing on your very great patience."

"By no means," he replied. "Men and men's actions and motives are my merchandise. If I could listen to a story like yours without the deepest interest I should not be in my present profession. But, now that I have heard it, I think I can guess the subject on which you wish to consult me. You would like to annul your marriage with Mr. Otway."

"Yes; if it is possible."
“It is very natural that you should wish to recover your freedom. I sympathize with you entirely, and I wish I could give you some encouragement. But I fear that you have no remedy.”

“It seems rather hard,” I said, “that I should be bound for life to this man whom I detest and who has done me such grievous injuries.”

“It is very hard,” he agreed, “and, humanly speaking, there ought to be some remedy. But the law provides none; nor is it really possible for the law to make provision for every imaginable contingency. Yours is a very exceptional case.”

“Yes, I see that; but it seems unreasonable to compel two people to maintain a relationship which is not only unsuitable but quite unreal.”

“It does,” he admitted. “But the law takes a very unsentimental view of these matters. It regards marriage as an institution concerned with the establishment of families and the orderly devolution of property, and its interference is, in the main, limited to circumstances connected with that assumed function. Of the human aspects of marriage it takes little account. In a purely legal sense—which is what we are considering—your position is this: You were competent to contract a marriage and you did contract one, of your own free will, without any compulsion or misrepresentation that the law would recognise. The circumstances that appeared to exist before the marriage still appear to exist. No new facts have come to light which would affect the competence of either party. It is a case in which one of the parties has disregarded the old legal maxim, Caveat emptor—buyer beware! You bought, at a high price, something which turns out to be of no value. You agreed to marry Mr. Otway for a consideration—the release of your father from his embarrassments—which seemed to be valuable enough to justify the great sacrifice that you contemplated. But it turned out that your father needed no release; and the consideration thereupon ceased to have any value. As far as the law is concerned, you have simply made a very bad bargain.”

“Does the law attach no importance to fraud?” I demanded.

“But has there been fraud?” he objected. “No representations, true or false, were made to you by Mr. Otway. You acted on knowledge which you assumed that you possessed. You laid down the conditions; he accepted them. You demanded a certain consideration; he furnished the consideration demanded. Even with regard to the letter from your father, we may—and do—suspect that he knew that it was in the box, and probably guessed at its contents. But we have no proof. Moreover, if he did know that it was there—even if he had opened it and read it, he was under no obligation to communicate its contents to you. Your agreement made no such provision. It laid down specific conditions, and with these Mr. Otway had fully complied. On the plea of fraud, I am afraid you would have no case.”

“Apparently not,” I agreed. “You are most horribly convincing, Dr. Thorndyke.”

“I am putting the case as a lawyer, and very much against my own feeling as a man. But my present office is rather like that of a Devil’s Advocate in a theological council. I think that this marriage ought to be annulled, but I am sure that, in point of law, it is not voidable.

“But there is yet another aspect of the case, and you must forgive me if I put it rather bluntly. There are not many women to whom I should have spoken in as downright a fashion as I have to you, and I shall continue to pay you this rather unpleasant compliment. Mrs. Otway, even if, legally speaking, you had a case, you could not take it into court.”

“Why not?” I asked, more than a little startled.

“Because of the incidents of the inquest. You have spoken of certain reservations in your evidence. But in the case of Mr. Otway there was more than reservation. There was deliberate mis-statement, and that, too, in respect of a question that was highly material to the inquiry. He was asked the reason of your father’s resentment of this marriage, and he stated it to be the disparity of age. But that was not the reason, and he knew it was not. Your father would have raised no obstacle if you had really wished to marry Mr. Otway. He resented the marriage because it had been brought about by means which he regarded as—morally speaking—fraudulent. Mr. Otway’s evidence was false evidence, and it was deliberately given with the intention of misleading the jury.”

“But it was a small point and of no importance. Besides, Mr. Otway’s evidence is no concern of mine.”

“Pardon me,” Dr. Thorndyke objected, gravely, “the point was of very great importance. It would have started a train of entirely new issues. And Mr. Otway’s evidence is very much your concern. You heard it given, you were asked if you confirmed it, and you did confirm it. Thereupon, Mr. Otway’s evidence became your evidence.

“Now, if you were to embark on a suit for the annulment of your marriage, the plea of fraud, on which you would base your claim, would have to be supported by evidence which would conflict with that given by you at the inquest. Your position would be a very uncomfortable one, and it would be made more so by the fact that your evidence was in agreement with Mr. Otway’s. When two witnesses agree in a departure from the actual facts known to them, a suspicion of collusion is apt to be raised; and collusion again suggests purpose and motive. I am afraid, Mrs. Otway, that the Devil’s Advocate is making out a diabolically complete case. But that, you know, is his business. The conclusion is that a malignant fate has woven around you a mesh of circumstances from which there is no escape, and that the less you struggle the less irksome will be your bonds.”

To this conclusion, unsatisfactory as it was, I assented with a readiness born not only of conviction but of a certain amount of alarm. I had heard my father speak with admiration of Dr. Thorndyke’s amazing power of analysing evidence and extracting its essentials, and I now began to wonder how much of the actual truth he had extracted from the evidence
at the inquest, elucidated by my narrative. His warning as to a possible suspicion of collusion with "a purpose and a motive" in the background, set me speculating as to whether he, himself, entertained such a suspicion; and his next question was by no means reassuring on this point.

“You spoke,” said he, “of having decided not to live with Mr. Otway, and of having communicated your intention to him. Do I understand that he assents to a separation?”

“Yes. He sees that the position would be quite impossible.”

“Is your arrangement with him merely a verbal one or has it been placed on a regular footing by a document of some kind?”

“Mr. Otway has executed a deed of separation, which I think is quite regular. But I had better let you see it.”

With some trepidation, I produced the deed and nervously watched him as he read it through, which he did with an inscrutable expression, and—as it seemed to me—a horrible appearance of seeing through it to the rather questionable circumstances that had brought it into existence.

“Yes,” he said, as he handed it back to me; “it is quite regular. You may congratulate yourself on finding Mr. Otway so compliant. It is more than one would have expected of him.”

“He could hardly have done otherwise,” I answered hastily. "We couldn’t possibly have lived together after what had happened. Still, I am glad he took the reasonable view. It leaves me free to make my own arrangements for my future.”

“And what arrangements do you propose—if your legal adviser is not too inquisitive.”

“Not at all. I was going to ask you to advise me. I don’t think there will be enough to support me, and, of course, I can’t accept any help from Mr. Otway. I shall have to earn my living in some way.”

“You could compel Mr. Otway to support you, but I appreciate your unwillingness to accept an allowance and thereby recognise the relationship. Have you any means of livelihood in your mind?”

I hesitated a little shyly. For I had; but my plan might sound rather an odd one, at least to a stranger.

“I thought,” said I, at length, “of trying to get a living by doing what I have been accustomed to do as a hobby—by making simple jewellery and small, ornamental metal objects. I am afraid you will look on it as rather a wild scheme.”

“No,” he answered. “It is an unconventional scheme, but not in any way a wild one. I think we often appreciate insufficiently the wisdom of the artist’s choice of his profession. In choosing a means of livelihood we are choosing the way in which we shall spend the greater part of our lives. We have something to sell—the bulk of our waking lives; and we are apt to think too much of its selling price—its value to the purchaser—and not enough of its value to ourselves. A man, such as a navvy, a miner, a bank-clerk or a factory hand, barter for the means of subsistence so many hours a day spent in doing something that he does not want to do. He sells the best part of his life. But the artist or craftsman makes a much better bargain, for he contrives to obtain a subsistence by doing what he enjoys doing and what he would elect to do for his own satisfaction. He sells only the by-products of his life; the whole of that life he retains for his own use, to be spent as he would, in any case, wish to spend it. But there is an inevitable proviso; his acceptable occupation must really yield a subsistence. His wares must be of value to the purchaser, and he must be able to find a market. Do you think you could satisfy those conditions?”

“I think I could make the things pretty well, but, as to selling them, that is a different matter. I have to find that out. May I show you some of my work?”

“I should like very much to see some of it,” he replied.

“I will fetch a few pieces. And meanwhile, that clock on the mantelpiece is partly my work. My father made the clock, itself; but I made the dial, the hands and the case.”

Dr. Thorndyke rose, and, stepping over to the mantel piece, looked at the work with keen interest. It was a little bracket-clock with a bronze dial, a silver circle for the figures, silver-gilt hands and a simple wooden case decorated with gesso. Leaving my visitor to inspect it, I went away and collected a few samples of my work in metal; a bronze candlestick, an enamelled silver belt-buckle, a gold pendant set with opals, and one or two silver spoons; all of which Dr. Thorndyke examined with that friendly interest—unmistakeable to the artist or craftsman—that evinces some knowledge of and liking for the thing examined.

“Well,” he said, as he laid down the last of the spoons, “these things answer the first question. They are quite workmanlike, and they are attractive and tastefully designed. The next question is the economic one. Could you sell them? and if so, would they realize a price that would furnish a reasonable livelihood? You would have to compete with commercial products made in large numbers by cheap processes. Your hammered, embossed and chased work would compete with work stamped from steel dies or with comparatively rough castings. Of course, your work is infinitely better value; but this is a commercial age, and buyers are bad judges. And then you would have to sell to dealers who would demand not less than fifty per cent profit, which, I am afraid, would leave you a pitiable, small return for your labour and skill.”

“Yes,” I agreed. “That is all quite true. But still, I think I will try. The work would be interesting and pleasant, and, as you implied just now, an artist cannot expect to be paid as much for doing what he likes doing as another man receives for
doing what he dislikes. Pleasant work is, to some extent at least, its own reward; and if my work doesn’t yield enough to live on, I shall have to try something else. But I don’t suppose I shall be absolutely without means when my father’s estate has been wound up.”

“Do you think of continuing to live here?” Dr. Thorndyke asked.

“No. As soon as everything is settled, I propose to go to London. It will be much easier—or, at least, less difficult—to dispose of my work there.”

“Undoubtedly. And have you any definite arrangements in your mind—where and how you are going to live, for instance?”

“None whatever, at present.”

“I ask because I happen to know of a place where you could put up, at least temporarily; where you would be comfortably lodged, well fed and cared for, and where you could pursue your labours under good working conditions and at small expense. There is only one drawback, but you may consider that a fatal one. It is in the immediate neighbourhood of Ratcliff Highway—or, as it has been renamed, St. George’s Street.”

“Is that a very dreadful place?”

“It is far from being an aristocratic locality. But let me describe the establishment. It is conducted by a Miss Polton, who is the sister of my laboratory assistant—a most expert and talented mechanic. Miss Polton was at one time a nurse; but when her brother entered my employment, he was able to help her to set up in Welclose Square, Ratcliff, a boarding-house for mercantile marine officers. At the same time, she, being like her brother, a highly-capable, ingenious person, got herself a hand-loom and took up weaving as a hobby. But since then times have changed. Sailing ships have to a great extent disappeared, and Miss Polton’s clients with them, while the hobby of making excellent cloth has turned out quite a profitable one. So Miss Polton plies her shuttle industriously, and, in the place of the merchant seamen, has collected a little family of women who also work at handicrafts for their living. I believe they form quite a happy little community, and, of course, they are able to assist one another in disposing of their wares. So that is the position. I know that Miss Polton has room for another boarder, for it is quite a large house—Welclose Square was once the abode of well-to-do shipowners and retired sea-captains—and I am sure she would welcome another novice to her community. The drawback, as I have said, is the neighbourhood, which is—to put it bluntly—just a trifle squalid.”

“I don’t see that the neighbourhood matters,” said I; “and in every other respect it sounds like the very thing I want.”

“I think you would be quite well-advised to give it a trial. You would be among friends and fellow-workers, and, if you found that the neighbourhood was too much for you, you would be in London and could seek a new residence at your leisure. I will write the address on one of my cards, and if on reflection you decide to give Ratcliff a trial, you can write to Miss Polton and me at the same time.”

He wrote the address, and, handing me the card, stood up and glanced at his watch.

“How long will it take me to walk to the station?” he asked.

“Less than twenty minutes.”

“I have half an hour, so I can walk easily. Good-bye, Mrs. Otway. I wish I could have given you a better account of your position. But I can only advise you to make the best of a bad bargain and keep your own counsel.”

“You have been most kind, Dr. Thorndyke,” I said, earnestly, “in giving me so much time and patient attention. I don’t know how I can thank you.”

“I will tell you,” said he. “By keeping a good heart and letting me know how your affairs progress.”

He shook my hand heartily, and, when I had let him out, strode down the garden path, the very personification of manly dignity, alertness and vigour. At the gate he turned to raise his hat, with a smile of friendly farewell; and I closed the door and turned back into the house, feeling, for the first time since my father’s death, that I was not alone in the world, but that, if the need should arise, the strength of this strong, commanding man was at my call.

The short remainder of my life at Maidstone I shall pass over briefly. It comes back to me in scenes like those of a play, separate but related. I see the interior of the parish church, noble, spacious, cathedral-like; I hear the voice of the clergyman reciting reverently those flowers of ancient poetry rendered into perfect English speech that usher the departed into the realms of silence with so gracious a dignity; I see the flower-strewn coffin sink into the grave wherein sleeps my unremembered mother, while the russet-sailed barges glide past the churchyard on the placid river below towards the mills at Tovil. And so farewell for ever to the best of fathers and the kindest, most lovable of friends.

These closing weeks, in which I wound up my old life and made ready for the new, were full of bustle and unrest. I had written to Miss Polton and Dr. Thorndyke, and from the former had received a kindly letter assuring me of the warmest welcome: and now I was busily collecting my tools and workshop appliances and packing them into travelling boxes to be dispatched with my heavier luggage. There was the furniture to be stored or set aside for sale, the servants to be placed in new situations, and various business to be transacted with Mr. Jackson, who, indeed, relieved me of all that lay within his powers.

Then there was Mr. Otway, from whom I received an abject letter and with whom I must needs have a rather distressing
interview. He was really horrified at my proposed mode of life (I suspect he had never done a stroke of manual work in his life), and even more so at my proposed place of residence; and was, I believe, sincerely distressed at my firm refusal to permit him to make me an allowance. Indeed, the devotion which he professed for me, little as I wanted it, seemed to be as real as was possible in the case of a man so self-centred and so callously egoistic. But the very sight of him hardened my heart and lighted up afresh my indignation at the havoc that he had wrought in my life. What I had agreed to do, I did; but I made no hair's breadth of concession. I gave him my future address, and agreed to his addressing letters there; but I refused resolutely to receive any visits from him, or even to enter into any correspondence other than that which circumstances might render necessary.

And now the last day has come; the day of final parting. I see myself wandering through the empty house, stripped of all but the barest necessaries and filled with new and strange echoes; the van drawn up at the gate to take away the last of the furniture, and the tearful Jessie carrying my two little portmanteaux down the path to the porter’s barrow. I see her return, wiping her eyes and gazing at me in dumb appeal, and, with a sudden impulse of tenderness, I kiss her and stroke her hair; whereupon she bursts into tears and throws herself sobbing on to my breast.

It was hard to close the old life, which had been so sweet and peaceful, so full and satisfying; to bid farewell to the beautiful old town which was the only place I had known and which I had loved so well. As I took my way through the streets, attaché-case in hand, all my old friends seemed to look on me reproachfully and call on me to stay. The quaint plaster-fronted house in Week Street, the venerable medieval pile at the corner of Gabriel’s Hill, the grinning masks on the corbels of the old house-fronts of Middle Row; all the old familiar landmarks, had suddenly grown dear and precious, and each exacted its twinge of regret as I looked my last on it. On the bridge I halted to survey the upper river, with the church and the Old Palace, both embowered in trees and brooding over the quiet water. Often as I had looked upon that view, it had never seemed to me so pleasant and desirable as now. And with this last impression—to be recalled how often in the troubled future!—I turned away and headed resolutely for the station.
BOOK II. — ROMANCE

XI. — A HARBOUR OF REFUGE

IT was the cabman who first made it clear to me that my town address was somewhat out of the common. He had stowed my two portmanteaux on the roof (it was a four-wheeled cab), and, descending to hold the door open for me to enter, shut it after me with a bang and waited while I stated my destination.

"I beg your pardon, Miss," he said, incredulously; "did you say Wexelsclose Square?"

"Yes. Number sixty-nine."

Again he regarded me with wrinkled brows. "That won't be Welclose Square down by the Docks?" he suggested.

"I don't know if it's near the Docks," I replied, "but it isn't far from Ratcliff Highway."

"That's the place, sure enough," said he. "Number sixty-nine, Well, I'm jiggered. With this he turned and slowly climbed to the box, looking in at me through the front window as he mounted; and even when he had taken his seat and gathered up the reins, he took yet another confirmatory glance over his shoulder before starting. These mysterious proceedings occasioned me some surprise, not entirely unmixed with anxiety. Dr. Thorndyke had admitted that the neighbourhood was squalid, and the question arose, How squalid was it? The first part of the journey, through Eastcheap and Great Tower Street, was rather reassuring; and as we crossed Tower Hill and the grey pile of ancient buildings loomed up above the trees, I was quite pleasantly impressed. But then came a change for the worse. Long streets of characterless houses, all of a dingy, grey colour—the colour of all-pervading dirt—and growing greyer and dingier as we proceeded; populated by men and women, and especially children, of the same cobwebby tint, with something foreign and unfamiliar in their aspect and manners—a deficiency of artificial head covering with a remarkable profusion of the natural, and a tendency to sit about on doorsteps; these, with a general outbreak on the shop signs of Wowskys, Minskys, Stems and Popoffs, were the features of the neighbourhood that chiefly attracted my attention as the cab rattled eastward. But there was not much time for extended observation, for I had barely noted these appearances when we turned into a short side-street and emerged into a square, the dinginess of which was somewhat relieved by a group of faded trees in the central enclosure.

Round the square the cab trundled slowly until it drew up opposite a tall house of the Georgian type, with white window frames and a green door. As the cab stopped, the green door opened and a small elderly lady came forth, while three younger women lurked in the background. Escaping from the cab, I advanced to meet the elderly lady, who received me with a singularly pleasant smile and a few quietly-spoken words of welcome; a proceeding that was observed with furtive interest by the cabman as he transferred my portmanteaux from the cab-roof to the pavement and thence to the hall; nor did his curious observation of me cease until it was brought to an end by actual invisibility, for, as the cab moved out of the square, I saw his face still turned towards me over the roof, with the same I expression of puzzled surprise.

"You would like to see your room, I expect," said the elderly lady whom I had correctly assumed to be Miss Polton; "then we will have tea and talk over your arrangements." She moved towards the stairs (up which I had just seen one of the young women hopping with surprising agility, with one of my portmanteaux in either hand), and conducted me to a room on the second floor, where the portmanteaux had been duly deposited, though the bearer had vanished.

"It's rather bare," said Miss Polton, "but you can have some pictures and ornaments if you like. Your young ladies usually prefer to have their own things and arrange them in their own way. Your workroom is downstairs. I consulted my brother about it, and he said he thought you would like a room with a stone floor if you were going to do hammered work and use a furnace. So, as I had one with quite a good light, I have kept it for you —that is, of course, if you like it."

"I expect I shall," I replied. "A wooden floor is dreadfully noisy when one is hammering on a stake, and not very safe when there are red-hot crucibles about."

"Yes," she agreed, "and you can have a mat for your feet when you are sitting at the bench. And now I will leave you and go and see about the tea."

Left to myself, I looked around at my new home. The room, though spacious, was undeniably bare, but yet it gave me an impression of comfort. For its bareness was due merely to the absence of superfluities. The empty walls, distempered a pale cream colour, were severe to baldness; but how much better than the usual boarding house walls, covered with staring flowered paper and disfigured with horrible prints or illuminated texts. They, like the empty book-shelves, were ready to receive the personal touches and to become friendly and sympathetic. Of actual necessaries there were more than in many an over-furnished room; a small wardrobe, a good-sized, firm table, a chest of drawers with a looking-glass on it, a small writing chair, a comfortable folding arm-chair, a washing-stand and a sponge bath, besides the book-shelves aforesaid, and a daintily-furnished bed, gave me a foundation of material comfort and convenience on which it would be easy to build and make additions. As I concluded my survey and refreshed myself with a wash, I decided that, whatever the surroundings of the house might be like, its interior seemed to have the makings of a home.

Nor was I less favourably impressed when I went down stairs. The dining-room, in which I found the ladies assembled, was pervaded by an air of spotless cleanliness with a severity approaching bareness. The absence of superfluous furniture and useless ornaments and bric-a-brac struck me, indeed, as rather odd in a household composed—so far as I knew—entirely of women.
“I must introduce you to the family,” said Miss Polton, with a pleasant wrinkly smile, “at least those who are at home. There are three more who will come in to dinner. This is Miss Blake, and these ladies are Miss Barnard and Miss Finch.”

I shook hands with my new comrades—the last being the little lady who had skipped up the stairs so actively with my luggage—and then we sat down to the table, at the head of which Miss Polton presided, and made the tea in a delightful Delft teapot from a brass kettle on which I cast an expert and somewhat disapproving eye, for it was of a blatantly commercial type and quite unworthy of the teapot. At first, conversation was spasmodic and punctuated by considerable pauses. Miss Polton was evidently a silent, self-contained woman, though genial in a quiet, restful way. Miss Finch, too, who sat by me, was quiet and a little shy, speaking rarely but silently plying me with food. Miss Blake, on the other hand, had a restless manner, and, though she spoke little at first, was undisguisedly interested in me, for whenever I looked at her I caught her wide-open, blue eyes fixed on me with an intensity that was almost embarrassing. She was a rather remarkable-looking girl, with a wealth of red-gold hair, a white and pink complexion, and a profile which, with its sharp, projecting chin and retroussé nose, might have been taken direct from one of Miss Burne-Jones’s allegories; indeed, my first glance at her made me think of the “Briar Rose” and the “Golden Stairs.”

And now, as I caught her intense gaze again and again, I had the feeling that she was wanting to say something to me; and the more so since I thought I detected a certain expectancy in the expression of her neighbour, Miss Barnard. Nor was I mistaken; for, after one of the periodic pauses in the conversation, she leaned over the table towards me and said in low, portentous tones: “Mrs. Otway, I want to ask you a question, if you won’t think me too inquisitive.” Here she paused—and Miss Barnard also paused in the conveyance to her mouth of a large piece of bread and marmalade.

Miss Polton explained that “Miss Blake was somewhat of a mystic.”

“Like her famous namesake,” said I.

“And ancestor,” Miss Blake added, eagerly.

“Really!” I exclaimed, clutching at this straw; “you are actually a descendant of William Blake? And I dare say you are a great admirer of his works?”

“I should think she is!” exclaimed Miss Barnard. “You should just see her fashion plates.”

Recalling Blake’s usual rendering of the human figure and its unadaptability to the conditions of our climate, I secretly resolved to take an early opportunity of examining those fashion plates. Meanwhile, I remarked, “I was thinking of his poems rather than the drawings.”

“Yes,” said Miss Blake; “though the drawings are very spiritual, too. But to return to my question. You see, I had been looking at your face. It is a face, you know, in which the workings of the subconscious appear, as it were. It’s an extraordinary psychic face, do you know?”

“Is it?” said I, noting that Miss Barnard had broken out into a slow smile, which she was trying to obliterate with the lump of bread and marmalade.

“Oh, very. Intensely so.”

“I don’t suppose your question would be too inquisitive,” I said, guardedly.

“It isn’t really,” said she. “You know, I have been I have been looking at your face, watching it with deep interest, and I have been hoping that, at last, I had met with a kindred spirit. I do hope—I feel convinced—that I have. I’ve been wondering if you are, as I am, a dweller in the larger world beyond that inhabited by the conscious self, beyond the mere material universe. Is it not so, Mrs. Otway?”

Now this was a “facer.” As my dear father would have expressed it in his playful fashion, it “knocked me side-ways.” I cast a bewildered glance round the table, and was aware of a very extensive outbreak of tact: Miss Polton was blandly indulgent, her face transformed into a network of amiable wrinkles; Miss Finch was engaged in an intense scrutiny of the bowl of a jam spoon; while Miss Barnard’s feats, with the bread and marmalade, were becoming positively dangerous.

“I am not sure I understand your question, Miss Blake,” I managed to respond at length.

“Perhaps I did not put my question very clearly—it is difficult to be very definite when one is speaking of the psychic life; but I was wondering if you had ever had experiences that had made you aware of that larger world beyond the world of mere matter and sense-perception; if you had sometimes felt the thoughts of other minds stealing into your own without the aid of speech or bodily presence and even, perhaps, held converse with those dear to you who, while they have passed out of this little, material world, still share with you the greater world in which soul speaks to soul unhampered by the limitations—”

The humorous wrinkles had suddenly faded from Miss Polton’s face, leaving it grave and quiet; and now, in a quiet, grave voice, she interposed:

“I think, Lilith, dear, that Mrs. Otway’s griefs are too new and too real—”

“I know!” Miss Blake exclaimed, impulsively. “I am an egotistical wretch. It was horrid of me to be so wrapped up in my own interests. I am so sorry; so very, very sorry. Please forgive me, dear Mrs. Otway! Let us talk of something else.”

“I don’t think we must talk of anything much longer,” said Miss Polton. “We have finished tea and we ought to get on
with our work. Besides, Mrs. Otway will want to unpack her things and set her room in order."

On this there was a general up-rising. Miss Finch immediately fell to work gathering up the debris and returning the cups and saucers to the tray, while Miss Blake renewed her apologies and expressions of sympathy. Then Miss Polton took possession of me, and, having shown me my workshop—a smallish, well-lighted room, with a paved floor and a large window looking on an unexpectedly pleasant garden—took me upstairs to a box-room in which my personal luggage had been deposited.

"Supper is at eight o'clock," said she. "We have made it rather late so that everyone may have a good, long day's work and all the wanderers may have come home. It is the social event of the day. And now I will leave you to your unpacking."

She tripped away up a narrow flight of stairs that opened from the landing, towards what I took to be the attics; from whence presently came a rhythmical "click-clack" that I associated with the loom of which Dr. Thorndyke had spoken. Meanwhile, I fell to work on my trunks, with a view to transferring their contents to my room; but I had hardly got them open when Miss Finch appeared at the open door.

"Can I help you?" she asked. "If I carry some of the things down you won't have so many journeys."

"But aren't you busy?" I asked in return.

"Do I look like it? No, I'm lazy this afternoon, but I should like to help you, if you will let me."

Of course I was only too glad, and forthwith loaded her with an armful of books, following her with a second consignment. For some time we continued our journeys up and down the stairs with very little said on either side, and gradually my room began to lose its emptiness and severity, and to take on the friendly aspect of an inhabited apartment.

"It doesn't look so bad," said Miss Finch, surveying it critically. "Looks as if someone lived in it. Do you like the wash-stand?"

"I've been admiring it. It's so simple and so tasteful and unusual."

"Yes; and yet it is only stained deal, with a few touches of gesso. Phillibar made it—Phyllis Barton, you know. You'll meet her at supper."

"Is she a carpenter?"

"No; she makes frames for mirrors and pictures; wooden frames decorated with gesso, or compo, or else carved. But she's very thorough. Does it all herself. Makes up the frames from the plank, makes the compo and the moulds and does the gilding. And she is quite a good wood-worker and carves beautifully."

"And does she make a pretty good living?" I asked, bearing Dr. Thorndyke's observations in mind.

"She does quite well now, though she had a hard struggle at first. But now she works direct for the artists and gets as much as she can do. You will often see her frames in the exhibitions. The floor-cloth is rather nice, too, isn't it, though it is only stencilled sacking. You'd be surprised to see how durable it is. The more it is worn, the better it looks—if it is properly done. This is stencilled with a stain. Lilith did it."

"Lilith? Is that Miss Blake?"

"Yes. Her name is really Winifred, but we call her Lilith because she looks as if she had come out of a stained-glass window. You might think that she was a little—well, a little barmy. But she's awfully clever."

"She does fashion-plates, doesn't she?"

"Yes, poor Lilith! She hates them, but she does them rippingly all the same. She would rather paint pictures or mural decorations or design tapestries, but you've got to do what you can sell, you know, if you want to make a living; and Lilith has a little brother whom she keeps at school—an awfully nice little kiddie. She's a really good sort, you know, though frightfully spooky—planchette, crystal ball and all that sort of tosh; and she thinks she has found a fellow-spook, so you will have to look out."

As Miss Finch paused to take another survey, her eye and mine fell upon the wash-stand, or rather on what it supported.

"I think," I remarked, "that I shall have to treat myself to some new crockery. That jug and basin are hardly worthy of Miss Barton's masterpiece."

"No; they're horrid, aren't they? Regular Whitechapel china-shop stuff. But I believe I've got some—I'll just run up and see."

She tripped away up the stairs and presently returned, bearing a basin and pitcher of simple, reddish-buff earthen ware glazed internally with a fine green glaze.

"They are frightfully crude and coarse," she said apologetically (and with cheeks several shades redder than the ware), "but they aren't vulgar. Would you like to have them until you can get something better?"

"I shall have them a long time, then," said I. "They are charming—delightful, and they suit the wash-stand perfectly. What a house this is for pottery! I noticed the teapot and the beautiful cups and plates, all so interesting and uncommon. And now you produce these wonderful things like some benevolent enchantress. How do you do it? Do you keep a crystal ball, too?"
Miss Finch laughed and blushed very prettily. “We all do our little bit towards making the home presentable and saving expense. Miss Polton distempered these walls, and Joan Allen painted the woodwork—you'll like Joan, I think; she paints portraits when she can get them, and fills in her time by doing magazine covers and book-wrappers. We shall expect a diploma work from you, too. You're a goldsmith, aren't you?”

It was my turn to laugh and blush as this magnificent title was applied to me. “Not exactly a goldsmith,” I protested. “Say, rather, a very elementary jeweller and metal-worker, or perhaps a coppersmith. And, as we have finished with this room for the present, I had better begin to get my workshop in going order.”

“And you'll let me help you with that, too, won't you?” said Miss Finch, with a wheeling air; and as I gladly accepted her help, she linked her arm in mine and we descended together to the scene of my future labours.

My experience of various workers has led me to observe that manual skill is a much more generalized quality than is commonly realized. The old saw of the “Jack of all trades and master of none” is entirely misleading; for manual skill acquired in the practice of one art is largely transferable to others. The acquirement of a particular kind of skill results in the establishment of a generally increased manual faculty, so that a person who has completely learned one handicraft is already more than half-way towards the attainment of skill in any other. This fact was impressed upon me as I watched little Miss Finch and noted her extraordinary handiness with probably unfamiliar appliances and her instant comprehension of the uses of things that she had probably never seen before. My two benches—the jeweller's and the general bench—had fortunately been made in a portable form, and now had to be joined up with their screw-bolts. But my little assistant took this in at a glance, and, before I had half finished unpacking the tool cases, she had the bench-tops up-ended, had sorted out the legs, struts and the appropriate bolts, and was hard at work with the spanner. Yet, as she worked, she kept an interested eye on the tools and appliances that came forth from the cases.

“What a jolly little muffle!” she exclaimed, as I deposited the small enamel furnace on the floor, pending the erection of its stand; “but won't it eat up the gas. You'll have to have your own meter—watch it, too, to see that your earnings don't all go to the gas company. And what a little duck of an anvil! But what on earth are those things?” pointing to a bundle of body-tools and snarling irons.

I explained the use of these mysterious appliances and of sundry others and so, with a good deal of gossip, partly personal and partly technical, we worked on until the sound of the first supper-bell sent us to our rooms to make ourselves presentable; by which time the fitting out of the workshop was so far advanced as to make it possible for me to begin work on the morrow.

The great social function of supper introduced me to the rest of my comrades; Phyllis Barton, who turned out, to my surprise, to be a tiny, frail-looking middle-aged woman of meek aspect—I had pictured her as a large, muscular, boisterous young woman; Joan Allen, who really corresponded somewhat to this description, and whom I detected more than once in the act of inspecting me with one eye closed; and a tall, rather shy girl, by name Edith Palgrave, a scrivener and calligrapher, who, I learned from Miss Finch, wrote, by choice, Church service books and illuminated addresses, but, by necessity, gained her principal livelihood by writing shop-tickets.

It was a pleasant genial gathering: homely, informal, and yet quite regardful of the indispensable social amenities. What the social class of my companions might have been I could hardly guess. They were all educated women, of good intelligence and pleasant manners, all keenly interested in one another's doings, but each fully occupied with her own activities. The agreeable impression was conveyed that, in this little human hive, the companionship arising from the community of domestic life tended in no way to hinder a self-contained person like myself from living her own life and pursuing her own interests and satisfactions.

And so, when, somewhat early, I retired to my room to spend an hour with my books before going to bed, my thoughts turned gratefully to Dr. Thorndyke, and I congratulated myself not a little on having found this quiet anchorage in which to rest after the stormy passages of my troubled life.

XII. — THE HIDDEN HAND

I HAD been settled in my new home about a month when I received a letter from Mr. Jackson. It was principally devoted to a report on business matters concerned with the disposal of my father's practice and the sale of the surplus furniture and effects, but it contained one passage that gave me considerable food for thought. The passage in question had been added as a postscript, and ran thus: “You have probably heard that Mr. Otway has left Maidstone. I fancy things had become rather uncomfortable for him. From what transpired at the inquest, an impression got abroad that he was, to a great extent responsible for your father's death, and there was consequently a rather strong feeling against him. I don't know where he has gone, but rumour has it that he has migrated to London.”

This was, in more than one respect, somewhat disquieting news. I turned it over again and again as I sat at my bench and tried to estimate its significance. The inquest had “gone off quite smoothly,” as Mr. Jackson had expressed it, but it was clear that some, at least, of the persons present had read a meaning into the evidence which the coroner and his jury seemed to have missed. Dr. Thorndyke was one of these; but, as no rumour could be traceable to him, there were evidently others. What did this portend? To Mr. Jackson it meant no more than a local prejudice. To me, conscious of a secret covenant which I had not dared to confide even to Dr. Thorndyke, it conveyed an uneasy feeling that suspicion was abroad,
that it might become cumulative, and that, even yet, that covenant might be dragged into the light of day which it would bear so ill.

Ever since my talk with Dr. Thorndyke, my conscience had been somewhat ill at ease. I felt that, as a witness giving testimony on oath, I had been at least uncandid, if not positively untruthful; and the word “collusion” had acquired an unpleasantly personal quality.

And then, what of Mr. Otway? Had he slipped away out of my life to hide himself where suspicion would not reach him? Or had he really migrated to London, and would his sinister shadow presently fall upon my new life as it had done upon the old? My hopes pictured him driven by his fears—for he was a timorous man—far afield, perhaps beyond the seas; but a presentiment whispered that I had not heard or seen the last of him.

It was a few days later, in fact, that I returned from a walk to find a letter from Mr. Otway, requesting me to see him. I met him the following day at the Tower Wharf. He was more agitated even than usual, and rose to greet me with a audible explanation of relief. “Miss Vardon—that is—Mrs.—ah—Helen. I have received a letter.”

“Your correspondence is of no interest to me.” I told him coldly.

“But the contents of this one are so extraordinary that I ventured to write to you about it. I hoped you would—er—respond to my appeal. It is strange,” he added, “considering what our relations are and what your feelings are towards me, that I seem to look to you, and to you alone, for support and counsel in this—er—this unexpected trouble.”

“I don’t suppose,” said I, “that any counsel of mine will be of much value to a man of your experience. But perhaps you had better tell me what the trouble is—Shall we sit down here? You spoke of having received a letter.”

“Yes,” he replied, as we sat down on a seat near the bridge. “It is an anonymous letter, and its purport is—ah—very singular, and is—ah—to the effect that—er—in fact—”

“Is there any objection to your repeating the actual wording of the letter?” I asked.

“Well, no. Certainly not. Perhaps it would be better. You are really remarkably business-like and clear-headed. I suppose it is your upbringing and being so much with your father. No, there is no objection. In fact,”—here he produced from his pocket, with evident reluctance, a leather wallet, from which he extracted a folded paper—“in fact, you may as well see the letter for yourself.”

I took the paper from him, and opening it found it to be a quite short letter, typewritten upon ordinary typist’s paper, without any address or other heading, and undated save for Mr. Otway’s written and signed endorsement. There was no signature, but in place of one was written in typed characters, “A Well Wisher” and this is what it said:

“Mr. Lewis Otway,

“The undersigned is writing to put you on your guard because Somebody knows something about how Mr. Vardon came by his death, and that somebody is not friend, so you had better keep a sharp look out for your enemy and see what they mean to do. I can’t tell you any more at present.

“A WELL WISHER.”

I read it through twice, noting, the second time, the peculiar construction, the faulty grammar and punctuation, and especially the confusion in the pronouns which is so characteristic of the writing of an uneducated person. Of course, these peculiarities might have been assumed as a disguise; but they established a probability that the writer was a person of indifferent education; to which class, indeed, the bulk of anonymous letter-writers belong. I handed the document back to Mr. Otway, and asked: “Does this letter convey anything to you?”

“Nothing,” he replied. “Absolutely nothing. It speaks of somebody knowing something. But that is impossible. There was no one in the house but you and I and—er—your father. Besides, there is nothing to know—excepting what you know.”

“Have you any idea or suspicion as to who the writer of this letter may be?”

“None whatever. I have not the faintest clue. You see, there is nobody in the world who has any—er—any special knowledge of the—ah—the exact circumstances but yourself.” He paused for a few moments, and then, in a lower tone, asked hesitatingly: “I suppose, Helen, you cannot—er—guess or—ah—surmise who might have—”

I looked up quickly and caught a furtive glance which was instantly averted; and in a moment it was borne in on me that he suspected me of either being the writer or concerned in writing of this letter.

“Mr. Otway,” said I, speaking slowly and quietly, the better to command my temper, “if you have any idea that I know anything of this wretched production, dismiss it. If you have any idea that there lurks in my mind any suspicion that your account of my father’s death was untrue, dismiss that, too. If I had known, or even had the smallest grounds for suspecting, that my father met with foul play, you would not have had to wait till now to hear from me; nor would my communication have reached you in this form or through these channels.”

As I said this, looking at him, I do not doubt, sternly and forbiddingly enough, he turned horribly pale and seemed to shrink visibly. He was completely cowed; so much so that, cordially as I detested him, I felt really sorry for him.

“You mistake me, Helen. You misjudge me,” he protested, huskily; “you do, indeed. I had no intention—never, for one moment, suspected—but why do I say this? Of course, you must know I did not. I merely thought it possible that you might
be able to guess—you might know of some person—"

“I do not, Mr. Otway,” said I. “No one connected with me has any knowledge that is not public knowledge. Nor do I believe that anyone else has. I should say that this person—apparently a person of the lower class—is just a common blackmailer, who was present at, or has read the report of, the inquest, and is trying to make you believe that some suspicion attaches to you.” I could not but admire the adroitness with which Mr. Otway made me a participator in his own difficulties and secured me as an ally against his unseen enemy. And the blackmailer is a rather formidable enemy to a man who is concealing an incriminating fact. We were partners in an unlawful act. That, I had already recognised; and the different significance of that act in our respective cases did not so very much affect our position in the present circumstances.

“Probably you are right, Helen. But you notice that there is no threat—no, direct threat, at least—and that there is no suggestion of any attempt to obtain money from me.”

“Perhaps that will come later,” said I.

Again he drew a long breath and cast a furtive glance at me. “Perhaps it will,” he agreed. “This may be the preliminary move, the laying of ground-bait, so to speak. It’s a harassing business, Helen. What do you think I had better do? You see, I rely on you for counsel, although I am so much older. But you have your father’s gift of clear judgment and perfect coolness in emergencies.”

It was rather a tactless observation, for it recalled vividly my dear father’s coolness in that last, fatal emergency; his composure and unruffled cheerfulness when the menace of ruin and disgrace—set up by Mr. Otway—had seemed poised over his head, ready to fall at any moment; and the recollection did not tend to increase my present sympathy.

“For my part,” I said, coldly, “I should do nothing at present. I should ignore this letter and wait for the writer to show his hand more clearly. If he should make any threats or demands for hush-money, I should at once put the matter in the hands of the police.”

I could see that this advice—particularly the latter part of it—did not greatly commend itself to Mr. Otway. Nor did it do to me. But circumstances offered no choice. Any risk is better than that of life-long subjection to a blackmailer.

“It would be very unsafe,” said Mr. Otway, “to have—any dealings with the police. They are pretty severe on blackmailers, but they are naturally ready to listen to anyone who professes to have information to give them. And a blackmailer may be very dangerous if he is brought to bay. We couldn’t afford to have any enquiries made that might seem to establish what they would call collusion to suppress evidence. We know that the facts that we withheld were not material. Other people would not.”

I had nothing further to say, but to repeat that I should ignore the letter; and for a time we sat silent, looking out on the river. Mr. Otway drew a deep breath and reflected gloomily. Perhaps my suggestion was not a very comforting one, for an uncomfortable aspect of the case was that he was right.

“Well,” said Mr. Otway, at length, “so be it. We will wait and see what happens. And now let us put this miserable affair away and talk about your future. I have seen some of your work, and I am sure that you could get good prices for it if it were placed in the proper quarter. But the ordinary shops would be of no use to you. The common retailer does not know or care anything about individual work. He just buys from the wholesaler or the manufacturer, and sells to the public. He would probably not look at your work, or if he were willing to buy it, he would pay no more than he pays to the manufacturer who rattles off his goods by the thousand, with the aid of cheap labour and machinery.

“But there are people who know the difference between artists’ works and manufactured goods, and are willing to pay for the better things. And there are dealers who supply them. Mr. Campbell is one. I have known him for many years, and I can assure you that he is an excellent judge of works of art and very anxious to get the best for his customers, who are mostly good judges, too. He is well known in artistic circles, and, as he is able to dispose of things of real value, he can afford to pay the artist a fair price. I strongly advise you to give him a trial. Of course, I would infinitely rather that you accepted an allowance from me, but, if you really—”

“It is very good of you, Mr. Otway, but I assure you that it is out of the question.”

“Very well, then. If you are quite resolved, I can only advise you to make the most profitable use of your talents. Go to Mr. Campbell, and I am sure that you will be treated fairly.”

I thanked him for his advice and promised to act on it; and very shortly after this I brought the interview to an end.

As I took my way slowly back to Wellclose Square, I reflected on the new developments that my meeting with Mr. Otway had disclosed. That some mischief was brewing there could hardly be a doubt. The disguise of the “Well Wisher” was too thin to create any illusion. As to the somebody who knew something, he was an obvious myth, for, as Mr. Otway had said, the circumstances did not admit of anyone knowing even what was known to me. My own explanation was that some person, who had been present at the inquest, had observed Mr. Otway’s excessive nervousness and had marked him as a likely subject for blackmailing operations. It was a chance shot and nothing more.

But Mr. Otway’s evident alarm was not difficult to account for. He was a naturally timorous man; he had been subjected to a great and prolonged strain, and he had an incriminating secret. His position was, in fact, one of appreciable danger, as he fully realized. If the details of my father’s death had been fully disclosed at the inquest, Mr. Otway’s statement and
explanation would probably have been accepted without demur. But the suppression of certain material facts put a different complexion on the matter. If the inquiry were now revived, he would have to explain, not only the original circumstances, but his motives for suppressing them. He had very good reason for alarm.

And yet his abject terror produced an uncomfortable impression on me. I could not disguise from myself that the whole tragedy of my father's death was due to an error of judgment on my part. The secret marriage was the out come of a mistake. Woman-like, I had acted on a strong conviction; and that conviction had been wrong. What if I had once again acted on an erroneous belief? I had assumed that Mr. Otway's account of my dear father's death was correct. There had seemed to be excellent reasons for the assumption. But what if I had been wrong, after all? If I had actually misled a Court of Justice to shield the murderer of my dearly loved father? It was undeniably possible. I had formed my opinion on mere probabilities, backed by a statement that, however plausible, was manifestly worthless as evidence. And that opinion might have been utterly wrong. It was a dreadful thought. So dreadful that, though I tried to put it away and remind myself that I did not entertain and never had entertained it, it haunted me during the whole of my walk home, even to the exclusion of the menace to myself that lurked in this blackmailer's letter.

XIII. — A CRYSTAL-GAZER AND OTHER MATTERS

THE cheerful atmosphere of the old house in Wellclose Square soon dissipated my gloomy thoughts. It was nearing supper-time when I arrived, and an agreeable clink of china proceeded from the dining-room, accompanied by a faint aroma suggestive of curry. On my landing I found Lilith and Miss Finch engaged in earnest discussion, and both greeted me as if I had returned after a long absence.

"We have been wondering," said the former, "what had become of our Sibyl," (she had bestowed this title on me, presumably, by reason of my peculiarly 'psychic' cast of countenance). "As for the poor Titmouse," (this was Miss Finch's pet name), "she has been wondering about a cat that has lost its kitten."

"Or like a kitten that has lost its cat," I suggested, bestowing an affectionate pinch on my little comrade's ear. "Well, I haven't been far afield, but I have done quite an important stroke of business."

"You don't mean to say you've sold something!" the Titmouse exclaimed, incredulously.

"Not actually sold. But I have discovered a market. I have tidings of a benevolent person—of the Scottish persuasion, I believe—who traffics in works of art and other productions of the human hand."

"A Scotchman!" exclaimed Miss Finch. "I thought all art dealers were Jews. When are you going to call on the Laird?"

"It is hardly worth while to call on him until I have a fair collection of work to show him," said I.

"I don't agree with you, Sibyl," said Lilith. "The first thing to do is to catch your dealer. To do that, you must find out what he wants. He is sure to have his own personal fancies, and he knows what he can sell most easily. Take him all that you have ready. He will be able to see from that what you can do, and he will tell you what kind of work he will take from you. And don't lose any time. I should go to-morrow if I were you."

"Does an artist have to work to order, then, like salaried journeymen?" I asked.

"Practically, yes," replied Lilith. "And why not? He makes things that he wants people to buy. Surely it is only reasonable that he should consider the needs and the wishes of the buyers. And all good craftsmen do. Chippendale's chairs were not only good to look at; they were comfortable to sit on and serviceable in use. The only difference between an artist craftsman and a commercial producer is that the artist always does his best, for his own satisfaction apart from the question of payment; whereas the commercial producer thinks of the profit only, and turns out the worst stuff that the buyer will put up with."

"But surely an artist may choose what he will make," said I.

"Of course he may," replied Lilith, "if he is willing to keep the thing when he has made it. Not if he is going to ask someone to pay him money for it."

I was inwardly somewhat taken aback by this exhibition of hard-headed reasonableness on the part of the mystical Lilith; so much so that, when she had gone to her room, I remarked on it to Miss Finch.

"Yes," she agreed; "Lilith is an extraordinary girl. In fact, there seem to be two Liliths; one is as cranky as a March hare, and the other is perfectly sane and very really shrewd. I sometimes wonder whether she really believes in all that crystal-gazing tosh and telepathic bunkum. But she practices what she has just been preaching. She does her fashion-plates according to orders—but ever so much better than she need—and does other work to please herself and is content to keep it. You should look in at her studio and see her at work; then you'd understand."

"And you think I had better take her advice?"

"I do. First catch your dealer; and if he wants to keep you turning out the same things over and over again, try to catch another dealer who wants something different. The great thing is to get a market. It's frightfully disheartening to keep on doing good work and having it all left on your hands."

Impressed by this wise counsel, I betook myself after supper to my workshop and reviewed my stock. A month's work
had produced no great accumulation, for I was still a slow worker, though the continuous practice was improving that. On the other hand, I had brought with me a certain number of unfinished pieces as well as some of my finished work; so that I had enough to give Mr. Campbell the means of judging my capabilities. When I had looked over the collection and withdrawn one or two pieces that were not up to my present standard, I packed the approved specimens in a hand-bag which I took up with me in readiness for the morrow. I was just opening the door of my room when Lilith came running up the stairs.

“You see,” I said, holding up the hand-bag. “I am acting on your advice. I have packed up a selection from my stock to take to the dealer to-morrow morning.”

“I am glad of that,” said she. “The business side of art is tedious and disagreeable, but you have got to sell if you are to live by your work. Would you mind giving me a private view of your masterpieces?”

“I shall be proud to show them to you,” I replied, conducting her into my room and placing the arm-chair by the table, “Let us put out the whole collection.”

I emptied the bag of its contents, which I set out on the table to the best advantage, and she examined the pieces one by one.

“They are charming,” she exclaimed, enthusiastically, “I can’t judge the work, though it looks most expert to my inexpert eye, but the design is delightful. They are all so individual and full of character, and so simple and restrained. You have a fine colour-sense, too, I think your use of enamel quite masterly, and I like your employment of bronze in place of the precious metals. It is fortunate that your dealer is a Scotchman, for the Jews, from Solomon downwards, have always had a leaning towards gold.”

“Yes,” said I; “bronze is my favourite material, even for personal ornaments. And it is capable of great variety in the patina, especially if one uses the Japanese methods of surface treatment. I wish it took the enamel better.”

“You seem to have overcome the difficulties pretty completely,” said Lilith. “This pendant, for instance, is beautiful, and so is the belt-clasp. Do you know, Sibyl, I think we might collaborate. Some of my designs might very well include metal ornaments—clasps, buckles, and buttons forming part of the decorative scheme. We must talk it over. And now, my dear Sibyl, I want to say something to you—something quite serious—and I want you to listen without prejudice.”

I looked at her, and was instantly aware of a change that had come over her. The shrewd, business-like, capable Lilith had suddenly become transformed into the mystic—wide-eyed, dreamy, yet intense.

“I have avoided talking to you about the things that are to me the great things of life,” she said in low, earnest, tones. “I have wished to, but I have been fearful of intruding on your strongly individual, self-contained personality. But I have felt that you have great gifts—great psychic gifts. You are a woman of power. The common herd live their little lives locked up in the prison of the visible and the conscious. If they would convey their thoughts to other minds they must use the unwieldy means of speech and visible signs. What they know of their fellow-immortals reaches them crudely through the organs of sense; and through those primitive and inadequate media they must needs communicate with others, bound by the limitations of time and space and mere material contact—at least, so long as they are prised within a material body. But there are others for whom no such limitations exist; specially gifted souls who can see without mere material eyes, who can hear without ears, who can speak their thoughts across the gulfs of time and space; who can look into the remote past, and even into the future; who can make their will-power operate at limitless distances and without the aid of gross bodily action. And you are one of these, Sibyl. I am convinced that you are endowed with these powers. But they are latent, unsuspected, because you have never tried to exercise them; because you have never sought to bring the subconscious within the domain of the conscious, or rather to make a contact between the two.”

To this strange and rather wild harangue (which the matter-of-fact Titmouse would have called “barmy”) I listened with grave attention, though with little enough conviction—for I could not but recall my ignorance and my mistaken judgment in the greatest crisis of my life—noting how like a prophetess the picturesque Lilith looked, with her golden aureole of auburn hair and her great, blue eyes and parted lips. But I made no reply—there was, indeed, nothing to say—and after a short pause she continued:

“Don’t think I am saying this with any impertinent intention of trying to force my own views on you. I have a definite practical purpose. You are going to-morrow to make your first essay in a vitally important branch of an artist’s calling. On your success depends the possibility of your following art as a profession—that is, if you have not enough to live without work.”

“I have not,” said I.

“Then artistic success is not sufficient. You must achieve industrial success; you must get a livelihood out of your work. As far as the creation of beautiful things is concerned you are quite competent and will become more so with more practice. Now you have to learn how to dispose of those works profitably; how to make people buy them.”

“But surely that will be decided by the suitability of the things themselves.”

“But, no doubt. But you mustn’t leave it at that. You must learn to exercise the power of silent willing combined with suggestion.”

“Take the matter—you,” said I.
“We must talk about this more fully some other time,” said Lilith, “and go into the theory and the results of experiments. For the present you must try to take my word for the fact that silent willing and suggestion are real powers. I don’t ask you to believe it without proof—I will give you the proof later—but I do beg you, dear Sibyl, to give the method a trial. If it fails in your hands you will be none the worse; but it won’t fail if you make up your mind to succeed.”

“What do you want me to do, Lilith?” I asked, not a little bit bewildered by her mysterious and rather vague expressions.

“I will tell you what I do myself,” she replied. “When I take a batch of drawings to a publisher, I stand outside the office for five minutes and silently will that he shall accept them. Sometimes I write on a piece of paper a command to the publisher to accept my work, and while I am waiting for the interview I keep my eyes fixed on the writing and mentally endorse the command. The writing, you see, helps me to concentrate my will-power. Then, at the interview, I use the method of suggestion. Whatever the editor or publisher may say, whatever objections he may make to my work, I continue steadily to impress on him that he is going to accept it, that, in fact, he has accepted it. If he refuses it, I ignore the refusal and go on talking as if he had accepted it—not rudely, of course; one must do these things tactfully—and all the time that he is talking, I continue silently to concentrate my will-power on him.”

“And what is the result?” I asked.

“The result, my dear Sibyl, is that I sell all the drawings that I offer for sale.”

This sounded convincing enough, and would have been more so if I had not happened to know that Lilith’s drawings were of the very best of their kind, and that she submitted them to the most rigorous criticism before letting anyone see them. Still, the fact that she sold her work was undeniable, and it was impossible to say how many excellent drawings had failed to gain acceptance. Certainly every capable artist is not a successful one.

“And what is it exactly that you want me to do?” I asked.

“I want you,” she replied, “to do just what I do myself. I want you to stand outside the shop for five minutes and silently will that this dealer shall buy your work. It would probably help you if you were to write down the command and keep your eyes fixed on the writing while you are willing; but if the dealer himself should happen to be visible, it would be well to fix your eyes on him so as to direct the will-force with more precision. And when you go into the shop, keep on willing with the greatest concentration that you can command, and when you are talking to the dealer, talk as if he had bought your work; keep on impressing on him that he has bought it, and don’t take any notice of contrary statements on his part. If he seems to think that he has refused it, you must correct his mistake and guide his thoughts into the proper channels.”

I suppose I must have looked somewhat dismayed at this rather startling programme, for Lilith continued, eagerly: “Now, don’t raise objections, Sibyl dear. It will be quite easy if you will only make up your mind. You have abundant will-power, and I am certain that you have the gift of projecting your mental states into the minds of others. And I am so anxious that you should succeed and that your great gifts should not be wasted. Say you will try, Sibyl, if only to please your friend.”

What could I do? Utterly as my mind refused to accept the connection between the alleged cause and effect, I could not say that no such connection existed. I was completely unconvinced; but my unconviction might conceivably be less rational than Lilith’s whole-hearted belief. For she declared herself able to support her belief with proof, whereas I had to admit that my scepticism was largely a matter of temperament. And she was so eager, and it was so sweet of her to be so full of anxiety on my behalf, that it would have seemed ungracious to make difficulties. The end of it was that I agreed to carry out her plan of conquest, on which she further inducted me into the arts of silent willing and suggestion and even supervised me while I wrote out, at her dictation, a peremptory command to the dealer, which I promised to use, as directed, for the reinforcement of my will-power at the appropriate time.

On the following morning, after a careful study of my father’s atlas of London, which I had brought with me from Maidstone, I set forth, hand-bag in hand and encouraged by the good wishes of my comrades and of Lilith in particular. Entering the Underground Railway at Mark Lane, I came to the surface at Charing Cross Station and bore away northwards across Leicester Square. During the journey, I had turned over in my mind the plan of attack to which I stood committed, with increasing distaste, I must admit, as the time for its execution drew nearer. And as my dislike grew, so also did my scepticism. I found myself recalling the fact that Lilith, successful as she claimed to be, was yet a fashion-plate artist very much against her own wishes, and reflecting that, if her silent willing were as efficacious as she believed it to be, she might surely compel the purchase of the kind of work that she enjoyed doing, instead of being herself compelled to follow a distasteful occupation. However, it was useless to think about it now. I had promised to give the method a trial and must carry out my promise.

These reflections brought me to the bottom of Wardour Street, and my attention was now fully occupied by the search for Mr. Campbell’s shop. Mr. Otway had omitted to give me the number of the house, but I remembered his saying that it was on the west side near the Oxford Street end; so I walked slowly up the east side and scanned the shop-fronts across the road. Near the top of the street my eye lighted on a smallish shop, above the window of which was inscribed in faded gold lettering “Donald Campbell,” and I immediately crossed the road, becoming aware as I did so of a sudden access of nervousness. For this was a new experience to me. Hitherto all my transactions with shopkeepers had been in the character of a purchaser; and my transformation into a vendor was accompanied by a diffidence and shyness that I had not expected or foreseen. Indeed, in the course of that short journey across the road, my bashfulness increased so much that I had nearly forgotten my promise to Lilith and was on the point of entering the shop when it flashed into my mind.
But even when I recalled Lilith’s instructions, they were not easy to carry out. I swerved from the shop door to the side of the window and stood there trying to concentrate my will-power. But it would not be concentrated. In the window was displayed a fascinating array of base metal spoons which instantly riveted my attention; particularly a set of the late seventeenth century, wrought in a fine-coloured latten, and exhibiting in a most charming manner the combined effect of delicate workmanship, with the patina of age and the softening of outlines from use and wear.

Unconsciously, I had begun to compare them with my own cruder productions before I realized that my will-power had escaped control. Then I jerked myself back from the spoons to my present task, and, hastily drawing the paper from my pocket, fixed my eyes on the written command and struggled to concentrate my thoughts on it and to suppress a growing consciousness of the absurdity of the whole proceeding. Presently I raised my eyes from the paper, and as they sought to dodge the spoons, they encountered another object equally disturbing. “It was only a face at the window,” as the ridiculous song has it, but it instantly engrossed my attention and transported me in spirit, not to any Highland glen, but straight away to the banks of the Jordan; a fattish face, framed with glossy, black hair that broke out at the temples into rows of little crisp curls like a barrister’s wig; a face with small, grey eyes, full under the lids, and surmounted by strong, black eyebrows, with full, red lips and a rather sketchy nose of the general form of a William pear with the stalk uppermost. It was clearly not Mr. Campbell’s face, but it appertained to the establishment; and, recalling Lilith’s instructions to direct my will power with more precision by fixing my eyes on the dealer, I directed a stony stare at the face and willed silently. But here I was countered again; for the owner of the face was also apparently possessed of psychic gifts, and fixed on me a gaze of such intensity that I was covered with confusion. On this I straightway forgot all about will-power, and, hastily pocketing the paper, walked nervously and guiltily into the shop.

The proprietor of the face confronted me impassively across the counter; and such was my trepidation that, although he obviously was not Mr. Campbell, I could think of nothing better than to ask him if he was; whereupon he completed my discomfiture by replying in the affirmative.

“I am Mrs. Otway,” said I; at which he suddenly grew keenly attentive, and I continued: “I understand that Mr. Otway—Mr. Lewis Otway—has written to you about me. I had a letter from him to that effect.”

“Yes,” said Mr. Campbell, “he has; and, if I remember rightly, he suggested that I might be able to dispose of some of your work. I think he said you did some repoussé or something of the kind.”

Apparently Mr. Campbell was preparing to treat me as an amateur, and my work as the product of a hobby. This would not do at all. Before saying anything further, I opened my bag and handed out the pieces one by one, setting them on the counter before him.

“Oh!” said he. “Yes; ha—hum; this isn’t exactly what I expected.” He picked up a teaspoon, turned it over between his fingers, closely examined the joining of the shank and bowl and the little bust that formed the knob, anything further, I opened my bag and handed out the pieces one by one, setting them on the counter before him.

“Nith the thpoon that,” was his comment as he laid it down (I observed that he tended to develop a lisp when preoccupied or off his guard); “well made, well designed; quite original, too. Spoons are my fancy—you saw that set in the window. If I could afford it, I would specialize in them more than I do. Not but what I’m fond of all goldsmith’s work if it’s good—or any other art work, for that matter; but I do love a good spoon.”

This was pleasant hearing, for I had a weakness for spoons myself. They are useful objects, they admit of infinite variety in design, and their small size adapted them peculiarly to my rather limited resources.

“But there is one thing that you must bear in mind,” continued Mr. Campbell. “Single spoons are not very saleable unless they are antique or collectors’ pieces. Modern spoons are bought for use as well as ornament, and buyers like them in sets; not all alike, of course, but with a general design running through the set. Twelve spoons, all different, but all brothers; that’s what they want.”

“Like the apostle sets,” said I.

“Yes,” he replied, “but we don’t want any more apostles. Too many on the market already. The apostles are done. They’re a back number. Everybody does them because they can’t think of anything else connected with the number twelve. But there is an opening for something original. If you can do me a set with a good striking design, I think I know where I can place them at a liberal price.”

I made a note of this proposal, and Mr. Campbell proceeded with his examination of my samples, accompanying the process with shrewd comments and useful hints. “Now, I’m rather doubtful about this,” said he, picking up a bronze paper-weight on which was a little figure with an open book; “it’s pretty and might take the fancy of a bookish man, but I question whether you’ll get paid for the work that you’ve put into it. People don’t always realize the value of a bronze casting. You must have done this by the cire perdue process.”

“I did.”

“Well, I should save that for more important pieces. Simple modelling and sand-casting is good enough for paper-weights. And you are too lavish with your silver. Just feel this candlestick. You could have done it with half the silver and got paid just as much. The extra cost of the unnecessary silver will have to come off the workmanship—at least, that is the tendency, although it is nominally sold by weight.”
As Mr. Campbell was speaking, a woman came out of an inner room and advanced to the counter. I glanced at her casually and then looked again more attentively, for I had instantly the feeling of having seen her before, though I could not recollect where. She was a Jewess of the dark and sallow type, about my own age, and of a sombre and rather forbidding aspect; and the glance that she cast on my samples, though impassive, was faintly disparaging.

“This is Mrs. Otway, me dear,” said Mr. Campbell. “You remember the letter I showed you about her. And these pretty things are her work.”

Mrs. Campbell—as I assumed her to be—raised her eyes and bestowed on me a quietly insolent stare, but made no remark. Then she cast another disparaging glance at my wares and said coldly: “They are all right of their kind; but you don’t want to fill the place up with modern stuff.”

Disagreeable as the remark was, its matter impressed me less than its manner. For again I was sensible of a certain vague familiarity in the voice, the intonation and the accent. She gave me, however, no opportunity for studying either, for, with the curt observation that “she supposed he knew his own business,” she retired to the inner room without taking any further notice of me.

“Well,” said Mr. Campbell, “there’s some truth in what my wife says. I can’t afford to lock up my capital in things that I can’t sell. But I like your work. It is good work, and you’ll improve. I am willing to buy this lot of pieces—at a price. But it will have to be a low price, because I don’t know how they will go. If you take my advice, you’ll leave them with me and let me try the market with them. When I have sold one or two I shall know what I can do with them, and then I can offer you a fair price based on what they fetch. How will that suit you?”

It seemed, on the whole, the most satisfactory arrangement, though I should have liked to have some definite idea as to the value of my work. I mentioned this, pointing out that I wanted to know if it would be worth my while to continue this kind of occupation.

“Well,” said Mr. Campbell, “you leave the things with me, and I will look them over carefully and weigh the silver. Then I will make you the best offer I can for the lot, and you can either accept it or refuse it, or wait and see what the things fetch. Give me your address and I will write you out a receipt for what you leave. Will that do?”

I replied that it would do admirably, whereupon he supplied me with a slip of paper and pen and ink, and retired to the desk with my collection to write out the receipt. I had taken off my glove and was beginning to write when somebody entered the shop with a quick, light step, suggesting a young and active man. Just behind me the footsteps stopped short, and a pleasant, masculine voice addressed the dealer.

“All right, Mr. Campbell; don’t let me disturb you. I’m in no hurry.”

“I’m afraid, sir, your things are not quite ready, but if you don’t mind waiting a moment I’ll make sure.”

“I suspected,” the voice rejoined, “that I might be a little over-punctual. However, you finish what you are doing, while I browse round the museum.”

At the first sound of the voice my pen stopped short; and it seemed as if my heart stopped, too—though it soon began to make up for lost time. I was disconcerted and vaguely annoyed that a small surprise should set up such a disproportionate disturbance. Perhaps, too, I was a little startled to find a voice so long unheard elicit such instant and undoubting recognition. But I recovered immediately and resumed my writing, though, to be sure, the pen-point no longer traced the firm and steady lines of the first-written words. Meanwhile, Mr. Campbell had completed his receipt and we now exchanged our documents, I checking his list of my sample works, and he scanning my address with apparent surprise.

“Wellclose Square,” he read out. “There is a Wellclose Square somewhere down Wapping way. It won’t be that one?”

“Yes. But I think it is actually in Ratcliff. When shall I hear from you?”

“I will write and post the letter this evening.”

“Thank you, Mr. Campbell. Good morning.”

As we exchanged bows, I turned and met the newcomer approaching the counter. He glanced at me, at first without recognition; then he looked again.

“Why, surely it is Miss Vardon!” he exclaimed.

“Wrong, Mr. Davenant,” said I. “It is Mrs. Otway. But that is a mere quibble. I am the person whom you knew as Miss Vardon.”

“Well, well,” said he, “what a piece of luck to meet you—and here of all places!”

“Is this a peculiarly unlikely place, then?” I asked.

“Well, I suppose it isn’t, really; at any rate, I mustn’t let Mr. Campbell hear me say that it is. Do you mind waiting a moment while I settle my little business with him? I want to hear all your news.”

His little business amounted to no more than an arrangement that he should call in about three days for his “things,” whatever they were, and when this had been settled, we left the shop together.

“Which way are you walking?” he asked.
“I really don’t know,” I answered. “I think I had some dim idea of seeing the town and taking a look at the shops.”

“Then,” said he, “as you are a country mouse, whereas I am a town sparrow of the deepest dye, perhaps I may be permitted to act as conductor and expositor of the wonders of the Metropolis, while you give me the news from Maidstone.”

“There is little to tell you excepting that I have lost my father. He died quite suddenly, about two months ago, from heart failure.”

“Ah!” said Mr. Davenant, “I had a presimentment that it was so. Seeing you in mourning, I was afraid to ask after him; and I need not tell you how deeply I sympathise with you. I remember how much you were to one another. What a mercy it is that you were married!”

To this I made no reply, and for a time we walked on slowly without speaking. But though nothing was said, much was thought, at least by me. For I had to make up my mind now, and once for all, on a point that I felt to be of vital importance. Should I tell him how things were with me? Or should I let him think that all was well, and that I was a normal married woman? Something—I did not ask myself what—urged me to tell him everything. But caution, prudence, whispered—and that none too softly—that it were better not. The sudden wave of emotion that had surged over me at the sound of his voice was still a vivid and startling memory; and it counselled reticence.

Thus two opposing forces contended; on the one hand, an emotional impulse, on the other the admonitions of reason; and it is needless to say that reason played losing game. Swiftly I argued out the issues. Sooner or later, the inevitable question must come, and with it the choice of an evasion or a straightforward answer. If it was to be evasion, then I put Jasper Davenant out of my life at once and for ever, for the evasion could never be maintained; must shut out this gleam of sunshine that came to me from the old, happy days as if to light up my sombre, lonely life, and wend on my pilgrimage without a friend save the companions of my working days.

And reason whispered again that it were better so.

XIV.—JASPER DAVENANT

THE silence that had fallen between me and my companion remained unbroken (with one exception, when he briefly drew my attention to the old stone name-tablet, inscribed “Wardour Streete 1686”) until we came opposite a church, standing back from the road, and distinguished by a sort of tumour—containing a clock—on its spire. Here Mr. Davenant halted, and looking up at the tower, remarked:

“A quaint-looking church, this; odd and ugly, but yet not without a certain character and picturesqueness. Quite an aristocratic church, too, for it is the burial place of a king.”

“Indeed,” said I. “Which of the kings is buried there?”

“He was but a shabby little king—Theodore of Corsica—and he has the shabbiest little moralizing monument. But he was a somewhat original monarch in his way, for, being in acute financial difficulties, he conceived the brilliant idea of making over his kingdom to his creditors. Would you care to see the monument?”

I assented, without enthusiasm, and we mounted the steps to the grimy churchyard, where presently, against the wall of the church, we found the monument. And still, as we deciphered the weathered inscription, I debated the question whether I should or should not tell him; and still I reached no conclusion.

“By the way,” my companion said, suddenly, “I am acting the showman on the assumption that you are the complete and perfect country bumpkin. But perhaps you are, by now, a fully acclimatized Londoner. How long have you been living in town?”

“About a month.”

“Then the hay-seed is still in your hair, so to speak. I still address a country cousin, and have not presumed unduly; though, no doubt, you are beginning to learn the rudiments. I heard Mr. Campbell speak of Welclose Square, for instance, as a region known to you.”

“Yes. That is where I live.”

As I caught his look of astonishment my heart began to race; for I knew that the inevitable question was coming.

“I suppose your husband is connected with the docks?”

“No,” I replied. “And he doesn’t live at Welclose Square. I am not living with my husband, Mr. Davenant. I never have lived with him, and it is not my intention ever to live with him.”

The deed was done. The murder was out. And though I knew that I had taken the wrong course, I drew a deep breath of relief. As to Mr. Davenant, he was, for a few moments, too much taken aback to make any comment. At length he said, somewhat gloomily:

“I am sorry to hear this, Mrs. Otway. Very sorry. It sounds as if your domestic affairs were not very comfortable.”

“They are not,” I answered. “But, as I have told you so much, I should like to tell you what the position really is. Would
you mind?"

"Mind!" he exclaimed. "Of course I want to know, if you are willing to tell me. Aren’t we old friends? I am most concerned about you."

"Thank you, Mr. Davenant. I should like to tell you how this extraordinary position has come about. Shall we sit down? This place is quieter than the street."

He dusted the wooden bench with his handkerchief, and we sat down just below the shabby monument of the poor, little, bankrupt king. And there I told once again that tragic story of cross-purposes and well-meant blundering. I had intended to give him but a bare outline of the catastrophe; but it could not be. For the bald fact was that I had sold myself to Mr. Otway for money; and my womanly pride and self-respect would not be satisfied with anything short of a complete justification such as might be accepted by a scrupulous, high-minded man. And as I poured out my miserable history, glancing at him from time to time, I was surprised and almost alarmed at the change that came over him. He was a sunny-natured man, buoyant, high-spirited, playful and humorous, though all in a quiet way. But now, as he listened to my story, the genial face grew rigid, the humorous mouth set hard and stern, and the short, sharp questions that he put from time to time, came in a voice that was strange to me.

"So now," said I, when I had come to the end of my recital, "you will understand why I refuse to recognize this marriage; and why I elect to live the life of a spinster, though without a spinster’s privileges."

In a moment his face softened, and his clear, hazel eyes looked into mine with grave tenderness.

"Yes," he said; "I understand. I wish I could say more. I wish I could tell you adequately how I grieve for you—for all the sorrow that you have had to endure and for the maimed life that lies before you. But words are poor instruments." He laid his hand on mine for an instant, and added: "Yet I hope you will feel what I want to express in these threadbare phrases."

I thanked him for the sympathy, which he had indeed made very clearly evident, and for a time neither of us spoke. Nevertheless, I could see that he was cogitating something. Once or twice he seemed about to speak, for he looked at me, but then again bent his gaze reflectively on the ground. At length, with some hesitation, he said:

"I hope you won’t think me inquisitive or impertinent, but I feel rather anxious as to—as how you are placed. I gather that this man Otway does not—er—contribute—"

"He is quite willing to. But I can’t allow him to maintain me if I repudiate the marriage."

"No; at least I think you are quite wise not to. But—you don’t mind my asking, do you? Are you properly provided for? I’m really not—"

"Of course, you’re not," I interrupted, smiling at his diffidence. "As to my means—well, I don’t quite know what they will be eventually, but at present I am living in a reasonable state of comfort. I am not anxious about the future."

My answer did not seem to satisfy him completely, for he continued to cogitate rather uneasily. But, now that I had the key, I could read pretty clearly, without the aid of any magic crystal, what was passing in his mind. He knew that I lived in a squalid east-end neighbourhood. He had seen me at the dealers, and evidently surmised that I was not there as a buyer; that I was in straitened circumstances—perhaps in a state of actual poverty—and that I was disposing of my jewellery and valuables to enable me to live. That, I had no doubt, was what he suspected; and the question that he was debating so earnestly was whether he could, without impertinence, extract any further information and whether our friendship was intimate enough to allow of his making any kind of offer of help.

I should have liked to set his mind at rest, but, in truth, I was none too confident about my future. That depended largely on the nature of Mr. Campbell’s offer; on my ability to earn a reasonable livelihood.

"Well," Mr. Davenant said, at length, "I hope your confidence is justified. But in any case, I suppose you have friends?"

"There’s no need for you to worry about me," I replied, evasively—for I had no near relatives from whom I could claim assistance. "I am in quite comfortable circumstances at present. And now let us put away my bothersome affairs and talk of something more pleasant."

"Very well," said he. "Let us choose an agreeable topic and discuss it in all its bearings as we used to do." He drew his watch from his pocket, and, glancing at it, continued: "It is now nearly one o’clock. What do you say to the question of lunch as an agreeable topic for our debate?"

I admitted that the subject was not without its attractions.

"Then," said he, "I will suggest that a club is an appropriate place in which to consume it, and that a mixed club satisfies the most extreme proprieties."

"I should hardly have suspected you of a mixed dub."

"In strict confidence," he replied, "between you and me and our friend Theodore of insolvent memory, I have another—unmixed—for normal club purposes. This one is my lunch club. It is quite near to my chambers, and is quieter and more pleasant than a restaurant. And it has a special character of its own, as is indicated by its name. It is called the ‘Magpies’ Club."

"That sounds rather ominous."
“Doesn’t it? But it isn’t a burglars’ club. Its members are collectors and connoisseurs—furniture and china maniacs and so forth; and the main function of the club is to enable them to show their specimens to one another and to exchange or sell duplicate pieces. May I take it that you consent to honour the ‘Magpies’?”

I accepted the invitation gladly, for a month’s residence in the East End had made me decidedly appreciative of the amenities of the more civilized regions. We decided to walk to Essex Street, in which the club had its premises, and to go by way of the side streets for greater quiet and ease of conversation.

“You spoke just now of your chambers,” said I. “Does that mean that you are in practice now?”

“Yes. But not in the law. I finished my legal studies and got called, but then I decided to give up the Bench and the Woolsock, though they shouted for me never so loudly, and return to an old love. I am now an architect.”

“Is a barrister allowed to practice as an architect?”

“On that I am not quite clear; but it really doesn’t matter to me. It is a question for the benchers or other authorities.”

“Have you been in practice long?”

“Exactly three weeks to-day. And when I tell you that I have already received a commission to design and erect a greenhouse no less than twelve feet by eight in plan, you will realize that I am mounting the ladder of professional success, with the speed of an eagle with a balloon attachment. My client, by the way, is a member of the club.”

Thus gossiping, we made our way by devious routes through the less frequented streets, by Garrick Street, Covent Garden and Drury Lane, until, by the Law Courts, we emerged into the Strand, crossed to Essex Street, and presently arrived at the roomy, old-fashioned house in which the Magpies had their meeting-place.

It was a pleasant, homely club, and certainly there could be no question as to its eminent respectability, for the aspect of the members—mostly middle-aged and many of them elderly—bordered on the humdrum. The room in which we selected our table was a large, oblong apartment, quietly furnished and decorated and provided with a glazed museum case, which occupied the centre; while a sort of dais at one end was devoted to the display of pieces of furniture exhibited by the members. I noticed, too, that the walls were occupied by pictures, each of which bore a written descriptive label.

“Are you interested in ancient ivories?” Mr. Davenant asked, as we looked into the glass case, in which a collection of very brown and cracked specimens were exhibited by a Mr. Udimore-Jones. “For my part, I find it difficult to develop great enthusiasm over the dental arrangements of superannuated elephants, carved into funny shapes by piously-facetious middle-agers. Look out! Here comes my client. Let us sneak off to our table. Ah! Too late! She’s seen us.”

“Which is your client?” I asked, looking round furtively.

“The elderly damsel with the smile—a Miss Tallboy Smith. There! She has caught my eye now. Did you ever see such a set of teeth? She had better be careful or Udimore-Jones will have her.”

We were edging away towards our table, with a feeble hope of escape, when she caught us.

“Now, I don’t believe you’ve seen my cup,” she exclaimed, with an engaging smile. “You must see it. It is not only genuine Nantgarw, but the roses on it are unquestionable Billingsleys.”

“Observe,” said Mr. Davenant, “the pride of the inveterate collector. You’d think she had painted those roses herself.”

“Indeed, you wouldn’t,” retorted Miss Tallboy-Smith; “not if you had seen them and knew anything about ceramic painting. And as to pride, isn’t it something to be proud of? Nantgarw porcelain is rare, and roses painted by Billingsley are rare; and when you have them both in a single piece, why then, you see, you—”

“Then,” said Mr. Davenant, “you multiply the rarity of the one by the rarity of the other, and the product of the multiplication is the rarity of the piece as a whole.”

“Isn’t he absurd?” she simpered, “treating me to a complete private view of the ‘ancient ivories.’”

“Perfectly incorrigible. Don’t you agree with me, Miss—Mrs—”

“Otway,” said I.

“Oh, really! Now I wonder—my brother knew a Mr. Otway—oh, but he was a money-lender. That wouldn’t be—but won’t you come and look at my cup?”

We returned to the glass case, of which Miss Tallboy Smith opened a door and lifted from its shelf a dainty porcelain teacup.

“Just feel how thin and light it is,” she said, holding it out to me.

“I wouldn’t if I were you,” said Mr. Davenant. “This Nantgarw stuff crumbles like a baked egg-shell; and it’s hideously valuable.”

“Don’t take any notice of him,” said Miss Tallboy Smith. “Just feel it—it’s positively delicious to touch; and look at the lovely roses; no one but William Billingsley could have painted those roses. And, if there could be any doubt, you have only to turn the piece up and look at the bottom. There is Billingsley’s personal mark—the number 7. That’s infallible.”

I took from her hand the delicate, translucent cup, and was admiring the freedom and softness of the flower painting...
when she drew nearer and said in a warning whisper: "Here comes Major Dewham-Brown. If he tries to sell you anything, don't buy it. He only brings his bad bargains here."

She had barely uttered her warning when a brassy voice behind me exclaimed: "How d'you do, Miss Tallboy-Smith and how are you, Davenant?" and a tall, smart, rather stupid-looking man with a large nose—which seemed to have been produced at the expense of his eyes and chin—sailed into my field of vision.

"Ha!" said he, "Pretty cup, that. Worth a pot of money, too, I expect, though I don't know much about 'em. And that reminds me that I've got rather an interesting thing that I picked up the other day; bit of old church plate; seventeenth century, if not earlier. Like to see it?"

Without waiting for a reply, he fished out of a "poacher's" pocket a flat object wrapped in a silk handkerchief.

"Curious piece, this: interested me very much. The repoussé-work on it is remarkably fine." He unfolded the handkerchief as he spoke, and at length extracted, with a sort of conjuror's flourish, a small, circular, silver platter—apparently a paten, to judge by its size. This he handed to Miss Tallboy-Smith, who grinned at it indulgently and passed it to Mr. Davenant, who, having looked it over without enthusiasm, handed it to me. A very brief inspection, with the piece in my hand, was enough to make Miss Tallboy-Smith's warning unnecessary; for, apart from the unsuitability of the ornament—if it was really meant for a paten—it was an obvious electrotype, which had, however, been pickled, polished and sulphured with intent to deceive. Having noted this fact, I returned the piece to its owner with a few words of polite and colourless commendation of the design; and the Major, chilled by the lack of enthusiasm, invested his treasure once more in its silken wrapping and went off in search of a more appreciative audience. Under cover of this parting courtesy to Miss Tallboy-Smith, Mr. Davenant and I retreated to our table.

"That antique of the Major's looked to me rather like fake," said my companion, when we had ordered our lunch. "It was so very venerable."

"It is an electrotype, sulphured to give an appearance of age," said I.

"Is it, by Jove? Now, how did you spot it as an electrotype?"

"It was the disagreement between the back and the face that first attracted my attention. The face was repoussé—pretty coarse too—but there was not a vestige of a toolmark on the back, where, of course, most of the punch-marks would be; nothing but the smooth surface of the deposited metal."

Mr. Davenant chuckled. "I seem to have imported an expert Magpie. Oh! But I remember now that you and your father used to do all sorts of wonderful works in metal. Ha, ha! Poor old Dewham-Brown! He little suspected that he was dealing with a practical artificer."

Here the advent of food put a temporary stop to conversation, for we were both pretty sharp-set; but during the progress of the meal I looked about me and was vastly entertained by the proceedings of the Magpies. The glass case was the centre of interest, around which a small crowd of enthusiasts gathered, eagerly discussing the exhibits, which the proud owners expounded, with their noses flattened against the glass, or tenderly lifted out for closer inspection. And now and again a new exhibitor would arrive with a bag or attaché case, from which fresh treasures were disgorged into the glazed sanctuary.

"I suppose," said I, "your members will have nothing to do with any but antique works?"

"Not as a rule," Mr. Davenant replied. "The collector is usually a lover of old things. But there are exceptions. A good many of the pictures shown here are modern; some, I suspect, are shown by the artists themselves. Then we have one member who collects modern pottery exclusively—not commercial stuff, of course, but the work of modern artist-potters, like De Morgan, the Martin Brothers and other individual workers. Fine stuff it is, too. I have a few pieces myself. And, talk of the old gentleman—there he is. I'll fetch him over and make him show us what he has got in that bag."

He rose from the table, and crossed the room, and I saw him accost a very tall, pleasant-looking young man who was bearing down on the glass case with a good-sized hand-bag, but readily allowed himself to be led over our table.

"Now, Hawkesley," said Mr. Davenant, "my guest wants to see what really high-class modern pottery is like. What have you got?"

"I have only three pieces with me," replied Mr. Hawkesley, "and they are all of the same type; what I call 'mystery-ware.'"

"What is the mystery about it?" Mr. Davenant asked.

"The mystery is, who makes it? As far as I know, there is only one dealer who has it, and he absolutely refuses to say where he gets it. I have never seen any of it exhibited—excepting here—and nobody can tell me the name of the potter or anything about it beyond the fact that it seems to be the exclusive monopoly of this one dealer, and that he has very little of it, and charges accordingly. But it is wonderful stuff." He lifted out of his bag a couple of jars and a bowl—handling them with that curious delicacy that one often notices in persons with large, strong, supple hands—and placed them carefully on the table.

"You see," he continued, "there are two methods of treatment, which are sometimes combined, as on this jar; and these two styles are based on two very different types of old work—the old English slip-ware, such as the Wrotham and Staffordshire and Toftware, and the old French Henri Deux, or Oiron ware. In the one, the ornament is produced by laying on pipes or threads of coloured slip—that is, clay in the semi-liquid state; in the other by inlaying coloured paste or enamel
in cavities in the body, which seems to be made with tools like those used by book binders. This covered jar—which looks almost like a piece of fine Japanese cloisonné—and this bowl show the inlay method, and this other jar is an example of the slip decoration, but with one or two spots of enamel inlay."

"I think I prefer the pure inlay," said Mr. Davenant.

"So do I," said Mr. Hawkesley, "and so, I think, does the artist. All his finest work is done by the inlay method, though he uses the slip decoration with such skill and taste that it is virtually a new method. The old Wrotham and Toftware looks very primitive by the side of this scholarly, refined work."

I turned the three pieces of pottery over in my hands and warmly commended the judgment of the collector. No modern work that I had ever seen approached it for perfection of finish or grace of design; while the colour-scheme combined richness, delicacy and restraint in a truly marvellous manner. It seemed to unite the brilliancy of enamel to the sober beauty of old tapestry. And even the little blue bird, inlaid on the bottom of each piece to form the potter’s mark, was finished with care and taste.

"May one inquire as to the local habitation and name of the dealer?" Mr. Davenant asked.

"You may," was the reply. "His name is Maurice Goldstein, and he is to be found at Number 56, Hand Court, Holborn. And I should like to wring his neck."

We both laughed at the vindictive tone in which this benevolent wish was uttered, and at the sudden ferocity of aspect that swept over the usually good-humoured, kindly face.

"Why this homicidal craving?" Mr. Davenant asked.

"Don’t you see," the other demanded, indignantly, "that this infernal Goldswine—I beg your pardon—"

"You needn’t," said I.

"That this miserable huckster is grinding the face of some poor artist; that he is not only devouring the earnings of this industrious, painstaking worker, but—for his own paltry profit—he is robbing that artist of the credit—of the fame—to which his genius and his enthusiasm entitle him. Look at this lovely jar! I gave that mean worm ten guineas for it. How much do you suppose he gave the potter?"

"Ten shillings, perhaps," suggested Mr. Davenant.

"Probably not much more, though there is getting on for a week’s work in it."

"Still," I said, with a mischievous desire to stir up his indignation afresh, "the potter probably enjoys making these beautiful things. The work is its own reward."

"I can’t agree to that," Mr. Hawkesley rejoined, warmly. "He doesn’t enjoy being hard up and having to work for a pittance. Besides, it isn’t just. This man makes a jar that is going to give me a life-long pleasure. I want to pay him for that pleasure. I want to know who he is, to shake his hand and thank him and tell him that he is the salt of the earth. And this Shylock hides him away and just feeds on him like the beastly parasite that he is."

He gathered up the treasured masterpieces, and having wished us adieu, with a sudden return to his customary geniality, crossed to the glass case to find a vacant niche for his samples of "mystery ware."

"I like Jack Hawkesley," said my companion; as we watched him.

"So do I," I agreed warmly. "He takes a human interest in the artist. I wish more collectors were like him."

"Yes," said Mr. Davenant. "He is a good type of rich man. Would that there were more Hawkesleys." He poured out the coffee which the waitress had just brought and then asked: "What do you think of this club—as a feeding and resting place, I mean?"

"It seems a comfortable, homely place, and the members and their exhibits are quite interesting."

"I find it so. You wouldn’t care to join, I suppose? It is cheap, as clubs go: five guineas a year and no entrance fee. I should think you would find it a great convenience, living so far from the centre of town."

"It would be a great convenience. But should I be eligible? I am not a collector, you know."

"No, but you are something of an expert. At any rate, Hawkesley and I would manage the formalities. Think it over, and if you decide to honour us, drop me a line. This is my address—56, Clifford’s Inn."

He handed me his card, and when he had made a note of my address, I prepared to depart.

"I have wasted a fearful amount of your time, Mr. Davenant," said I; "but it has been a very pleasant interlude for me."

"Has it really? I hope it has. For my part, I have enjoyed myself just as I did in the old days when you used to let me wag a philosophic chin at you, and I am reluctant to let you go so soon. Mayn’t I see you to the station, or wherever you are going?"

"I thought of walking back to get myself acquainted with London."

"Then let me put you on the right road and show you some of the short cuts."
“But what about your work?”

He regarded me with that quaint, humorous smile that I had always found so attractive. “My work is, at present, of a somewhat intermittent type. This is one of the intermissions. Let us fare forth and study the architectural beauties of the Metropolis.”

And we fared forth accordingly.

The short cuts discovered by my companion did not in the least conform to Euclid’s definition of a straight line; and their brevity was relieved by sundry excursions into alleys and by-streets and incursions into churches and other ancient buildings. They led us by way of the Temple and its old round church, Mitre Court, Fetter Lane, Nevill’s Court, Gough Square, and so to St. Paul’s Churchyard and into the Cathedral; thence by Paul’s Alley, Paternoster Row, Cheapside and Lombard Street, dropping into one or two churches on our way, until we came out on Great Tower Hill, and drifted slowly down Royal Mint Street. And all the while we gossiped pleasantly of this wonderful city and its wonderful, inexhaustible past; and my guide expounded, with all his old gaiety and brightness—and with astonishing knowledge of his subject—until I had almost forgotten Welclose Square and the sinister shadow that hung over my life, and seemed to be back in the untroubled days of my girlhood.

But not quite. For, even as I talked—or more often listened—with the liveliest interest and pleasure, a project was maturing in my mind. I had, in fact, conceived a brilliant idea. Mr. Davenant’s suggestion that I should join the club had started a train of thought that ran as an under-current—in the subconscious mind, perhaps, as Lilith would have said. It had begun vaguely when I saw the modern pictures on the walls, and the modern works in the glass case and the Major hawking round his little platter. Here was a place in which the work of the unknown artist could be shown and perhaps sold; my own work, Lilith’s work, the Titmouse’s, Philibar’s, even Miss Polton’s. For five guineas a year I could open this emporium, not only to myself, but to my fellow-workers; could slip past the dealer and secure his profits for us all. I say it was a brilliant idea—at least, it appeared so to me; and throughout that long peregrination, made delightful by the sympathetic companionship of my newly-recovered friend it germinated and grew until, as we halted to say good-bye at the corner of Cable Street, it had grown to full maturity.

“I have been thinking,” said I, “of your suggestion—about joining the club, you know. It would be nice to have a place to go to for a rest or a meal, in the centre of town. And I shall often want such a place.”

His face brightened perceptibly—perhaps at the implied assurance that I could afford to spend five guineas.

“Then, may I put your name up for election?”

“Will you be so kind?”

“Won’t I? It will be jolly, and we shan’t lose sight of one another again; though that was my fault for not writing. I was often on the point of sending you a letter, and then I felt a silly diffidence—thought that you might consider I was presuming on our acquaintance. However, I will propose you for membership at once, and in about a week’s time you will be a full-blown Magpie. Then I will send you a line, though, of course, you will get the official notification.”

He handed me my bag, and with a hearty hand-shake, we said “Good-bye,” and went our respective ways.

It was but a few minutes’ walk to Welclose Square, and I took it slowly; for now that my companion was gone and I was bereft of his buoyancy and vitality, I was suddenly aware of intense bodily fatigue. Moreover, I felt a certain reluctance to bring to a definite close what had been an interval of quiet but perfect happiness. And so, in spite of my fatigue, I sauntered on, loitering awhile in St. George’s churchyard and stopping to look up at the quaint stone name-tablet at the corner of Chigwell Lane, until weariness and growing hunger drove me homewards. And even then, it was not without regret that I pulled the brass bell-knob and, as it were, wrote “Finis” to this pleasant and eventful chapter.

XV. — THE MAGIC PENDULUM

THE weighty question whether my handicraft would yield me a livelihood was answered on the following morning by the arrival of a letter from Mr. Campbell; and it was answered, though not very emphatically, in the affirmative. The prices that he offered, provisionally—and advised me not to accept—were appallingly low; very little above those of mere commercial goods. But even so, it would be possible, by hard work and spare living, to eke out a bare subsistence. And it was fair to assume that Mr. Campbell’s offer was, as indeed he explicitly stated, a minimum, on which an advance might be expected. Accordingly, I declined the offer and decided to await the results of actual sales to his customers.

I was turning these matters over at the breakfast table, when Lilith came and took a vacant chair by my side.

“Well, Sibyl,” she said, in a low voice, “how did you fare yesterday? Did you have any success?”

“Yes. I came back with an empty bag.”

“And a full purse?”

“Ah! That is another matter. The tide of handicraft doesn’t seem exactly to lead on to fortune.”

“I want to hear all about it,” said Lilith. “But we can’t discuss it here. Let us have a quiet talk up in my room after breakfast. If you will run up when you’ve finished, I will join you in a few minutes.”
I assented gladly, for Lilith, apart from what the irreverent Titmouse characterised as her “crystal-gazing tosh,” was a sound adviser on business affairs; and a few minutes later I betook myself upstairs to her studio. I had scarcely seen this room before, for there was an unwritten law, sternly enforced by Miss Polton, forbidding the boarders to enter one another’s workrooms except by invitation and on specific business, and I now looked about me with a good deal of curiosity.

It was a queer room. The two sides of Lilith’s personality, like two separate persons, seemed to have parcelled it out into two distinct territories. There was the working territory, neat, precise, business-like, strangely free from the usual muddle and disorder of a woman-artist’s studio; the big water-colour easel, the orderly painting cabinet, the papier-mache lay figure, quaintly arrayed in a walking costume such as might have been seen in a Regent Street shop window (miraculously built up, as I observed, of draperies, pinned, tied or lightly stitched together), the charcoal studies from the figure, pinned up on the wall for reference, with careful pencil drawings of heads, hands and feet, and one or two casts of faces and hands. The working department was a model of matter-of-fact efficiency.

In curious contrast to this was the domain of Lilith, the mystic. In a well-lighted corner stood a small table supporting a black velvet cushion on which reposed a crystal globe of the size of a cricket ball. Above the table a couple of book-shelves exhibited a collection of volumes treating of Spiritualism, Telepathy, Apparitions, Psychical Research and other occult subjects. On the upper shelf stood a box filled with the letters of a dissected alphabet; while, hanging on the wall, was a small heart-shaped object with tiny castors, which I assumed to be Planchette, and by its side a single Egyptian bead suspended at the end of a silken thread.

Yet these two aspects of this strange girl’s character were not without a connecting link. On the walls were several framed paintings signed “Winifred Blake,” mystical figure subjects, recalling, but not imitating, the works of Burne Jones and Rosetti, exquisitely drawn and delicately painted in water-colour. The work on the easel was a similar drawing of a frieze-like character, the figures nude but with lightly indicated draperies; and one of the nude figures had been traced on to a fashion-plate board and was already partly clothed in the walking costume.

My survey of the room and its contents was interrupted by the arrival of its occupant, who having seated me in the easy chair, perched herself on her painting-stool and opened the examination.

“Now,” said she, “I don’t want to be inquisitive, but I do want to know just how you got on. Did you carry out the methods that I proposed?”

“I did—at least as far as the silent willing was concerned—though not very thoroughly. I don’t think I did much in the way of suggestion.”

“And did you sell your work?”

“Yes, I think I may say I did,” and here I gave her an account of Mr. Campbell’s two alternative offers.

“You have done admirably, Sibyl,” she said enthusiastically. “Your first essay has been a perfect success. And now, tell me: are you convinced?”

As I could not truthfully say that I was, I took refuge in polite evasion, which, however, Lilith brushed aside with some impatience.

“I can never understand this kind of scepticism,” said she. “You have the cause and effect before your eyes, but yet you refuse to recognise the connection. You take your work to this man. Outside the shop you will that he shall buy it. You go in and he does buy it. What more could you want?”

“But he might have bought the things if I hadn’t willed, you know.”

“Yes,” she agreed; “he might. But that is not the way we reason about material things. I strike a match and apply it to a laid fire, and the fire burns. It might have burned if I had not applied the lighted match, but no one doubts the connection between the lighted match and the lighted fire. Physical causes and effects are accepted with unquestioning faith, but as soon as we come to spiritual or psychical phenomena, this extraordinary scepticism springs up—this curious refusal to admit and accept the obvious.”

“I am not asserting that there was no connection between the silent willing and the purchase of my work,” said I. “All I say is that I don’t regard the connection as proved. I can’t decide for or against because there doesn’t seem to be enough evidence either way.”

“Yes; I suppose you are right,” she admitted, reluctantly. “But I should like to convince you, because I am sure you have very unusual powers.”

She was silent for a short space, and then, suddenly, she asked: “Have you ever been to a séance, Sibyl?”

“Never,” I replied.

“Well,” said she, “you ought to go to one—not to any of those silly public shows conducted by mere mountebanks, but to a private séance, carried out by really earnest people who are seeking to extend our knowledge. Would you care to come to one with me?”

“It would be rather interesting,” I replied, without much enthusiasm.
“It would,” said she. “You were speaking of evidence just now. Well, at a genuine séance you would obtain evidence that I think would convince you of the reality of psychical phenomena. I have a friend—a Mr. Quecks—who has given me some most remarkable demonstrations, and I have no doubt that he would be very pleased for you to accompany me to one of them.”

“Is Mr. Quecks a medium?” I asked.

“No; I shouldn’t describe him as a medium, though he is very sensitive and has most extraordinary powers. But he is a profound student of super-normal phenomena and deeply interested in psychical research. May I ask him to show you some of his experiments?”

“Thank you, Lilith; and I hope you will find me less disappointing than you have to-day. I am really quite curious about these things, although I admit a rather sceptical frame of mind. I was wondering, before you came up, what you do with that bead on the string.”

“That,” replied Lilith, all agog at the question, “is the pendule explorateur—the magic pendulum. It is an instrument of the kind known in psychical science as an autoscope—an appliance for, as it were, bringing the subconscious into view.”

“But how does it work?”

“It works by the influence of the subconscious mind upon the muscles. Let me show you—but you shall try it yourself because you are an unbeliever.”

She removed the crystal ball and its cushion from the table, and taking the bowl of loose letters, turned out its contents and rapidly arranged the letters in a circle, forming a clock-wise alphabet. Then she took the pendulum down from its hook.

“Now,” said she, “what you have to do is this: you rest your elbow on the table to steady your hand, and you hold the string with the thumb and finger, letting the bead hang just clear of the table in the centre of the circle; and you must keep your hand perfectly still and steady.”

“But if I do, the bead will remain still, too.”

“No, it won’t, excepting just at first. Presently it will begin to swing, apparently of its own accord, but really in accordance with your mental state. For instance, if you let it hang inside a glass and you will that it shall strike the hour, it will strike the hour. If you will—or I hold your other hand and will—that it shall swing round in a circle to the right or left, it will swing round in the direction willed. But that is an exercise of the conscious will. In the experiment that we are making now we tap the subconscious. If there is any thing or person occupying your subconscious mind, the pendulum will spell out the name of that thing or person by swinging towards the letters. Let me put the chair comfortably for you, so that you can keep quite still.”

As I listened to Lilith’s explanation I began to wish heartily that I had never embarked on this experiment. Of course, I did not believe for a moment that this absurd pendulum would develop the occult powers that Lilith claimed for it; but yet her confidence shook mine. And I had a very strong feeling that, on this day of all days, I should prefer to keep my subconscious mind to myself. However, there was no escape; so I seated myself and proceeded to carry out Lilith’s directions.

For nearly half a minute the bead hung quite motionless from my steady hand. Then it began almost imperceptibly to oscillate. My eye had already taken in the positions of the letters which might be incriminating, and now I observed with uneasy surprise that the faint oscillations of the pendulum were taking a direction towards the letter J. I could detect no movement in my hand, but, nevertheless, the oscillations grew wider and wider until the bead, as if possessed by a private demon, swung briskly half-way across the circle.

“That is pretty definite,” said Lilith. “It is swinging towards U—or is it J? The circle ought to have been bigger, so that the letters need not have been opposite to one another. But I’ll write down both; U or J.”

The swing of the pendulum now began to shorten; and then, almost abruptly, it changed its direction to one at right angles, and I observed with astonishment that it was pointing direct to A.

“It’s either A or P,” said Lilith. “I’ll put them both down.”

Once again the pendulum changed the direction of its swing, and Lilith noted down E or S; and so, to my growing consternation, it continued to take up quite distinct changes of direction until six variations had occurred, when the pendulum became stationary and then began to swing round in a circle.

“It has finished,” said Lilith—whereupon I instantly dropped the pendulum. “It is a word of six letters: U or J, A or P, E or S, A or P, E or S, F or R. Let us see if we can make out what the word is. It is a pity the letters were opposite; it muddles it up so. They ought to be in a half-circle, but then they would be too close. But let us try a few combinations. U P S A S F; it can’t be that. U P S A S F; it can’t be that. We’ll try it with J—I A E P E F; that isn’t it. J A S B S F; that can’t be the word. Do the letters suggest anything to you, Sibyl? Is there any name that might be lurking in your subconscious mind, beginning with U or J? Try to think. What did you do in town yesterday?”

“Oh, various things. I went to the dealer, of course; and then I went to a private show of pottery and antiques.”

“Pottery,” mused Lilith, scanning the letters that she had written down. “Let me see: Upchurch? No, that won’t do.” She
looked the letters through again and then asked eagerly: "There wasn’t any Wedgwood there, I suppose?"

Now it happened that while Mr. Hawkesley was talking to us I had noticed an old gentleman tenderly placing a very fine green Wedgwood cup and saucer in the show case. So I could, and did, answer truthfully.

"Yes, there was; a beautiful green Jasper-ware cup and saucer."

"There!" Lilith exclaimed triumphantly. "Jasper! That is the word! And yet I don’t suppose you have given that cup and saucer a thought since you saw it."

"I had forgotten its existence until you spoke of Wedgwood."

"Exactly," said Lilith. "And that is the mysterious peculiarity of the subconscious. You see a thing or a person perhaps only for a moment, and straightway forget it. It seems to be gone for ever. But it is not. It has sunk into the subconscious, to remain there unnoticed possibly for years until some chance association, or perhaps a dream, brings it to the surface. But all the time it has been there. And at any moment it can be brought into view by the use of some kind of autoscope such as the pendulum or the crystal."

"The crystal is an autoscope, too, is it?" I asked.

"Yes; but of quite a different kind. The pendulum acts by the effects of the subconscious mind upon the muscles; the crystal by the effects of the subconscious mind on the centres of visual perception."

"That sounds very learned; but tell me exactly what you do with the crystal."

"As to me, personally," replied Lilith, "I do very little with it. Crystal vision—or ‘scrying,’ to use the technical term—is a rather rare faculty. But in the case of a really gifted observer, the most astonishing results are obtained. The method of using the instrument is this: The scryer sits in a restful position with the crystal before her (all the best scryers, I think, are women) and gazes steadily at the bright lights in it, keeping the conscious mind in a passive state—thinking of nothing, in fact. After a time the lights in the crystal grow dim; a kind of cloud or mist seems to float before it, and in this cloud, and gradually taking its place, the picture or vision appears; sometimes dim and vague, but often quite clear and bright, like the little pictures that you see in a convex mirror or a silver ball."

"And what is this picture? I mean what is its subject?"

"That varies. It may be a scene from the past that had been forgotten by the conscious memory, or something that never happened at all—just a jumble of bits of memory like a dream. Or it may be the picture of some event that is going to take place in the near future."

"But," I objected, "how can an event which has not yet occurred be in your subconscious mind?"

"I know," said Lilith. "The whole subject of pre-recognition is a very difficult one. But there seems to be no doubt that prophetic visions do really occur. And then there is clairvoyance—seeing across space and through obstacles. A really gifted scryer, by concentrating her thought on a particular person or place as she looks into the crystal, can see that person or place, no matter how great the distance may be; can see exactly what the person is doing or what is happening at the place."

"Really!" I exclaimed. "That sounds like rather an undesirable faculty. Doesn’t it strike you, Lilith, as a very great intrusion on the privacy and liberty of the subject to scry a person without his or her consent? Supposing the scryer should happen to discover the scryed one in the act of taking her—or his—morning tub. Wouldn’t it be rather a liberty?"

Lilith laughed (but I could see that the idea was new to her): "You are dreadfully matter-of-fact, Sibyl. But, of course, you are quite right. We shouldn’t misuse our powers. As for me, I have very little power of the kind to misuse, for I have never seen anything more than a sort of vague picture of unrecognisable figures in undistinguishable surroundings. But I think you might do better, for I am still convinced that you have special gifts. Would you like to try the crystal, Sibyl?"

"Not now, thank you, Lilith. We ought to get to work after all this gossip. And that reminds me that, before you came up, I was looking at your exquisite paintings and wondering if you are not, to some extent, wasting your great talents."

"In what way?" she asked.

"Of course," I said, "these designs would make magnificent tapestries or wall decorations. But if you can’t get a wall, you might descend to a smaller surface. Have you ever tried designing and painting a fan?"

"No," she replied.

"I wish you would," said I. "You would do it splendidly with your power of design and your delicate technique. And Phillibar could make the sticks and carve the guards, or I could do you a pair in silver repoussé, and a jewelled pin and loop. Will you think over the proposal?"

Lilith picked up the crystal on its cushion and, smiling at me, said:

"I will make a bargain with you. If you will take the crystal to your room and give it a thorough trial whenever you have time, I will get out a design for a fan. Do you agree?"

I held out my hand for the crystal. Primarily, my desire was to introduce Lilith to Fame and Fortune through the medium of the Magpies Club; but the startling success of the magic pendulum had aroused my curiosity in regard to the
other “autoscope,” though I have to confess that, when I had borne it to my room, I concealed it guiltily in a locked drawer, where it should be secure from the prying eyes of the servant-maid, and above all from the observation of the sarcastic and sceptical Titmouse.

But there were other matters than crystals and magic pendulums to be thought of. There was, for instance, the set of twelve spoons which Mr. Campbell had asked me to make and to which he had again referred in his letter. I knew now that I should be paid for them at a reasonably remunerative rate, and this, and the congenial nature of the task, encouraged me to get to work. But before I could begin there was the motive of the design to be considered; and since the apostles were ruled out as obsolete, I had to find some other group of twelve related objects. After a whole day’s anxious thought, I fixed upon the Signs of the Zodiac as furnishing a picturesque and manageable motive, and with this scheme in my mind, I fell to work in earnest, first with the pencil and then with the wax and metal.

But busy as I was, and happy in the interest of my work, I was yet aware of a change, of something new that had come into my life. From the little workshop which had been my world, I found my thoughts straying out into the larger world, and particularly that part of it which is adjacent to Temple Bar; and if at times I viewed this change with some misgivings, I was more often conscious of a sense of exhilaration such as one feels when embarking on some new adventure.

In due course I received notice of my election as a member of the Magpies Club, and by the same post a letter from Mr. Davenant asking me to celebrate the event by lunching with him there; and, as I had occasion to go into town to replenish my silver and some other materials, I accepted his invitation, intending to return to Welclose Square in the afternoon. But it appeared that a loan collection of antique silver was being exhibited at the South Kensington Museum, and that he had hoped to have the pleasure of inspecting it under my expert guidance. Now, to a craftsman (or crafts-woman) of small experience, there is no technical education to compare with the study of admitted masterpieces. I felt that strongly, and I felt that I needed that technical education; furthermore, I felt that the attempt to explain the merits of the old work to an attentive and sympathetic listener would help me to concentrate my own attention. And perhaps it did. At any rate, I spent a long and pleasant afternoon at the museum, and we subsequently discussed the exhibits (and various other matters) very companionably over the dinner table at the club.

“It has been a jolly day for me, Mrs. Otway,” said Mr. Davenant, as he wished me ‘good-bye’ at the Underground Station. “I’ve learned no end about silver—you are a perfect encyclopaedia of knowledge in regard to goldsmith’s work. And the delightful thing to think of is that we’ve only scratched the surface of the museum. The place is inexhaustible. Do you think I may hope for the pleasure of another visit there with you before long?”

I gave what I intended to be an ambiguous answer. But it was not ambiguous to me; and I suspect that Mr. Davenant went on his way with a feeling that a precedent had been created.

When I arrived home, I found a letter awaiting me from Mr. Otway. It was not entirely unexpected, for I had felt pretty certain that he would presently hear further from his mysterious correspondent. It now appeared that he had received one or two short letters, ostensibly of the nature of warnings, but actually threatening, though in vague, indefinite terms, and one more recently of a more explicitly menacing character. These he wished me to see and discuss with him, and he asked me to make an appointment, at my convenience, to meet him for that purpose. I replied, suggesting, as before, the Tower Wharf; and there, a couple of evenings later, I met him.

In appearance he had by no means improved. His pale face had a strained, wild expression, his eye-lids were puffy and covered with curious, minute wrinkles. His hands were markedly tremulous, and his fingers bore the deep stains that mark the inveterate cigarette smoker. His dress was noticeably less neat than it had used to be; indeed, he presented a distinctly shabby and neglected appearance. Oddly enough, too, he seemed to have grown somewhat stouter.

I should have been less than human if these plain indications of sustained misery had awakened in me no feeling of pity. That his sufferings were the indirect result of his indifference to the happiness or misery of others, could not entirely stifle compassion, and I found myself speaking to him in a tone almost sympathetic.

“I am afraid, Mr. Otway,” said I, “you are letting these nonsensical letters worry you quite unnecessarily. You are not looking at all well.”

“I am not at all well, Helen,” he replied, dejectedly.

“And I think you are smoking too much.”

“I am. And I am drinking too much—I, who have been a temperate man all my life. And I have to take drugs to get a decent night’s rest. This worry is breaking me up.”

“Oh, come, Mr. Otway,” I protested, “you mustn’t give way in this manner. What is it all about, after all? Just a wretched blackmailer whom you know to be an impostor, whose threats you know to be mere empty vapourings.”

“That is not quite true, Helen. The man is an impostor, no doubt. He doesn’t really know anything. There is nothing for him to know. But he could create a great deal of trouble. He could, in fact, cause the—ah—the inquiry to be re-opened and—ah—”

“Exactly. And if it were re-opened? There would be unpleasant comment on the fact that a detail of the evidence had been withheld at the inquest. But that is the worst that could happen.”

Mr. Otway looked at me with a sort of dumb gratitude that was quite pathetic, but his gloom was in nowise dispelled by
my optimism.

"It is very good of you, Helen," said he, "to speak in this cheerful, confident tone. But I assure you, you minimize the danger. There is no saying what construction might be put upon the suppression of that detail; what considerations of motive might be read into it—especially as there was what they would call collusion between us to suppress it. But let me show you the last letter—the others are of no consequence."

He produced his wallet, and, after some awkward fumbling, drew out the letter, which he held out to me with a hand that shook so that the paper rattled. Like the last, it was typewritten unskilfully, and characterized by the same semi-illiterate confusion in the wording, which ran thus:

"Mr. Lewis Otway,

"The writer of this warns you once more to look out for trouble. The person that I spoke of knows that some thing was held back at the inquest at least they say so and that they know why your wife won't live with you and that she knows all about it too and that someone knows more than you think anybody knows. This is a friendly warning.

"FROM A WELL WISHER."

I returned the letter to Mr. Otway after reading it through twice, and I must confess that my confidence was somewhat shaken. If the writer was merely guessing, he seemed to have an uncanny aptitude for guessing right. As to his claim to possess some further knowledge, I did not see how that could be possible. When the fatal interview took place between my father and Mr. Otway, there were—to the best of my belief—only three persons in the house. Of those actually present at the interview there was only a single survivor—Mr. Otway himself—and he alone knew with certainty what occurred. The claim was therefore almost certainly false. And yet, even as I dismissed it, there crept into my mind once again a vague discomfort, a doubt whether there might not be something that I was unaware of, and that Mr. Otway knew; some dreadful secret that I, of all persons in the world, had been instrumental in guarding from discovery. And as I glanced at Mr. Otway—haggard, wild, trembling, and terrified out of all proportion to the danger, so far as it was known to me—the horrid doubts seemed to deepen into something like suspicion.

"Of course," said he, when he had returned the letter to the wallet, "I realize that you are right; that there is nothing to be done but to wait for this person to show his hand more plainly. It would be madness to apply to the police. They would immediately ask if there had been any evidence withheld and why you were not living with me. And if they succeeded in getting hold of the writer of this letter, we should have more to fear from them than from the writer himself. He may be, as you believe, a mere blackmailer who is preparing to extort money, but if he were brought to bay he would try to justify his threats."

With this I could not but agree. The implied allegations in this letter were, in point of fact, true; and any attempt to obtain help from the police would probably result in their truth being made manifest.

"Have you no idea whatever," I asked, "who might be the writer of this letter? He can hardly be a complete stranger. Have you no suspicion? Can you think of no one who might have written it?"

He looked at me furtively and cleared his throat once or twice before replying; and when he did answer, his manner was hesitating and even evasive.

"Suspicions," he said, "are—er—not very—ah—helpful. I have no facts. The mere—ah—conjecture that this person or that might possibly be concerned—if a motive could be supplied—and—ah—if one can think of no motive—"

He left the sentence uncompleted, giving me the vague impression that he was reserving something that he did not wish to discuss.

We were silent for some time, and I was beginning to consider bringing the interview to an end when he suddenly turned to me with a gesture of appeal.

"Helen," he said earnestly, "is it not possible for me to prevail on you to—ah—to reconsider your decision and—ah—to—to terminate this—er—this unhappy separation. Consider my loneliness, Helen, my broken health and this trouble—which is our joint trouble—and—ah—"

"Mr. Otway," I answered, "it is not possible. I assure you it is not. I am deeply distressed to think of your unhappiness and to see you looking so ill, but I could not entertain what you suggest. You must remember that we are strangers. We have never been otherwise than separated. As we are, so we must continue."

"You don’t mean that we must always remain apart?" he exclaimed. "It was only meant to be a temporary separation."

"At any rate," I rejoined, "the time has not come to consider a change. But I shall be glad to hear how things go with you and to give you any help that I can."

I rose and held out my hand, which he took reluctantly (though it was the first time that I had ever offered to shake hands with him).

"I am driving you away, Helen," he said.

"No, indeed," I replied. "I had to go. You will write to me if anything fresh happens?"

He promised readily, and we turned and walked away in opposite directions. When I had gone a little way, I paused to
look back at him; and as I noted his dejected droop and his air of something approaching physical decrepitude, I felt a pang—not of remorse, but of regret that I could not in some way lighten the burden of his evident misery. It is true that his unhappiness was of his own making, and that in wrecking his own life he had wrecked mine and my father's. But vindictiveness is a character alien to the civilized and developed mind. For what he had done I still loathed him; but it pained me to think of the haunting dread, the abiding fear that was his companion night and day.
I HAD told Mr. Otway that I had to go; but I did not tell him why. If I had, he would probably have been considerably startled. For the fact is that while we were talking I had formed a resolution which had rapidly matured—the resolution to go to Dr. Thorndyke and make a clean breast of the whole affair. He had invited me to call on him and report from time to time; especially if I should be in need of advice or help, and I had been intending to write and propose a visit. Now, however, I decided to call on the chance of his being disengaged, and if he should be unable to see me, to make an appointment.

From the Tower Wharf I made my way quickly to Mark Lane, noting as I entered the station that it was a quarter to six; and as the train rumbled westward I turned over the situation and decided on what I should say. That some trouble was brewing I had little doubt, and though I did not share Mr. Otway’s alarm, I was more than a little uneasy. For, at the best, the re-opening of the inquiry into my father’s death must entail a scandal and exhibit my conduct in a decidedly questionable light; and such a scandal would be a disaster. As a discredited witness, how could I face my comrades at Wellclose Square? And how should I stand with Jasper Davenant? These were unpleasant questions to reflect on. And underneath these reflections was the uneasy feeling that perhaps there was something more in Mr. Otway’s fear than was known to me; something of which I had hardly dared to think.

From the Temple Station I found my way without difficulty to Dr. Thorndyke’s chambers at Number 5A, King’s Bench Walk, and was relieved to find the outer oak door open and a small brass knocker on the inner one tacitly accepting the possibility of visitors. I plied it modestly, and was immediately confronted by Mr. Polton, whose countenance, at the sight of me, became covered with a net work of benevolent and amicable wrinkles.

“The doctor is up in the laboratory looking over his apparatus, but I expect he has nearly finished. I’ll go and tell him you are here. Have you had tea?”

I had not and admitted the fact, whereupon Mr. Polton nodded meaningly, and having offered me an arm-chair, took his departure. In a minute or two Dr. Thorndyke entered the room and greeted me with a cordiality that put me at my ease instantly.

“I have been wondering when you were coming to see me; in fact, I have seriously considered calling at Wellclose Square to see how you were getting on. Polton will bring you some tea in a moment, and then you must tell me all your news. I hope you are comfortable in your new home.”

“I am very happy, indeed, Dr. Thorndyke, and very grateful to you for finding me such a congenial home. And I have made quite a promising start in my new profession, too. But I have really come to ask your advice—and to make a confession.”

“A confession,” said Dr. Thorndyke, looking at me gravely. “Is it necessary? and have you given it due consideration?”

“Yes, I think so. There is only one point. I should have told you this secret before, but as another person is involved in it, I felt that it would be a breach of confidence. But I now feel that my legal adviser should be told every thing.”

“That is so. Advice can only be based on known facts. And I may say that anything that you may tell me in my professional capacity is a privileged communication. A lawyer cannot be compelled to reveal anything that his client has told him, and is, in fact, forbidden to do so. You are, therefore, committing no breach of confidence in giving me any necessary information.”

“I am glad to know that, because, when I last spoke to you about my affairs, I held back something that you may consider important.”

“Something relating to the inquest?” he asked.

“Yes. Did you suspect that I had?”

“I suspected that Mr. Otway was holding something back when he gave his evidence—but here is your tea, with all the little lady-like extras, just to show you what an old bachelor can do in the way of domestic miracles. I am ashamed of you, Polton. I call that embroidered tea-cloth sheer ostentation.”

Mr. Polton laid out the dainty service, beaming with satisfaction at the doctor’s recognition of his efforts to maintain the credit of the establishment, and as he went out I heard him close the outer door.

“Polton evidently smells a conference,” commented Dr. Thorndyke. “The infallible way in which he always does the right thing without a word of instruction almost makes me believe in telepathy—which might be awkward if he were not as secret as an oyster. Now don’t hurry, but tell me quietly what you want me to know.”

Thus encouraged, I gave him the suppressed facts relating to the loaded stick that I had seen in Mr. Otway’s hand, and then told him about the mysterious letters. He listened very attentively, and seemed deeply interested, for he questioned me at some length about Mr. Otway’s establishment at Maidstone, his mode of life and such of his antecedents as were known to me.

“Is the stick in your possession or has Mr. Otway got it?” he asked.
"I suppose he has it. At any rate, I have never seen it since that day."

"And you know nothing of any of his associates, other than the housekeeper?"

"Nothing whatever."

"Is Mrs. Gregg still with him?"

"I believe so, but I am not sure."

"And you know nothing of his present mode of life excepting that he lives in Lyon’s Inn Chambers?"

"No. I really know nothing about him."

"It is very satisfactory for you," Dr. Thorndyke observed. "You are quite in the dark. These letters suggest an intention to extort money, but they may come from a personal enemy or from someone who has some design other than direct blackmail. And the question is, what cards does that person hold? Is he acting on a mere guess or has he any actual knowledge? The problem involves two questions: was there anyone in the house, that morning, besides you, your father and Mr. Otway? and did anything occur on that occasion beyond what Mr. Otway told you? The answer seems to be in the negative in both cases; but we cannot be certain on either point. Meanwhile, your position is very unpleasant, and Mr. Otway’s still more so, for his apprehensions, though perhaps exaggerated, are not entirely groundless. He has behaved with consummate folly. Whether his account of the tragedy be true or false, if he had had the courage to give it in full at the inquest, it must have been accepted in the absence of contrary evidence. But that is by no means the case now. If the inquiry were re-opened, a jury would tend to regard his suppression of certain facts as evidence of the importance of those facts.

"As to advice: there is nothing that you can do but try to forget these menacing letters. I will make a few cautious enquiries—though we have very little to go on; and you must let me know at once if there are any fresh developments."

This ended the conference, but not the conversation, for Dr. Thorndyke insisted on a full account of my progress as a craftsman, and even called down Mr. Polton to give an expert opinion on Mr. Campbell’s prices; which opinion was to the effect that they were as good as could be expected.

"So," said Dr. Thorndyke, as I rose to depart, "you have justified your rather bold choice of a profession. You have already made it an economic success, and with more experience on the commercial side, you will probably earn a very satisfactory livelihood."

This was encouraging enough, backed as it was by Mr. Polton’s practical experience. But with the other results of this conference I was much less satisfied. Indeed, my talk with Dr. Thorndyke, though it had relieved me of the burden of concealment, so far from setting my apprehensions at rest, had rather increased them. Not only was it evident that he regarded these mysterious letters as indications of a real danger, but he clearly entertained the possibility that Mr. Otway might have something more than I knew to conceal; in fact, I was by no means sure that he did not suspect Mr. Otway of having killed my father.

Here, then, was abundant matter for reflection, and that none of the most pleasant; and during the next few days my mind was very full of these new complications, of this dark cloud which had arisen over my brightening horizon. Again and again I recalled in detail the incidents of that terrible morning when my dear father was snatched from me, but no new light, either on the tragedy itself or on these sinister echoes of it, came to me. I even tried Lilith’s crystal—having first locked my door—but either my faith was weak or I lacked those special psychical gifts with which its owner credited me. I did, indeed, get as far as the cloud, or mist, of which Lilith had spoken; which gathered before my eyes and blotted out the crystal. But that was all. When the mist cleared away, no picture emerged from it, but only the crystal ball with the diminutive image of my own head reflected on its bright surface.

But anxieties sit lightly on the young and healthy. As the days passed, the gloomy impressions faded and I became once more absorbed in my work. The Zodiac spoons were progressing apace, and were going to do me credit; and daily I became conscious of growing facility, of increasing skill, which not only lessened my labour but was itself a source of pleasure. To do a thing with ease is to do it with enjoyment; and, incidentally, added skill means added speed and greater earning power. Already I began to speculate on what Mr. Campbell’s idea of “a good price” would turn out to be.

Moreover, there were other distractions. Once or twice a week I looked in at the club, and these visits had a pleasant way of developing into impromptu jaunts—to picture galleries, exhibitions, museums, and even on one or two occasions a concert or a matinée. Of the relations which were growing up between Jasper Davenant and me I did not care to think much. Perhaps the ostrich is a wiser bird than we are apt to imagine, for it does, at least, avoid the pains of anticipation. Sooner or later, no doubt, some understanding would have to be arrived at; but meanwhile Mr. Davenant was a delightful companion—gay, cheerful, buoyant, humorous, but withal a man of earnest purpose and a serious outlook on life. In all our junketings was little, real frivolity; the fun and gaiety were but the condiments to season the more solid and serious interests. In so far as a friendship between a young man and a young woman, which must necessarily stop at friendship, can be, our friendship was unexceptionable. But; of course, there was the qualification. However, as I have said, I let the future take care of itself and drifted pleasantly with the stream.

About this time, I made quite a startling discovery. It happened that in one of my journeys to town I had seen in a bookseller’s window a book on studio pottery, and, thinking that it might be useful to Miss Finch, I had bought it, but had forgotten to give it to her. In the middle of my morning’s work I suddenly remembered the book, which I had put in a
cupboard in the workshop, and got up from my bench to take it to her. Her “works” were at the bottom of the garden, in an outhouse which had once been a ship-smith’s shop; but, close neighbours as we were, and close friends, too, I had only once been in her workshop, when, on an off day, she had shown me her wheel, her lathe and her small glass kiln. About her work she was extraordinarily secretive; but then, she was a reticent girl in general, so far as her own affairs were concerned, though she showed a warm interest in her friends, and was, indeed, very affectionate and lovable.

As I came round the clump of bushes that hid her premises from the house, the silence and repose of the place gave me some qualms, and for a moment I hesitated to interrupt her work. However, I pocketed my scruples and rapped boldly on the door; whereupon the familiar voice at its highest pitch—several ledger lines above the stave—demanded who was there.

“It is I, Peggy; Helen Otway,” I replied apologetically. There was a pause of nearly half a minute, and then she unlocked and opened the door, looking rather embarrassed and very pink.

“I always lock myself in when I am at work,” she explained.

“Well, Peggy, don’t let me disturb you. I’ve only brought you a book that I got for you in town.”

“Oh, come in, Sibyl,” said she. “Of course I don’t mind you.”

She took the volume from me, and quickly turning over the pages and glancing at the illustrations, exclaimed, “What a ripping book! I shall enjoy reading it. And how sweet of you to think of getting it for me!” She linked her arm affectionately in mine and conducted me into her domain, passing through the outer room, which was devoted to plaster work—the making of moulds and “bats”—to the clay room, where the little gas engine and the mysterious wheel stood idle and a general tidying up appeared to have taken place. Here we stood chatting rather disjointedly, she still turning over the pages of the book with approving comments, and I looking about me with a craftsman’s curiosity respecting the materials and appliances of an unfamiliar craft. And here I got my first surprise; for, on a side bench I noticed a collection of what were evidently bookbinder’s tools. Was it possible that the secretive Titmuse was a bookbinder as well as a potter? I determined to inquire into this, but meanwhile my attention was attracted by the bench at which she had evidently been working, as suggested by the displaced stool. On this bench stood an object of some size—about twelve inches high—enveloped in a damp cloth. By its side were a spray-diffuser, a number of little spatulas and tiny modelling tools, and several little covered pots of a creamy, white earthenware delicately ornamented with floral decoration in a warm blue. Venturing to lift the cover of one, I found it to be filled with little rolls of brightly-tinted clay that looked like coloured crayons.

“You are mighty fastidious about your apparatus,” I remarked, picking up the dainty little pot and wiping some smears of clay from its surface.

“And why not?” demanded Peggy. “Why shouldn’t one have pretty things to work with? The old craftsmen did. I’ve seen some old planes and chisel-handles beautifully carved, and I am sure they did better work for having beautiful tools to work with. I would have pretty tools myself if I could make them.”

“You shall, Peggy,” said I. “You shall show me what you want and I will make them for you.”

As I was speaking I absently turned the little pot upside down and glanced at the bottom. And then I really did get a shock. There was only a single spot of ornament on the base, but that spot was a revelation: for it was a little blue bird.

I smothered the exclamation that rose to my lips and put the pot down on the bench. What could be the meaning of this? Had Peggy, like Mr. Hawkesley, been attracted by Mr. Goldstein’s wares? Or was it possible—“Won’t you show me what you were doing, Peggy?” I asked.

She turned scarlet at the question, and looked so distressed that I felt it a cruelty to press her. But cruel or not, I meant to get to the bottom of the mystery.

“I’d rather not, Sibyl, if you don’t mind,” she said, shyly.

“But why? What an extraordinary little person you are.”

“Well,” she said, doggedly, “if you must know, I am not allowed to show my work to anyone.”

“Not allowed by whom?”

“By the dealer who takes all my work. For some reason, best known to himself, he makes a secret of it; won’t allow anyone to know who makes it.”

“But apart from the dealer, Peggy, you wouldn’t mind my seeing your work?

“Of course I shouldn’t. I should like you to see it. But a promise is a promise, you know.”

“Of course,” I agreed; and then I stepped quickly up to the bench and very carefully picking up the damp cloth, lifted it clear of the object which it covered; which turned out to be a jar standing on a small turn-table. Peggy sprang forward with a gasp of consternation; but she was too late. The deed was done; moreover, the murder was out; for in the moment when my first glance fell on the jar, Mr. Hawkesley’s “mystery ware” had ceased to be a mystery so far as I was concerned.

The appearance of the jar was rather curious, but perfectly unmistakable. The clay, in its “green” state—unbaked and still somewhat plastic—was of a cool, grey colour, and the surface of the squat, octagonal body and the short neck and rim was covered with rich and intricate floral ornament, very minute, sharp and delicate. In the completed part this ornament was
of dull blue and finished flush with the surface; in the unfinished part it was simply indented and had the appearance of what bookbinders call "blind tooling," but was somewhat deeper.

From the work, my eyes turned with a sort of respectful wonder to the creator, who stood by my side with an air partly embarrassed, partly defiant. To me there was something very impressive in the thought that this unassuming, little lady was actually a master craftsman (I am compelled to use the masculine form, there being no feminine equivalent); the creator of masterpieces which would live in the great collections of the future for the admiration of generations yet unborn. And in the first shock of surprised admiration and pride in my friend's achievement I had nearly blurted out all that I knew. But reflection suggested a better plan.

"My dear Peggy!" I exclaimed. "I never dreamed that you did work of this quality."

"There's nothing very wonderful about it," she replied, regarding the jar with a kind of affectionate disparagement. "It is only a poor imitation of the beautiful Oiron ware. That pottery has always interested me; partly because it is so lovely, and partly because, according to tradition, it was made by a woman—Helene de Hangest-Gerilis. But my work isn't a patch of hers, and it isn't even as good as I could do."

"How is that?"

"Well, you see, it ought to have more modelled ornament than I put on. It ought to be more important. Her pieces were most elaborately modelled—many of them had figures in the full round. But I can't afford to carry my work as far as that. It would take too long. Besides, I have to work to order, to some extent, and my orders are to keep to moderately, simple pieces."

"Your orders! From the dealer, I suppose? Tell me about him, Peggy, and how it is that you are such a slave."

"I'm not a slave," she retorted doggedly. "But I have a contract with a dealer. He takes the whole of my work, and he makes it a condition that I shan't sell anything to any one else or let anybody know what kind of work I do. I oughtn't to have let you in, but I know that I can trust you not to breathe a word to anyone of what you have seen here."

Mr. Hawkesley was right, then; and I recalled with sympathetic vindictiveness his desire to wring the dealer's neck.

"Concerning this contract, Peggy," said I. "You say the dealer has the right to the whole of your work. Did he pay you anything for this privilege?"

"Yes. He paid five pounds when the agreement was signed; but he deducted it from the payment for the first lot of pieces."

"Then it was only payment on account, not payment for the exclusive right to all your work. And with regard to the prices, how are they fixed?"

"Oh, the dealer fixes the prices, of course. He knows more about it than I do."

"Evidently. But what sort of prices does he fix?"

"Oh, ordinary prices, I suppose. He will probably give me fifteen shillings for this jar."

"And how long will it take you to make it?"

"Let me see," she said, reflectively. "There is the throwing and turning; that doesn't take very long. Then this one had to be shaped after it was turned. Then there comes the decorating; of course that is what takes the time. Including the cover, I should say there is nearly a week's work in that jar. And then it has to be fired and glazed; but the firing and glazing are done in batches."

"And all this for fifteen shillings a week!" I exclaimed.

"Say a pound," said she. "That is about what I earn. It isn't much, is it? But I have a little money of my own, though I spent most of it on fitting up the workshop."

"And what period does this precious contract cover? When does it expire?"

"Expire?" she repeated, a little sheepishly. "I don't know that it expires at all. No period is mentioned in it."

"Peggy," I said, solemnly; "you should alter your potter's mark. Take out the little, blue finch and put in a little, green goose. But, seriously, we must see into this. I am a lawyer's daughter—not that I profess to have inherited a knowledge of law. But I am certain that this agreement is not binding. Will you let me show it to a friend of mine who is a lawyer? In strict confidence, of course."

"Yes, if you like, Sibyl. But I don't see that it matters. I like doing the work and I do make a living by it. What more would you have?"

"I thought you said you would like to do something more ambitious—the very best work of which you are capable. Wouldn't you?"

She was silent for a while, and a far-away, wistful look stole into her face. Suddenly she said: "Sibyl, I'm going to show you something; but you mustn't tell anyone." She led me to a large cupboard, the door of which she unlocked and threw open. On the single shelf was a model in red wax of a tall candlestick or lamp-holder of the most elaborate design, the shaft and capital-like socket enriched—though sparingly—with fine relief decoration, and the base occupied by a spirited and
graceful group of figures, beautifully modelled and full of life and expression.

“That,” she said, “is to be my chef d’art—though it doesn’t look much in the wax. You must think of it in ivory-white, with a rich coloured inlay and perhaps some under-glaze painting. It has taken me months, doing a bit whenever I have had time, or when I couldn’t resist the temptation to go on with it. Now it is finished, as far as the modelling goes, and the next thing will be to mould it. But I shan’t actually make the piece at present, because I don’t mean him to have it—the dealer, you know. If I finished it now, it would be his, of course.”

“Yes, by the contract it would. And it mustn’t. This piece ought to give you a position in the front rank of artist potters. But I mustn’t waste any more of your time. You will let me have that agreement, won’t you?”

She promised that I should have it at lunch-time, and with this I went back to my workshop to consider a plan that had come into my mind for her enlightenment and emancipation. But it turned out that there was no need for scheming on my part, for chance or Providence offered me the opportunity ready-made. That very evening I received a short note from Mr. Davenant informing me that Miss Tallboy-Smith had acquired a collection of English and French soft porcelain, and that she proposed to exhibit the whole of her new acquisition for a week at the club.

“She rather wants,” he said, “to make the opening day something of a function, and has asked Hawkesley and me to be there to lunch. Can you come, too? It would please her if you could—and you know how delighted Hawkesley and I would be. Besides, I think it will really be a very interesting show.”

Here was the very chance that I wanted. Forthwith, I swooped down on the unsuspecting Titmouse and secured her agreement to bear me company to a “pottery show,” without giving too many particulars. Then I wrote to Mr. Davenant telling him that I was bringing a guest who was deeply interested in pottery and porcelain, and asking that we might form a party of four at a small table.

By the same post I sent off Peggy’s agreement to Dr. Thorndyke, with the request that he would tell me whether it was or was not legally binding. And, having thus laid the train, as I hoped, for the discomfiture of Mr. Goldstein, I felt at liberty to return to my own affairs.

XVII.—THE APOTHEOSIS OF THE TITMOUSE

THE respective merits of hard and soft porcelain have been, from time to time, warmly debated by collectors and experts, but never, perhaps, have they been more earnestly discussed than on the occasion of the opening of Miss Tallboy-Smith’s exhibition. During the half-hour which preceded lunch, the central glass case and the additional show-cases which had been set up for the occasion were surrounded by groups of eager connoisseurs, and the contrasting virtues of the pate tendre and the more durable, if less beautiful, true porcelain were once more considered and expounded.

The attendance of the members and their friends must have been highly gratifying to Miss Tallboy-Smith, though it was no greater than was warranted by the importance of the exhibition; for the collection included representative pieces, not only of Chelsea, Bow, Nantgarw, Pinxton, and other English ware; but also of the old, French soft paste porcelain, including several early examples of Sevres. The preliminary glance at the collection had furnished material for conversation, as I could see by observing the occupants of the long central table, at the head of which sat the beaming hostess, supported by Major Dewham-Brown (who talked little, but consumed his food with intense concentration of purpose); and even our own small table, tucked away inconspicuously in a corner, was not immune from the influence of soft porcelain, for Mr. Hawkesley and my guest discussed the topic with a wealth of knowledge that reduced Mr. Davenant and me to respectful and attentive silence.

Our two friends were evidently very pleased with one another; and not without reason. For Mr. Hawkesley was much more than a mere collector; he was an enthusiastic and learned student of all kinds of ceramic work; while, as to my friend Peggy, her conversation revealed a familiarity with all kinds of materials and processes that made me feel quite shy as I thought of the artless handbook with which I had presented her.

But, indeed, Miss Peggy was quite transfigured. She had met with a kindred spirit. And under the influence of contagious enthusiasm, the usually silent and secretive Titmouse blossomed out in a manner that surprised me. As I listened to the animated duet of her chirping treble with Mr. Hawkesley’s robust baritone, I found it difficult to identify her with the quiet little potter who was wont to work behind locked doors in the old shipsmith’s shop at Welclose Square.

After lunch the siege of the showcases began again on a more portentous scale. Glass cases were opened for more complete inspection of their contents, and pieces were even hand-ed out to be handled, stroked and smelled at by the more infatuated devotees. As neither Mr. Davenant nor I could be included among the latter, we were satisfied by a comparatively brief inspection of the treasures, after which we retired to a sheltered seat to look on and talk.

“Just look at those two china-maniacs!” exclaimed Mr. Davenant. “They are as thick as thieves already. And what is Miss Finch going to do with that bléu de roi vase? Is she going to kiss it? No; she has given it back to the Tallboy-Smith. Well, well; enthusiasm is a fine thing. By the way, she is a nice little lady, this friend of yours; pretty and picturesque, too, and uncommonly well turned out. I’m beginning to have a new respect for Welclose Square.”

I looked at the Titmouse with a sort of motherly pride (though she was about my own age). The word picturesque described her admirably with her warm colour, her graceful hair, and the trim, petite figure that was so well set off by the
simple, artistic dress—in which I seemed to trace the hand of Lilith. She was my importation to the Magpies, and I felt that she was doing me credit.

“I have often wondered,” Mr. Davenant said, after a reflective pause, “what made you choose such an unlikely locality as Welclose Square for a residence, and, indeed, how you came to know of its existence. Very few middle-class people do. I hope Miss Vardon will not consider me unduly inquisitive.”

“Mrs. Otway will not,” said I.

“Mrs. Otway is a myth—a legal fiction. I refuse to recognise her existence. She is a mere creature of documents, of church registers. The real person is Miss Helen Vardon.”

“That sounds rather like nonsense,” said I, “but, of course, it can’t be, because the speaker is Mr. Davenant. Perhaps there is some hidden meaning in these cryptic observations.”

“There isn’t,” he rejoined; “or, at any rate, it shan’t remain hidden. I mean that I refuse to recognise your connection with this man, Otway, or to associate you with his beastly name.”

“But it is my beastly name, too, according to law and custom.”

“I don’t care for law and custom,” said he. “The name Otway is abhorrent to me, and it doesn’t properly belong to you. I shall call you Miss Vardon, unless you let me call you Helen; and I don’t see why you shouldn’t, considering that we are old and intimate friends.”

“It would undoubtedly have the support of a well-established precedent. There was a certain bishop who was called Peter because that was his name. That precedent would apply to Helen, but it certainly would not to Miss Vardon.”

“Then,” he rejoined, “let us follow this excellent precedent. Let it be Helen. Is that agreed?”

“I don’t seem to have much choice; for if ‘Mrs. Otway’ is a legal fiction, ‘Miss Vardon’ is an illegal one.”

“Well, don’t let us have any fictions at all. Let us adhere to the actual baptismal facts.”

“Very well, Mr. Davenant.”

“But why ‘Mr. Davenant’? My baptismal designation is Jasper.”

“And a very pretty name, too,” said I. “But the precedent does not apply in your case. You have not married Mr. Otway.”

“No, thank Heaven! If I had, there would be a case of petty treason. But neither have you, for that matter. You have only gone through a ridiculous ceremony which means nothing and signed a document which sets forth what is not true.”

“It seems to me,” I said, “that we are not adhering to our agreement to avoid fictions. My marriage, unfortunately, is perfectly real and valid in the eyes of the law.”

“The law!” he exclaimed, contemptuously. “Who cares for the law? Have we not the pronouncement of that illustrious legal luminary, Bumble C.J., that the law is a ass and a idiot? And, mark you, he was specially referring to matrimonial law. Now, who would base his actions and beliefs on the opinions of an ass and a idiot?”

“And to think,” said I, “that you have abandoned the law for mere architecture! With your gift for casuistry, you ought to have been a Chancery lawyer or else a Jesuit. But here is Miss Tallboy-Smith. She thinks we are neglecting her treasures.”

But our hostess had not come to utter reproaches. On the contrary, she was brimming over with pleasure and gratitude.

“My dear Mrs. Otway,” she exclaimed, beaming on me and grasping my hands affectionately, “I can’t thank you enough for bringing that dear young lady, Miss Finch, to see my porcelain. She is a sweet girl, and she simply knows everything about china. It is perfectly wonderful. She might be a potter herself. And her love of the beautiful things and her enjoyment in looking at them has given me, I can’t tell you how much, pleasure. You must really bring her to see my whole collection. Will you? I shall love showing it to her.”

I agreed joyfully, for this would mean another nail in the coffin of Mr. Goldstein; and as Peggy and Mr. Hawkesley joined us at this moment, I was able to complete the arrangement and fix a date.

As Miss Tallboy-Smith bustled away, Mr. Hawkesley put in his claim.

“I don’t see,” said he, “why I should be left out in the cold. I’ve got a collection, too; and I think it would really interest Miss Finch, for she tells me she has seen very little modern pottery. Won’t you bring her to see it, Mrs. Otway?”

Again I accepted gladly, with Peggy’s consent. My scheme was working rapidly towards a successful conclusion, and I felt that I could push it forward energetically; for that very morning I had received a letter from Dr. Thorndyke returning the agreement and denouncing it as legally worthless and utterly opposed to public policy.

“As to fixing a date,” said Mr. Hawkesley, “I suggest that we all adjourn to my rooms now. Come and have a cup of tea with me and then we can look over the crockery. How will that do?”

It suited Peggy and me quite well, and we said so.

“And you, Davenant?” asked Mr. Hawkesley.

“Well, I had one or two cathedrals to finish,” was the reply; “but they must wait. Art is long—deuced long, in my case.
Yes, let us adjourn and combine crockery and tea—which, as Pepys reminds us is a 'China drink,' and therefore appropriate to the occasion."

On this, we sallied forth and made our way to the Strand, where we chartered a couple of hansom to convey us to Dover Street, Piccadilly, where Mr. Hawkesley had his abode in one of those fine, spacious, dignified houses that one finds in the hinterland of the West End of London. His rooms were on the first floor, and when we arrived there by way of a staircase which would have allowed us to walk up four abreast, we were received by a sedate and impassive gentleman, whose appearance and manner suggested a Foreign Office official of superior rank.

"Would you let us have some tea, please, Taplow?" said Mr. Hawkesley, addressing the official deferentially. Mr. Taplow opened a door for us, and having signified a disposition to accede to the request, departed stealthily.

As we entered the large, lofty room, well lighted by its range of tall windows, I looked about me curiously, for I was instantly struck by the absence of pottery among its ornaments. The available wall-spaces were occupied by important pictures—all modern; the mantelpiece and other suitable surfaces supported statuettes of marble or bronze—again all modern. But of ceramic ware there was not a trace, with the single exception of a small framed cameo relief. Rather did the apartment suggest the abode of a furniture collector, for one side of the room, opposite the windows, was occupied by a range of armoires, or standing cupboards, mostly old French or Flemish.

"You don't favour the glass case, I notice, Hawkesley," said Mr. Davenant.

"No," was the reply. "They are well enough for public museums, but they are unlovely things. And one doesn't want to look at one's whole collection at once. I like to take the pieces out singly and enjoy them one at a time. You see, each piece is an individual work. It was the product of a separate creative effort, and ought to be enjoyed by a separate act of appreciation."

"You seem, Mr. Hawkesley," said I, "to have a preference for modern work. Do you think it is as good as the old?"

"I think," he replied, "that the best modern work is as good as any that was ever done. Of course, I am not speaking of commercial stuff. That is negligible in an artistic sense. I mean individual work, done under the same conditions and by the same class of men as the old craft work. That is quite good. The pity is that there is so little of it. But I am afraid the supply is equal to the demand."

"Don't you think," said Mr. Davenant, "that that is partly the fault of the modern craftsman? Of his tendency to confine himself to fine and elaborate, and therefore costly, productions? Of course, the old work was not cheap in the modern factory sense of cheapness. The pottery and china that was made at the Etruria works or those of Bow or Chelsea was by no means given away. But the prices were practicable for every day purposes, whereas modern studio pottery is impossible for domestic use. And the same is true of other craftwork, such as book-binding, fine printing, textiles, metal work, and so on. If the modern craftsman caters only for the collector and ignores the utilitarian consumer, he can't complain at being ousted by commercial production."

Here the arrival of Mr. Taplow with the tea arrested what threatened to prove a too-interesting discussion. I should have liked to continue it—on another occasion; at present, my desire was rather to "cut the cackle and get to the horses." Accordingly, while the tea was being consumed, I rather studiously obstructed any revival of the debate by keeping up a conversation of a general and somewhat discursive character; and as soon as we appeared to have finished I introduced the subject of Ceramics.

"Is that plaque on the wall a Wedgwood cameo?" I asked.

"Oh, no," Mr. Hawkesley replied. "That is an example of Solon's wonderful pate-sur-pate work. It is done with white porcelain slip on a dark, coloured ground. Come and look at it."

We all rose and gathered round the plaque while Mr. Hawkesley descanted on its beauties; which were, indeed, evident enough.

"It is lovely work," said he; "so free and spontaneous. The Wedgwood reliefs look quite stiff and hard compared with these of Solon's. I have some of his vases with the same kind of decoration, and we may as well look at those first."

He wheeled a travelling turn-table towards a fine Flemish armoire of carved oak, and opening the latter, displayed a range of pieces of this beautiful work, at the sight of which Peggy's eyes glistened. One after another they were carefully placed on the turn-table, viewed from all points, admired, discussed and replaced. The other contents of the armoire were less important works—mostly French—but all received respectful attention. The next receptacle, a French armoire of carved walnut, was devoted to modern stone-ware by the Martin Brothers, Wells and other individual workers, concerning which our host was specially enthusiastic.

"There," said he, placing on the turn-table a wonderful Toby jug of brown Martin ware, "Show me any old salt-glaze ware that is equal to that! Look at the modelling! Look at the beautiful surface and the quality of the actual potting! And then go and look at the stuff in the shop windows. Just good enough for the slavery to smash."

"Well," Mr. Davenant remarked, "you can't say that she doesn't appreciate its qualities and do justice to them. If former generations had been as energetic smashers as the present, collectors of old stuff would have had to seek their treasures in ancient rubbish-heaps."

"Yes, that is a fact," agreed Mr. Hawkesley, as we moved on to the next cupboard. "When domestic pottery was more
valuable it got more respectful treatment. Now this cupboard is only partly filled. I keep it for the work of one artist whose name I don’t know. I’ve shown you some of the ware, Mrs. Otway, but it may be new to Miss Finch.”

As he unlocked the door my heart began to thump, and I cast an anxious eye on Peggy. For I knew what was coming, but I didn’t know how she would take it. At the moment she was looking at the closed door with pleased expectancy. Then the door swung open, and in a moment she turned pale as death. For one instant I thought she was going to faint, and so, apparently, did Mr. Davenant, for he made a quick movement towards her. But the deadly pallor passed, and was succeeded as rapidly by a crimson flush; but her quick breathing and the trembling of her hand showed how great the shock had been.

Meanwhile, Mr. Hawkesley, all unconscious, was glancing over the row of vases, jars and bowls, and exalting on the peculiar beauties of the “mystery ware.” The pieces were separated into two groups; the works in pure inlay and those combining the inlay with slip decoration and embossed ornament; and of the latter he presently lifted from its shelf and placed on the turn-table.

“Now, isn’t that a lovely jar, Miss Finch?” said he. “And doesn’t it remind you of the beautiful St. Porchaire, or Oiron ware?”

Peggy gazed at the jar with an inscrutable expression as she slowly rotated the turn-table. “It is somewhat like,” she agreed; “at least, the method of work is similar.”

“Oh, don’t give my favourites the cold shoulder, Miss Finch,” said Mr. Hawkesley. “I think I prize my pieces of this ware more than anything that I have. It is so very charming and so interesting. For, you see, it is real pottery; I mean that, beautiful and precious as it is, it is quite serviceable for domestic purposes, whereas much of the studio pottery is made for the gallery or the cabinet.”

“You haven’t discovered yet where it is made, I suppose?” I asked.

“No,” he replied. “Its origin is still a mystery and something of a romance—which may be one reason why I am so devoted to it. I often speculate about the potter, and invent all sorts of queer theories about him.”

“As for instance?”

“Well, sometimes I fancy that he may be in debt to this dealer—that he may have had advances or loans and be unable to pay them off and get free. It is quite possible, you know. Then, sometimes I have thought that he may be one of those poor creatures who drink or take drugs, and that the dealer may keep him slaving in some cellar for his bare maintenance and his miserable luxuries. But I’ve given that idea up. This work is too sane and reasonable and painstaking for a drunkard or drug-taker. But, who ever and whatever he is, I wish I could find him out, and thank him for all the pleasure that he has given me, and help him to get a proper reward for his labour, which I am sure he does not.”

“I don’t know why you are so sure,” said Mr. Davenant. “This ware is pretty expensive, isn’t it?”

“Not if you consider that each piece is an individual work on which a great deal of time and labour has been expended. The price that I paid Goldstein for this particular piece was seven guineas, which wouldn’t represent very high remuneration if the artist had the whole of it.”

“Seven guineas, Mr. Hawkesley!” exclaimed Peggy, incredulously.

“Yes, Miss Finch; and I should say very cheap at the price.”

I glanced at Peggy with malicious satisfaction, for her cheeks were aflush with anger and the light of battle was in her eyes.

“What a shame!” she protested. “How perfectly scandalous! The grasping, avaricious wretch! To charge seven guineas for a piece that he bought for fifteen shillings!”

For a few seconds there was an awesome silence. Peggy’s exclamation had fallen like a thunderbolt, and the two men gazed at her in speechless astonishment; while she, poor Titmouse, stood, covered with blushes and confusion, looking as if she had been convicted of pocketing the spoons.

“You actually know,” Mr. Hawkesley said, at length, “that Goldstein gave only fifteen shillings for that jar?”

“Yes,” she stammered faintly, “I—I happen to have—to be aware—that—that was the amount paid—”

She broke off with an appealing glance at me, and I proceeded to “put in my ear.”

“It’s no use, Peggy. The cat is out of the bag—at least her head is, and we may as well let out the rest of her. The fact is, Mr. Hawkesley, that this ware is Miss Finch’s own work.”

I now thought that Mr. Hawkesley was going to faint. Never have I seen a man look so astonished. He was thunderstruck.

“Do you mean, Mrs. Otway,” he exclaimed, “that Miss Finch actually makes this ware herself?”

“I do. It is her work from beginning to end. She does the potting, the decorating, the firing and the glazing. And she does it without any assistance whatever.”

Mr. Hawkesley gazed at Peggy with such undissembled admiration and reverence that I was disposed to smile—though I
liked him for his generous enthusiasm—and the unfortunate Titmouse was reduced to an agony of shyness.

"This is a red letter day for me, Miss Finch," said he. "It has been my dearest wish to meet the creator of that pottery that I admire so intensely; and now that wish is gratified, it is an extra pleasure to find the artist so much beyond—"

He paused to avoid the inevitable compliment, and Mr. Davenant held up a warning finger.

"Now, Hawkesley," said he; "be careful."

"I know," said Mr. Hawkesley. "It is difficult to steer clear of banal compliments and yet to say what one would like to say; but really the personality of the mysterious artist has furnished a very pleasant surprise."

"I can believe that," said Mr. Davenant. "I can imagine, for instance, that you find Miss Finch a very agreeable substitute for the intoxicated gentleman in the cellar."

At this we all laughed, which cleared the air and put us at our ease.

"But," said Mr. Davenant, "proud as we are to have made the acquaintance of a distinguished potter, we are haunted by the spectre of that fifteen shillings. We get the impression that Miss Finch's business arrangements want looking into."

"Yes," agreed Mr. Hawkesley, "they do indeed. Why do you let this fellow have your work, at such ridiculous prices, too?"

"It isn't so ridiculous as it looks," replied Peggy. "When I began, I couldn't sell any of my work at all. It was frightfully discouraging. No one would have anything to do with it. My first work was simple earthenware, and even the cheap china shops wouldn't have it. Then I chanced upon Mr. Goldstein, and he bought one or two simple, red earthenware jars and bowls for a few pence each. It didn't pay me, but still it was a start. Then I experimented on this pipe-clay body with slip decoration and coloured inlay and showed the pieces to Mr. Goldstein; and he advised me to go on and offered to take the whole of my work, if I signed an agreement. So I signed the agreement, and he has had all my work ever since."

"At his own prices?"

"Yes. I didn't know what the things were worth."

"Well," said Mr. Davenant, "my law is a trifle rusty, but I should say that that agreement would not hold water."

"It won't," said I. "We have just had counsel's opinion on it, and our adviser assures us that it is worthless, and that we can disregard it."

"Then," said Mr. Davenant, "you had better formally denounce it at once."

"Why trouble to denounce it?" demanded Mr. Hawkesley. "Much better let me call on Goldstein and make him tear up the duplicate. He has got a fine, handy warming-pan hanging up in his shop. I saw it only this morning."

"The connection is not very clear to me," said I.

"It would be clear enough to him," was the grim reply.

Mr. Davenant chuckled. "Your methods, Hawkesley, appeal to me strongly, I must admit; but they are not politic. Legal process is better than a warming-pan, even if it were filled with hot coals. Let us hand the agreement to a reputable solicitor, and let him write to Goldstein stating the position. Miss Finch won't hear any more of her benefactor after that."

After some discussion, in which I supported Mr. Hawkesley's proposal, the less picturesque method of procedure was adopted, and Mr. Davenant was commissioned to carry it out.

"And we will have a one woman show of Blue Bird Ware at the club," said Mr. Hawkesley. "I will take my whole collection there and exhibit it with a big label giving the artist's name in block capitals. The pottery collectors will just tumble over one another to get specimens of the work when the artist is known."

The rest of Mr. Hawkesley's collection received but a perfunctory consideration. Even the gorgeous De Morgan earthenware, glowing with the hues of the rainbow, came as something of an anti-climax; and we closed the last of the cabinets with almost an air of relief.

"And now," said Mr. Hawkesley, as he pocketed his keys, "I suggest that we mark this joyful occasion by a modest festival—say, a homely little dinner at the club and an evening at the play. Who seconds my proposal?"

"We shall have to go as we are then," said I, "as we can't change."

"I think we can enjoy ourselves in morning dress," he rejoined; "and as we shall all be in the same shocking condition, we can keep one another in countenance."

The proposal was accordingly adopted with acclamation and carried into effect with triumphant success, and some slight disturbance of the orderly routine of the establishment in Welldclose Square; for it was on the stroke of midnight when Miss Polton, blinking owlishly, opened the green door to admit the two roisterers who had just emerged from a hansom-cab.

"It has been a jolly day!" Peggy exclaimed fervently as we said 'good-night' on our landing. "And it will be a jolly tomorrow, too."

"Yes; you will be able to get on with your masterpiece now; and when it is finished we can show it at the club and you will be able to sell it for a small fortune."
“I shan’t want to sell it,” she said. “If it is good enough, and if it wouldn’t seem too forward or improper, I should like to give it to Mr. Hawkesley—as a sort of thank-offering, you know.”

“Thank-offering for what?”

“For his appreciation of my work. I really feel very grateful to him, as well as to you, Sibyl, dear. You see, he not only liked the things, but he thought of the worker who made them. All the time that I was working alone, with the door locked, from morning to night to fill that cormorant’s pockets, Mr. Hawkesley was thinking of me, the unknown worker, looking for me and wanting to help me. I don’t think it is you who have got me out of Mr. Goldstein’s clutches. But I do feel very, very grateful to Mr. Hawkesley. Don’t you think it is quite natural that I should, Sibyl?”

“I think you are a little, green goose,” said I, and kissed her; and so ended the day that saw the end of her servitude and the dawn of prosperity and success.

XVIII. — AMONG THE BREAKERS

My preoccupation with Peggy Finch’s affairs had to some extent submerged my own, but now that my little friend had triumphantly emerged from the house of Bondage, I returned to my labours with a new zest. In spite of the various interruptions, the Zodiac spoons had made steady progress, and it was but a few days after our momentous visit to Mr. Hawkesley’s rooms that, almost regretfully, I put the finishing touches to the Fishes spoon—the last of the set.

It had been a pleasant labour, and as I laid out the completed set, I was not dissatisfied. True, there had been difficulties; but difficulties are the salt of craftsmanship. Some of the signs, such as Aries, Taurus, Leo, Virgo and Capricornus, had been quite simple, the head of the Ram, the Bull, or other symbolic creature furnishing an obvious and appropriate knop for the spoon. But others, such as Gemini, Pisces, and especially Libra, had been less easy to manage. Indeed, the last had involved a slight evasion; for, since it seemed quite impossible to work a pair of scales into a presentable knop, I had relegated them to the shoulder of the bowl and formed the knop of a more or less appropriate head of Justice blindfolded. So all the difficulties had been met by a pleasant and interesting exercise of thought and ingenuity, and the work—my magnum opus, for the present—was finished. And it was rounded off by a very agreeable little addition; for Phyllis Barton, who had seen and greatly admired the set, had made a delightful little case to contain it—just a pair of walnut slabs hinged together, the lower slab having twelve shaped recesses to hold the spoons and the lid ornamented with shallow carvings of a winged hour-glass and the phases of the moon.

I made up the spoons into a parcel and the case into another, so that they should not be treated together in a single transaction; and having advised Mr. Campbell by a letter on the previous day, set forth one morning for Wardour Street. The silent willingness which should have preceded my entry to the shop was inadvertently omitted, for as I crossed the street I observed Mr. Campbell exchanging blandishments with a large Persian cat of the “smoky” persuasion, and, as he saw me at the same moment, I had no choice but to enter straightway.

He received me with the most encouraging affability—indeed, he even condescended to shake hands—and was evidently pleased to see me. And his reception of my work was still more encouraging. There was none of the buyer’s proverbial disparagement. He was frankly enthusiastic. He held up each spoon separately at arm’s length, wagging his head from side to side; he inspected it through a watchmaker’s lens; he stroked it with a peculiarly flexible thumb, and finally laid it down with a grunt of satisfaction.

Then came the question of terms; and when he offered twenty-four guineas for the set, I was quite glad that the silent willingness had been omitted. For I should probably have willed eighteen.

Having settled the price of my own work, I produced the wooden case. Phyllis had priced it at half a guinea, which was ridiculous. I boldly demanded a guinea for it.

“That’s a long price,” said Mr. Campbell, pulling a face; of proportionate length. But I watched his thumb travel ling over the clean-cut carving, I saw him delicately fitting the spoons, one by one, into their little niches, and I knew that that guinea was as good as in Phyllibar’s pocket.

“It is a long price, Mrs. Otway,” he repeated, cocking his head on one side at the case. “But it’s a pretty bit of work; and it’s the right thing—that’s what I like about it. So suitable; it would be a sin to put those spoons into a velvet-lined case, as if they were common, stamped, trade-goods. Very well, Mrs. Otway, I’ll spring a guinea for the case; and I should like to see some more work from the same hand.”

This was highly satisfactory (though it was not without a pang of bereavement that I saw the little case closed and hidden from my sight for ever in a locked drawer); and when I had received the two cheques—I asked for a separate one for Phyllis—I tripped away down Wardour Street as buoyantly as if I had not a care in the world.

The association of ideas is a phenomenon that has received a good deal of attention. It was brought to my notice on this occasion when I found myself opposite St Anne’s Church; for no sooner had my eye lighted on its quaint warty spire than my thoughts turned to Mr Davenant—or rather, I should say, to Jasper. Perhaps he was in my mind already; possibly in the subconscious, as Lilith would have said, and the church spire may have acted as an autoscope—it would not have had to be an exceptionally powerful one. At any rate, my thoughts turned to him and to the Magpies Club, and it was not unnatural that my steps should take a similar direction.
As I followed the well-remembered route, I reflected on the changes that a few short months had brought. In that brief space a new life had opened. The solitary, friendless orphan who had sought sanctuary in Miss Polton’s house, how changed was her condition! Happy in her work, in her home, in her friends; for had she not her Lilith, her Phyllis, her Peggy—and Jasper? And here a still, small voice asked softly but insistently a question that had of late intruded itself from time to time. Whither was I drifting? My friendship with Jasper was ripening apace. But ripening to what? There could be but one answer; and that answer only raised a further question. In normal circumstances the love of a man and a woman finds a permanent satisfaction in marriage. But where marriage is impossible love is a mere disaster; a voyage with nothing but rocks and breakers at the end.

So whispered the still, small voice into ears but half attentive; and as I neared the bottom of Essex Street it became inaudible, for approaching the club-house from the opposite direction was Jasper himself.

“Well!” he exclaimed, “this is a piece of luck! And yet I had hoped that you might be coming into town to-day. Is it business or pleasure?”

“It has been business, and now I hope it is going to be pleasure. I am taking the rest of the day off.”

“Now, what a very singular coincidence! I am actually taking the rest of the day off myself.”

“Your coincidences,” I remarked, “somehow remind me of the misadventures of the bread-and-butter fly; they always happen.”

“Quite so,” he agreed. “But then, you see, if they didn’t happen they wouldn’t be coincidences. Do we begin by fortifying ourselves with nourishment?”

“I don’t know what you mean by ‘begin,’ but I came here to get some lunch.”

“So did I—another coincidence, by the way. Shall we take our usual little table in the corner?”

We seated ourselves at the table, and as we waited for our lunch to be brought, I ventured on a few inquiries into Jasper’s professional affairs.

“You seem to take a good many days off,” I remarked.

“I do. There is, so to speak, a distinctly marked ‘off side’ to my practice.”

“And when you are away, what happens? Do you keep a clerk?”

Jasper grinned. “You over-estimate the magnitude of my practice. No; I have a simpler and more economical arrangement. I let my little front office to a law writer, at a peppercorn rent, subject to the condition that he shall interview my clients in my absence, furnish evasive answers to their questions, and supply ambiguous and confusing information.”

“But don’t the clients get rather dissatisfied?”

Again Jasper smiled. “That question,” said he, “involves an important philosophic principle. A famous philosopher has proved his own existence by the formula ‘cogito, ergo sum’—I think, therefore I am—implying that if he didn’t exist he couldn’t think. Now, that principle applies to my clients. Before they can be dissatisfied, they must exist. But they don’t exist. Therefore they are not dissatisfied. Q.E.D.”

“I don’t believe you care whether they exist or not—but that is the worst of having an independent income.”

“It is a misfortune, isn’t it? But I bear up under it surprisingly. Will you have some of this stuff? It is called a pelion. I heard the waitress describing it as a pea-lion, apparently misled by the analogy of the pea-cock and the pea-hen. Evidently she is no zoologist.”

At this moment Miss Tallboy-Smith entered the room and halted at our table to exchange greetings and remind me of my engagement.

“Tell Miss Finch not to forget,” said she. “It’s next Wednesday. I shall have my things back from here by then, and I understand that Mr. Hawkesley has secured the cases for a special exhibition of studio pottery. You must bring Miss Finch to that, too.”

Like Jasper’s proxy, I gave an evasive answer to this, for I knew that wild horses would not drag Peggy to an exhibition of her own work. But evidently Mr. Hawkesley had made no confidences so far.

“Have you ever seen the Diploma Gallery at the R.A.?” Jasper asked when Miss Tallboy-Smith had flitted away. “If you haven’t, we might look in there for an hour this afternoon.”

As I had never seen the diploma works, I fell in readily with the suggestion, and accordingly, when we had finished lunch, we strolled thither and spent a very pleasant hour examining and comparing the works of the different academicians, old and new. From Burlington House we drifted into the Green Park, and presently took possession of a couple of isolated and lonely-looking chairs. For some time we gossiped about the pictures at which we had been looking in the gallery; then our talk turned on to the affairs of my friend Peggy.

“Hawkesley seems to have appointed himself Miss Finch’s advertising agent,” Jasper remarked. “And he’ll do the job well. He is an energetic man, and he knows all the pottery connoisseurs. I met him yesterday, and had to listen to Blue Bird ware by the yard.”
“I like him for his enthusiasm,” said I.

“So do I,” agreed Jasper. “And it is quite a little romance. His admiration of the pottery is perfectly genuine, as we know; but there is something in what he calls ‘the personality of the artist.’ I think he is distinctly ‘taken’ with your pretty little friend. How does she like him?”

“I think she is decidedly prepossessed. At any rate, she is profoundly grateful to him for discovering her work, and especially for the interest that he took in the unknown worker.”

“There you are, then,” said Jasper. “There are the ingredients of a life-size romance. Fervid admiration on the one side, gratitude on the other, and good looks and good nature on both. We shall see what we shall see, Helen; and I, for one, shall look on with the green eyes of envy.”

“Why will you? Do you want Peggy Finch for yourself?”

“I want Hawkesley’s good fortune. If he loves this little maid and thinks she cares for him, he can ask her to marry him. That is what makes me envious.”

I made no reply; indeed, there was nothing to say; and already the sound of the breakers was in my ears.

“I suppose, Helen,” he said, after a long pause, “you realize that I love you very dearly?”

“I know that we are the best of friends, and very deeply attached to one another.”

“We are much more than friends, Helen,” said he; “at least, there is much more than friendship on my side. You are my all—all that matters to me in the world. You live in my thoughts every moment of my life. When we are apart I yearn for the sight of you—I reckon the hours that must pass before I shall see you again, and when we are together the happy minutes slip away like grains of golden sand. But I need not tell you this. You must have seen that I love you.”

“I have feared it, Jasper—and that I might presently lose the dearest friend that I have in the world.”

“That you will never do, Helen, dearest, if I have the happiness to be that friend. Why should you?”

“It seems that it has to be. Our friendship has been a sweet friendship to me—too sweet to last, as I feared; and if some might cavil at it, it was innocent and wronged no one. But if it has grown into—into what I had feared it might, then it has become impossible. More than friends we can never be, and yet we cannot remain friends.”

We were both silent for more than a minute, and both were very grave. Then Jasper asked, with a trace of hesitation: “Helen, if we were as those other two are—if you were free—would you be willing to marry me?”

It was a difficult question to answer, in the circumstances and yet I felt it would be an unpardonable meanness to dissemble.

“Yes,” I answered; “of course I should.”

“Then,” said he, “I don’t see why we can never be more than friends.”

“But, Jasper, how can we? I am a married woman.”

“I don’t admit that,” said he. “Your marriage is a fiction. You are really a spinster with a technical impediment to the conventional form of marriage. Your so-called husband is a stranger to whom you have no ties. You don’t like, or even respect him; and certainly you have no obligations of duty to him, seeing that he induced you by a mere fraudulent pretence to go through this form of marriage with him.”

“I am not thinking of Mr. Otway,” said I. “He is nothing to me. I owe him no duty or consideration, and I would not sacrifice a single hair of my head for him. But the fact remains that I am, legally, his wife; and while he lives I can contract no other marriage.”

“But is that quite true, Helen?” he objected.

“Certainly it is; unless you consider a bigamous marriage as an exception, which it is not.”

“Of course I do not. Bigamy is a futile and fraudulent attempt to secure the appearance of a legal sanction. No one but a fool entertains bigamy.”

“Then I don’t see the meaning of your objection.”

“What I mean,” said he, “is that a fictitious marriage does not exclude the possibility of a real marriage.”

“Still I do not quite follow you. What do you mean by a real marriage?”

“A real marriage is a permanent, life-long partnership between a man and a woman. Ordinarily, such a partnership receives the formal endorsement of the State for certain reasons of public policy. But it is the partnership which is the marriage. The legal endorsement is an extrinsic and inessential addition. Now, in your case the State has accepted and endorsed a marriage which does not exist—which is a pure fiction. The result is that if you contract a real marriage, the State will withhold its endorsement. That is all. It cannot hinder the marriage.”

“This is all very ingenious, Jasper,” said I, “and it does credit to your legal training. But it is mere sophistry. The position, as it would appear to a plain person of ordinary common sense, is that a woman who is legally married to one man and is living as the wife of another, is a married woman who is living with a man who is not her husband.”
“That is the conventional view, I admit,” said he. “But it is a mistaken view. It confuses the legal sanction—which is not essential—with the covenant of life-long union, which is the essence of marriage—which, in fact, is the marriage.”

“But what is the bearing of this, Jasper?” I asked. “We seem to be discussing a rather abstract question of public morals. Has it any application to our own affairs?”

“Yes, it has. At least, I think so, though I feel a little nervous about saying just what I mean.”

“I don’t think you need be. At any rate, there had better be a clear understanding between us. Tell me exactly what you do mean.”

He considered awhile, apparently somewhat at a loss how to begin. At length, with evident embarrassment, he put his proposal before me.

“The position, Helen, is this: You and I have become deeply attached to one another; I may say—since you admit that you would be willing to marry me—that we love one another. It is no passing fancy, based on mere superficial attractions. We are both persons of character, and our love is founded on deep-seated sympathy. We have been friends for some years. We liked one another from the first, and as time has gone on we have liked one another better. Our friendship has grown. It has become more and more precious to both of us, and at last it has grown into love—on my side, into intense and passionate love.

“We are not likely to change. People of our type are not given to change. We love one another and we shall go on loving one another until the end.

“If our circumstances were normal, we should marry in the normal manner. That is to say, we should enter into contract publicly with certain formalities which would confer a definite legal status and render our contract enforceable in a court of law. But our circumstances are not normal. We are willing to comply with the formalities but we are not allowed to. We are not in the position of persons who, for their own purposes, lightly disregard the immemorial usages of society—who dispense with the formalities because they would avoid the responsibilities of formal marriage. We wish to enter into a lifelong partnership; we desire to undertake all responsibilities; we would welcome the formalities and the secure status. But the law refuses. There is a technical disability.

“We have, therefore, two alternatives. We may give up the marriage which we both desire, or we may marry and dispense with the formalities and the legal status. Supposing we give up the marriage. Just consider, Helen what it is that we give up. It is the happiness of a whole life-time. The abiding joy of the sweetest, the most sympathetic, companionship that is possible to a man and a woman. For though we are lovers, we are still friends, and friends we shall remain until death parts us. Our tastes, our interests, our sympathies make us prefer one another as companions to all other human beings. Of how many married couples can this be said? To us has been given that perfect comradeship that makes married life an enduring delight, a state of happiness without a cloud or a blemish. And this is what we give up if we let this disability, this technical impediment, hinder us from marrying.

“On the other hand, supposing we marry and dispense with the formalities, what do we give up? Virtually nothing. The legal security is of no value to us, for each of us is secure in the constancy of the other. If we enter into a covenant, we shall abide by it, not by compulsion, but because we shall never wish to break it. As to the legal status and the social recognition, is it conceivable that two sane persons should give up a life’s happiness for such trumpery? Surely it is not. No, Helen, let us boldly take our destiny into our own hands. Let us publicly denounce this sham marriage and cancel it for ever. I ask you, dearest, to give me the woman of my heart for my mate, my friend, my wife, for ever; to take me, unworthy as I am, for your husband, who will try, as long as he draws the breath of life, to make up to you by love and worship for what you have sacrificed to make him happy.”

As I listened to Jasper’s appeal—delivered with quiet but impressive earnest—I think I was half disposed to yield. It was not only that I admired the skill with which he put his case and the virile, masterful way in which he trampled down the obstructing conventions; but deep down in my heart I felt that he was right—that his separation of the things that really mattered from those that were trivial and inessential was true and just. But there was that vital difference between us; that he was a man and I was a woman. Our estimates of the value of the conventions were not the same. Without the legal sanction I might be his wife in all that was real; but the world would call me his mistress.

“Jasper, dear,” I said, “it is impossible. I admit the truth of all that you have said, and I wish—Oh! Jasper, how I wish, that I could accept the happiness that you offer me! You need not tell me that our companionship would be a delight for ever. I know it. But it cannot be. Even if I could accept it for myself, I could not accept it for you; I could not bear to think that, through me, you had been put outside the pale of decent society. For that is what it would mean. You—a gentleman of honour and reputation—would become a social outcast, a man who was living with another man’s wife; who, if he were admitted at all to the society of his own class, would have to be introduced with explanations and excuses.”

“I think you exaggerate the social consequences, Helen,” said he. “I propose that we should write to Otway and formally repudiate the marriage. Then, if we were boldly, and openly to state our position and the exceptional circumstances that had driven us to it, I believe that we should receive sympathy rather than condemnation. I don’t believe we should lose a friend; certainly not one whose loss would afflict us. And Otway could take his remedy, if he cared to.”

“You mean he could divorce me,” I said, with something like a shudder.

“Yes. But I am afraid he wouldn’t.”
“I don’t think he would. But if he did, it would be an undefended suit, and the stigma of the Divorce Court would be on us for ever.”

“It would be unpleasant, I admit,” he replied. “But think of the compensations. Think of the joy of being, together always, of having our own home, of going abroad and seeing the world together.”

“Don’t, Jasper!” I entreated. “It is too tantalizing. And even all this would not compensate me for the knowledge that I had dragged you from your honourable estate to a condition of social infamy.”

“You need not consider me,” he rejoined. “I have thought the matter out and am satisfied that I should gain infinitely more than I should lose; for I should have you, who are much more to me than all the rest of the world.”

“You haven’t thought of everything, Jasper,” said I. “You know of the folly I committed at the time of my father’s death—in withholding facts at the inquest, I mean—and you have excused it and treated it lightly. But others would view it differently. And now there is this blackmailer of whom I have told you. At any moment, a serious scandal may arise; and in that scandal you would be implicated.”

“It wouldn’t matter to me,” said he. “Nothing would matter to me if only I had you.”

“So you think now. But, Jasper, think of the years to come. Think how it might be in those years when the social ostracism, the loss of position and reputation, has grown more and more irksome, if we should regret what we have done, if we should blame ourselves—even, perhaps, secretly blame one another—”

“We should never do that, Helen. We should always be loyal. And there wouldn’t be any social ostracism. At any rate, I am quite clear as to my own position. I want you for my wife. To get you I would make any sacrifices and count them as nothing. But that is only my position. It isn’t necessarily yours—or rather, I should say your sacrifices would be greater than mine. A woman’s point of view is different from a man’s.”

“It is, Jasper. I realise fully how essentially reasonable your proposal is, and I am proud of, and grateful for, the love that has impelled you to make it. But to me the thing is impossible. That is the only answer I can give. What it costs me to give that answer—to refuse the happiness that you offer me, and that I crave for—I cannot tell you. But even if it breaks my heart to say ‘no,’ still, that must be my answer.”

For a long time neither of us spoke. As I glanced furtively at Jasper, the dejection, the profound sadness that was written on his face wrung my heart and filled me with self-accusation. Why had I not foreseen this? Why had I, who had nothing to give in return, allowed his friendship to grow up into love under my eyes? Had I not acted towards this my dearest friend with the basest selfishness?

Presently he turned to me, and, speaking in quiet, even tones, said:

“It would not be fair for me to make an appeal on my own behalf. I may not urge you to accept a relation which your feeling and judgment reject. But one thing I will ask. I have told you what I want; and you are to remember that I shall always want you. I will ask you to reflect upon what we have said to-day, and if perchance you should come to think differently, remember that I am still wanting you, that I am still asking you, and tell me if you can give me a different answer. Will you promise me this, Helen?”

“Yes,” I replied, “I promise you, Jasper.”

“Thank you, Helen. And meanwhile we remain friends as we have been?”

“We can never be again as we have been,” said I. “Friendship may turn to love, but love does not go back to friendship. That is as impossible as for the fruit to change back into blossom. No, dearest Jasper; this is the end of our friendship. When we part to-day it must be farewell.”

“Must it be, Helen? Must we part for ever? Could we not go back to the old ways and try to forget to-day?”

“I shall never forget to-day, nor will you. For our own peace of mind we must remain apart and try to avoid meeting one another. It is the only way, Jasper, hard as it will be.”

I think he agreed with me, for he made no further protest. “If you say it must be, Helen, then I suppose it must,” he said, dejectedly. “But it is a hard saying. I don’t dare to think of what life will be without you.”

“Nor I, Jasper. I know that when I say ‘good-bye’ to you, the sun will go out of my life and that I can look for no other dawn.”

Again we fell silent for a while; and again I reproached myself for having let it come to this.

“Don’t you think, Helen,” he said at length, “that we might meet sometimes, say at fixed intervals—even long, intervals, if it must be so—just that we might feel that we had not really lost one another completely?”

“But that is what I should wish to avoid. For we have lost one another. As to me, it has no significance. I have nothing to give and nothing to lose. I am shackled for life to Mr. Otway. But you have your life before you, and it would only be fair that I should leave you free.”

“Free!” he exclaimed. “I am not free and never shall be. Nor do I wish to be free. I am yours now and for ever. And so I would wish it to be. We may not be married in any outward form, but we are married in the most real sense. Our hearts are married. We belong to one another for ever while we live, and neither of us will ever wish to change. You know it is so,
dearest, don’t you?”

What could I say? He had spoken my own thoughts, had expressed the wish that I had not dared to acknowledge. Weak and unjust it may have been, but the thought that in the dark days of our coming separation we should still be linked, if only by an invisible thread, came as something like a reprieve. It left just a faint spark of light to relieve the gloom of the all too sombre future. In the end we agreed to a monthly letter and a meeting once a year. And so, having fixed the terms of our sentence, we tried to put our troubles away and make the best of the few hours that remained before the dreaded farewell.

But despite our efforts to get back to our wonted cheerful companionship, the swiftly-passing hours were filled with sadness and heart-ache. Instinctively we went and looked at things and places that recalled the pleasant jaunts that were to be no more; but ever Black Care rode behind. It was like the journey of two lovers in a tumbril that rolled its relentless way towards the guillotine; for at the end of the day was the parting that would leave us desolate.

And at last the parting was upon us. At the corner of Cable Street we halted and faced one another. For a few moments we stood in the gathering gloom, hand clasped in hand. I dared not speak, for my heart was bursting. Hardly did I dare to look at the man whom I loved so passionately. And Jasper could but press my hand and murmur huskily a few broken words of love. And so we parted. With a last pressure of the hand I turned away and hurried along Cable Street. I did not dare to look back, though I knew that he was gazing after me; for the street swam before my eyes and I could barely hold back my sobs.

I did not go straight home. The tumult of emotion sent me hurrying forward—whither I have no recollection save that somewhere in Shadwell a pair of friendly policemen turned me back with the remark that it “was no place for the likes of me.” At length, when the first storm of grief had passed, and I felt myself under control, I made my way to Wellclose Square, and pleading the conventional headache, retired at once to my room.

And there, in quiet and seclusion, with tears that no longer need be restrained, with solemn rites of grief, I buried my newborn happiness—the happiness that had died almost in the moment of its birth.

XIX. — ILLUSIONS AND DISILLUSION

IT is a generally accepted belief that of all the remedies for an aching heart, the most effective is distraction of the mind from the subject of its affliction. And probably the belief is well founded. But it usually happens that the sufferer is the last to recognize the virtues of the remedy, preferring to nurse in solitude a secret grief and to savour again and yet again the bitterness of the Dead Sea fruit of sorrow.

So it was with me in these unhappy days. The seclusion of the workshop gave me the opportunity for long hours of meditation, in which I would trace and retrace the growth of my love for Jasper, would think with passionate regret of what might have been, and speculate vaguely upon the future. So far from seeking distraction in these first days of my trouble, I kept aloof from my comrades, so far as I could; shut myself in the workshop, or in my room, or wandered abroad alone, following the great eastern thoroughfares where I was secure from the chance of meeting a friend.

But the distractions which I would have avoided came unsought. First, there was the visit with Peggy to Miss Tallboy. It was due but a day or two after my parting with Jasper, and I loathed the thought of it; but it had to be; for who could say how much it might mean to Peggy? And as it turned out, I should never have forgiven myself if I had failed her. I had looked for a rather dull, social call flavoured with porcelain. But it was quite otherwise. Miss Tallboy-Smith had at length heard of Peggy’s genius and had invited a few specially choice connoisseurs to meet her, including Mr. Hawkesley—unless he had invited himself. At any rate, there he was, reverential and admiring, but yet with a certain air of proprietorship which I noted with interest and not without approval. It was quite a triumph for Peggy, and she took it very modestly, though with very natural satisfaction. To me, however, there was a fly in the ointment, though quite a small one; for Mr. Hawkesley proposed an exploration of the Wallace Collection, which Peggy had never seen, and which I felt bound, for her sake, to agree to. But I looked forward with prospective relief to the time—not far distant, I suspected—when these two pottery enthusiasts would be intimate enough to dispense with a chaperon.

Then there came a distraction of another kind. One evening after tea, Lilith took me apart, and looking at me with some concern, said: “Our Sibyl has not been herself of late. I hope she is not being worried about anything.”

“We all have our little troubles, Lilith,” I replied, “and sometimes we don’t take them so resignedly as we should.”

“No,” she rejoined. “Resignation is easier when the troubles are someone else’s. But we are very concerned to see you looking so sad—not only Margaret and I, but all of us. We are all very fond of you, Sibyl, dear, and any of us would think it a privilege to be of help to you in any way. You know that, don’t you?”

“I have good reason to. No woman could have found kinder or more helpful friends than I have in this house.”

“Well,” she said, “friends are for use as well as for companionship. Don’t forget that, if there is any little service that any of us can render you.”

I thanked her very warmly, and she then opened a fresh topic.

“Some time ago, Sibyl, we were speaking of psychical experiments, and I suggested that you might like to see some
carried out by my friend, Mr. Quecks, who is an authority on these subjects. Mr. Quecks was away from home at the time, on a lecturing tour in Kent; but he is home again now. I wrote to him about you and have had one or two talks with him, and he has asked me to invite you to a little demonstration that he is giving to some friends next Friday evening. Would you care to come with me?"

I would much rather not have gone, but I knew that a refusal would disappoint Lilith, who had set her heart on converting me. Accordingly, I accepted the invitation, and we were arranging details of the expedition when Peggy joined us. As soon as she heard what was afoot she was all agog.

"Oh, what fun!" she exclaimed. "You'll let me come, too, won't you, Lilith? I did so enjoy it last time."

Lilith, however, was by no means eager for her company, for the Titmouse was a rank unbeliever, and made no secret of it.

“What is the use of your coming, Peggy?” said she. “You don’t believe in the super-normal. You would only come to scoff.”

“Perhaps I should remain to pray,” rejoined Peggy. "It is no use preaching to people who are already convinced. And I should just love it. That Quecks man is so frightfully amusing. He is the funniest little guffin you ever saw, Sibyl. Won't you let me come, Lilith?”

"Of course you can come if you really want to," Lilith replied with evident reluctance. “But you shouldn’t speak of Mr. Quecks as if he were a mountebank or a buffoon. He may not be handsome, but he is a very learned man and very sincere.”

“I beg your pardon, Lilith,” said Peggy. “I won’t call him a guffin any more. And thank you ever so much for letting me come.”

The arrangements being thus settled, it is only fair to Peggy to say that she endeavoured, as far as possible, to treat the demonstration quite seriously. Even in our private conversations she made no further disparaging references to Mr. Quecks, though I did gather that her anxiety to be present at the séance was not unconnected with a desire to keep an eye on him to see that he did not impose on me.

Mr. Quecks’ house was situated in a quiet street off Cromwell Road, Kensington, and the “demonstration” took place in a large room intermediate in character between a library and a drawing-room, lighted by three electric bulbs, all of which were encased in silk bags, so that the illumination was of a twilight dimness. The visitors were about a dozen in all, and while we were waiting for the late arrivals Mr. Quecks made a few observations on super normal phenomena in general.

To me he required no disparagement from Peggy or anyone else, his own appearance doing all that was necessary in that respect. The first glance at him impressed me disagreeably; but then he was a manifestly uncomely man, with a large, bald face and long, greasy black hair, which was brushed straight back and accumulated in an untidy bush at the nape of his neck. He spoke unctuously, and his manner was confident, persuasive, didactic and authoritative, and he gave me the impression of a man who was accustomed to dealing chiefly with women—his present audience was composed of them exclusively.

“In interpreting the results of the experiments which we are about to perform,” he observed, “we have to bear in mind that psychical and super-normal phenomena, inasmuch as they are not concerned with material things, are not directly appreciable by the senses. We cannot see or touch the subliminal self, either our own or that of others. But neither can we see the electric current or the Hertzian waves. We know of their existence and properties indirectly, through their effects. Electricity can be transformed into heat, light or sound, and these can be perceived by means of the radiator, the electric lamp or the telephone, which act directly on our senses. So it is with the hidden subconscious self. Invisible itself, it can be made to produce effects which are perceptible to the conscious mind through the senses, and through those effects its own existence is revealed.”

This sounds reasonable enough; but the experiments themselves were rather disappointing on the whole. Perhaps I expected too much; or perhaps the preoccupied state of my mind did not allow me to bring to them sufficient interest or attention. Moreover, Mr. Quecks had an assistant (I had almost said “confederate”) whose appearance pleased me no more than his own; a wall-eyed, taciturn woman of about thirty-five, of the name of Morgan, who acted as the “percipient”—the word “medium,” I noticed, was not used—and helped to prejudice me against the experiments.

We began with a demonstration of thought-transference, which I found dull, tiresome and unconvincing. Probably I was unreasonable; but the apparent triviality of the proceedings, which resembled a solemn and unspeakably dull drawing-room game, influenced my judgment. The percipient, Miss Morgan, being seated, blindfolded, in the middle of the room, a pack of playing cards and another pack of cards, each of which bore a single capital letter, were produced. A card was drawn out at random and held up behind the percipient and in view of everyone else, including Mr. Quecks, who held the percipient’s hand. Miss Morgan then guessed the card or the letter. Sometimes she guessed correctly, sometimes nearly correctly, some times quite incorrectly. The proportion of correct guesses, Mr. Quecks informed us, was vastly greater than could be accounted for on the law of probabilities. And I dare say it was. But the exhibition left me cold, as did those of table-tilting and planchette writing which followed. Even the “pendule explorateur,” which had so impressed me on a previous occasion, fell flat on this. For, since that rather startling experience, I had given some thought to the magic pendulum, and believed that I had found at least a partial explanation of its powers. Accordingly, when my turn came to try the “autoscope,” I took the string in my fingers and shut my eyes; and when Mr. Quecks objected to this, I gazed fixedly
at the opposite wall, seeing neither the pendulum nor the clockwise alphabet. Under these conditions the pendulum was a complete failure; it would spell nothing. But when I looked steadily at the pendulum and the letters, the swinging ball spelled out clearly the word that I chose—Lilith.

I was thus in a decidedly sceptical frame of mind when the next set of experiments began; and even these produced, at first, no effect on me other than a slight tendency to yawn. Their object was to demonstrate the existence of a “psychometric” power or faculty; that is to say, a power to detect in certain material objects a permanent impression left by contact with some particular person. Such a faculty, Mr. Quecks explained to us, was possessed by certain exceptionally sensitive persons. He had it to some extent himself, but in Miss Morgan it was developed in a really remarkable degree, as the experiments which were to follow would convince us.

Hereupon Miss Morgan was once more blindfolded, all the lights but one were switched off, so that the room was almost in darkness, and the demonstration began. One of the visitors, at Mr. Quecks’ whispered request, slipped a ring from her finger and passed it to him. By him it was handed to Miss Morgan, who solemnly applied it to her forehead. Then followed an interval of expectant silence, in which I thought I heard a faint giggle from Peggy Finch, who sat in the row in front of me.

At length Miss Morgan opened her mouth and spake. It seemed that she was seeing visions, and these she described in detail. Naturally I was unable to check them, nor could I judge whether they had any relation to the ring. The owner of that article stated, at the close of the experiment, that the visions, as described, corresponded closely to certain places and events which were known to her and to no one else. Which seemed conclusive enough; but yet it left me only with a feeling that the whole proceeding was ridiculous and trivial.

The next experiment was performed with a glove from the hand of another visitor, and when this was concluded, Mr. Quecks whispered to a lady in the front row, who whispered to Peggy, who turned to me.

“He wants your handkerchief, Sibyl,” she said in a low whisper.

I took my handkerchief from my pocket and gave it to Peggy, who squeezed it up into a ball and passed it to the lady in front, who passed it to Mr. Quecks, who handed it to Miss Morgan; who, in her turn, applied it to her forehead as if it had been an ice-bag, and assumed an attitude of intense mental concentration. And again the sound of a suppressed giggle came from the neighbourhood of the Titmouse.

Then Miss Morgan began to speak.

“I seem to be passing through the country—swiftly—very swiftly; past great, wide fields and woods. They are strange-looking woods. The trees are all in lines—in straight lines...But wait! Are they trees? No, they can’t be; they are too small. No—they are plants growing up poles —they must be vines. It is a vineyard—and yet they don’t look quite like vines. No, no! Of course, I see now; they are hops. It is a hop-garden. And now I am passing another. Now I have come out on to a road on the top of a hill. There are hills all round, and in the hollow there seems to be a town...and I seem to see water in the town...yes, it is water. It is a river...But I don’t see any ships...only some red things...Oh, yes! I see; the red things are sails—red sails. I thought sails were always white.”

She paused; and in the intense silence I leaned forward, listening eagerly. All my indifference and boredom had vanished. This was quite a different affair from the card-guessing and planchette-reading. She had described Maidstone vividly, accurately—or at least so it seemed to me; Maidstone as it would appear to one approaching the bridge from the west. Of course it might be mere guessing; but—

“I seem,” Miss Morgan resumed, “to be descending a hill by a broad street...What is that in front of me? Is it—yes I see it is a bridge. Yes I see it plainly now. I am coming towards it. But what on earth is this thing on my left hand? It seems to be a mass of gold and yet...and yet it looks like an elephant. That’s ridiculous, of course. It can’t be...But it certainly looks like gold...and yet it...it really does look like an elephant! Well, I can make nothing of it. And now it is gone and I am on the bridge.” Again she paused, and I sat gazing at her in blank astonishment. There could now be no question as to the reality of the visions, unless the whole exhibition was a fraud. The idea of skilful guessing could not be entertained for a moment. The description did not merely fit Maidstone; the detail of the golden elephant on the brewery by the bridge fixed the identity of the place I beyond the possibility of doubt. It was either a genuine—and most amazing—psychical phenomenon or an outrageous imposture. But an imposture, to which Lilith must have been a party, was more incredible than the supernatural itself.

As these thoughts passed swiftly through my mind, Miss Morgan resumed her description.

“I am standing on the bridge, but it is beginning to grow indistinct. By the riverside I can just see a great house, an old, old house, which seems to stand by the water’s edge, and beyond it trees and a church tower. Now it is gone and I can see nothing. Is this all?...No; I see, very, very faintly, a small crowd of people. They seem to be in a field. And I make out a number of white objects in the field. They look rather like sheep, but they are very still. Oh! they are not sheep at all; they are tombstones. And I see now that the people are all in black and that they are standing round an open grave. It must be a funeral...Yes; there is the clergyman in his surplice...But it is beginning to fade.

“No it isn’t! Something else is coming. It is very dim, but it looks like a man sitting at a table. Yes! But I can’t see what he
is doing. He is not writing. He has something in his right hand, and keeps moving it up and down. Oh, I see now; it is a hammer. He seems to be hammering some bright object—a piece of metal, I think...Yes, it is quite clear now. But it isn't a man at all; it is a woman. I saw her distinctly for a moment, but she has grown dim again...Now she has gone and I can see nothing...I think that is all...Yes, that is all. Nothing else seems to come."

She removed the handkerchief from her forehead and held it out towards Mr. Quecks, who took it from her and tiptoed round to where I was sitting.

"Thank you, Mrs. Otway," he whispered. "It seemed a very successful experiment; but you can judge better than I can."

"It was, indeed, most successful," I replied, as he gave me back my handkerchief. "I am positively amazed at the detailed accuracy of the description."

"You think the correspondence is closer than could be accounted for by coincidence or chance guessing?" he asked.

"There can be no question of chance," I replied. "The descriptions were much too detailed and circumstantial."

"That is most interesting," said he. "For there can be no other explanation but that of genuine psychometric faculty. Miss Morgan is a stranger to you, and, moreover, she did not know whose handkerchief it was. The remarkable success of this experiment seems to support Miss Blake's estimate of your unusual psychic gifts. You evidently have the power of imprinting your personality on inanimate objects in an exceptional degree. I should almost think it likely that you would be a successful scryer. Have you made any experiments with the crystal?"

"Yes. But they are all complete failures. I could see nothing."

"That is not unusual in early experiments," said he. "There is a difficulty in concentrating. I wonder if you would care to make a trial now under my guidance. I think I could help you to visualize some simple scene. Will you try?"

The astonishing success of Miss Morgan's experiment had revived all my former curiosity, and I assented readily, much to Mr. Quecks' satisfaction. The nature of the new experiment was explained to the company, and the necessary preparations made. An easy chair was placed for me in the middle of the room, and the chairs for the others arranged behind it, so that I should not have my attention distracted by seeing them. As I passed Lilith on my way to the chair, I greeted her with a smile, and was a little surprised at the lack of response on her part. I thought she would be gratified to see me taking so active a part in the proceedings; but apparently she was not; indeed, I had never seen her look so ungenial.

When I had taken my seat, Mr. Quecks directed me to lean back and adopt a position of complete physical rest. A black, velvet cushion was then placed in my lap and on the cushion was laid the crystal globe, itself almost black in the dim twilight save for a single spark where it reflected the light of the one electric lamp.

"You will look fixedly at the bright spot of light," said Mr. Quecks, who had seated himself beside me; "concentrate your attention on it and think of nothing else. Don't let your mind wander, and don't move your eyes. Think of the bright spot and look at it. Soon a mist will come before your eyes; then you will feel a sort of drowsiness. You will grow more and more drowsy, but your eyes will keep open and you will still see the mist. You are seeing it now—" (this was quite correct); "it grows denser; now you are beginning to feel drowsy—just a little drowsy—but your eyes are wide open; still you are getting drowsy—rather more drowsy—"

He seemed to repeat these words over and over and over again like a sort of chant; and his voice, which had been at first soft and confidential, took on a peculiar sing-song quality, and at the same time began to grow more and more distant until it came to me thin and small like the voices that are borne from far-away ships on a calm day across the water of a quiet anchorage. And, meanwhile, a strange somnolence fell upon me. I felt as if I were in a dream. Yet my eyes were wide open, and before them floated the mist, out of which shone the single spark of light. And the little, thin voice went on chanting far away, but I could no longer make out what it said. Nor was I attending to it. I was gazing into the mist at the tiny spark —gazing fixedly, unwinkingly, without effort.

Presently the mist seemed to clear a little, and the spot of light began to grow larger. Now it looked like a hole in the shutter of a dark room; and now it was as though I were looking through an opera glass or a telescope; but I could make out nothing save a confused blur of light, in the middle of which was a vague, dark shape. But still the area of light grew larger, and now I could see that there were other shapes, all dim, vague and shadowy. Then in an instant it cleared up, as a magic-lantern picture sharpeners when the lens is focussed. The dark shape was Mr. Otway. He stood, stooping forward, gazing at something on the floor—something that lay by the fireplace, motionless, with upturned waxen face. It was horribly distinct. I could see my father's face settling into the rigidity of death; I could see the crimson streak on his temple; I could even see the sparkle of the silver knob on the stick that Mr. Otway grasped.

The vision lasted, as it seemed, but for a few seconds. Then it grew dim and confused and quickly faded away into blank darkness; and I found myself sitting up in the chair, wide awake, but bewildered and a little frightened. The lights were full on, and the visitors were all gathered around my chair gazing at me with a very odd intentness.

"Did you see anything in the crystal?" Mr. Quecks asked, suavely.

"Yes," I answered, not quite so suavely. "How long have I been asleep?"

Mr. Quecks looked at his watch. "Just five and twenty minutes," he replied.
of. That is the position."

whom I married in error, whom I

of a corn-poppy.

for him an awful lot, don’t you, and we are fond of one another, aren’t we?"

As to the nature of my vision, Peggy displayed no interest, but turned the conversation on to subjects quite unconnected with Mr. Quecks or psychical science.

Shortly after this the meeting broke up, and Peggy and I took our departure. As we sat in the train, I tried to extract from my companion some details of what had happened, but I found her curiously unwilling to pursue the topic. I gathered, however, that, as soon as the hypnotic trance was completely established, Mr. Quecks suggested to me that I should have a distinct vision of some scene that I had witnessed “in the old town that Miss Morgan had seen and shortly before the funeral that she had described.” Then, after an interval, he had put a number of problems in multiplication and division of large numbers and fractions, which I had solved with extraordinary ease and rapidity. As to the nature of my vision, Peggy displayed no interest, but turned the conversation on to subjects quite unconnected with Mr. Quecks or psychical science.

When we arrived home she followed me to my room and suggested that we should wait there for Lilith, which was what I had intended to do. And here again she showed a marked tendency to avoid the subject of Mr. Quecks and his experiments. But, as she sat in my chair gossiping, I caught her eye, from time to time, travelling almost furtively towards the clock on the mantelpiece, and I wondered if she was feeling anxious about Lilith, who had to make her way alone through the rather unsavoury neighbourhood of Ratcliff. Whatever she was feeling, however, she kept up a flow of conversation—which was, itself, a rather unusual phenomenon—and presently grew quite confidential about herself—which was more unusual still. It was clear that her friendship with Mr. Hawkesley was now quite firmly established, and they evidently saw a good deal of one another—but this I knew already. And it was clear that their sympathy in tastes was running parallel to a very strong liking of a more personal kind.

After a pause in this confidential gossip, Peggy suddenly looked down a little shyly, and, turning very pink, asked hesitatingly:

“Sibyl, dear, you haven’t quarrelled with Mr. Davenant, have you?”

“No, indeed,” she replied. “But you don’t seem to have seen much of one another lately.”

She was silent for a while, and I noticed that her cheeks were growing more and more pink.

“What is my little chameleon turning that colour for?” I asked.

She looked up at me with a shy smile. “Sibyl,” she said, “don’t think me inquisitive or impertinent. I am your friend, you know, and we are fond of one another, aren’t we?”

“We are the very best of friends, Peggy, dear, so you needn’t mind asking me anything that you want to know.”

“Well, then, Sibyl; why don’t you and Mr. Davenant marry? Anyone can see how fond he is of you, and I’m sure you care for him an awful lot, don’t you, now?”

“My Titmouse is becoming an expert authority on these matters,” said I, thereby converting poor Peggy to the semblance of a corn-poppy.

“Perhaps I am,” she admitted, defiantly. “But why don’t you marry him, Sibyl?”

“My dear Peggy,” said I, “there is a very substantial reason. Its name is Mr. Otway.”

“Sibyl!” gasped Peggy. “I thought you were a widow!”

I shook my head. “No, Peggy. I am a widow in effect, but a married woman by law. I have a husband who is no husband; whom I married in error, whom I have never lived with and could never think of living with, but whom I can never get rid of. That is the position.”

She flung her arms around my neck, and laid her cheek to mine.

“My poor, dear Sibyl,” she exclaimed. “How dreadful for you! I am so frightfully sorry, dear. And is there no end to this?”

“There is death,” said I. “That is all. And that is why I am not seeing much of Mr. Davenant nowadays.”
"It is an awful thing, Sibyl," said she. "You and Mr. Davenant could make one another so perfectly happy. And I don't see why you shouldn't, for that matter."

"Why, how could we, Peggy?"

Again she blushed scarlet, and with a defiant glance at me, replied:

"I wouldn't have my whole life wrecked. I should just go off with him, husband or no husband."

"You dreadful little reprobate. And what do you suppose the world would say about you?"

"It could say what it liked so long as I'd got the man I wanted. But it wouldn't really say anything. No one with any sense would think a penny the worse of me. Nor would they of you. Everyone would say that you had done the right thing, seeing that you had no choice. You couldn't be expected to be bound for life to a dummy husband."

At this moment I rose from my chair, and going over to the dressing-table, lit a candle. Then I put my hand in my pocket and drew out an unaddressed envelope and a piece of pencil. With the latter I wrote on the envelope my signature and the words "ten minutes to eleven." The whole proceeding seemed quite automatic. I did not know why I was doing it. I had not known that either the envelope or the pencil was in my pocket, for I had not put them there. But I carried out the train of action almost unconsciously and quite without surprise.

When I had written on the envelope, I opened it and drew out a piece of paper. On the paper was some writing in an unfamiliar hand. I held the paper near the candle and read as follows:

"At ten minutes to eleven you will light a candle, take this envelope and a pencil from your pocket; you will write on the envelope your signature and the time. Then you will open the envelope and read this message."

I stood for some seconds gazing at the paper in utter amazement. Then I looked round quickly at the clock. It was ten minutes to eleven. From the clock my glance turned to Peggy, who was sitting watching me with a very uncomfortable expression.

"Do you know anything about this, Peggy?" I asked.

"Yes," she replied. "That Quecks man told you to do it. He wrote the message and put the envelope and pencil in your pocket when you were in a deep sleep. He spoke the message into your ear, and, after about a minute, told you to wake up, and you woke up immediately. It was like his impudence to perform his beastly experiments without getting your permission first."

"It was. But the thing is rather uncanny. I don't like it at all."

"There's nothing in it," said Peggy, though she, too, was evidently not pleasantly impressed. "It's what they call post-hypnotic suggestion. It isn't in any way super-natural. The doctors know all about it."

"Still," said I, "it is a very strange affair. There is something extremely eerie in finding oneself turned into an unthinking automaton worked by somebody else's will. And some of the other experiments were rather startling: Miss Morgan's visions for instance."

"Mightn't they have been just clever guesses?"

"No, Peggy. That is quite impossible. Her descriptions applied to my case in detail and were correct every time. You heard her describe the view from Maidstone Bridge?"

"Yes. And I recognised it from that water-colour over your mantelpiece."

"Well, don't you think it very wonderful and incomprehensible?"

"No, I don't," said Peggy. "How do you suppose she did it?"

"I can only imagine that some influence that I don't understand passed to her from my handkerchief."

"Then you imagine wrong," said the Titmouse. "Your handkerchief was in my pocket all the time. It was my handkerchief that she was smelling at. And her descriptions didn't fit me the least little bit. I don't hammer my pottery, you know."

"But I don't understand. You passed her my handkerchief, didn't you?"

"No; I passed her mine. You see, I'd seen this handkerchief trick before and I had mine ready, rolled up into a ball in my hand. So it was quite easy to make the exchange. But we may as well change back now."

She took a handkerchief from her pocket and handed it to me; and when I had identified it as my own, I produced hers and restored it to her.

"You are a wicked little baggage, Peggy," said I, "though I must admit that the ruse was quite a fair one. But still, I don't quite see how it was done? It was evidently an imposture. But how was it worked? How did she get the information?"

"Why, she got it from Mr. Quecks, and he got it from Lilith."

"You surely don't suggest that Lilith was a party to this fraud?"

"Of course I don't," she replied, indignantly. "Lilith is a lady to the tips of her fingers. That's just where it is. She would never suspect. But we know that she wrote to Quecks about you, and she has talked to him about you, and no doubt he has
pumped out all that she knows about you. Then you will remember that he has just come back from a tour in Kent—he is almost certain to have been to Maidstone—and there are such things as picture postcards. There is no mystery as to how it was done; but I do wonder that he was such a fool as to do it before Lilith. I suspect she stayed behind to tell him what she thought of him."

As we were speaking, Lilith came up the stairs, and I ran out to intercept her and bring her in.

"You needn't have waited up for me," said she, "though I am glad you have, for I want to apologise for Mr. Quecks' very improper behaviour."

"Don't think any more about it, Lilith," said I. "It didn't do any harm, and it has enabled Peggy and me to have a little private séance to ourselves."

"Did the post-hypnotic experiment work correctly?"

"Perfectly—and most uncannily."

"Then," said Lilith, "you have gained by that amount of experience. As to the rest of Mr. Quecks' experiments—well, Sibyl, I am afraid we must consider them on the plane of public entertainment rather than on that of genuine research. But it is getting late. We had better go to bed now and talk things over to-morrow."

This advice was forthwith acted on, as to its first half; and if I owed Mr. Quecks a grudge for trying to impose on me, I should have been grateful to him for giving me something to think about other than my own griefs and entanglements.

XX.— CLOUD AND SUNSHINE

REVIEWING on the morrow my experiences at Mr. Quecks' house, I was conscious of a rather definite change of outlook. Those experiences had made a very deep impression. The vision that I had seen was something outside ordinary, normal experience, and it still haunted me. And then, even more uncanny, there was that strange automatic action which I had carried out with such perfect unconsciousness and yet so exactly and punctually. It was all very well for Peggy to put it aside with the easy explanation that it was merely post-hypnotic suggestion, and that the doctors knew all about it. That explanation explained nothing. The fact remained that I had suddenly become aware that those which I had been accustomed to dismiss as delusions—as the mere superstitions of credulous people—were actual realities. And this discovery created for me a new standard of possibility and truth. Even Miss Morgan's visions, though I knew them to be a rank imposture, had left an impression that was not to be completely effaced. The shock of amazement that they had produced at the time left a vague after-effect, due, no doubt, to the more real and equally mysterious experiences.

Concerning these latter I was somewhat puzzled. It was not quite clear to me how I had come to be hypnotized at all, and I took an early opportunity of questioning Lilith on the subject.

"There is no mystery about that," she replied. "The orthodox method of producing the hypnotic trance is to cause the 'subject' to gaze steadily at some bright object—a metal button, a crystal, or even a small piece of white paper. He is told to gaze fixedly at this object, to concentrate his attention on it, and to think of nothing else. The purpose of this is to get rid, as far as possible, of the conscious self and to allow the subconscious self to act without disturbance. When this state of mental abstraction has been established, the 'subject' is ready to receive suggestions. If the operator suggests to him that he is drowsy, he becomes somnolent; and at the same time he becomes much more susceptible to suggestion. Now, if the operator suggests to him that he feels certain sensations, he feels those sensations. If it is suggested that he performs certain actions, he performs them. This is what happened to you. Mr. Quecks induced you to gaze steadily at the crystal, and when you were in the proper state of mental abstraction, he suggested the hypnotic trance. Then he suggested that you would see a vision of some scene that you had looked on shortly before the funeral, and I understand that you did see such a vision."

"Yes, I did; and most astonishingly vivid it was. But, Lilith, when I lit that candle in my room I was not in the hypnotic trance."

"No; that was a post-hypnotic phenomenon, and really a most interesting one. To understand it you must think of the two personalities, the conscious self and the subconscious, or subliminal self. Now the suggestions are made to the subconscious self, while the conscious is dormant or in abeyance. But when the conscious self returns or awakens, the subconscious mind continues to work, although unperceived by the conscious mind. If the suggestion refers, as in your case, to some action to be performed at an appointed time, the subconscious keeps account of the passing time and at the appointed moment sets the machinery in motion. The action itself is perceived by the conscious mind, but the train of subconscious thought has been unperceived, though it has really been quite continuous. It is very curious, though not particularly mysterious."

"And it is only in the hypnotic trance that these suggestions take effect?"

"That," replied Lilith, "is not quite clear. It seems that in ordinary sleep suggestions of the kind may sometimes take effect. And for the same reason. In sleep, the conscious self is in abeyance—is out of action; but the subconscious is active, as we see in the case of dreams and still more strikingly in the case of somnambulism. But the postponed effects of suggestions made during normal sleep need more investigation. I believe that sleep produced by drugs is much more like the hypnotic trance than natural sleep."
“Well,” I said, “it is all rather weird and uncanny,” and so the subject dropped. But, as I have said, the influence of these strange experiences remained. My former scepticism of the occult and mystical gave place to a state of mind in which I was prepared to admit the possibility of things that I had once regarded as wildly incredible.

Nevertheless, I was but faintly interested in the wonders of psychical research. Indeed, I was not much interested in anything connected with my daily life. I had endeavoured to revive my enthusiasm for my work by setting myself an ambitious task—a silver candlestick of a semi-ecclesiastical design, worked in repoussé with enrichments in enamel. But all the pleasure in the work was gone. The various processes—skillfully enough executed, as I noticed with tepid satisfaction—which should have been a joy, were but the routine of industry; and through them all the never-ending heartache, the sense of loss, of bereavement, the feeling that the light had gone out of my life for ever. The passing time seemed to bring no mitigation. Rather did it seem to me that every day I missed my dear companion more.

Perhaps if my loss had been more final—if, for instance, Jasper had been taken from me by Death—I might have striven more determinedly to shape my life anew. But there was a certain inconclusiveness in our separation. Not that I ever, for a moment, considered the possibility of re-opening the question. But still I think there lurked in my mind the feeling that the door was not finally closed. Jasper’s words, “Remember that I am still wanting you, that I am still asking you,” would come to me unbidden, again and yet again, reminding me that the way was still open, that I could end the separation if and when I chose. And then Peggy’s outspoken declaration was not without its effect. For the Titmouse was a very paragon of modesty and maidenly propriety; and when I recalled her robust contempt of conventional points of view I could not help asking myself sometimes if I had not been too prudish.

All of which was very disturbing. It left me with my resolution unchanged, and yet without that sense of finality that would have set me reconstructing my scheme of life.

So the weeks dragged by till the time for the first monthly letter drew nigh; and the passionate yearning with which I looked forward to it told me that that letter was a mistake. It ought never to have been. The chapter should have been ended and the volume shut irrevocably.

As the time for the letter approached, my unrest took me abroad more than usual, and one day, forsaking the sordid east, I took the train to South Kensington and made my way to the Museum, though with no special object in my mind. I had ascended the steps to the main entrance, and was approaching the doorway, when I came face to face with Miss Tallboy-Smith, who was just emerging. At the sight of me she halted with a dramatic gesture of astonishment.

“Well!” she exclaimed, “so you are really alive! I thought I was never going to see you again. Where have you been? It’s ages—centuries—since I have seen you. And dear Miss Finch, too; whatever has become of her? Were you going into the Museum? I have just been wallowing in the Salting Collection. Delightful, isn’t it? The very kernel of the Museum. Don’t you think so?”

“I don’t think I have ever seen the Salting Collection,” said I.

“Never seen the Salting Collection!” she gasped. “My dear Mrs. Otway! How dreadful! And you a connoisseur, too. Why, it’s a Paradise; the collectors’ Heaven. Do you believe that people come back after death and frequent their old haunts? I hope it’s true. If it is, I shall come to the Salting Collection. I shall divide my ghosthood between that and the Wallace. It will really be very jolly. Unlimited leisure, with all eternity at one’s disposal. And no stuffy restrictions; no closing hours or students’ days. So convenient, too! You just pass in through the closed door or the wall and float up the stairs. Why, you could even get inside the glass cases! I’m afraid you’ll think me an awful old heathen; but I’m not really. And how are you? And how is Miss Finch? And why haven’t you been to the club for such an age. And isn’t it dreadful about poor Mr. Davenant?”

My heart seemed to stand still, and I think I must have turned pale, for Miss Tallboy-Smith said hastily: “I’m afraid I have startled you, Mrs. Otway; but surely—surely—do you mean to tell me that you haven’t even heard about it?”

“I have heard nothing,” I said, faintly. “Is he—tell me what has happened.”

“I haven’t had very full particulars,” said she, “but it seems that a cart—or was it a wagon? No, I think it was a cart—and yet I’m not quite sure that it wasn’t—but there! I’m not very sure as to the difference between a cart and a wagon. What is the difference?”

“It doesn’t matter,” I said impatiently. “Tell me what happened.”

“No,” she agreed, “I suppose it doesn’t matter. Well, it seems that this wagon—but I think it was really a cart—yes, I’m sure it was—at least, I think so—but at any rate it appears that the wagon had run away—that is, of course, it was the horse that had run away, but as he was tied to the cart, it comes to the same thing. And he got on to the pavement—it was in the Strand, somewhere near that shop where they sell those absurd—now what do they call those things? I am getting so silly about names, and it’s quite a common name, too—”

“Never mind what they are called,” I entreated. “Do tell me what happened to Mr. Davenant.”

“Well, what happened was this. When the wagon got on the pavement all the people scattered to get out of the way—all except a messenger boy, and he fell down right in front of the cart. Then Mr. Davenant ran out and tried to drag the boy dear of the wagon; and, in fact, he did drag him out of the way, but he wasn’t quick enough to save himself, for the horse swerved and knocked him down violently on to some stone steps. He fell with his side on the stone steps, and I understand that his ribs were simply smashed to matchwood.”
“And where is he now? Is he in a hospital?

“He was. They took him to Charing Cross Hospital, but he wouldn’t stay there. He insisted on going home directly they put on the splints or whatever the things were. And, will you believe me, Mrs. Otway, when I tell you that he has been living alone in those wretched chambers ever since! He wouldn’t even have a nurse. Isn’t that just like a man?”

“But who looks after him?

“No one. Of course there is the charwoman, or laundress as they call them—though why they should be called laundresses I can’t imagine. They look more like dustwomen—and the man from the office downstairs looks in sometimes. It’s a perfectly scandalous state of affairs. I wish, Mrs. Otway, you would go and see him and make him have a nurse.”

“I will certainly go and see him,” said I. “I will go now,” and I held out my hand to bring the interview to an end.

“How sweet of you, dear Mrs. Otway!” she explained, keeping a firm hold of my hand, which I endeavoured unobtrusively to withdraw. “I felt sure you would go to the rescue. And you will insist on his having a nurse, won’t you? He will listen to you, but you will have to be firm. Promise me you will, now.”

“I will see that he is properly looked after,” I replied.

“Yes, but he must have a nurse, you know—a properly trained and certificated nurse. You can get excellent nurses at that place—now, what is its name? Cavendish—Cavendish something. I am getting so silly about names. Let me see, I did have a card in my purse; perhaps it is there still—” Here she released my hand to open her wrist-bag, and I took the opportunity to retreat down the steps.

“Don’t trouble, please,” I urged. “I shall manage quite well. Good-bye!” and with this I hurried away, somewhat unceremoniously, across the wide road, and, as soon as I had turned the corner, broke into a run. A couple of minutes later I arrived at the station, breathless, just in time to see a Circle train move out. I could have wept with vexation. It was but a few minutes before the next one would be due, but those minutes dragged like hours. With swift strides I paced up and down the platform in an agony of impatience, turning over and over again Miss Tallboy Smith’s confused account of the accident and trying to construct by its aid some intelligible picture of Jasper’s condition.

Even when I was in the train its progress seemed intolerably slow and the succession of stations interminable. It was an agony to sit still and passively await the leisurely arrival at my destination, and an unspeakable relief when, at last, I reached the Temple Station, to spring from the train, dash up the stairs and hurry along the embankment. My progress on foot might be slower, but I had the physical sensation of speed.

At the top of Middle Temple Lane I emerged into Fleet Street, and, crossing the road, entered Clifford’s Inn Passage. I had never been there before, and, though I knew the number of Jasper’s house, I thought it best to enquire as to its whereabouts. As I passed through the archway I saw a somewhat clerical-looking man standing at the door of the porter’s lodge, and from him learned that No. 54 was in the inner court on the east side of the garden; with which direction I hurried on again. Clearly there came back to me the impressions that seemed so dim at the time: a sense of quiet and repose, of aloofness from the bustle of the city, an old-world, dignified shabbiness that was yet homely and pleasant withal.

I crossed a little court, passed through a second archway, and came out into a second, larger court, where the gay foliage of plane trees found a foil in the dingy, red brick of the venerable houses. A glance showed me the narrow alley by the garden, and a dozen paces along its roughly-flagged pavement brought me to the entry of No. 54, on the side of which was painted “Mr. J. Davenant, Architect,” and below, in smaller lettering, “Jonathan Weeble, Law Writer.”

I stepped into the entry, and tapping on a door which, by its painted description, appeared to appertain to Mr. Weeble’s premises, was bidden to “come in.” Accordingly, I entered and was confronted by a somewhat unkempt, young man who was apparently engaged in engrossing a large document which was secured to a sort of evergrown lectern by means of a band of tape.

“I have called,” I said, “to enquire about Mr. Davenant. Is he in a very serious condition?”

“He wasn’t when I saw him about an hour ago,” was the reply.

“Do you think he would be well enough to see me?” The young man, whom I assumed to be Mr. Weeble, inspected me critically, and then replied:

“I should say most emphatically that he would. But we needn’t leave it at that. I can soon find out. Won’t you sit down?”

He rose briskly and hurried out of the office, and it was only when I heard him ascending the uncovered stairs, two or three at a time, that I remembered that he had given no name.

Mr. Weeble’s confident manner had lifted a load of anxiety from my mind, but my agitation was little abated. My fears were relieved, indeed, for evidently Jasper’s condition was not such as to occasion alarm; but, as my anxiety subsided, other emotions made themselves felt. I was actually going to see him. Within a couple of minutes we should be together. The intolerable separation would be at an end. And the ecstasy of this thought—the almost painful joy of anticipation—brought home to me the intensity of my yearning to look on him again.

The sound of Mr. Weeble’s footsteps descending the stairs set my heart thudding, and as he bustled into the office I stood up, trembling with excitement.

“It’s all right,” said he. “Mr. Davenant will see you, if you’ll go up. First floor, right hand side of the landing. I’ve left the
door open, and you'll see his name above it."

I did not go up the stairs at Mr. Weeble’s pace, but I went as rapidly as the trembling of my knees would let me. On the first floor I saw a forbidding, iron-bound door standing ajar, and above it the well-beloved name, painted in white letters. I drew back the heavy door, disclosing a lighter one, also ajar, which I pushed open as I closed the massive “oak” after me. For a moment I stood on the threshold looking into the quaint, old-world room, with its panelled walls and the soft green light from the plane trees shimmering through the windows. He was reclining by the fire on a low, wooden settle, and held a book in his hand; and even in that instantaneous glance I could see how changed he was—how pale and thin and weary-looking. But as I stepped out from the shadow, the worn face lighted up; the book fell to the floor, and he flung his arms out towards me.

“Helen!”

“Jasper!”

In a moment I was on my knees by his side. His arms were around me and my cheek lay against his. And so for a while we rested with never a word spoken and no sound in the room but the ticking of the clock and the soft rustle of a swaying branch on the window panes. And so I could have rested for ever; for at last my heart was at peace.

“Jasper, dear,” I said, at length, “how is it with you? Are you badly hurt?”

“Not a bit,” he replied. “It is just a matter of a cracked rib and a few bruises; and I’ve nearly recovered from those.”

“But why did you never send me a word? That wasn’t friendly of you, Jasper.”

“How could I, dearest?” he protested. “A bargain is a bargain. The month wasn’t up.”

“Jasper!” I exclaimed; “how could you be so silly? Of course you ought to have sent me a message, and I would have come to you instantly.”

“I am sure you would, Helen,” said he, “which was an additional reason for my keeping to our covenant. It would have seemed a shabby thing to do; for, badly as I wanted you, I was never really in any danger. By the way, how did you hear of my little mishap?”

I told him of my meeting with Miss Tallboy-Smith, and he chuckled softly. “She was an old goose to frighten you with those lurid stories, but I’m very grateful to her, all the same. I have wanted you, Helen.”

He drew me closer to him and stroked my hair fondly; and again we were silent for a while. The clock ticked on impassively, the plane tree rustled gently on the window, and I was filled with a quiet, restful happiness that I was unwilling to interrupt even by speaking.

Presently Jasper bent down to my ear and whispered:

“Helen, darling, you haven’t anything to tell me, have you?”

I knew what he meant, of course; and the strange thing is that, though the question came unexpectedly, and though I had not consciously given the subject a moment’s, thought, I found my mind completely and finally made up.

“Yes,” I replied, “I have. Jasper, dear, I am your own. I can’t live without you. The world must say what it will. I can do without the world, but I can’t exist without you.”

He drew me yet closer to him and kissed me reverently. “Dear heart,” he said softly, “sweet wife, I would try to thank you if words could tell you what your precious gift means to me. But life is before us, and mine shall be one long thanksgiving. You have given me my heart’s desire; if love and worship and faithful service can in any degree repay you, they shall be yours as long as our lives endure.”

Thus in a few moments were the long weeks of misery and despair blotted out. We were reinstated, and, indeed, much more than reinstated; we were admitted and accepted lovers. And, just as my mind had, so to speak, made itself up without conscious thought on my part, so now that I had entered into this new covenant it seemed quite inevitable and satisfying. Its nonconformity with social conventions left me completely undisturbed.

Presently Jasper made me draw up a low, rush-bottomed chair that I might sit comfortably by his side while we talked. But, in fact, we talked little; for there is a sort of telepathy born of perfect sympathy that makes speech superfluous. We were both very happy and very deeply moved; and it seemed more companionable to sit, hand clasped in hand, and let our thoughts run on undisturbed by speech, knowing that the thoughts of each were but a reflection of the other’s.

Anon came Mr. Weeble, stamping slowly up the stairs like an infirm coal-porter and making such a prolonged to-do about inserting the latch-key into the outer door that we both laughed. A very discreet man was Mr. Weeble.

“I’ve just come to see if I can do anything,” said he, when Jasper had introduced me. “I generally make his tea and straighten out his bandages. Shall I make the tea now or are you taking charge, Mrs. Otway?”

“I will make the tea,” said I, “but while you are tidying up the bandages I will run out and get some fresh cakes.”

“Yes,” said Mr. Weeble, “that would be a good idea. Our stock is rather low and a trifle old and fruity. And talking of cakes, that reminds me that an old rooster called a day or two ago and left one. I put it in a spare deed-box and forgot all about it. I’ll go and fetch it up.”
“A rooster, you say, Weeble,” said Jasper. “May we assume that you are speaking figuratively?”

“Yes,” replied Mr. Weeble. “Elderly party with an automatic smile and the rummiest name I ever heard. Now what was her name? Something double-barrelled—Bigboy-Jones, was it?”

“Tallboy-Smith, I expect,” said Jasper.

“That was it. I sent her a letter of thanks the same day in your handwriting and signed it with your name. Are you starting now, Mrs. Otway? You’ll find a very good cake-shop in Fetter Lane near the top on the left-hand side.”

I took a brief bag of Jasper’s and his latchkey and sallied forth into Fetter Lane by the postern gate; and as I walked up the quaint, old street I found myself looking into the homely shops and inspecting the ancient timber houses with a queer sort of proprietary air, as if I belonged to the neighbourhood. I found the cake-shop—it was really an old-fashioned baker’s shop, such as one might find in a country town—and as I made a selection of the wares, based on experience of Jasper’s tastes, I found myself almost unconsciously considering the merits of the establishment as a source of supply for a family of two. If the change in my mental state was sudden, it was certainly complete; as I sauntered back down Fetter Lane with my bag of provisions, care-free and filled with a delightful sense of emancipation, loitering to look into shop windows or topeer up strange courts and alleys that I might not return prematurely; I could not but contrast my condition with that in which I had set forth in the morning, hopeless, heart-weary, despondent. When I arrived at Jasper’s chambers, Mr. Weeble had already gone; but he had filled the kettle and set it to boil on the gas-stove in the kitchen, where I found it murmuring placidly and breathing out little clouds of steam. The kitchen was a delightful absurdity. About the magnitude of a good-sized china cupboard, it suggested, with its range of shelves and little chemical sink, a doctor’s dispensary or a chemist’s laboratory. Yet it was very orderly and quite convenient, and it had the advantage that, while I was engaged in the preparations for the meal, my heart singing in unison with the kettle’s song, I could look out of a tiny window on the moss-grown garden, or through the open door see Jasper watching me with a smile of ecstasy, and receive his instructions as to where the various articles were to be found. It was all very pleasant and intimate, and every little, homely detail helped to bring home to me the reality of my happiness.

During the very leisurely tea we gradually approached the subject of our future arrangements, which had evidently been very carefully thought out by Jasper.

“I’m not quite such a graven image as I look,” said he. “I don’t believe it’s necessary for me to keep so immovable. But that is the doctor’s business. I just do as I’m told. However, my bandages are coming off in a few days, and I understand that I shall be practically well in a fortnight. Until I am well, we had better let things remain as they are; and I think it would be better for you not to come and see me again in the interval.”

“Do you mean that I am to leave you, a helpless invalid all alone and no one to look after you?”

“Yes,” he replied. “Of course, I shall want you dreadfully, but as to my being alone and helpless, that is merely a sentimental view of the case. You can see for yourself that I am quite comfortable and well cared-for—Weeble never forgets me for an instant. And I think it most necessary that, until we are definitely married, we should have the most scrupulous regard for the conventions. We can’t get the sanction either of the Law or the Church to our marriage; therefore, it is the more necessary for us to treat it ourselves with the utmost respect and seriousness. We are not going to enter into a casual and irresponsible relationship. We are going to contract a marriage; and I propose that we do so publicly and with proper formalities suited to the dignity and importance of the transaction.”

“But,” I asked, “what formalities are possible?”

“My proposal,” he replied, “is this: we shall appoint a day and a time to meet here, and have two witnesses in attendance. Weeble could be one and the Inn porter, Mr. Duskin, the other. In the presence of those witnesses we shall formally agree to take one another as husband and wife. Each of us shall make a written declaration to the same effect, reciting the circumstances which render the unusual procedure necessary, and, in your case, denouncing and repudiating your marriage with Otway. These declarations we shall respectively read to the witnesses—who will also read them—and we shall each sign our declaration in the presence of the witnesses. I am not quite clear whether it would be legal for them to counter-sign as witnesses. If not, we shall add a note stating that the signatures were made in their presence. Then we shall exchange declarations and we shall notify Mr. Otway and whosoever else may be concerned, or whom we wish to inform, of what has taken place. Does that meet with your approval, Helen?”

“Entirely,” I replied, “excepting the sentence of banishment. Don’t you think I might just look in on you now and again to see if you want anything?”

“It is only a fortnight, dearest,” said he, “and we can write as often as we please. Until we are married we can’t be too careful to avoid provoking criticism.”

I made no further objections, for I felt that he was right; and, moreover, I could not but perceive that this rather excessive prissiness, like the formalities which he had proposed, was simply an unconscious expression of chivalrous respect, a protest in advance against any unfavourable criticisms of me. And in accordance with what I felt he would consider prudent, I took leave of him comparatively early, so as to avoid a second meeting with Mr. Weeble, who, I learned, came in every night between eight and nine to help him to get to bed.

“I shall write to you every day,” I said, as I drew on my gloves, “and you must promise that, if there is anything that I can do for you, you will let me know and never mind about Mrs. Grundy. Is that agreed?”
He gave the required promise, and when I had handed him back his latch-key, I stooped and kissed him; and as I looked back at him before closing the iron-bound door, I could not but contrast this parting with the miserable farewell of less than a month ago.

XXI. — A DREADFUL INHERITANCE

IT has always been, and still is, somewhat of a puzzle to me to account for the sudden and complete change in my point of view in regard to my union with Jasper. Lilith would doubtless have explained it as a case of subconscious reflection, and probably she would have been right. My impression is that Peggy's matter-of-fact attitude toward marriage unsanctioned by law had a more profound effect, than I was aware of; that her words—which I had certainly recalled from time to time—had remained in my mind subconsciously exercising a continuous influence. Or it may be that I had found a life of separation impossible, and had realised it consciously only when I found myself once more in Jasper's presence.

But, however it may have happened, the fact remains that I accepted the new order without a qualm. The conditions that I had scouted as unthinkable now seemed entirely reasonable and acceptable. The only twinge of misgiving that I ever had, was produced by the drafting of the declaration that Jasper sent for my approval and criticism. For that well-meant document, with its half-defiant, half-protesting phrases, did certainly bring home to me with uncomfortable vividness the fact that this marriage was not like any other marriage, and that I was not as other married women. But I sent it back approved and tried to forget it, and quietly went on with my preparations for the new life.

Outwardly, however, I made no change in my habits, and even tried to suppress the gaiety and buoyancy of spirit that I felt, lest the sudden change from my recent depressed condition should attract notice. I still lived my life apart, only too happy in my solitude, and spent most of my time in the workshop conning over Jasper's letters, or meditating on the happy days that were drawing so near. For a time the candlestick was sadly neglected, until I had the sudden inspiration of finishing it as a wedding-gift to Jasper. And then all the joy of work revived and blossomed into unsuspected skill. Tracer and punch seemed to travel along their appointed paths unguided; the spindle-shanked chasing hammer became a familiar demon and appeared to develop a volition of its own, and the little enamel furnace roared with glee.

So the days sped by, each bringing me nearer to the golden gate of my enchanted garden, and each so filled with quiet happiness that I could not wish it shorter. About the end of the first week came a letter from Jasper saying that the bandages had been discarded, and that he had taken a walk and had appeared quite well and strong. A day or two later, came another fixing the date and time of our meeting. It was to be on the following Thursday—only five days ahead—at six o'clock in the evening. The formalities were to be carried out immediately on my arrival; we should then dine quietly at the club, spend the evening at a concert or the theatre, and take the boat train either to Flushing or Calais, which ever I preferred.

The arrival of this letter, though I had been daily expecting it, came as quite a shock, and turned my tranquil happiness into feverish excitement which I had some difficulty in concealing. The fixing of an actual date and the selection of a definite region in which to spend the honeymoon (I chose the north of France) gave a reality to this Great Adventure and brought it out of the undefined future into the present. For now I had to carry out the final preparations. Lightly as I might travel, I must take some luggage, and this would entail a conveyance; and this in its turn involved something in the nature of a public departure, so that, if I had desired to disappear secretly—which I did not—the thing would have been impossible. Yet I was, naturally, loath to say much about my immediate intentions, preparing to make my explanations by letter after the event; and this the prevailingly good manners of the little community made quite easy. I notified Miss Polton and my more intimate friends that I was going away on a visit of uncertain duration, and, whatever curiosity they may have felt, no further particulars were asked for as I went about my immediate preparations—the packing of those few things that I must needs take away with me—unnoticed, or at least uncommented on, and then began unobtrusively to arrange the rest of my possessions for the final removal.

On Wednesday—the day before that of my departure—a letter arrived from Mr. Otway. It reached me just after lunch, and I glanced at it before rising from the table. The subject was the same as that of previous ones, but it was evident that something in the nature of a crisis was approaching. The extreme agitation of the writer was shown not only in the matter and the impassioned, rather incoherent manner, but even in the handwriting; which was ill-formed and slovenly, in great contrast to Mr. Otway's usual business-like neatness.

"My dear Helen," it began "I have not troubled you for quite a long time with my miserable affairs—which are, to some extent your affairs too. But they are going from bad to worse, and now I feel that I am coming to the limits of endurance. I cannot bear this any longer. My health is shattered, my peace of mind is wrecked, and my brain threatens to give way. Death would be a boon, a relief, and I feel that it is not far off. I cannot go on like this. Those wretches leave me no peace. Hardly a week passes but I get some new menace; and now—but I can't tell you in a letter. It is too horrible. Come to me, Helen, for the love of God! I am in torment. Have pity on me, even though you have never forgiven me. I cannot come to you, for I am now unable to leave my bed. I am a wreck, a ruin. Come to me just this once, and if you cannot help me, at least give me the comfort of your sympathy. You will not be troubled by me much longer.

"Your distracted husband,

"LEWIS OTWAY."
The emotions that this letter aroused were mixed and rather conflicting. Never had I felt a deeper loathing of Mr. Otway than now that I was being forced to accept what I knew in my heart to be but a counterfeit of marriage. I had been robbed of my birthright, and he had robbed me. Never was I less in a mood to offer him sympathy in the troubles that he had created for himself and me by his callous selfishness. And yet I decided to go to him. Whether the decision was due to some sort of compunction for the blow that I was going to strike on the morrow; or whether to curiosity, or to a desire to verify his foreboding of approaching death, I cannot say. Certainly the last consideration entered into the mixture of motives, and probably was the determining factor. At any rate, I decided to go. Dimly, I perceived that I ought to have consulted Jasper, though I was unaware of the possible legal significance that my visit might acquire. I formed my decision at once, and early in the afternoon set forth westward with the letter in my pocket.

I did not go direct to Mr. Otway's chambers. Promptly as I had made up my mind, I felt the necessity of thinking over the circumstances and forecasting the possibilities. On my way westward I made a halt at a tea-shop, and while I awaited the leisurely service I drew out the letter and read it through again. Clearly the blackmailers were becoming more urgent and possibly more definite. It seemed as though they had adopted some new tactics. But it was not the blackmailers who interested me. I found my eye travelling again and again to those two sentences that hinted at the possibility of Mr. Otway's death.

"I feel that it is not far off." And again, "You will not be troubled by me much longer." Had he any solid grounds for these forebodings? Or were they merely the offspring of abiding terror, or perchance simply rhetorical flourishes designed to arouse my sympathy? These were questions of no small moment to me, for Mr. Otway's death would set me free and in an instant unravel the tangled skein of my relations with Jasper.

As I drank my tea with reflective deliberation I turned these questions over in my mind, not disguising from myself the cool, impassive, egoism of my attitude. My feeling in respect of Mr. Otway was devoid of any trace of sentimentalism. I viewed him as the insurance director views the generalised "proposer,"—but inversely; for I was interested in his decease, not in his survival. I loathed him, but I did not hate him. I did not wish him ill. If I could have saved him from suffering I would have done so, even at the cost of some considerable effort. But if he had stood in the face of instant death, and I could have averted that peril by moving a finger, I would not have moved a finger.

That was my position. As I rose from the table and returned the letter to my pocket, what was in my mind was that Mr. Otway seemed to think that he was going to die, and I hoped that he was right.

When I reached Lyon's Inn Chambers the sun was already low and the gloom of the evening was beginning to settle on the closed-in block of buildings. I ascended the ill-lit stone stairs to the second floor, where the light on the landing was so dim that I had difficulty in deciphering Mr. Otway's name above the door of his "set" and as I did so I noted with surprise that the inscription was faded and obscure, and had the appearance of having been in existence for many years, whereas Mr. Otway had, as I believed, but recently entered on his tenancy.

The door was opened by Mrs. Gregg, who stood in the gloom of the entry confronting me without a word.

"Good evening, Mrs. Gregg," I said. "Mr. Otway has asked me to call on him—"

"Ye need make no excuses," she interrupted, "for coming to see your lawful husband."

"Thank you, Mrs. Gregg," I replied. "Is Mr. Otway disengaged?"

"No," she answered; "he is expecting a visitor."

"How very unfortunate," said I. "He wanted particularly to see me, I know."

"Perhaps you could look in some time to-morrow?" she suggested.

"No, I am afraid I can't. If Mr. Otway is unable to see me this evening I must write to him. I shall not have another opportunity to call for some considerable time."

She reflected for a few moments, and I gathered that she was unwilling to take the responsibility of cancelling the interview.

"Could you call again a little later?" she asked, at length. "He will have finished with his visitor by about half-past seven, or say a quarter to eight. Could you look in again at eight?"

I had not wanted to be out as late as this would make me, but if I was to see Mr. Otway at all, it would have to be tonight. Eventually I accepted the arrangement, some what, I think, to Mrs. Gregg's relief.

As I descended the stairs I heard the footsteps of two persons—apparently a man and a woman—ascending. On the first-floor landing I met the man, who turned out to be the lamplighter. Just as I had passed him he lit the landing lamp, and its light, which came from behind me, fell full on the woman who was coming up. It was only a momentary glimpse that I caught as she passed me on the stairs, but I recognised her instantly. She was Mrs. Campbell, the wife of the Ward Street dealer. It was an odd meeting, and it gave me the material for a good deal of thought and speculation. Mr. Otway's chambers were the only ones on the second floor; from which it seemed probable that Mrs. Campbell was the visitor whom he was expecting. This was a rather queer coincidence; but it was not the only one. That sudden recognition of the face, thrown into strong relief against the dark background by the bright lamplight, had set my memory working. I remembered how,
when I had seen Mrs. Campbell in the shop and had heard her speak, her face had seemed to suggest something familiar, and her accent and the intonation of her voice had called up some accent and tone that I had heard before. It had been but a vague impression at the time; but now, in the new setting and aided by association, the impression became quite definite. The face that hers had suggested was Mr. Otway's face; but the really odd thing was that her voice and accent suggested not Mr. Otway's but Mrs. Gregg's. And this very queer resemblance was made yet more queer by a singular discrepancy. Mrs. Gregg spoke with a distinct Scottish accent. It was a peculiar one, different from that of any other Scots person whom I had ever heard speak; but it was quite pronounced. Mrs. Campbell, on the other hand, had no trace whatever of a Scottish accent; of that I was quite sure. But I was equally sure of the resemblance between the two, subtle and elusive as it was.

Here, then, was a problem the consideration of which gave me quite a considerable amount of occupation, and, helped me to while away the hour and a half that I had to wait. The almost fantastic oddity of the coincidence might have made me reject my impressions as mere delusions; but, on the one hand, there was Mrs. Campbell evidently making for Mr. Otway's chambers, and, on the other, the fact that it was Mr. Otway who had introduced me to the shop in Wardour Street. However, I could get no farther than speculation; and, as speculation tends rapidly to exhaust its limited material, I presently dismissed the problem and returned to the consideration of Mr. Otway's health and its bearing on my own future.

The hour and a half I spent in a leisurely survey of Lincoln's Inn and the Temple. My perambulations with Jasper had brought home to me that London is an entertainment in itself; that no observant person need be dull who has access to its historic streets and picturesque backwaters. And now it was very pleasant to revisit the scenes of former rambles—to be repeated often in the future—and meanwhile to reflect on the happenings of the present and let my thoughts stray to the new life that was about to open; and the time slipped away so agreeably that when the three-quarter chime was struck in a polite undertone by the genteel clock in the Inner Temple, it came to me as quite a surprise.

On the stroke of eight I rang the bell of Mr. Otway's chambers, and was forthwith admitted by the taciturn Mrs. Gregg. In silence she conducted me along a narrow corridor that led from the entrance lobby, across a largish room furnished partly as a library, partly as a dining-room and by a communicating door into the bedroom, when—still without uttering a word departed, shutting the door after her.

Mr. Otway half rose in bed as I entered, and made a vague gesture of welcome, finally extending his hand, which I shook formally.

"This is really good of you, Helen," said he, "to come and see me, and to come so promptly. I am sorry Mrs. Gregg sent you away. There was no need. My other visitor could have been put off."

"It is of no consequence," said I. "My time was my own to-night. What is the new trouble—for I infer from your letter that there is some new development. Is there any definite threat?"

Again he half rose in bed, and looking at me with anxious intensity said, in a low, suppressed tone "Helen, just see that the door is properly shut."

I did so, and he then begged me to draw the chair, which had been placed for me, closer to him. This I also did, and, having seated myself, looked at him expectantly.

Still half raised in bed, he bent his head as near to me as he could, and in a whisper said, "Helen, I want to ask you a question. What became of your father's stick?"

The question, whispered with such strange secrecy, and accompanied by a singular look compounded of eagerness, fear and suspicion, somewhat startled me; for I remembered, even as he spoke, that the same question had been asked by Dr Thorndyke.

"I haven't the least idea," I replied. "Haven't you got it?"

"No. I never had it. I have never seen it since the—ah—the occasion when—ah—you remember—"

"Of course I remember. I have good reason to."

"Ah—no doubt. Yes. But are you quite sure—I thought you might have taken it away with you."

"But, Mr. Otway, you let me out of the house yourself. You saw me go, and you must have seen that I was not taking it. And you know that I never came to the house again."

He sank back on his pillow with a gesture of despair.

"Yes," he murmured, "that seems to be so. It must be so, I suppose."

"It is so," I said. There is no question about it. When I went away that morning the stick was in your house. But why are you asking me about it? Is it of any importance?"

He turned towards a table that stood by the opposite side of the bed, and taking up a bunch of keys, unlocked a deed-box that was on the table, and took from it a sheet of paper.

"Read that," said he, handing me the paper.

The document was a type-written letter of a similar character to the previous ones, and of about the same length. It ran thus:
“Mr. Lewis Otway,

“Some funny questions are being asked. What about Mr. Vardon’s stick—the loaded stick with the silver, knob to hide the lead loading? Where is it? Somebody says they know where it is and who’s got it. And they say there is a bruise on the silver top, and they say something about a smear of blood and a grey hair sticking to it. Do you know anything about it? If you don’t, you’d better find out. Because I think you’ll hear from that somebody before you are many weeks older or else from the police.

“AWELL-WISHER.”

As I came to the end of this document I raised my eyes and met Mr. Otway’s fixed on me with a very singular expression. But he quickly averted his gaze, possibly embarrassed by the steady intensity of my own. For this letter, together with Mr. Otway’s agitated questionings, had revived the old doubts in my mind. Could there be any truth in this veiled accusation? Was it possible that I had really made a hideous mistake in shielding this man? As these doubts flashed through my mind, some reflection of them may have appeared in my expression as I steadily, looked Mr. Otway in the face. At any rate, he looked away as I have said; and when I handed him back the letter, he took it in a hand that shook like a dipsomaniac’s, and replaced it in the deed-box without a word.

For a space we were both silent, and I sat looking at him and his surroundings with profound distaste. The close, stuffy air of the room aroused a faint disgust; the objects on the bedside table—the cigarette box—the large spirit decanter and siphon and a bottle of veronal tablets—conveyed a disagreeable impression of drinking and drug-taking. And the man himself, with his pasty face, his baggy eyelids, creased with multitudinous wrinkles, his drooping, tremulous underlip, was distinctly repellent. The whole atmosphere of the place and its occupant was unwholesome, sordid and abnormal.

Yet, unwholesome and unhealthy as he looked, there was no striking change in Mr. Otway’s appearance; nothing new to justify, so far as I could judge, his alarming account of himself. His aspect supported the suggestions of the spirit-bottle, the cigarettes and the veronal; he looked distracted, terrified, nerve-shaken; but he did not, to my eye, look like a dying man. I inspected him critically during that interval of silence, and arrived, almost regretfully, I fear, at the conclusion that his forebodings were merely the result of a chronic state of fear—if they were real and not deliberately assumed to excite my sympathy.

I think he must have had a feeling that I was regarding him with disfavour, for presently he turned towards me with a deprecatory air and sighed warily.

“I am afraid, Helen,” said he, “that you are very tired of me and my troubles. But you must try to be patient. It may not be for long.”

“Why do you say that?” I asked. “Is your health really bad, apart from the worry of these letters?”

“My health gets worse from week to week,” he replied. “Not that I am suffering from any definite disease. But the constant alarm and anxiety, the shocks which keep coming one on top of another, are breaking me up. I get no interval of peace in which to recover. I am in a constant state of worry and depression by day, which leads to that,” and he pointed to the spirit-decanter, “and it is even worse at night unless I secure a little rest by those things,” pointing to the veronal bottle; “and cigarettes, whisky and veronal don’t make for a long life or robust health.”

“Still,” I said, “you mustn’t exaggerate or alarm yourself unnecessarily. You are not in very good condition, I can see; but there is no reason to suppose that you are in a dangerous state. Couldn’t you cut off these drugs and the whisky and go away for a change?”

He shook his head.

“I couldn’t go away,” he said. “They would find me out and follow me. And as to cutting off the stimulants and the sedatives, that is impossible. Bad as they are, they are the last bulwark against something worse.”

“What do you mean?” I asked.

He did not answer immediately, but seemed to be considering my question and debating whether he should make any further confidences. At length he turned to me somewhat abruptly with an expression which I had never seen on his face before: a wild expression strangely unlike his usual, heavy solidity, suggesting excitement and terror, with yet a curious dash of exultation.

“Helen,” he said with a singular intensity of voice and manner, “there are men who are born into this world under sentence of death. The black cap hangs over their cradles. Throughout their lives they have continually to watch—to evade the execution of the sentence if they can. But the time comes when they can escape no longer. They are tired of evasion, of the struggle to escape; and then they give themselves up; and that is the end.

“I am one of those men, Helen. My mother put an end to her own life. My only brother put an end to his life. My mother’s father made away with himself. It is in the blood. My mother was found hanging from a tree in an orchard. My brother disappeared and was found a month later hanging from a peg in a disused wardrobe. My grandfather hanged himself from a beam in the loft. Perhaps there were others. At any rate, there it is. The fathers have eaten sour grapes and the children’s teeth are set on edge.”

He paused, and I sat looking with uneasy surprise at the unwonted animation in his face: the faint flush, the awakening light in his eyes, the suppressed eagerness of his manner. There was something weirdly unpleasant about this new phase.
“You mustn’t allow these fancies to disturb you,” I said feebly.

“They are not fancies,” he retorted. “They are weighty realities. I thought for a long time that the inheritance had passed me by. But when the first of those letters came, I knew that the legacy had fallen in. And every new menace sets the impulse working. Whenever one of those letters comes I feel it; I find myself thinking of my mother and my brother, and wondering if they felt the same. Then I take a stiff whisky, and the feeling goes off. But I don’t care, nowadays, to go to bed until I have taken a dose of veronal.”

“Well?” I asked.

He drew himself to the edge of the bed, and, thrusting his head out, peered into a shadowy corner of the room with a sort of half-terrified, half-exultant leer that seemed to stir the very marrow of my bones.

“What is it, Mr. Otway?” I asked, staring into the corner but seeing nothing.

“Do you see it, Helen?” he said, rolling his eyes at me and then looking back into the corner, which was in a line with the bed-head; “that great hook, or bent peg. I can’t imagine what it was put there for; but there it is, like a great metal finger, beckoning, beckoning.”

I looked at the object that he indicated—a massive curved peg or hook fixed to the wall about seven feet from the floor—and shivered slightly. Its appearance was horribly suggestive.

“When I used to lie awake,” Mr. Otway continued, still gazing into the corner, “after the first letters came, I could lie on my left side, because then it was behind me and I seemed to feel it drawing me. I had to turn so that I could see it; and whenever I looked at it, it seemed to beckon. And so it does now.”

“I should have it unscrewed and taken away,” said I.

“Yes,” he replied, reflectively, “perhaps it might be—and yet I don’t know. Perhaps I might be more restless if it were not there. It is; in a way, a satisfaction to know that—ah—that I hold a trump card that I can play if—ah—if all the other cards are against me.”

As he spoke, he looked at me with that same curious half-frightened, half-exultant expression that made me wonder whether perhaps his inheritance included a dash of insanity. Then he rolled back to the middle of the bed and lay staring at the ceiling; and by degrees the excitement faded out of his face and he recovered his usual stolid gravity of expression.

Presently he glanced at the little carriage clock that stood on the table, and, turning to me, said: “I usually take my veronal about this time. Would you mind giving me a glass of water and the tablets?”

I rose from my chair, and as I did so my little wrist-bag, which had been reposing, forgotten, on my lap, slipped to the floor. I picked it up and hung it on the knob of the chair-back, and then fetched the water-bottle and tumbler from the wash-stand. Having filled the tumbler and handed it to Mr. Otway, I picked up the veronal bottle, and seeing that it was a new one, broke the seal, withdrew the cork and pulled out the cotton-wool packing.

“Three tablets, please,” said Mr. Otway.

I handed him the bottle, and as he took it and shook out the three tablets he smiled grimly.

“You are the most cautious woman I have ever met,” he remarked. “But you are quite right to make me responsible for my own poison.”

He took the tablets one at a time, crunching each between his teeth very thoroughly before washing it down, with water. Then he mixed what looked to me a very stiff allowance of whisky, with a very little soda water, and swallowed it at a draught.

“I find that the stimulant makes the veronal act more rapidly,” he explained. “I shall be asleep in about half-an-hour. Do you mind staying with me until I drop off?”

I agreed to this, although it was getting late; but, conscious that it was probably the last service I should ever render him, I did not feel that I could refuse. So I sat down again in the chair and watched him, noting that already—probably as a result of the stimulant—he was quieter in manner and more peaceful in appearance. Even when he reverted to the subject that had occasioned my visit, his manner was quite calm.

“There is something very mysterious about that stick,” he remarked. “Recalling the circumstances, I remember putting it down in the corner by the writing-table. I never saw it again, and never gave its whereabouts a thought. I assumed that you had taken it, but I now realise that I was mistaken. Apparently it has got into undesirable hands and we haven’t heard the last of it, I fear.”

“You had better not think any more about it, Mr. Otway,” I said. “There is nothing to be done, and the less you worry the less harm these people will be able to do.”

“Yes,” he agreed; “that is good advice, and I can follow it now. But if I should wake up in the small hours of the morning it will be very different. That is the worst time, Helen. Then this persecution seems beyond bearing. The horror of it makes me sweat with fear. I seem to hear the police on the stairs. I find myself listening for the sound of the bell. It is horrible—horrible! And then I think of that wardrobe, unnoticed all those weeks, and the figure inside in the dark. And then—”

He made a motion of his eyes towards the shadowy corner and involuntarily I glanced at the great peg high up on the
He did not speak again for some time, and I sat silently watching him and thinking—thinking of his dreadful heritage and all that it might mean. Was it a reality, this legacy of death that he saw coming to him? Was it true that even now the black cap hung over his bed? Supposing it were? Supposing that this very night, in the chilly middle watch, he should wake with all his terrors clutching at his heart! Should creep out of his bed and—Here my glance stole into the shadowy corner, and, as I looked, my mind seemed to picture a dim shape filling the wall space below the big, massive peg. There were no details and hardly any form; it was just a shape, vague and rather horrible. I shivered slightly, but I did not try to blot out the mental picture. It was a gruesome thing, that dim, elongated shape, but it did not disturb me much; for it set going other associated trains of thought. There was the ceremony to-morrow evening, the witnesses with their doubtful rights of attestation, protesting that all was in order—and protesting in vain. There were two Ishmaelites going forth hand-in-hand into the wilderness, ready to meet scorn with defiance—but still Ishmaelites. And at the thought, the shape upon the wall space below the peg seemed to grow less dim, to loom out more distinctly. That shape was Mr. Otway—dead. The late Mr. Otway. No longer a legal impediment, but just a fiction that had ceased to exist.

From the dark corner I turned my eyes on to the living man as he lay motionless, breathing softly with an occasional faint snore, and now and again puffing out his cheeks. He was not asleep, for I could see his eyes open and close at intervals; but he was evidently growing somnolent. I watched him with deep interest, almost with fascination, as one might look on a condemned man making his last journey in the hangman’s cart. This was a condemned man, too: a potential suicide. At any moment he might set forth on his last journey; and his arrival at his destination would set the Ishmaelites free. He was ready to go; but he awaited the determining influence that would start him on his journey. What form would that final cause take? Would it be some sudden shock of alarm? Or the cumulative effect of prolonged, abiding fear?

I leaned forward and spoke softly to him.

“Do you know, Mr. Otway, what caused your brother—”

He opened his eyes and looked at me, dully. “What did you say, Helen?” he asked.

“I was wondering if you knew—if there was anything in particular that caused your brother to take his life.”

He cogitated sleepily for a while before replying. At length he answered, in a drowsy voice: “I am not very clear about it. He had had a good deal of worry of one kind and another, financial and domestic. I don’t know that anything unusual had occurred; but he had been in a nervous, depressed state for some time.”

Having made this reply, Mr. Otway closed his eyes and took a deep breath; and I reflected on the significance of his answer. There had apparently been no specific cause of his brother’s suicide, but just the accumulating effects of nervousness and depression, which exploded when they reached a certain degree of intensity. His condition, in fact, seemed to have been almost identical with Mr. Otway’s present condition.

Once more my eyes wandered away to the shadowy corner; and again the wall space below the great hook-like peg became occupied by that elongated shape. Now I seemed to visualise it more completely. It was no longer a mere shape. It had parts—recognisable members. There were the limp-dangling arms, the downward-pointing toes, the shadowy head lolling sideways. It was very horrible, yet I found myself viewing it without horror, but rather with a certain detached interest. I was getting used to it, and was disposed to consider it in terms of its significance.

It was not a person. It was a thing which had replaced a person who had ceased to exist. That person had had a wife. But the wife had ceased to exist, too. In her place was a widow—a free, unattached woman in whom were vested all the rights and liberties of spinsterhood, including the power to contract a valid and regular marriage. The shape was an ugly and forbidding thing; but it held precious and desirable gifts.

From the shape projected by my own imagination my eyes turned to the actual man—the man who was convertible into such a shape. He was fast asleep now; lying on his back, breathing a little stertorously and blowing out his cheeks at each breath. He was an unpleasant spectacle, and the sound of his breathing was disagreeable. He ought not to be lying on his back; for sleepers who lie on their backs are apt to dream, and dreams are not good for men with a tendency to suicide. And sleepers who breathe stertorously are apt to dream ugly dreams.

This consideration set my thoughts working afresh. Supposing this man should have a dream presenting his waking terrors with all the added intensity and vividness of a nightmare; the heavy footfalls of the police upon the stairs, the hands groping in the darkness of the landing for the bell-pull! Or if his dream should show him that wardrobe with its dreadful occupant! What would happen? And even as I put the question to myself my imagination supplied with startling vividness the answering picture. I saw the affrighted sleeper suddenly awaken in uncontrollable panic, scramble from his bed and shuffle hurriedly towards the corner under the peg.

The mental construction of the scene was singularly complete and orderly. I even found myself filling in the details of the means. There, indeed, was the peg. But a man cannot hang himself without some means of suspension. And these must be immediately available or the impulse might die away before they were found. I glanced around the room to see what means were to hand; and at once my eye lighted on an old-fashioned bell-rope that hung beside the head of the bed. Its perfect suitability was evident at a glance—provided that it could be detached without ringing the bell. But the necessity for cutting it rather than pulling it down would be obvious, even to a suicide.

The means, then, were all ready to hand. And there was the man, charged with this self-destructive tendency, sleeping in
the very posture calculated to start it into action.

I sat still, watching him with absorbing interest, and as these thoughts shaped themselves with more and more distinctness, an impulse of which I was barely conscious formed itself and steadily grew in intensity. At length I leaned forward and spoke in a low voice.

“Mr. Otway, you should not lie in that position.”

There was no answer, and he made no sign. The heavy breathing went on with uninterrupted regularity, the eyes remained closed. Again I spoke, this time more loudly, clearly and distinctly.

“Mr. Otway, can you hear me? If you lie as you are lying, you will probably dream. You may have bad, dangerous dreams. You may dream of your mother and your brother. You may dream that the peg on the wall is beckoning to you. And then you may wake in a panic and think that the peg is still beckoning. And then—”

I stopped suddenly. What was this that I was doing? Was it a warning to avert disaster? So the words were framed. But I knew it was nothing of the kind. It was suggestion, pure and almost undisguised. The dreadful truth struck me like a blow and seemed to turn me into stone. I sat rigid as a statue, still leaning forward with my lips parted as if to complete that awful sentence, every moment more appalled by this frightful thing that I had done. There came to me in a flash a vision of my own automatism after the séance; I heard Lilith telling me how the sleep of the drugged resembles the hypnotic trance; and again it came to me how I had been sitting looking at that terrible peg on the wall and—without conscious intention—creating by my will the awful shape beneath it.

How long I should have sat, bent forward as if frozen into rigid immobility by the horror of this hideous thing, it is impossible to say. The realization of what I had done, that had fallen on me like a thunderbolt, had petrified me in a posture of arrested action. It seemed to have deprived me of the power of movement.

The place was intensely silent. The monotonous breathing of the sleeping man—the snoring intake alternating with the soft, blowing expiration—made no impression on the profound quiet, and the rapid ticking of the little carriage clock on the table seemed only to make it more intense.

Suddenly something stirred in the outer room. I sprang to my feet with a gasp that had almost been a shriek. Probably it was only Mrs. Gregg, but in my overwrought state the sound was vaguely alarming. I stood for a few moments, my heart thumping and my breath coming short and fast; then I stole on tip-toe across the room and softly opening the door, peered into the outer room. It was in darkness except that a bright beam of moonlight poured in at the window; but this gave enough light to show that there was nobody in the room.

Still fearful of what I knew not what, I stepped softly through the doorway and looked about me suspiciously. The moonlight struck on a large cupboard or wardrobe, which instantly suggested the lurking-place of some eavesdropper and at the same time aroused hideous associations connected with Mr. Otway’s brother; so that, in spite of my alarm, I was impelled to pluck at the handle to satisfy myself that no figure was hidden within. But the cupboard was locked, or, at any rate, would not open.

Then I looked under the table and peered into the darker corners of the room, growing—naturally—more and more nervous every moment, and pausing from time to time to listen, or to look back through the doorway into the bedroom, where I could see Mr. Otway lying motionless like a sepulchral effigy.

Suddenly something stirred softly quite near to me—the sound seemed to come from the cupboard. I could have screamed with terror. The last vestige of my self-possession was gone, and in sheer panic I fled across the room and down the corridor to the entrance lobby. This place was in utter darkness, and as I frantically groped for the latch, I felt my skin creep and break out into a chilly sweat. At last I found the latch, dragged the door open and darted out; and as the clang of the closing door filled the building with hollow echoes, I ran swiftly down the stairs.

Once out in the inhabited streets, my alarm subsided somewhat; but still the image of that motionless figure in the bedroom, the sinister-looking peg on the wall and the recollection of those dreadful words that I had spoken into the sleeper’s ears pursued me with an abiding horror. I walked quickly out into the Strand, and I was in the act of hailing a cab when I remembered that I had left my wrist-bag hanging on the chair-back by Mr. Otway’s bedside. My purse was in that bag. But if it had contained my entire worldly possessions I could not have summoned up courage enough to go back for it.

The cab drew up by the kerb. I hesitated a moment, but reflecting that it was yet hardly ten o’clock, and that someone would be waiting up from whom I could borrow the fare, I gave the cabman the address, with the necessary explanations, entered the cab and shut the door. But as the crazy vehicle—it was an ancient four-wheeler—rattled over the uneven roadways of the side streets, the scene in that warm and stuffy bedroom was re-enacted again and again. And yet again I looked on that ill-omened cupboard in the ghostly moonlight; speculated on the mysterious sounds in the living-room; wondered uncomfortably if there had been a watcher or a listener, and if so, whether that eavesdropper knew the meaning of silent willing and suggestion.

XXII.—THE CATASTROPHE

VIEWED by the cheerful light of the morning sun as it streamed in through my bedroom window, the phantoms of the previous night dwindled to mere scarecrows. On the panic-stricken state in which I had fled from Mr. Otway’s chambers I
was now disposed to look back with faint amusement. Even the words which I had spoken into Mr. Otway’s ears as he slept had no longer any terrifying significance, though I had to admit that they were not susceptible of any satisfactory interpretation. They had been spoken under the influence of an impulse which I could not account for, and did not care to examine too closely, but which I vaguely connected with my excursions into psychical research—a subject which I decided to avoid as far as possible in the future.

As to Mr. Otway, if his account of his family was correct, it seemed quite probable that, sooner or later, he would make away with himself, though, seeing that he was now well past middle life, the propensity could hardly be as strong as he had represented it. On the other hand, he was now being subjected to a very excessive nervous strain, and was undoubtedly letting his mind run on the subject of suicide. If the blackmailers continued to keep up an increasing pressure, as they seemed inclined to do, the breaking-point might be reached quite soon. And I could not disguise from myself that the catastrophe, if and when it occurred, would not present itself to me as a personal misfortune.

With this I dismissed Mr. Otway and his affairs, and let my thoughts roam into more attractive regions. For this was the day of days. In a matter of a few hours my separation from Jasper would be at an end. We should be united, never again to part.

As I rose and dressed, this was the burden of my thoughts. The weeks of separation and loneliness were gone, and the hours that lay between the present and that final meeting were running out apace like the grains of sand in an hour glass that is nearly spent. I hurried over breakfast that I might the sooner escape to be alone with my happiness; and most of the morning I spent in the workshop, arranging my apparatus so that it might easily be packed, in case I should not come back to superintend the removal myself. The candlestick, which was finished and successful beyond my expectations, I took upstairs to place in my trunk that I might give it to Jasper this very day. And then I paid a visit to my friend Peggy, whom I found in her workshop chirruping gaily and very busy making a complicated set of plaster moulds from the dissected wax model of her masterpiece. But I did not stay long with her, for the making of piece-moulds is an engrossing occupation and one better followed in solitude.

As I entered the house from the garden I encountered our little housemaid with a telegram in her hand.

“This has just come for you, ma’am,” said she, holding it out towards me. “The boy is waiting to see if there is any answer.”

I suppose that to most persons unaccustomed to receiving telegrams, the appearance of the peremptory, orange-tinted envelope is a little portentous. Especially so was it to me at that moment, with the crisis of my life so near at hand; and my heart beat tumultuously as I tore open the envelope and unfolded the flimsy paper. It bore but a brief message; but when I had read that message, the joy of life, the half-timorous happiness that had come to me with the morning sunlight, went out in a moment, like a wind-blown taper, and left me desolate.

“CANCEL APPOINTMENT FOR TO-DAY AND DO NOT COME TO THE CLUB. LETTER FOLLOWS. JASPER.”

That was all. There was really nothing very alarming in it. But to me it came as a dreadful anti-climax, strung up, as I was, to the highest pitch of nervous tension. With a trembling hand I refolded the paper, and, having told the maid that there was no answer, ran up to my room and bolted myself in.

It was a terrible blow. Only now, by the bitterness of the disappointment, did I realise the heart-hunger that I had endured, the intense yearning for the moment in which my beloved companion would be restored to me. And then, beyond this sudden collapse of my happiness, almost in the moment of its realisation, was the mystery, the suspense, the uncertainty. What could it be that had happened? Had Jasper’s condition suddenly grown worse? That could hardly be, for he was practically well—at least, he had so regarded himself—and moreover there was that cryptic reference to the club. Why must I not go to the club?

There was something very mysterious in that prohibition! The more I reflected on the matter the more puzzling did it appear. On the other hand, the very mystery in which the affair was shrouded was itself a relief. For, of course, I never for one moment had the faintest doubt of Jasper’s loyalty, nor could I entertain the possibility of his having changed his views on the subject of our marriage. Some thing had occurred to hinder it; but Jasper was my own and I was his, and that being so, the hindrance, whatever it might be, could be but temporary.

So I comforted myself and made believe that all was well, though when by chance my eye lighted on the trunk, packed and even provided with a blank label, I could hardly keep back the tears. At lunch I let Miss Polton know that my visit was postponed, and immediately after the meal I prepared to go out and seek relief in a long, sharp walk. By the time I returned, the letter from Jasper would probably have arrived and I should know how matters stood.

I had put on my outdoor clothes and was just about to start, when, opening the drawer in which I kept my wrist-bag, I suddenly remembered my loss of the night before. The bag contained, not only my purse, but my card-case and one or two other things I could not conveniently do without. The prohibition to go to the club could hardly, I reflected, extend to Lyon’s Inn Chambers, though they were in the same neighbourhood. At any rate, I wanted the bag, and in my restless state a journey with a defined purpose offered more relief than an aimless walk through the streets.

During the short journey from Mark Lane to the Temple I turned over and over again the words of the telegram without obtaining any glimmer of enlightenment. If I had been less sure of Jasper, I should have been intensely wretched; but now,
as the shock subsided, my optimism revived and I found myself looking forward to Jasper’s letter with a confident expectation of reassuring news.

Emerging from the Temple Station, I walked up Arundel Street, and, crossing the Strand, presently passed through Half-Moon Alley and cast a glance of friendly recognition at the old gilded sign, so pleasantly associated with the scarlet parasol that hung outside the umbrella-maker’s shop in Bookseller’s Row. The two signs recalled the old delightful explorations with Jasper, and put me in quite a cheerful frame of mind, which lasted until I found myself once more ascending the bare and rather sordid stone stairs of Lyon’s Inn Chambers. Then there came a marked change. As I walked up the cold, gloomy staircase a feeling of depression settled on me. I passed the grimy lantern that had looked on my head-long, terror-stricken flight, and some of the forgotten qualms came back. I breathed again the close air of that unpleasant bedroom; I saw again the unwieldy figure in the bed, with its pasty face and puffy eyelids; and even the sinister-looking peg on the wall came forth with uncomfortable vividness from the recesses of memory. By the time I reached the landing, my distaste for the place had grown so strong that I was half inclined to turn back and complete the transaction by means of a letter.

This weakness, however, I overcame by an effort of will and resolutely rang the bell. There was a short interval and then the door opened, revealing the figure of Mrs. Gregg, who, according to her custom, stood and stared stonily at me without uttering a word.

“Good afternoon, Mrs. Gregg,” said I. “When I went away last night I left my wrist-bag behind.”

“Ye did,” she answered; “and ye left the bedroom door open and the gas full on. I found it so this morning.”

“I am very sorry,” I said.

“Tis no matter,” she rejoined, impassively, and continued to stare at me in a most singular and embarrassing fashion.

“Could I have my bag, please, Mrs. Gregg?” I asked.

“Ye could,” she replied; but still she made no move nor any suggestion that I should enter; and still continued to look at me with the strangest, most enigmatic expression.

“I hope,” said I, by way of relieving the extraordinarily uncomfortable situation, “that Mr. Otway is better today.”

“Do ye?” said she; and then, after a pause, “Maybe ye’d wish to see him?”

“I don’t think I will disturb him, thank you,” I replied.

“Ye need have no fear,” said she. “Ye’ll no wake him.”

“Well, I don’t think I have time to see him to-day. I just called to get my bag.”

“And is that all ye’ve come for?” she demanded, glowering at me in the most astonishing manner.

“What else should I have come for?” I asked.

She thrust her head forward and replied in a mysterious tone: “I thought maybe ye’d come to ask where your husband is.”

“I don’t understand you, Mrs. Gregg. Is Mr. Otway not at home?”

“He is not,” she replied; and as I made no answer she asked: “Shall I tell you where he is?”

“It really isn’t any business of mine, Mrs. Gregg,” said I.

“Is it not?” she demanded. “Will it no interest ye if I tell ye that your husband is in St. Clement’s Mortuary?”

“In the mortuary!” I gasped.

“Aye, in the mortuary.” She glared at me in silence for a few moments, and then, suddenly grasping my arm, exclaimed: “Woman! do ye ken yon peg on the bedroom wall? Aye, ye may well turn pale. Ye’d ha’ turned paler if ye’d seen what I saw by the gaslight this morn hangin’ from yon peg.”

I gazed at her for a few moments in speechless horror, until she seemed to sway and shimmer before my eyes. Then, for the first and only time in my life, I must have fainted, for I remember no more until I found myself lying on the floor of the lobby, with Mrs. Gregg kneeling beside me slapping my face with a wet towel.

I rose with difficulty, feeling very weak and shaken. Mrs. Gregg silently handed me my bag and preceded me towards the he door, where, with her hand on the latch, she turned and faced me.

“Well, mistress,” she said, “tis a fit ending, seeing how it began. Ye’ve been a poor wife, but ye’ll make a bonny widow, though I doubt it will stay long at that.”

To this insolent and brutal speech I made no reply. I was completely broken, physically and mentally. I tottered out on to the landing and slowly descended the stairs, holding on to the iron hand-rail, my horror of the place urging me to hasten away, my trembling limbs and lingering faintness bidding me go warily. As I walked unsteadily up Holywell Street, a newspaper boy, running down the narrow thoroughfare, halted and held out a paper.

“Here y’are, Miss, sooicide in Lyon’s Inn. The housekeeper’s story.”

I hurried past him with averted face, but out in the Strand there were others, shouting aloud the dreadful tidings or
displaying posters on which the hideous fact was set forth in enormous type. And it seemed as if each and all of them were specially addressing themselves to me. I returned down Arundel Street, instinctively making for the station, but as I approached it a fresh group of newsboys made me swerve to the left and pursue my way along the Embankment on foot.

As I walked on, and the air and exercise helped me to recover physically from the shock, I began to collect my faculties. At first I had been utterly bewildered and overborne by a sense of horror and guilt. I had sent this wretched man to his death. I had ordained the means, the manner and the time of his death, and it had duly befallen according to my directions. Morally—and perhaps even legally—it amounted to murder. I had willed, I had suggested; and that which I had willed and suggested had come to pass. That was what had flashed into my mind in the very moment in which Mrs. Gregg had made her dreadful communication.

But now, as I walked on, I began to argue the case in my own favour. In the first place, I told myself, it was not certain that the act of the dead man had any connection with the willing or the suggestion. It might have been a mere coincidence. I tried to dwell on this view; but it would not do. The coincidence was too complete to be explained away by any such casuistry. I could not in this way escape the responsibility for Mr. Otway’s death.

Then I considered the question of intention. I told myself—truthfully enough—that I had not consciously willed that Mr. Otway should kill himself. I had not even been conscious of any intention to suggest to him that he should kill himself. But though I did make some sort of point in my own defence, it was extremely unconvincing I had allowed my mind to dwell with hardly-disguised satisfaction on the possibility of his suicide (in a particular manner at a particular time), and between that and actual willing the distinction was not very obvious. And then there were those words, spoken to him in his sleep. It was not conscious, deliberate suggestion; but what was it? The impulse to speak those words was apparently evolved from the subconscious. But does no moral responsibility attach to subconscious intentions?

So I argued, back and forth, round and about; but always came back to the same conclusion. Mr. Otway was dead; and it was my act that sent him to his death. Locked up in my own breast this dreadful secret might remain; but it was my companion for life. There was no escape from it.

But would it remain locked up in my own breast? That was another question that began to loom up with a very real menace. How much did Mrs. Gregg know? She might easily have overheard our conversation and even those final, fatal words. And if she had, would she understand their significance? Now that I came to consider the circumstances, there was something rather alarming in the manner of this inscrutable woman; something threatening and accusatory which I had vaguely felt at the time. And as I reflected on this and the possibilities that it suggested, a fear of something more substantial than my own accusing conscience began to creep around my heart.

When I arrived home, Jasper’s letter was awaiting me. But it contained nothing new. He had seen the posters, had bought an early paper and had immediately sent off the telegram. His tone was that of matter-of-fact satisfaction. The legal impediment to our marriage had now been removed. No declarations were necessary now. We could marry like other people. We were free.

That was the burden of the letter. All our troubles were at an end. Until everything was settled, we had better avoid meeting. But when the chapter was closed with all due formalities we could sing “Nunc dimittis,” and thenceforth live only for one another.

I laid the letter down. All that it said was true. The picture that my imagination had drawn under the guidance of desire as I had sat looking into the shadowy corner of the bedroom in Lyon’s Inn had become a reality. The fetters that I had forged and put on that fatal morning in the little church at Maidstone, had fallen off and given me back my freedom.

And even as I told myself this, some voice from within seemed to whisper a caveat, and my heart was sensible of a chill of fear.
BOOK III. — CRIME

XXIII. — THE DEAD HAND

THE entry of Mr. Otway into my life inaugurated a long succession of disasters. The very first words that I heard him speak shattered the peace of a lifetime. Thence-forward, like the Ancient Mariner, I was haunted by a malign influence which seemed to exhale continuously from his ill-omened personality. And even now that he was dead that malignant spirit was not at rest. His very corpse, lying in the mortuary, was a centre whence radiated sinister influences that crept into my secret soul and enveloped me from without. During his life Mr. Otway had been my evil genius; and death had but transformed him into a malicious poltergeist.

His first, tentative appearance in this character was made on the very evening of my second visit to Lyon's Inn Chambers, when the coroner's officer called at Wellclose Square to serve the subpoena for the inquest. The announcement of his arrival caused me some qualms of vague alarm, which I knew in my heart to be nothing but the stirring of my own conscience. For the purpose of this inquest was to find an answer to the question, "How did Lewis Otway come by his death?" And that question I could have answered in four words—Silent Willing and Suggestion. But I had no intention of answering that question; and hence, as I entered the room into which the officer had been shown, I was consciously on the defensive.

I had, however, no occasion to be. The officer was a civil, fatherly man in a constable's uniform, sympathetic, deferential and not at all inquisitive.

"I have called, ma'am," he began, "on a very sad errand. I don't know whether you have heard the dreadful news—"

"Of Mr. Otway's death?" I said.

"Ah! then you have heard. That is a relief. Well, I have called to let you know that the inquest is arranged for the day after to-morrow, at 3 p.m. in the room adjoining the mortuary." He gave me a few explicit directions as to how to find the latter and then added: "If there is any information that you could give us that would guide us in starting the inquiry, we should be glad. Or the names of any witnesses that we ought to subpoena."

I reflected. The threatening letters must necessarily be referred to at the inquest. I should have to mention them myself, even if Mrs. Gregg knew nothing of them.

"I happen to know," I replied, "that Mr. Otway had received a number of anonymous letters and that he was greatly worried about them."

"Blackmailing letters?" he asked.

"I don't think any demands for money were made," I replied.

"Do you know what was their nature? Were they threatening letters?"

"Yes, indirectly. The two or three that I saw had reference to the death of my father, who died very suddenly and who was alone with Mr. Otway at the time. They suggested a suspicion that Mr. Otway was responsible for my father's death."

The officer looked at me quickly and then became deeply reflective.

"Will it be possible to produce those letters at the inquest?" he asked, after a cogitative pause.

"They are not in my possession," I answered; "but if the coroner will make an order for their production I will endeavour to have it carried out."

"Thank you, ma'am," said he; and then, as an after-thought, added: "If you could make it convenient to call at the coroner's office to-morrow, say at about two o'clock, I could give you the order and perhaps help you to carry it out."

The latter suggestion appealed to me strongly and I fell in with it at once. Thereupon the officer picked up his helmet with an air of satisfaction, and, having handed me the subpoena, moved towards the door. I accompanied him along the hall and let him out; and as I wished him good evening and launched him down the steps, another figure emerged from the darkness and passed him on the way up.

"Does Mrs. Otway live here?" the newcomer enquired. I glanced at him with faint suspicion, for the exact incidence in time of his arrival with the officer's departure suggested a connection between the two events.

"I am Mrs. Otway," said I.

"Oh, indeed! Could I have a few words with you on a matter of some importance? I will not detain you more than a few minutes."

I hesitated, eyeing my new visitor dubiously. But there were no reasonable grounds for a refusal; and I eventually ushered him into the little parlour that the officer had just left, and indicated the vacant chair.

"The matter concerning which I have taken the liberty of calling on you, Mrs. Otway," said he, "is connected with—er—with the painful occurrence—er—at Lyon's Inn Chambers. A most deplorable affair. Most distressing for you—most distressing! Pray accept my sincere sympathy."
“Thank you, Mr.—”
“Hyams is my name—you may have heard your late husband speak of me. We have been acquainted a good many years.”
“He has never spoken of you to me, Mr. Hyams. But what can I do for you?
“Well, I can put my business in a nut-shell. Your husband, at the time of his death, had certain valuable property of mine in his possession. I should like to get that property back without delay.”

He had certainly wasted no time. Unsentimental as was my own attitude I felt this haste to be almost indecent.
“I should think you will have no difficulty,” said I, “if you apply in the proper quarter.”
“That is what I am doing,” he retorted. “You are is widow. His property is in your hands.”
“Not at all,” I replied. “Pending probate of the will, the property is vested in his executors.”

He looked at me in not unnatural astonishment. I suppose the phraseology that I had acquired from my father was unusual for a woman.

“Who are the executors?” he asked.
“I don’t know,” I replied.
“But,” said he, “I suppose you have seen the will.”
“No, I don’t know that there is a will. I am only assuming the existence of one from my knowledge of Mr. Otway’s business-like habits.”
“But this is very unsatisfactory,” said Mr. Hyams. “There is portable property of mine worth several thousand pounds lying in his chambers for anyone to pick up, and those chambers in charge of a woman who probably has access to his keys. It really isn’t business, you know.”
“What is the nature of the property?” I asked.
“It is a collection of very valuable stones, the who lot contained in a little box that anyone could carry away in his pocket.”

“Then,” said I, “the probability is that he has deposited the box with his bankers.”

“Who are his bankers?” he asked.
“I really don’t know.”
“You don’t know!” he exclaimed. “But you must have seen his cheques. I presume he made you an allowance?”
“I accepted no allowance from him and I have never seen one of his cheques.”

Mr. Hyams looked at me with undisguised incredulity, “A most extraordinary state of affairs,” he commented. “Can you give me the address of his lawyers?”

“I am sorry, Mr. Hyams, that I cannot. I don’t even know if he has a lawyer. I know nothing whatever about Mr. Otway’s affairs.”

Mr. Hyams’ countenance took on an expression that was very much the reverse of pleasant. “I suppose, Mrs Otway,” said he, “you realise that you are talking to a man of business and that you are telling a rather unlikely story.”

“I realise it very clearly, Mr. Hyams,” I replied, “and I realise also the difficulty of your position. What I recommend you to do is to go to Lyon’s Inn and see the housekeeper, Mrs. Gregg. She has been with Mr. Otway many years and can probably tell you all that you want to know.”

Mr. Hyams shut his mouth tightly, rose deliberately and picked up his hat.

“Then,” said he, “the position, as I understand it, is this: You don’t know whether there is or is not a will; you don’t know the name of your husband’s bankers; you don’t know who his lawyer is; you don’t know anything about his affairs; and you disclaim any responsibility in regard to property that was in his custody when he died.”

“Yes,” I agreed, “that is the position; a very unsatisfactory one for you, I must admit. Perhaps I may be able to help you later, when I know more about Mr. Otway’s affairs. Will you leave me your address?”

He was on the point of refusing, but prudence triumphed over anger and he laid on the table a card on which I read the name, “David Hyams, Dealer in precious stones,” and the address, “501, Hatton Garden.”

“If I learn anything fresh I will write to you,” I said; whereupon he thanked me curiously and gruffly and walked towards the door with pursed-up lips and a lowering, truculent expression and took his departure without another word.

When he was gone I reflected at some length on the significance of his visit. The interview had brought home to me very vividly my anomalous position. Mr. Otway had been a total stranger to me. Of his past, of his recent habits and mode of life, his friends, his occupation—if he had any—his family and social status, I knew nothing. My father had referred to him as a retired solicitor and as a collector of, or dealer in, precious stones. Vaguely, I had conceived him as a man of some means—perhaps a rich man. But I knew nothing of him and had given him and his affairs barely a thought. He was a
stranger who had come into my life for but a moment, and had straightway gone out again, leaving a trail of desolation to show where he had been.

That was the real position. But to strangers to the world at large, it would seem incredible. I was Mr. Otway's widow. I had been his wife in law if not in fact. And the world would hold me to the legal relationship. The dead man, lying in the mortuary, seemed about to make good the claims that the living man had been forced to abandon. My status as a wife had been a mere fiction: my status as a widow was an undeniable reality.

The clear perception of the extent to which I was involved in the dead man's affairs gave my visit to the coroner's office a new importance. For now, while seeking information for official use at the inquest, I must gather what knowledge I could for my own guidance under cover of the coroner's order. The address of the office—in Blackmoor Street, Drury Lane—was printed on the subpoena, and there, after a few enquiries, I made my appearance punctually on the following day.

My friend of the previous evening—whose name I discovered to be Smallwood—was in the office, looking over some documents with the aid of a pair of spectacles, which gave him a curiously unconstabulary aspect. He rose when I entered, and, opening a drawer, took out a sheet of paper.

"This is what you asked for, Mrs. Otway," said he (upon which a young man at a desk looked up quickly), "the coroner's request for the production of the letters that you told me about. Can I give you any other assistance?"

"If you could accompany me to the chambers and be present during the search for the letters, I should be glad," I replied. "You see," I added, seeing that he looked somewhat surprised, "I am almost a stranger to the housekeeper, I know nothing about the household or Mr. Otway's arrangements, and I shall be accountable to the executors if there are any, for any interference with the papers or their removal. I should very much prefer to have a reliable witness."

He saw the position at once, and, greatly to my relief, agreed to come with me, or rather to follow me in a few minutes. Thereupon I left the office and walking at a leisurely pace into Drury Lane presently made my way into the Strand by way of May-pole Alley and turned eastward towards Lyon's Inn Chambers.

At the entrance I waited for a minute or two and then slowly ascended the stairs to Mr. Otway's landing, growing more and more uncomfortable with every step. For the bare stone staircase set my memory working very unpleasantly, recalling again my headlong flight and the terrible episode that had preceded it—that episode that would so gladly have sponged out of my recollection for ever.

I stood at the door with my hand on the bell, listening for Mr. Smallwood's steps on the stair, and so might have remained until he arrived; but suddenly the door opened and Mrs. Gregg confronted me. Apparently she had some means of observing a visitor from within.

"What are ye standing there for?" she demanded. "Why did ye not ring?"

"I was just about to ring when you opened the door," I replied.

She smiled sourly and looked at me in that strange, inscrutable fashion of hers that I found so disconcerting.

"And what might your business be?" she demanded.

"I have come about some letters of Mr. Otway's—some anonymous letters that he has received from time to time. Perhaps you know about them?"

"You mean, perhaps I have been in the habit of reading his letters. Weel, mistress, I have not. I know nothing about his letters."

"Perhaps you can show me where his letters were kept."

"Indeed, I'll do no such thing. What! Do you think I'll have you scratching up in his chambers and pawing over his letters and papers and him not under-ground yet?"

At this moment I caught the welcome sound of footsteps on the stairs. Mrs. Gregg listened suspiciously, and as Mr. Smallwood came into sight there was a visible change in her demeanour.

"What does he want, I wonder?" she said.

"He has come to receive the letters and to be present at the search for them," I replied, producing the coroner's order. She glanced at the paper, and, as Mr. Smallwood stepped up to the door, she motioned us to enter.

"Come in," she said, gruffly. "'Tis no affair of mine, but I'll no hinder ye."

We were just about to enter when footsteps were again audible on the stairs, and we waited to see who this other visitor might be. Somewhat to my surprise it turned out to be Mr. Hyams, who certainly seemed to have a genius for coincidences.

"Now this is quite a lucky chance," said he, doing himself, as I suspected, less than justice. "I didn't expect to find you here, Mrs. Otway. I presume you are just having a look round."

"I have come to search for some documents that have to be put in evidence," said I. "The coroner has asked for them."

"Well," said Mr. Hyams, "you might, at the same time, see if you can find any trace of my property."

"What property is that?" demanded Mrs. Gregg.
“A parcel of stones—a very valuable collection—that Mr. Otway had from me on approval.”

Mrs. Gregg snorted. “Man,” said she, “ye’re talkin’ like a fool. Do you suppose Lewis Otway would have left a valuable parcel of stones lying about in his rooms like a packet of snuff? Ye’ll find no stones here.”

“That may or may not be,” said Mr. Hyams. “At any rate, I’ll stay and see if anything turns up.”

During this dialogue we had gradually moved from the lobby down the corridor and now entered the living-room. As we crossed it I looked curiously at the large cupboard and wondered idly what I could have found so alarming in its appearance on the night of my visit. But if the living-room had, by the light of day, lost its disturbing qualities, it was otherwise with the bedroom. I opened the door with trepidation, and as I did so and was confronted by the disordered bed, the horror of the place began to come back to me. Nevertheless, I entered the room with a firm step and with my eyes on the bedside table, which appeared to be in the same condition as when I had last seen it. I had just noted this when I felt my arm grasped, and turning quickly found Mrs. Gregg at my side. Her eyes were fixed on me and with her disengaged hand she was pointing towards the corner by the bed-head. Involuntarily my gaze followed the direction in which she was pointing and lighted on the fatal peg, which now bore a loop of the red bell-rope with two free ends. Of course I had known it was there, but yet the sight of it made me turn sick and faint, and I must have shown this in the sudden pallor of my face; for when, controlling myself by an intense effort, I turned to speak to her she was looking at me with a leer of triumph.

“How can we have Mr. Otway’s keys?” I asked.

“Ye’ll find them in the right dressing-table drawer,” she answered. “I’m no party to this, but I’ll no hinder ye.”

Mr. Smallwood opened the drawer and produced a bunch of keys which he handed to me. I looked them over and selecting the most likely-looking ones, tried them, one after the other, on the deed-box. The fourth key fitted the lock, and when I had turned it and raised the lid of the box, the letter which Mr. Otway had shown me lay in full view. I took it out and laid it on the table and then proceeded to lift out the remaining contents of the box. There was not much to remove: a cheque-book, a pass-book, a small journal, a memorandum book, a bundle of share-certificates, a canvas bag containing money, and at the bottom of the box a foolscap envelope endorsed, “Anonymous Letters.”

I opened the unsealed envelope and drew out the letters which I glanced through one by one. There were seven in all, of which I had already seen three. When I had looked at them I returned them to the envelope, adding the last letter, and then began to replace the other things in the box.

“I see a cheque-book there, Mrs. Otway,” said Mr. Hyams, who had followed my proceedings with intense interest. “May I make a note of the banker’s address?”

I handed him the cheque-book and continued to replace the contents of the box. When I had finished I paused with the box open, waiting for him to return the cheque-book; and at this moment I became aware, with a start of surprise, that an addition had been made to our party.

The new-comer was a short, stout, middle-aged man, obviously a Jew of the swarthy, aquiline type, with a very large nose and rather prominent dark eyes. He stood in the open doorway of the bedroom watching us with a slightly unpleasant smile. As he noted my surprised look his smile became broader and more unpleasant.

“Make yourselves at home, ladies and gentlemen,” said he. “These are public premises—at least I assume they are, as I found the door open.”

Mr. Hyams looked round with a start—as, indeed, did the others.

“May I ask who you are, sir?” he enquired.

“You may,” was the suave reply. “My name is Isaacs—of the firm of Isaacs and Cohen, solicitors. I am one of the executors of Mr. Lewis Otway’s will. And having regard to my responsibilities in that capacity, I may, perhaps, venture to enquire as to the nature of these proceedings. You, sir, appear to be in possession of the testator’s cheque-book. Did you happen to require the loan of a fountain pen?”

Mr. Hyams turned very red and hastily laid down the cheque-book.

“That,” he exclaimed angrily, “is perfectly unwarranted. I was simply making a note of the banker’s address.”

“With what object?”

“With the object of enquiring whether certain property of mine, which was in Mr. Otway’s custody, had been deposited in the bank.”

“What is the nature and value of this property?” asked Mr. Isaacs.

“It is a collection of precious stones of the approximate value of four thousand pounds.”

“Then,” said Mr. Isaacs, “I can give you the information you want. No property, other than documents, has been deposited at the bank.”

“In that case,” said Mr. Hyams, “the stones must be in these rooms.”

“It is quite probable,” Mr. Isaacs agreed.

“Is there any objection to ascertaining, now, whether they are here?”
"Yes, there is," replied Mr. Isaacs. "The will has not been proved and no letters of administration have been issued. Pending probate of the will I propose to take possession of these premises and seal all receptacles that may contain valuable property. I shall interfere with nothing until I have letters of administration."

"And how soon will that be?" asked Mr. Hyams.

"Seven days must elapse before the will can be proved. Under the circumstances there may be some further delay. And now I should like to know what has been taking place. You, for instance, madam—"

"I am Mrs. Lewis Otway," said I, "and I have come here by the coroner's direction, to look for some letters that are to be put in evidence."

"Have you found them?"

"Yes," I answered, "they are here; and, as you are an executor, I had better hand them to you, and you can deliver them to the coroner's officer if you think fit."

I handed him the envelope and the coroner's letter, which he read, and then asked: "Did you have to make a very extensive search?"

"No, she didn't," said Mrs. Gregg. "She kenned fine where to look for them and she found them at the first cast."

On this I noticed that Mr. Hyams cast a quick, suspicious glance at me and I thought it wise to explain.

"I looked first in this box because I had seen Mr. Otway put one of these letters into it."

"Quite so," said Mr. Isaacs. "Very natural." But obvious as the explanation was, I could see that it had left Mr. Hyams unconvinced.

I now returned the cheque-book to the deed-box, locked the latter and handed the keys to Mr. Isaacs; who delivered the anonymous letters to the coroner's officer and took his receipt for them on a slip of paper. My business being now at an end, I offered my card to Mr. Isaacs, took his in return, and departed in company with Mr. Smallwood.

"A queer business, this, ma'am," the officer remarked as we descended the stairs. "Regular mix up. Seem to be a lot of Sheenies in it."

"Sheenies?" I repeated, interrogatively. "What are Sheenies?

"Jews, ma'am," he replied, apparently a little surprised at my ignorance. "It's just a popular name, you know."

I reflected on Mr. Smallwood's remark, which seemed hardly justified by the facts—two Jews only having appeared in the case, so far as I knew. And yet I seemed to be aware of a sort of Semitic atmosphere surrounding Mr. Otway. There were, for instance, the Campbells; and then Mrs. Gregg, although a Scotswoman, might easily, but for her strong Scottish accent, have passed for a Jewess; while Mr. Otway, himself, had been distinctly Semitic in appearance.

At the entry, where we separated, Mr. Smallwood halted to give me a final injunction.

"You had better be in good time to-morrow, ma'am," said he, "because it will be necessary for you to view the body so that you can give evidence as to the identity of the deceased."

I thanked him for the reminder, but would much rather have been without it. For the prospect filled me with a vague alarm, and now the mental picture of the sleeping man, which had haunted me by night and by day, began to be replaced by one more dreadful, and one which I felt that my visit to the mortuary would attach to me for ever.

XXIV.—THE GATHERING CLOUDS

THE distaste which I felt for my errand did not prevent me from following Mr. Smallwood's advice on the subject of punctuality. It was some minutes short of half-past two when I turned into the mean little street off Drury Lane in which the mortuary was situated. I had found the place without much difficulty and had still less in finding the mortuary itself, for, as I entered the street I observed a procession of about a dozen men passing in through a narrow gateway, watched attentively by a small crowd of loiterers. Assuming the former to be the jury, I walked slowly past on the opposite side and continued for the length of the short street. I had just turned to retrace my steps when the men filed out of the gateway and proceeded to enter a building a few yards up the street, and immediately afterwards Mr. Smallwood appeared at the gate. He saw me at once and waited for me to approach.

"I am glad you have come in good time, ma'am," said he. "The jury have just been in to view the body and the coroner will like to open the inquest punctually. This is the way."

He preceded me down a narrow passage, at the end of which he pushed open a door. Following him I entered the mortuary, a bare, stone-floored hall containing two large slate-topped tables, one of which was occupied by a recumbent figure covered by a sheet. Mr. Smallwood removed his helmet and together we advanced slowly towards the awesome, shrouded form, lying so still and lonely in its grim surroundings. Very quietly, the officer picked up the two upper corners of the sheet and drew it back, retiring then a couple of paces as if to avoid intruding on my meeting with the dead.

Strung up as I was, the first impression was less dreadful than I had anticipated. The face was pale and waxen, but it was...
placid in expression and more peaceful than I had ever seen it in life. The hunted, terrified look was gone and had given place to an air of repose, almost of dignity. For a few moments I was sensible of a feeling of relief; but then my glance fell upon a contorted length of crimson rope that lay on the slate table, and instinctively my eye turned to the uncovered throat. And as I noted the shallow groove under the chin, faintly marked with an impression of the strands of the rope, the shocking reality came home to me with overwhelming horror. Before my eyes arose that awful shape upon the bedroom wall and the hardly less dreadful image of the sleeping man unconsciously receiving the message of his doom.

With a new horror—an incredulous horror of myself—I looked on the pale, placid face and seemed to read in it a gentle reproach. He had gone to his death at my bidding. He had stood unsteadily on the brink of the abyss, and I had pushed him over.

It seemed incredible. There had been no conscious intention; no guilty premeditation. I would have told myself that there was no connection other than mere coincidence. But there the plain, undeniable facts were. Unconsciously—or subconsciously—my will had created that premonitory shape upon the wall; the terrible words had formed themselves and issued from my lips. And straightway the thing that my thoughts and words had foreshadowed had come to pass. This waxen-faced effigy that lay on the stone table, as its living counterpart had lain that night in the bed, was its fulfilment, its realisation.

"Better not stay too long, ma’am," said Mr. Smallwood. And as he spoke I became suddenly aware that I had reached the limits of endurance. My knees began to tremble and I breathed the tainted air with difficulty.

"Better come away now," continued Mr. Smallwood. "It’s been rather too much for you. Good afternoon, Mrs. Gregg."

I looked up quickly and perceived Mrs. Gregg, who must have come in near the middle. I had been in the room without making a sound, standing at the foot of the table watching me intently. That penetrating stare and the singular, enigmatical expression would have been disturbing at any time. But now I was conscious of actual fear. As I tottered unsteadily along the passage to the street, the menace of that watchful, inscrutable gaze followed me. How much did this woman know? What had she heard? And if she had overheard those last words of mine, how much had she understood of their import? These were weighty questions, the answers to which I should doubtless hear within an hour or two.

When I was ushered by Mr. Smallwood into the room in which the inquest was to be held, the court was already assembled and ready to begin. The jurors sat along one side of a long table and one or two reporters occupied a part of the other, while a row of chairs accommodated the witnesses and persons interested in the case, including Mr. Isaacs, Mr. Hyams, Mr. and Mrs. Campbell, and a youngish man of a markedly Jewish type whom I did not recognise. I took my seat at the end of the row, and Mrs. Gregg, who had followed us in, seated herself near the middle.

As I took my seat the coroner addressed one of the reporters:

"Let me see, what paper do you represent?"

"I am not a pressman, sir," was the reply. "I am commissioned to make a report for Dr. Thorndyke."

"Dr. Thorndyke! But what is his connection with the case? I know nothing about him."

"I only know that he has asked me to make a verbatim report of the evidence."

"Hm," grunted the coroner. "I’m not sure that it is quite in order for private individuals to send their reporters to an inquest."

"It is an open court, sir," the reporter observed.

"I know. But still—however, I suppose it doesn’t matter. Well, gentlemen, I think we are ready to begin. The witnesses are all present and it is on the stroke of three. I need not occupy your time with any preliminary statement. It seems quite a straightforward case and you will get the facts from the evidence of the witnesses. We are here, as you know, to inquire into the circumstances of the death of Lewis Otway, whose body you have just viewed, which occurred either on the night of the 18th instant or the morning of the 19th. The body was found hanging from a peg in his bedroom by his housekeeper, Mrs. Gregg, and it will be best to take her evidence first."

Mrs. Gregg was accordingly called, and having taken a position near the head of the table, was sworn and proceeded to give her evidence.

"My name is Rachel Gregg, age 51. I was housekeeper to the deceased, Lewis Otway."

"How long," asked the coroner, "had you known the deceased?"

"Thirty-three years."

"What was deceased’s occupation?"

"He was a retired solicitor; but he was a connoisseur in precious stones, and, I think, dealt in them to some extent."

"Was he in financial difficulties of any kind, so far as you know?"

"No. I believe he was quite a well-to-do man."

"Had you any reason to suspect him of an intention to take his life?"

"Yes. He used to say that he expected, if ever he had any trouble, that he would hang himself. The tendency to suicide
was in the family. His only brother hanged himself, his mother hanged herself and his mother's father hanged himself.

“But that was only a tendency that might not have affected him. Had you any reason to expect that he actually might commit suicide? Was there anything in his manner, in the state of his mind or in his circumstances that led you to believe that he might take his life?”

“Not until recently. He always used to be quite cheerful in a quiet way until he got married. After that he was never the same. His marriage seemed to bring all sorts of trouble into his life.”

“Tell us exactly how this change came about.”

“His marriage took place about eight months ago—on the 25th of last April when he was living at Maidstone. It was quite sudden. I knew nothing of it until the day before, when he told me he was going to marry a Miss Helen Vardon, and that the marriage was to take place secretly because the lady's father had refused his consent. On the morning of the marriage I saw Mr. Otway go out, and soon afterwards I went out myself to do some shopping. When I came back I found the new Mrs. Otway in the study and her father, Mr. Vardon, lying dead on the floor. Mr. Otway had gone to fetch a doctor. It appeared that Mr. Vardon had called directly after the newly-married couple had arrived home from the church and that there had been a quarrel and Mr. Vardon had fallen down dead. I understand that Mr. Vardon was alone with Mr. Otway at the time.

“Soon after I arrived, Mrs. Otway left the house and went back to her own home, and Mr. Otway told me that she refused to live with him. At any rate, she never did live with him, and she never came near him until the night of his death.”

“Do you know if the deceased agreed to this separation?”

“Apparently she made him agree. But it was a great trouble to him, and I know that he tried more than once to get her to live with him.”

“Do you know what was the cause of the separation?”

“No. Mr. Otway never mentioned it to me.”

“You say that the separation was a great trouble to the deceased. Did it obviously affect his spirits?

“Yes; he was very depressed after his wife went away, and he never recovered. He seemed to get more and more low-spirited.”

“What do you know of any other reasons than the separation from his wife why he should have been depressed in spirits?”

“Yes. Mr. Vardon's sudden death was a great shock to him. He felt that he had been partly the cause of it, by quarrelling with Mr. Vardon. Then there was a great deal of talk in Maidstone about the affair and people blamed Mr. Otway for what had happened; and later rumours began to get about that there had been foul play—that Mr. Otway had actually killed Mr. Vardon. These rumours got on his nerves so badly that he gave up his house at Maidstone and moved to London.”

“You have spoken of a quarrel between deceased and Mr. Vardon. Do you know what the quarrel was about?”

“I believe it was about the secret marriage, but I was not in the house at the time.”

“Were there any other causes for the mental depression which you say the deceased suffered from?”

“I think so, but I can't say for certain. There were some letters that came about once a month which seemed to worry him a good deal. I used to see him reading them and looking very anxious and depressed; and after a time he began to get very nervous and fidgety and couldn't sleep at nights unless he took a dose of veronal. And I noticed that he was smoking much more than he used to, and taking much more whisky.”

“Did you ever see any of the letters that you have spoken of?”

“I never read one, but I saw the outsides and I noticed that they all bore the post-mark of East London.”

Here the coroner drew from the large envelope six of the letters which I had found in the deed-box, and handed them, in their envelopes, to Mrs. Gregg.

“Do you recognise any of these letters?”

Mrs. Gregg turned the envelopes over in her hand, looked closely at the post-marks and replied, as she returned them:

“Yes; these look like the letters that I spoke of.”

The coroner laid the letters on the table, and after a few moments reflection said: “Now, Mrs. Gregg, we want you to tell us what you know of the circumstances of Mr. Otway's death. You spoke of a visit from Mrs. Otway.”

“Yes. She came to Lyon's Inn Chambers on Wednesday night, about half-past six and told me that Mr. Otway had written to her asking her to come. As Mr. Otway was then expecting another visitor, I asked her to call again about eight, which she agreed to do. Mr. Otway had been rather poorly for the last few days—very nervous and despondent, and had been sleeping badly—and for three days had kept to his bed. I told him that Mrs. Otway was coming at eight o'clock and he then said that he had some private business to talk over with her and that I need not sit up. I gave him his supper at half-past seven and just after I had cleared it away Mrs. Otway came. I showed her into the bedroom and went to the kitchen to finish up my work. At half-past nine I went to bed—a little earlier than usual because I thought they would like the place quiet for their
talk. At a quarter to seven on Thursday morning I got up, and as soon as I was dressed, went into the living-room to tidy it up. Then, to my great surprise, I saw that the door of the bedroom, which opens out of the living-room, was wide open and that the gas in the bedroom was full on.

“Thinking that Mr. Otway might be worse, I called out to him to ask if he wanted anything; but there was no answer. I could see the bed from where I was and could see that he was not in it; so I called to him again, and as there was still no answer, I went into the bedroom. At first I thought he was not there; but suddenly I saw him in a corner of the room that was in deep shadow. He seemed to be standing against the wall, with his arms hanging down straight and his head on one side; but when I went nearer I saw that he was hanging from a large peg and that his feet were three or four inches off the floor. He had hanged himself with a length of bell-rope that he had cut off with his razor—at least that was what it looked like, for the razor was lying open on the bed. I picked up the razor and ran to him and cut the loop of rope, and as he fell, I let him down on the floor as gently as I could. He seemed to be quite dead and his skin felt cold, so I ran out to fetch a doctor. Just outside the buildings I met a policeman and told him what had happened, and he told me to go back to the chambers and wait, which I did. A few minutes later he arrived at the chambers with a doctor, who examined the body and said that Mr. Otway had been dead some hours.”

“Did you see any means by which deceased could have raised himself to the peg from which he was hanging?

“Yes. There was an overturned chair lying on the floor nearly underneath him. It looked as if he had stood on it to fix the loop of rope and then kicked it away. Mrs. Otway’s bag was lying on the floor by the side of the chair.”

“Mrs. Otway’s bag! What bag was that?”

“A little wrist-bag such as ladies use to carry their purses and handkerchiefs. She called for it the same day and I gave it to her. She had not heard what had happened, and when I told her she fell down in a dead faint.”

The coroner reflected for a while with wrinkled brows, and I caught the eyes of one or two of the jurymen regarding me furtively. After a somewhat lengthy pause, the coroner asked:

“Do you know what time Mrs. Otway left the chambers?”

“I heard the outer door slam about half an hour after I had gone to bed. That would be about ten o’clock.”

“Did you see Mrs. Otway or deceased after you let her in?”

“No. I did not go into the bedroom again. I went into the living-room twice and could hear them talking.”

“Could you hear what they were talking about?”

“I could hear a few words now and then. When I went into the living-room the first time they seemed to be talking about suicide. I heard Mr. Otway say something about a peg on the wall.”

“And when you went in the second time?”

“They seemed still to be talking about suicide. I heard Mrs. Otway ask deceased what drove his brother to hang himself.”

“You heard nothing suggesting a quarrel or disagreement?”

“No. They seemed to be talking in quite a friendly way.”

“Do you know what kind of terms they were on?”

“No. I never saw them together before except for a few minutes on the wedding day.”

“You spoke of a visitor who came to deceased earlier in the evening. Who was that visitor?”

“A Mrs. Campbell. Her husband is a jeweller and curio-dealer whom deceased had known for a good many years, and used to have business dealings with. I understand she came on business and she only stayed about ten minutes.”

“Is that all you know about the case?”

“Yes, I think I have told you all I know about it.”

The coroner glanced at the jury. “Do any of you gentlemen, wish to ask the witness any questions?” he inquired.

Apparently none of them did, and when the coroner had complimented Mrs. Gregg on the clear manner in which she had given her evidence, she was dismissed.

There was a short interval in which the coroner read over his notes and the jury conferred together in low under tones. Then the coroner observed: “We had better dispose of the police and medical evidence as they are merely formal and will not take much time. We will begin with the constable.”

The policeman was then called and briefly corroborated Mrs. Gregg’s evidence. When he had finished, the doctor, whom he had brought to the chambers, took his place, and having been duly sworn deposed as follows:

“My name is John Shelburn. I am a member of the Royal College of Surgeons and a Licentiate of the Royal College of Physicians, and am acting as locum tenens for the police surgeon of Saint Clement Danes. At seven twenty-eight a.m., on Thursday, the 18th of October, I was summoned by the last witness to accompany him to Lyon’s Inn Chambers, where a man was reported to have hanged himself. I went with the constable to a set of chambers, over the door of which was painted the name of Mr. Lewis Otway. I went into the bedroom where the gas was alight, the blinds down and the curtains
drawn. There, lying on the floor near the wall, I found the dead body of a tall, heavily built man, about fifty or fifty-five years of age, dressed in a suit of pyjamas. The surface of the body was cold and rigor mortis was well established. I should say the man had been dead about eight hours. Around the neck was a double loop of red bell-rope and a portion of the same was hanging from a large peg on the wall about seven feet from the floor. The rope had apparently been cut down for the purpose as a portion was still attached to the bell-wire and the severed tassel lay on the bed, on which were impressions of feet, as if someone had stood on the bed to cut it off. The length of rope had been joined at the ends with the kind of knot known as a ‘granny’ and formed into what is known as a weaver’s loop, which had been passed over the head and the standing part of the rope hitched over the peg. This would form a running loop, like this—"

Here the witness produced a piece of thick string and demonstrated the arrangement on his thumb and the knob of a chair-back.

"I released the double loop from the neck and found a shallow groove on the throat corresponding to the rope. The countenance of the deceased was calm—as it usually is in cases of hanging—and there were no signs of violence or anything remarkable about the body. A chair, on which the deceased had apparently stood to adjust the rope on the peg, was lying close by and near to it on the floor was a lady’s hand-bag. The rope had been cut with some sharp instrument—probably a razor, as I was informed by the housekeeper. I looked round the room but saw nothing of any significance excepting a half-empty whisky decanter and a nearly-full bottle of veronal tablets on a table by the bed."

"Can you tell us at what time death took place?"

"Only approximately. I have said that the man appeared to have been dead about eight hours. That would give us eleven o’clock on the night of the 18th as the time at which death occurred. But I will not bind myself to that time exactly. It might have been an hour earlier or later."

"After hearing your evidence and that of the other witnesses which you have also heard, it is a mere formality to ask your opinion as to the cause of death."

"Yes. The cause of death was obviously suicidal hanging."

This concluded the surgeon’s evidence, and when he had been dismissed, the coroner turned to the jury.

"We have now, gentlemen," said he, "established the fact of death and its immediate cause. Our next move is to seek to establish the contributory circumstances—the more remote causes. We have ascertained that this unfortunate man committed suicide. The question that we now have to consider is, Why did he commit suicide? Possibly the evidence of his widow may help us to answer that question. Helen Otway."

As I rose to take my place at the table I was dimly aware of a certain ill-defined movement on the part of the jury and the spectators such as one may notice in a church at the conclusion of a sermon. But in the present case the cause was evidently a concentration rather than a relaxation of attention. Clearly, my evidence was anticipated with considerable interest.

"Your name is—?"

"Helen Otway. My age is twenty-four and I live at 69, Welclose Square."

"Have you viewed and do you identify the body now lying in St. Clement’s mortuary?"

"Yes; it is the body of Lewis Otway, my late husband."

"When did you last see the deceased alive?"

"On the night of Wednesday, the 18th of October."

"Tell us, please, what took place on that occasion."

"I went to see deceased in consequence of a letter that I had received from him asking me to do so. I arrived at about half-past six and was informed by Mrs. Gregg that deceased was expecting another visitor."

"Did you know who that other visitor was?"

"No; but as I went down the stairs I met Mrs. Campbell coming up and assumed that she was the visitor."

"You know Mrs. Campbell, then?"

"Only by sight. I have seen her in her husband’s shop. Mrs. Gregg asked me to call again at eight, and I agreed to do so, and did so. I was then admitted by Mrs. Gregg, who conducted me to the bedroom and left me there, shutting the door as she went out. I did not see her again that night. Deceased was in bed and had by his side a table on which were a spirit decanter, a siphon of soda water, a box of cigarettes, a bottle of veronal tablets and a deed-box."

"Did you notice anything peculiar in his appearance?"

"No. He was not looking well, but he seemed less ill than I had expected from his letter; which conveyed the impression that he was in a dangerous condition."

"Have you got that letter?"

"Yes," I replied, "I have it here." As I spoke, I drew the letter from my pocket and handed it to the coroner who glanced
through it and then laid it down with some other papers.

"We will consider this letter," said he, "with the others that you have handed to me, later. Will you now tell us what passed between you and the deceased?"

"At first we talked about an anonymous letter that he had received a day or two previously. He showed me the letter, and when I had read it, he locked it in the deed-box."

"We will deal with the anonymous letters presently. What else did you talk about?"

"Deceased repeated the statement that he had made in the letter, that he did not expect to live much longer. I asked him if he had any reason for saying this and he then told me that there was a strong family predisposition suicide; that his brother, his mother and his mother's father had all hanged themselves, and that since he had received the anonymous letters he had been conscious of an impulse to make away with himself in the same manner."

"Had you not known previously of this family tendency?"

"No. He had never mentioned it before, and I knew nothing of his family."

"Did deceased speak as if he actually intended to make away with himself?"

"No, but he spoke of an impulse which he found it difficult to resist; and he mentioned that a large peg on the bedroom wall seemed to fascinate him and to make the impulse stronger. I advised him to have it taken away."

"Previous to this conversation, had you ever thought it possible that the deceased might commit suicide?"

"No; the possibility never entered my mind."

The coroner considered these replies and made a few further notes; then he proceeded to open a fresh subject.

"Now, Mrs. Otway, with regard to your relations with deceased. Were you on friendly terms with him?"

"Not particularly. We were practically strangers."

"A witness has stated that you refused to live with deceased and that you never had lived with him. Is that true?"

"Yes, it is quite true."

"Had you quarrelled with deceased?"

"No, there was no quarrel. Our marriage was a business transaction and immediately after the ceremony I discovered that my consent had been obtained, as I considered, by misrepresentation."

"We don't want to be inquisitive, Mrs. Otway, but we wish to understand the position. Could you give us a few more particulars?"

"Do you wish me to describe the circumstances of my marriage and the separation from my husband?"

"If you please."

"My marriage with Mr. Lewis Otway took place under the following circumstances: I accidentally overheard a portion of a conversation between Mr. Otway and my father from which I gathered that Mr. Otway claimed the immediate payment of five thousand pounds held by my father— who was a solicitor— in trust. It appeared from the conversation that my father was unable immediately to produce the money, and Mr. Otway threatened to take criminal proceedings for misappropriation of trust funds. To this my father made no very definite reply. Then Mr. Otway offered to abstain from any proceedings and to allow the claim to remain in abeyance on condition that a letter was to be written. I later received a letter from Mr. Otway, and as it was certain that my father would strongly object, we agreed not to inform him until after the marriage had take place."

"In accordance with this arrangement we were married privately on the 25th April of the present year and we went together from the church to Mr. Otway's house. I had left a letter for my father informing him of what had been done, and very shortly after our return from the church he came to the house. From an upper window I saw him enter the garden and was very much alarmed at his appearance. I had heard that he suffered from complaint of the heart and had been warned against undue excitement and exertion, and I could see that he was extremely excited and was looking very ill. Mr. Otway let him in and, in answer to a question, admitted that the marriage had taken place. Then I heard my father ask Mr. Otway if he had told me about a letter that he—my father—had sent, and when Mr. Otway gave an evasive reply my father called him a scoundrel and accused him of having tricked and swindled me."

"I heard no more of what was said, as the two men went into the study and shut the door; but a minute or two later I heard a heavy fall, and, running down to the study found my father lying on the floor and already dead. There was a small wound on his temple and Mr. Otway, who was stooping over the body, held my father's walking-stick—a thick Malacca cane with a loaded silver knob—in his hand. He stated that my father had threatened him with the stick and that he had taken it away from him and that during the struggle my father had fallen insensible, striking his head on the corner of the mantel-piece as he fell."
“Did you believe him?

"I think, at the moment, I did not. But on reflection, remembering how ill my father had looked, I had no doubt he was speaking the truth."

"Was there an inquest on your father’s death?"

“Yes. The jury found, in accordance with the medical evidence, that death was due to heart failure caused by excitement and anger."

“And after this you refused to live with deceased?

“Yes. I asked him about my father’s letter and he said he had not seen it. I went with him to the letter-box and there we found it. The postmark showed that it had come by the first post and my father’s address was on the outside of the envelope. There were no other letters in the box. I had no doubt that Mr. Otway had seen the letter and put it back in the box."

“Was that why you refused to live with him?”

"Partly. The letter stated that my father was able to meet his liabilities and gave a date on which payment would he made. Consequently the threatened proceedings against my father were impossible and Mr. Otway had obtained my consent by false pretences. But further, Mr. Otway’s action had been the cause of my father’s death, and this alone would have made it impossible for me to live with him as his wife."

“Did deceased agree to the separation?”

“Yes. He saw that the position was impossible; but he hoped that the separation might be only temporary—that we might become reconciled at some future time.”

“Did you consider this possible?”

“No. I held him accountable for my father’s death and could never have overcome my repugnance to him.”

The coroner noted down this answer and having glanced over his notes reflectively, looked up at the jury.

“Do any of you, gentlemen, wish to put any questions on this subject?” he asked.

The jurors looked at one another and looked at me; and one of them remarked that, “This young lady seems to have rather easy-going ideas about the responsibilities of marriage.”

“That,” said the Coroner, “is hardly our concern. The next matter that we have to consider is that of certain letters received by the deceased from some unknown person or persons. There are seven of them and they seem by the postmarks to have been sent at intervals of about three weeks and to have been posted somewhere in the East end of London. We will begin with the first.” He handed a letter to me and asked: "Have you seen that letter before?"

“Yes,” I replied. “Deceased showed it to me one day last June when I met him by appointment at his request. He seemed to be extremely worried about it.”

The coroner took the letter from me and read it aloud.

“Mr. Lewis Otway,

“The undersigned is writing to put you on your guard because Somebody knows something about how Mr Vardon came by his death and that somebody is not a friend, so you had better keep a sharp look-out for your enemy and see what they mean to do. I can’t tell you any more at present.

“A WELL WISHER.”

“Do you know,” the coroner asked, “who wrote that letter?”

“No, I do not.”

“Have you no idea at all? Is there no one whom you suspect?”

“I have not the least idea who sent that letter.”

“You say that deceased was extremely worried about it. Do you know why he was worried?”

“I understand that there had been rumours in Maidstone that Mr. Otway had killed my father. Those rumour seemed to have preyed upon his mind and made him unreasonably nervous.”

The coroner nodded gravely and opened another letter and as he read aloud the well-remembered phrases I realised that I should need all the courage and self-possession at my command.

“The writer of this warns you once more,” the letter ran, “to look for trouble. The person that I spoke of knows that something was held back at the inquest at least they say so and that they know why your wife won’t live with you and that she knows all about it too and that someone knows more than you think anybody knows. This is a friendly warning.”

“FROM A WELL WISHER.”

The coroner looked keenly at me as he finished reading.
“Can you explain the meaning of this letter?” asked. “It refers to something that was held back at the inquest. Was anything held back, so far as you know?”

“I remember that there was one omission in the evidence. Mr. Otway made no mention of my father’s stick.”

“Was it not mentioned at the inquest at all?”

“No.”

“Did you not give evidence?”

“Yes; but I was merely asked if I confirmed Mr. Otway’s evidence, which I did.”

“You confirmed Mr. Otway’s evidence! But that evidence was not correct. The duty of a witness is to state the whole truth; whereas Mr. Otway had withheld a highly material fact. How was it that you did not supply this very important fact?”

“It did not appear to me to be of any importance. The medical evidence showed that death was due to heart failure.”

“Medical evidence!” the coroner exclaimed, testily. “There is too much of this medical evidence superstition in these courts. People speak as if doctors were infallible. It was your duty as a witness to state all that you knew, not to decide what was or was not of importance. And I cannot understand how you came to hold such an opinion. You found your father lying dead with a wound on his head and a man standing over him with a loaded stick, and you considered this fact of no consequence?”

“I see now that I ought to have mentioned it.”

“What was the verdict?”

“The verdict was in accordance with the medical evidence—Death from natural causes.”

“Did the medical witness or witnesses know that Mr. Otway had had a loaded stick in his hand?”

“No.”

“Did anybody besides yourself and Mr. Otway know about the loaded stick?”

“Mrs. Gregg came into the room when Mr. Otway had gone for a doctor. She saw the stick in a corner and picked it up to examine it. She asked whose it was and remarked on its weight.”

“Did she know it had been in Mr. Otway’s hand at the time of your father’s death?”

“I have no reason to suppose that she knew.”

“Well,” said the coroner, “it is a most extraordinary affair. You heard Mr. Otway give his evidence, you knew that that evidence was incomplete, and yet, though the dead man was your own father and you have declared an unconquerable repugnance to Mr. Otway, you allowed this garbled evidence to pass unchallenged. It is an amazing affair. However,” he continued turning to the jury, “that is not our concern. But what is our concern, for the purposes of this inquiry, is that we now begin to see daylight. We can now understand the extraordinary effect these letters seem to have had on the man whose death we are investigating. Lewis Otway, when he gave his evidence at the inquest, suppressed a most important and damaging fact which he believed to be known only to himself and his wife. Thereby he obtained a verdict of Death from Natural Causes, which exonerated him from all blame. Had all the facts been known, the verdict might have been very different.

“Now the receipt of these letters must have destroyed his sense of security. Apparently someone else—and that someone evidently an enemy—knew of this damaging fact and knew of the further damaging fact that it had been suppressed at the inquest. In effect, these letters held out a threat of a charge of murder, or at least, manslaughter. It is no wonder that they alarmed him. But we had better take the rest of the evidence. There is this letter deceased wrote to his wife, which I will read. It is dated the 17th of October, and this is what it says:

“My dear Helen,

“I have not troubled you for quite a long time with my miserable affairs—which are to some extent your affairs too. But they are going from bad to worse, and now I feel that I am coming to the limits of endurance. I cannot bear this much longer. My health is shattered, my peace of mind is wrecked and my brain threatens to give way. Death would be a boon, a relief, and I feel that it is not far off. I cannot go on like this. Those wretches will not leave me in peace. Hardly a week passes but I get some new menace and now—but I can’t tell you in a letter. It is too horrible. Come to me, Helen, for the love of God! I am in torment! Have pity on me, even though you have never forgiven me. I cannot come to you, for I am now unable to leave my bed. I am a wreck, a ruin. Come to me just this once, and if you cannot help me, at least give me the comfort of your sympathy. You will not be troubled by me much longer.

“Your distracted husband,

“LEWIS OTWAY.”

When the coroner finished reading the letter (which evidently made a deep impression on the jury) he looked at me gravely.
“Before passing to the next letter, I must ask one or two questions about this one. What did you understand from the phrases ‘I feel that it (death) is not far off. I cannot go on like this. You will not be troubled by me much longer.’ Did they not suggest to you an intention to commit suicide?”

“No. I understood them as referring to his state of health.”

“If you had known of the family tendency to suicide, how would you have understood these passages?”

“I should have suspected that he contemplated suicide.”

“But you say you were not aware of this tendency?”

“No, I was not.”

“He refers to his ‘miserable affairs—which are to some extent your affairs too.’ What did you understand him to mean by that?”

“I understood him to refer to the fact that I was partly responsible for the omission of certain details in the evidence at the inquest.”

“When you received this pitiful letter, what did you do?”

“I went to him the same day to find out what the trouble was. He then showed me an anonymous letter that he had received.”

“Is this the one?” the coroner asked, handing it to me; and when I had glanced at it and identified it, he proceeded to read it to the jury.

“‘Mr. Lewis Otway,"

“‘Some funny questions are being asked. What about Mr. Vardon’s stick?—the loaded stick with the silver knob to hide the lead loading? Where is it? Somebody says they know where it is and who’s got it. And they say there is a bruise on the silver-top, and they say something about a smear of blood and a grey hair sticking to it. Do you know anything about that? If you don’t you’d better find out. Because I think you will hear from that somebody before you are many weeks older or else from the police. A WELL WISHER.’"

As he laid down the letter, the coroner looked at me curiously.

“There are one or two important questions, Mrs. Otway,” said he, “that arise out of this letter. The first is, What has become of this stick?”

“I don’t know what has become of it. I saw Mrs. Gregg replace it in the corner by the writing table and never saw it again. The deceased asked me the same question when he showed me the letter; but I reminded him that I did not take the stick with me when I left his house and that I never went to the house again.”

“It never occurred to you to ask what had become of your father’s stick?”

“No. I always assumed that it was in Mr. Otway’s possession.”

“You have told us that Mrs. Gregg had seen the stick in Mr. Otway’s house. Had anyone else seen it there?”

“I don’t know of anyone else having seen it; but, of course, it may have been seen there by other persons. I know nothing of what went on in that house. I never entered it after my father’s death.”

“With the exception of Mr. Otway and yourself, did anyone know that you had seen that stick in Mr. Otway’s hand on the occasion of your father’s death?”

“So far as I am aware, no one else knew.”

“There is a statement in that letter referring to a bruise on the silver knob and a smear of blood with a grey hair sticking to it. Is it possible, so far as you know, that that statement might be true?”

“I cannot say that it is impossible.”

“After your father’s death, did you examine the stick?”

“No. I saw it in Mrs. Gregg’s hands, but I did not look at it closely.”

At this point a police superintendent who had been sitting near to the coroner’s table, rose, and, approaching the table, stooped over it and spoke to the coroner in a low voice. The latter listened attentively and nodded once or twice, and when the superintendent had returned to his seat he addressed me.

“I think that will do, Mrs. Otway—for the present, at any rate. We may have to ask you one or two questions later. Do any of the jury wish to ask anything before the witness sits down?”

As none of the jury responded, I returned to my seat, and the coroner then recalled Mrs. Gregg.

“You have heard the last witness state that she saw you take up Mr. Vardon’s stick. What made you examine that stick?”

“I did not examine it. I noticed it standing in the corner and saw that it was a strange stick—that it was not Mr. Otway’s. I took it out of the corner to look at it and then noticed that it was heavily loaded at the top.”
“Can you say whether there was or was not a bruise or a blood smear on the knob?”

“I cannot. I did not look closely at the knob. I just picked the stick up, felt its weight and put it back in the corner.”

“Did you know that Mr. Otway had had that stick in his hand when Mr. Vardon fell dead?”

“No. I never heard of that until to-day.”

“Could anyone other than Mrs. Otway have known, so far as you are able to say?”

“I can’t say. I should think not. I did not get back to the house until it was all over. But I thought, and believe, that there was no one in the house but those three—Mrs. Otway and her husband and her father.”

“Do you know what became of that stick?”

“I do not. I put it back in the corner and never saw it again. It was not in the corner when I tidied up the room the next day.”

“Thank you, Mrs. Gregg. That will do.”

Having dismissed the witness, the coroner turned to the jury.

“I had hoped, gentlemen,” said he, “to finish the case to-day, but, as you have seen, its apparent simplicity was rather illusory. Some rather curious issues have arisen which will have to be considered in detail. Moreover, there appears to be a suspicion that property of very great value has been removed from the premises—at least, it seems to be missing. Under these circumstances, the police authorities ask for an adjournment to enable them to make some enquiries; and I am sure you will agree with me that this, and certain other matters, should be cleared up before a verdict is returned. I therefore propose to adjourn the enquiry for fourteen days.”

The court rose, and I rose with it. As I stood up and turned towards the door I saw Jasper standing at the back of the hall. He made no sign, nor did I; and as soon as our eyes had met, he turned and walked out. I did not attempt to follow, for I understood at once that he did not consider it desirable that we should recognise one another in this place. Moreover, I was detained for a minute or two by the coroner, who informed me, with a curious dry civility, that he wished me to attend at the adjourned meeting of the court, as further evidence from me might be required and after him, by Mr. Isaacs, who, as executor, was responsible for the funeral arrangements and who promised to inform me when the date had been fixed.

As I emerged from the gateway I glanced up the street with a wistfulness which I would hardly acknowledge to myself. But, of course, Jasper was already out of sight. Feeling very lonely, weary and exhausted, I walked slowly down Drury Lane considering what I should do next. And suddenly there came on me a longing for the quiet and comfort of the club. It was quite near; and once there I could wash, refresh and rest in peace, alone, or at least among civilised people. And it was even possible that Jasper might be there.

At this thought I must have unconsciously quickened my pace, for a few minutes later found me passing through the entrance hall, telling myself that, of course, Jasper would not have come there. Nevertheless as I opened the door to the large room my eye instantly sought the familiar table in the corner; and when I saw Jasper sitting by it with a wishful gaze fixed on the door, my weariness and loneliness seemed to drop from me like a garment.

XXV. — SUSPENSE—AND A DISCOVERY

“I HAD hoped,” said Jasper, as we met by the table, “that you would come on here. I had to take the chance. You understood why I made myself scarce as soon as you had seen me?”

“I assumed that you thought it better that we should not be seen together just at present.”

“It is more than unadvisable,” said he. “It is vitally important. We will talk about that letter—but not here. There is a lot that I have to say to you, but we had better have our talk where we cannot be seen, or possibly overheard. I propose that I run off now—nobody has seen us here yet—and wait for you at my chambers. You just have a wash to freshen you up and come along at once. Don’t stop for tea; I will have some ready for you. And you had better come by the least frequented way. Go down the Embankment, up Middle Temple Lane, along Crown Office Row, cross King’s Bench Walk to Mitre Court, come out into Fleet Street by Mitre Court Passage, cross to Fetter Lane and into Clifford’s Inn by the postern gate.”

“All this sounds very secret and mysterious,” said I.

“It is necessary,” he replied. “We mustn’t be seen together if we can help it. Remember the jury and other interested parties are local men, and might easily run against us in the public thoroughfares. So I will run off now and you will come along as soon as you can.”

To this arrangement I agreed, although the precautions seemed to me somewhat excessive, and he hurried away while I went in quest of hot water and the other means of ablation.

The process of purification did not take long, for the temptation to linger luxuriously over the ceremonial of the toilet was combated by curiosity and anxiety to rejoin Jasper. In a few minutes I emerged, greatly refreshed and sensible of a very healthy appetite, and set forth by the prescribed route towards Clifford’s Inn, reflecting earnestly as I went on Jasper’s
rather mysterious attitude. I did not have to ply the knocker, for as I reached the landing I found Jasper standing at his open door.

“Now,” said he, when I had entered and he had softly closed both the massive “oak” and the inner door, “we are secure from observers and eavesdroppers, and we can pow-wow at any length we please.”

“You are very secret and portentous,” I remarked. “What is it all about?”

“The secrecy and portentosity,” he replied, “are possibly by-products of a legal training. We will discuss that presently. Meanwhile, the need of the moment is to provide nourishment for a starving angel.”

He placed an easy chair for me by the fire, and then retired to the little kitchen, from which issued a gentle din of crockery very grateful to my ear. Presently he emerged with a tray on which were a teapot and two covers, and having deposited it on a small table, placed the latter by my chair and removed the covers with a flourish.

“There is only one cup and one plate,” said I, noting that the “nourishment” had been provided on a scale of opulence appropriate to masculine conceptions of appetite.

“Dear me!” exclaimed Jasper. “How many cups and plates do you generally use?”

“Go and get another plate and cup and saucer,” I commanded, severely.

When he had made the necessary addition to the table appointments, he drew up a second armchair, and, as he poured out the tea, he said, gravely:

“We have had a long probation, Helen, dearest—at least, it seems so to me; and it is not over yet. But this little interlude should hearten us for what remains. To me it is a glimpse into a future of perfect happiness and comradeship. Do you realise, Helen, that we are now a normal, engaged couple, free to marry when we choose?”

Of course I had realised that we were free; but as I thought of the shrouded figure that even now reposed under its sheet in the mortuary, I doubted whether the word “normal” was fully applicable.

“It is perfect peace and happiness to be here with you, Jasper,” I replied; “but I think I shall feel more normal when we can meet without all this secrecy. And even now I don’t quite understand it. Why is it so important that we should not be seen together?”

“That is fairly obvious, I think,” he replied. “I am going to be very frank with you, Helen, because I have complete confidence in your courage and strength of character. There is no use in blinking the fact that you are in a difficult situation. That coroner man thinks you wrote those anonymous letters; and he suspects that you knew about Otway’s suicidal tendencies.”

“But I distinctly said I did not.”

“Yes, but, you see, the person who wrote those letters is not a person whose statements would carry any weight; and he thinks you are that person. He thinks you have tried to drive Otway to suicide, and he will be looking for a motive. There is a fairly obvious motive already, as you were encumbered with a husband whom you didn’t want; but if you add another husband whom you did and do want, the motive for getting rid of the unwanted one becomes much more definite. That is the kind of motive he will be on the look-out for. Hence the necessity for the utmost caution on our part. If a witness could be produced who could depose to having seen us together, it might be possible for him to put some inconvenient questions.”

“Could he not question me on the subject apart from any such witness?”

“I don’t think it would be admissible for the coroner to suggest the existence of a lover if he had no facts. And that brings us to the point that I was going to raise. You ought to be represented either by counsel or by a solicitor; preferably by counsel, as a barrister is more agile—more accustomed to deal with the sudden exigencies that arise in court.”

“You seem to suggest that I am charged with having brought about Mr. Otway’s death.”

“I wouldn’t use the word ‘charged’ as I don’t know that there is any such offence recognised by law. Morally, to cause a man to commit suicide would be much the same as to murder him, but I can’t say off-hand what the legal position would be. My impression is that it would not be an offence that could be dealt with by law unless the act of murder could be proven. Nonetheless, I would be happier to see you with some reliable counsel we could trust.”

It was then I thought of Dr Thorndyke. He had shown a kind interest in my affairs, even to the extent of having a shorthand reporter at the inquest. Surely he would be ideal, if I could persuade him to take up the role of my advocate. I broached the possibility to Jasper, explaining Dr. Thorndyke’s interest in the case.

“The very man!” Jasper said enthusiastically. “You must see him, Helen, and soon. He is a local resident, luckily, and lives only a few moments’ walk from here.”

So fast did things seem to be moving that I was reluctant to take on another visit after my already busy day, but Jasper was insistent that I should seek out Dr. Thorndyke’s help. “I wish I could accompany you,” he said, “but it is best if we are not seen out together. Will you see him?”

“Perhaps.” I temporised, still feeling that to take on the services—and the cost!—of such a distinguished advocate was an extreme reaction to my current situation.
We talked a little longer, and then I took my leave, getting directions to Dr. Thorndyke's rooms from Jasper.

"I suppose," said he, as he bade me farewell, "we had better not meet again until this affair is over. It is only a fortnight, and after that we shall be free. Meanwhile, we can write as often as we please."

I agreed to this the more readily as I saw that another meeting with Jasper would make it difficult for me to escape from his demand that I should invoke Dr. Thorndyke's help. Nevertheless, as I took my way through Clifford's Inn Passage into Fleet Street, I found myself looking forward somewhat gloomily to the lonely and anxious fortnight lay ahead.

For several days nothing out of the ordinary occurred. My friends at Welclose Square, who knew approximately what my position was, were quietly sympathetic, but never referred to the matter; excepting the incorrigible Peggy, who frankly congratulated me on my newly-acquired freedom.

"It's horrid for you, Sibyl," said she, "but still it is for the best; though he might have managed it a little more decently—a level crossing, you know, or 'found drowned,' or something of that sort."

"You are a callous little wretch, Peggy," said I.

"I don't care," she replied, defiantly. "You know it is true. I am awfully sorry for you now. It must be perfectly beastly to have to answer all those important questions, and have your answers printed in the news papers. But it will soon be over, and then you can forget it and have a good time. I shall dance at your wedding before I am six months older."

I had to pretend to be shocked, but the Titmouse's optimism did me good. For there was a bright side to the picture, and it was just as well to gather encouragement from an occasional glance at it.

About ten days after the first sitting of the inquest I received a letter from Mr. Isaacs. He had already written to me briefly to inform me that the funeral had been postponed by the coroner's direction until after the adjourned inquest, but had then said nothing about the will. The present letter supplied the omission, and its contents surprised me very much. It appeared that the will been proved and that I was the principal beneficiary. "The testator," said Mr. Isaacs, "has bequeathed to you the bulk of his personal—upwards of eight thousand pounds—and the lease of the premises in Lyon's Inn Chambers, together with the furniture and effects contained therein. You are also constituted the residuary legatee. The chambers have now been evacuated by Mrs. Gregg, and are at your disposal. They are at present locked up, and the keys are in my possession pending your instructions and advice as to whether you intend to occupy the premises, to let them or to dispose of the lease. A copy of the will can be seen at my office, and, of course, the original can be examined at Somerset House."

The provisions of this will caused me, as I have said, considerable surprise. I had regarded myself as having no pecuniary claim on Mr. Otway, and had not considered myself as concerned in his will at all. Now it was evident that, selfish as he had been during his life, he had been anxious at least to make some atonement after his death for the injury he had done me; and the fact did not tend to make my sense of guilt less acute.

Before I had replied to Mr. Isaacs' letter I received two other communications. One was from Jasper; and though it was written in a tone of quiet cheerfulness, its contents filled me with alarm. It appeared that Jasper, becoming uneasy at my continued neglect to take any measures to secure a counsel to represent me, had called on Dr. Thorndyke with the object of retaining him. "We have had rather bad luck," he continued, "though I don't suppose it will matter. Dr. Thorndyke would have been pleased to represent you, but unfortunately he has been commissioned at the last moment by the Home Office to make an independent investigation of the case. He gave me the name of a suitable counsel—a rising junior named Cawley—with whom I have made the necessary arrangements. So your interests will be looked after, and we can trust Thorndyke to clear up the obscurities of the case."

The other letter was from Dr. Thorndyke himself, and confirmed Jasper's account.

"Your friend, Mr. Davenant," it said, "called on me to-day to ask me to watch the proceedings of the inquest on your behalf, which I would have done with great pleasure if I had been at liberty. But I had just received instructions from the Home Office to look into the case and give evidence at the adjourned inquest; so I referred your friend to Mr. Cawley, who is an excellent counsel and will be able to do all that is necessary."

"Mr. Davenant expressed great disappointment that I should be, as he expressed it, 'retained by the other side.' But I pointed out to him that there is no 'other side.' I am not a 'witness advocate.' My evidence would be the same whichever side employed me. I never undertake to represent a particular interest, but merely to obtain what facts I can and give those facts impartially in my evidence and I always make it clear to clients that they employ me at their own risk—at the risk that the facts elicited may be unfavourable to them. So, although I am not retained by you, I shall act precisely as if I were. I shall find out all I can, and tell the court all I know. This will, presumably, be entirely in your interest.

"And now I am going to ask a favour of you. I wish to examine and make a plan of the premises at Lyon's Inn Chambers, and I understand that the tenancy of the Chambers is now vested in you. Will you be so kind as to lend me the keys and authorise me to make this survey? If you will, I shall be able to make my evidence more complete."}

If Jasper's letter had alarmed me, Dr. Thorndyke's positively terrified me. The cool, relentless impartiality, the unhuman indifference to everything but the actual truth that the letter conveyed appalled me; and I even seemed to read a direct menace in its tone. If I had employed him, I should have done so at my own risk; so he seemed to hint. His intention was to "find out all he could and tell the court all he knew." How much would he find out? How much did he know already? He had a verbatim report of the evidence so far. He had Mrs. Gregg's statement that "they seemed to be talking about suicide."
He would know all about suggestion and silent willing. Was it possible that he already knew that I had sent that wretched man on his last journey? When I recalled all that my father had said of his amazing powers of inference; when I remembered how unerringly he had detected the reservations in Mr. Otway's evidence and mine; I could not but feel that my chance of keeping my guilty secret was infinitesimal. The probability was that it was discovered already.

As to his request, obviously I had no choice but to grant it, and I was on the point of writing to Mr. Isaacs to instruct him to hand the keys to Dr. Thorndyke when it occurred to me that it might be well to avoid unnecessarily taking the former gentleman into my confidence. I knew nothing about Mr. Isaacs, and was not particularly prepossessed by him; not did I know the object of the proposed survey of the premises, concerning which indeed I was somewhat mystified and rather uncomfortable. Eventually I decided to call at Mr. Isaacs' office for the keys and deliver them myself to Dr. Thorndyke.

Accordingly I wrote a short note to the latter informing him of my intentions, and on the following morning betook myself to Mr. Isaacs' office, which was situated in New Inn. I could see that my visit was somewhat unexpected, and evidently aroused the solicitor's curiosity.

"You will see," said be, "that the keys are all labelled, and I have made a rough inventory of the furniture and effects. Perhaps you would like me to come with you and check it."

"Thank you," said I, "but I don't think I will check the inventory to-day. We will postpone that until I take formal possession. At present I am merely going to take a look at the premises."

When I said this, I had, of course, no intention of going to the chambers at all, but as I walked down Wych Street with the keys in my bag, I reflected that, as I had said I was going, I had better go. Moreover, it was possible that the arrangement of the place had been disturbed and that some things might need to be replaced; for I assumed that Dr. Thorndyke would wish to see the premises as they were on the night of the tragedy. And then I was not without some curiosity concerning this place which had been the scene of events so momentous to me.

At the bottom of Wych Street I turned round by the "Rising Sun" and walked along Holywell Street to the entrance of Lyon's Inn Chambers; and as I, once again, ascended the gloomy stone stairs, the sinister atmosphere of the place enveloped me as it had done on previous occasions, and induced a vague sensation of fear. When I reached the landing and stood at the ill portal, the feeling had grown so pronounced that I hesitated for a while to enter the chambers. At length I summoned up courage to insert the key, and as the massive door swung open I stepped into the lobby.

But my nervousness by no means wore off. Leaving the outer door ajar, I walked quickly down the corridor, peered into the kitchen and the little, empty room that had presumably been occupied by Mrs. Gregg—apparently the furniture had belonged to her—crossed the living-room and entered the bedroom. Here nothing seemed to have been changed. Even the great peg—on which, of course, my eye lit instantly—still bore the end of crimson rope; the bed had been stripped, but the bedside table stood intact even to the bottle of veronal tablets. I looked about me quickly and nervously, noting the arrangement of the furniture and comparing it with my recollections of that unforgettable night; and when I had decided that it was unaltered, I turned to go.

As I crossed the living-room, the large, wardrobe-like cupboard attracted my attention, and I recalled the mysterious sounds that had seemed to issue from it. Was it possible, I wondered, that Mrs. Gregg could have been concealed in it that night and have overheard those last incriminating words of mine. She had not referred to them in her evidence, but the inquiry was not finished yet. I resolved to settle the question whether it was physically possible for her to have been concealed in the cupboard, and having tried the door and found it locked, I turned the keys over by one until I found one labelled "cupboard in living-room." It was a rather unusual type of key, with a solid stem instead of the more usual barrel, and when I had inserted it and opened the door, I noticed that the key-hole passed right through the lock, so that the door could be locked from the inside as well as the outside. The cupboard itself was fitted like a wardrobe with a single shelf just above my eye level, beneath which a short woman like Mrs. Gregg could have easily stood upright. Thus the construction of the cupboard and the peculiar form of the lock made it at least possible that an eavesdropper might have been concealed that night; and that was all that I could say.

Before shutting the door I stood on tip-toe to see if there was anything on the shelf. In the semi-darkness of the interior I could see some kind of metallic object, and reaching in, took hold of it. As I drew it into the light of day I gave a gasp of astonishment. It was my father's stick. I took it down and turned it over curiously in my hands, marvelling how it should have got into this receptacle; and a turned it over, there came into view a flattened dent on the silver knob covered by a thick smear of blood to which two hairs had stuck. I looked at the hairs closely, but could come to no opinion as to whether or not they were my father's. One of these was white and the other a brownish grey. My father's hair had been iron grey as a whole, but I could not judge what the appearance of individual hairs might have been. If these were really his, then the man who had gone to his account was my father's murderer. It was a dreadful thought, but yet not without a certain compensation. As I looked at this relic of that day of wrath I felt my heart hardening. If the message that it bore was a true message, then I need have no more compunction for what I had done. If I had known with certainty that Mr. Otway had killed my father, those words which had slipped from me subconsciously would have been consciously uttered with full and deliberate intent and without a qualm.

I stood for a while with the stick in my hand considering what I should do with it. That its mysterious reappearance would create a complication I plainly foresaw, but to take it away and conceal it would be not only dishonest but very unsafe; for it was almost certain that someone knew of its existence. It must have been seen when the inventory was taken. Eventually I replaced it on the shelf and locked the cupboard; and having put the keys back in my bag made my way to the
door, which had been standing ajar all this time.

As I walked slowly to the Temple, I turned over in my mind the significance of this strange discovery. Someone must have known of the presence of this stick in the chambers, and that someone was either Mr. Otway or Mrs. Gregg. But both had declared positively that they had never seen it; and it was difficult to imagine why either of them should have kept it hidden away and disclaimed all knowledge of it. I could make nothing of the problem. Only one thing was clear to me. I must let Dr. Thorndyke know of my discovery; for it did not incriminate me in any way and might give him a clue to some of the elements of the mystery, the unravelment of which would be to my advantage.

The door of Dr. Thorndyke’s chambers was opened by Mr. Polton, who greeted me with a friendly smile, all creases and wrinkles.

“I’m sorry to say that the Doctor is not at home, ma’am,” said he; “and he will be sorry, too. He would have liked to see you, I am sure.”

“It doesn’t matter, Mr. Polton,” said I. “I have only called to leave these keys. But I should like to leave a message. Will you ask him not to disturb things more than he can help, as the inventory has not been checked yet; and will you tell him that the stick is in the large cupboard in the living-room? You won’t forget, will you?”

“I shan’t forget,” he replied, with a slight emphasis on the last word, “but I never trust my memory in important matters. Would you mind writing the Doctor a little note?”

He produced writing materials and placed a chair by the table, and I sat down and briefly put my message into writing. When I had given him the note—which he set in a conspicuous place on the mantel-piece—he looked at me as if he had something to say, and I waited to hear what it was.

“I have got an old verge watch to pieces upstairs,” he said at length. “I don’t know whether you would care to have a look at the movement. It’s worth looking at. If you want to know what workmanship is, you should look at the inside of a good, old watch.”

I was not, at the moment, much interested in watches or workmanship, but I could not resist his companionable enthusiasm—to say nothing of the implied compliment. So we went up together to the workshop, where he exhibited with a craftsman’s delight the delicate wheels, the engraved plates and the little chased pillars, and even brought out a microscope that I might appreciate the finish bestowed on the links of a fusee-chain that was hardly thicker than a horse-hair.

As the day of the adjourned inquest drew near, my anxiety—intensified by the consciousness of my guilty secret—grew more acute. My position was, as Jasper had said, a difficult one in any case. But the really alarming element in it was the introduction of Dr. Thorndyke into the case. The suggestion factor in the suicide would probably remain unsuspected by the coroner and the jury. But would it escape Dr. Thorndyke’s almost superhuman penetration? I could not believe that it would, for the hint of it was plain in Mrs. Gregg’s evidence. And if it were detected, it would be revealed. Of that I had not the shadow of a doubt. Dr. Thorndyke was a kindly, even a genial man; but he was Justice personified. He would investigate the case with relentless accuracy and completeness; and he would tell the truth to the last word. Of that I felt certain. If he held my fate in his hands I was lost.

Of the view of the case taken by outsiders I had an unpleasant illustration the day before the adjourned sitting. It was furnished by an article in an evening paper that I had taken up to my room to read. Glancing over its pages, my eyes was caught by the words “Lyon’s Inn,” and I read as follows:

“The new Lyon’s Inn seems to be emulating the reputation of the old. Within that ancient precinct occurred the famous Weare murder, forgotten of the present generation, but immortalised in those rather brutal verses of Tom Hood’s:

“They cut his throat from ear to ear, His brains they battered in. His name was Mr. William Weare, He lived in Lyon’s Inn.”

“The drama of Lyon’s Inn Chambers, however, is not a murder—at least we hope not. It is at present regarded as a suicide. But there are some queer features in the case. There is, for instance, a handsome young wife, who, it seems, flatly refused to live with her elderly husband from the very wedding day; there is a series of unaccountable anonymous letters; and there is a rumour of a hoard of precious gems spirited away from the chambers, apparently on the very night when Mr. Lewis Otway hanged himself from a peg on his bedroom wall. So the adjourned inquest, which opens at 11 a.m. to-morrow, may elicit some curious revelations.”

As I laid the paper down, a cold hand seemed to settle on my heart. The writer had exaggerated nothing. He had not even stated all the accusing facts. But even so, put quite impartially, the article exhibited me as the central figure of the tragedy, as the visible agent of the sinister events that had befallen in those ill-omened chambers. And could I say that it misstated the case? Of the anonymous letters, indeed, and the stolen gems—if stolen they were—I knew nothing. But the central fact of the case was Mr. Otway’s death. For that the coroner held me accountable. And, though he misjudged the evidence as to the means, I could not but admit that the coroner was right. The coming inquiry was, in effect, the trial of Helen Otway.
My own counsel, Mr. Cawley, a shrewd-looking man of about thirty-five, introduced himself to me as I took the seat reserved for me, and gave me a few words of advice.

"I think," said he, "I have had all the necessary instructions from Mr. Davenant, who, I see, is here." (I had had an instantaneous glimpse of him as I entered the room.) "His impression is that the coroner is disposed to put a certain amount of blame on you for your husband’s death. If that is so, you will have to be rather careful about answering questions, especially any questions that the jury may put. Don’t be in a hurry to answer any doubtful questions. Give me time to object if they seem inclined to go beyond the evidence."

I promised to bear his advice in mind, and then asked:

"Do you know if Dr. Thorndyke is giving evidence to-day?"

"I presume he is," was the reply; "but I notice that he is not present and that his reporter is."

At this point the coroner laid down the papers which he had been looking over, and opened the proceedings with a short address to the jury.

"The adjournment of this inquiry, gentlemen," said he, "which was decided upon a fortnight ago, is amply justified by the mass of new facts which are now available. These new facts bear chiefly on the property which, as you heard at the last sitting, was believed to be missing; but in other directions they throw a very curious light on the case. The first witness will be Superintendent Miller, of the Criminal Investigation Department."

As his name was spoken, the officer rose and took his place by the table. He took the oath, and disposed of the preliminaries with professional facility, and then waited gravely for the coroner’s next question.

"You had some knowledge of the deceased, Lewis Otway, and his affairs, I understand?" said the coroner.

"Yes. I have known of his existence for more than twenty years."

"Will you tell us what you know of him?"

"I first made his acquaintance about twenty-three years ago. He was then practising as a solicitor—chiefly as a police-court advocate—and was known by his real name, Lewis Levy, which he subsequently changed to Otway. After a time, he began to engage in business as a money lender, and it was at this time that he took the name of Otway. Presently he began to combine with money-lending a certain amount of trafficking in precious stones, and it was then that the police began to keep a somewhat close watch on him, with the idea that he might be also acting as a receiver. We never really had anything against him, but we always had the impression that he did some business as a middleman, or disposer of stolen jewels.

"When I first knew him, he had living with him a young woman, named Rachel Goldstein. She was nominally his housekeeper, but there were two children—a boy named Morris, and a girl named Judith—whom he admitted to be his. When he changed his name to Otway, Rachel Goldstein took the name of Gregg, and used to pass as a Scotch-woman. The children lived with their parents until they grew up, when Otway (or Levy) provided for them in a way that made the police watch still more closely. Judith married a David Samuels, who traded under the name of Campbell as a dealer in works of art, especially goldsmith’s work and jewellery; and Morris Goldstein started as a dealer in antiques, with a shop in Hand Court, and some workshops in Mansell Street, Whitechapel, where most of the antiques were made.

"Now both these men were practical working jewellers. It was believed that Otway financed them both, and it was known that he was the lessee of the premises that they occupied. Moreover, as soon as they were established in business, Otway gradually abandoned the money-lending, and occupied himself almost exclusively in dealing in gem stones. He was an exceedingly good judge of stones, and was quite successful as a legitimate dealer; but the police had an impression that he did a considerable amount of business that was not legitimate. I want it to be quite clear that I am not making any accusations; I am referring merely to an impression that the police had; it may have been quite a mistaken impression, but I mention it because the matter bears directly on this enquiry.

"The idea of the police, then, was that Otway dealt to a considerable extent in stolen property. We suspected that he obtained this property—precious stones, without the mounts—not from the thieves, but from the receivers, and that he disposed of them with the aid of his son and son-in-law. Both those men did a fairly large trade in high-class jewellery. They did not touch commercial goods, but dealt exclusively in work produced individually by skilled goldsmiths and jewellers, some of whom they kept regularly employed. They also did a good deal of repairing and re-setting, and their transactions were always with private customers, not with the trade.

"Our idea of the way it was worked was this: We thought that when Otway had got a collection of stolen stones he would pass on some of them to these two men. They would then commission their craftsmen to make some articles of jewellery, and would provide them with stones which had been bought from the regular dealers, and the purchase of which could be
proven if necessary. Then, when the jewels were delivered—or even after they had been sold to a private buyer—Campbell or Goldstein would take the purchased stones out of their settings and replace them by stolen stones. And a similar method could have been employed when jewels were brought for alteration, repair or re-setting. This kind of substitution would be very difficult to trace, for it is not easy to identify particular stones and prove that they are not the ones referred to in the dealers’ receipts. As a matter of fact we never did trace any stolen gems excepting on a single occasion; and then the evidence was not good enough for us to risk a prosecution.

"And now we come to the case that concerns this enquiry. About a year ago there was a burglary at the premises of Messrs. Middleburg, of New Bond Street, the well-known jewellers, and, among other things, a collection of valuable stones, worth about five thousand pounds, was carried off. It was a small collection, but all the stones were individually of considerable value, and several of them were remarkable, either in respect of size or other peculiarities. The collection has never been traced, and none of the stones has reappeared either here or abroad; and the police have reason to believe that the whole collection is still in this country.

"When these stones disappeared so completely, the police formed the opinion that they had passed into the possession of Otway, and that he was holding them up until an opportunity occurred to issue them one by one. At this time he was living at Maidstone—he had been there a year or two, but he had kept his old chambers at Lyon’s Inn, and often stayed in them for a week or more at a time. Last May or June he left Maidstone and came back to his old chambers, and we then began to keep a closer watch on him.

"About a couple of months ago he bought—or rather took on approval—from Mr. Hyams, of Hatton Garden, a collection of stones of which I have seen the list. These stones were carefully selected by Otway, and the remarkable thing about them is that, taken as a whole, they are singularly like the stolen collection. Among the stolen stones, for instance, there were two large tourmalines, one green and one deep blue, both table stones with step-cut backs; four emeralds, two step-cut and two cut en cabochon; two large chrysoberyls, one brilliant-cut, green and one en cabochon, yellow; one pale-blue diamond; and one pale-pink. Now, the collection taken from Mr. Hyams includes tourmalines, emeralds, chrysoberyls, and diamonds, of almost exactly the same size, colour and cutting; and there are many other passable duplicates of the stolen stones.

"When I became aware of this I inferred that Otway was making arrangements to release the stolen stones, and I caused a still closer watch to be kept on him; but up to the present not one of the missing stones has been discovered. Now I understand that the Hyams collection has disappeared; and if that is so, it seems probable that the person who has taken it is also in possession of the stolen collection. But that, of course, is only a guess."

"Quite so!" said the coroner, "and it is a matter that is more in your province than in ours. Is there anything more that you have to tell us that is relevant to the enquiry?"

"No, I think that is all."

"You will be remaining here, in case we want to refer to you again?"

"Yes; I want to hear Dr. Thorndyke’s evidence, and, of course, I want to hear the verdict."

"I am afraid you may have a long time to wait, for I have had a telegram from Dr. Thorndyke saying that he has been detained at Maidstone, and has missed his train. It is a great nuisance for us all. However, we will go on with the evidence. The next witness will be Mr. Samuel Isaacs."

As the superintendent retired to his seat and Mr. Isaacs approached the table, I reflected rapidly on what I had just heard. Dr. Thorndyke had apparently been down to Maidstone. Was his visit connected with the present enquiry? And if so, what was it that he had been investigating? The locality suggested some kind of research in which I was concerned, but at the nature of that research I could make no guess whatever. However, there was no time to speculate on the subject, for Mr. Isaacs had been sworn, and was ready to begin his evidence.

"You were solicitor to the deceased, I understand, Mr. Isaacs?"

"Yes; I am one of the executors of his will."

"In that capacity have you heard of any property said to be missing from the chambers which he occupied?"

"I have. Mr. Hyams has made a claim to have restored to him a parcel of precious stones, valued at about four thousand pounds, which, he states, was his property, and which he asserts the deceased had in his possession."

"Have you examined the premises with a view to discovering that property?"

"Yes, I have examined the premises very thoroughly, and have made a complete inventory of all the effects of the deceased. I have gone through the contents of the safe and all other receptacles, and have checked the property which he had deposited at his bank. I have made a most exhaustive search, but have failed to find any trace of the parcel referred to, or of any precious stones whatever."

"Is it possible that you may have overlooked the parcel?"

"I should say it is impossible. My opinion is that the parcel is not on the premises, and it certainly is not at the bank."

The coroner and a legal-looking gentleman at the table both noted down this reply. Then the former said: “You are, no doubt, in a position to tell us what was the state of the deceased man’s affairs. Was there any kind of financial embarrassment?”
"I should say, certainly not. The gross value of the estate—which is entirely personal—is a little over seventeen thousand pounds: and the liabilities, so far as they are known to me, are quite trivial."

"Can you tell us roughly, what are the main provisions of the will, that is, if it has been proved?

"It has been proved. The principal beneficiary is the widow, who receives eight thousand pounds, and the lease of the chambers in Lyon’s Inn, with the furniture and effects, and is made residuary legatee. Rachel Gregg—or Goldstein—receives one thousand, and Morris and Judith, each two thousand pounds, and the lease of the premises in which they respectively carry on their business. There are a few small legacies—less than a thousand pounds in the aggregate; so that there will probably be a residue of about three thousand pounds, which will go to the widow."

"What is the date of this will?"

"It is dated the 10th June last."

"Do you know whether the provisions of the will were known to the widow, or the other beneficiaries?"

"I do not know. They were not disclosed by me until probate had been granted."

"Thank you," said the coroner. "I think we need not trouble you any further, unless the jury wish to ask any questions."

The jury did not; but the legal-looking gentleman at the table did, and springing up like a Jack-in-the-box, he addressed the coroner.

"As representing Mr. Hyams, sir," said he, "I should like to ask the witness whether, in the event of the missing gems not coming to light, their loss would be chargeable to the estate?"

The countenance of Mr. Isaacs hereupon assumed that peculiar expression known to students of sculpture as "the archaic smile."

"You are asking me to admit liability," he replied; "I can’t do that, you know. There is a recognised procedure in these cases, with which I have no doubt you are acquainted."

The questioner sat down with a jerk, and Mr. Cawley stood up.

"May I ask the witness, sir, whether, in the event of this loss being adjudged to be chargeable to the estate, that loss would affect equally all the beneficiaries?"

"No," replied Mr. Isaacs, "it would not. It would fall, in the first place, on the residuary legatee. It would only affect the estate as a whole in so far as the amount of the charge exceeded that of the residue."

"Thank you," said Mr. Cawley. "There is one other question that I should like to ask. The present will is dated the 10th of last June. Did the execution of that will involve the revocation of a previously-existing will?"

"Yes, it did. After his marriage deceased re-acknowledged the existing will by a fresh signature and attestation, but he revoked this will when he made the new one."

"Could you tell us who were the beneficiaries under that will?"

Mr. Isaacs fixed a thoughtful (and somewhat beady) eye on the coroner’s pewter ink-pot, and cogitated for a few moments.

"Is it necessary, sir, for me to answer that question?" he asked at length, looking up at the coroner.

"Is the point material?" the latter asked, looking at Mr. Cawley.

"I submit, sir, that it may become highly important,” was the reply.

The coroner reflected with his eyes fixed on Mr. Cawley. Then he nodded. "Yes,” he said, "I think you are right. We must ask you to answer the question, Mr. Isaacs."

Mr. Isaacs bowed. "The beneficiaries under that will were Rachel Goldstein, Morris Goldstein, and Judith Samuels."

"In what proportions was the property devised?"

"The bulk of the personality was divided between Morris and Judith. Rachel Goldstein—or Gregg—received two thousand pounds, but she was also the residuary legatee."

"And the value of the estate?"

"I can’t tell you that. I only know what it is now."

Mr. Cawley sat down, and Mr. Isaacs retired to his seat. Then the coroner pronounced the name of Mr. Hyams, and its owner took his place by the table.

"We have heard, Mr. Hyams," said the coroner, "of certain property of yours which was in the deceased man’s custody. Will you give us a few particulars of the transaction. When, for instance, did it come into the possession of the deceased?"

"Two months ago—on the tenth of August, when the deceased called at my office, and asked me to let him have a selection of stones for a special purpose. He said that he had an opportunity of disposing of a number of pieces of jewellery to a wealthy American gentleman, and that he had discovered an extremely clever artist whom he proposed to commission
to make them. They were to be important pieces, chiefly pendants, brooches, and bracelets. The stones were to be exceptional in size and quality, and he wanted an assortment for Mr. Campbell—who was conducting the transaction—to show the intending purchaser. He had a list in his pocket-book, which he referred to as he made his selection from my stock. The stones which he selected were rather unusual—the sort of stones that appeal to collectors and connoisseurs, rather than ordinary wearers of jewels. And some of them were very valuable; one ruby alone that he took was worth fifteen hundred pounds. The total value of the parcel that he carried away with him was four thousand two hundred pounds."

"I understand that he did not pay you for them?"

"No; he was not proposing to keep them all. They were a selection to show to the customer. I made out a full list, and he signed a receipt at the foot of it. I had known deceased for many years, and had often had similar dealings with him."

"And did he never return these stones, or any part of the collection?"

"No. From the time that he left my office with the stones in his pocket I never saw him or heard from him again."

This was the sum of Mr. Hyams’ evidence; and when he had retired the name of Judith Samuels was called. The new witness took her place at the table, and, after the usual preliminaries, proceeded to give her evidence.

"I am the wife of David Samuels who trades under the name of Donald Campbell. He is a dealer in works of art, principally goldsmith’s work and jewellery. He is a practical jeweller himself, but most of the alterations and repairs are put out. The new work that he sells, or which is commissioned by customers, is executed for him by independent goldsmiths, not by workmen employed by him."

"You visited the deceased on the night preceding his death, I understand, is that so?"

"Yes. I came to his chambers about half-past six, and left about seven o’clock."

"Did you notice anything unusual in his manner or appearance?"

"He was not looking very well, and he seemed rather depressed but he brightened up as we talked. He was very much interested in the business which I had come to discuss."

"What was the nature of that business?"

"It was connected with a collection of stones that he had got on approval from Mr. Hyams to carry out a commission that he expected to get from a very wealthy American gentleman, to whom he had an introduction. He did not disclose the name of the gentleman, but it was understood that if he secured the commission, my husband should conduct the negotiations, and get the work executed."

"Did you gather that he had the stones in his possession?"

"Yes; he showed them to me. They were in a small wooden box, the different kinds of stones wrapped up separately in little paper packets. He took the box from a deed-box on the table by his bed-side, and put it back there when he had shown me the stones."

"Did you make any arrangements as to the disposal of these stones?"

"No final arrangements. He advised that we should get some of our artist goldsmiths to submit designs for the customer to see; and he suggested that my husband should ask Mrs. Otway to design and execute a pendant to take some of the finest stones."

"Mrs. Otway!" exclaimed the coroner. "What Mrs. Otway do you refer to?"

"I mean Helen Otway, the wife of the deceased."

"Are we to understand that Mrs. Otway is a designer of jewellery?"

"She is not only a designer; she is a practical goldsmith, and a very clever one too. My husband admires her work exceedingly and has paid her some very high prices. He paid her, for instance, twenty-five guineas for a set of silver teaspoons."

The looks of astonishment that the coroner, the jury, and the press-men bestowed on me might, in other circumstances, have flattered my vanity. Now, I could see that Mrs. Campbell, without (so far as I knew) departing one single jot from the truth, was enveloping me in the most hideous entanglements.

After a pause—filled in with strenuous note-taking—the coroner again addressed the witness. "It has been given in evidence that the deceased had received a number of anonymous letters. Do you know anything about these letters?"

"I know nothing beyond what I heard when the evidence was given."

"Have you any means of judging who wrote these letters?"

"I have heard the evidence, and I can make a pretty good guess who wrote them."

"That is not quite what I mean. Have you any information about them other than what you gathered from the evidence?"

"No; I never heard of them until then."
This concluded Mrs. Campbell’s evidence. When she had retired Mrs. Gregg was recalled and questioned concerning the missing stones.

“Did you know that deceased had these stones in his possession?”

“Yes. He showed them to me on one occasion, and I often saw him looking at them. He was very fond of precious stones. He used to set them out on a small square of black velvet, and try them in different lights, and look at them through a magnifying glass.”

“When did you last see these stones?”

“After Mrs. Campbell—that is the last witness—had left and just before Mrs. Otway arrived. Deceased was then sitting up in bed looking at a large green stone. I reminded him that Mrs. Otway was due at eight, and he then put the stones back in their box, and put the box away in the deed-box that was on the table.”

“When did you first learn that the stones were missing?”

“The day after the discovery that the deceased had committed suicide, when Mrs. Otway came to the chambers with Mr. Hyams and the coroner’s officer. She came to search for the anonymous letters, and she went straight to the deed-box, and there they were. But the stones were not there. I saw her take all the things out of the deed box for Mr. Hyams to see and there were no stones there.”

“Thank you.” said the coroner “That will do. We must now, gentlemen, see if Mrs Otway can give us any further information.”

I once more took my place at the table and was again sensible of a generally heightened curiosity on the past of the jury and the spectators.

“We may as well dispose of the question of the missing stones,” said the coroner; “for though it does not affect our enquiry directly but is rather the business of the police, it seems to have an important, indirect bearing. You have heard, Mrs. Otway, the evidence of Judith Samuels, and Rachel Goldstein—or Gregg. Can you throw any light on the disappearance of these stones?”

“No, I cannot.”

“Did you know that deceased had these valuable stones in his possession?”

“No; I never heard of the stones until Mr. Hyams called on me on the evening of the day on which Mr. Otway’s death was discovered.”

“Do you know, or have you any idea, where those stones are now?”

“I do not know, and I have no idea where they are.”

“Did you know that deceased was a dealer in precious stones?”

“No; my father told me that deceased collected gem-stones, and that he sometimes had dealings in them. But I supposed that he was merely a collector, not a professional dealer.”

“How long had you known deceased when you married him?”

“I had known of his existence about a year, but I had hardly ever spoken to him. He was virtually a stranger to me.”

“Had you never heard of the suicidal tendency in his family?”

“Never until the night preceding his death, when he told me.”

“It has been stated that you are a practical goldsmith, and that you have executed work for Mr. Samuels, or Campbell. Is that true?”

“I work as a goldsmith and I have sold some of my productions to Mr. Campbell; but I have never been employed by him. I work as an independent artist.”

“Has he ever supplied you with precious stones?”

“No. I purchase my own materials.”

“Have you ever done any alterations or resettings for him?”

“No. I have done no work of any kind for him, or anyone else. I work on my own account, and sell what I make.”

The coroner nodded, and glanced over his notes. After a pause he asked: “At what time on the night of your visit to deceased did you leave his chambers?”

“A little before ten o’clock.”

“What was the condition of deceased when you left? Did he seem particularly depressed or worried?”

“He was asleep when I left.”

“Asleep!” exclaimed the coroner, “How long had he been asleep?”
“Not very long; perhaps a quarter of an hour. When he took his usual dose of veronal he asked me to stay with him until he went to sleep, and I did so.”

“I see that the housekeeper states that when she entered the living-room in the morning, the bedroom door was wide open, and the gas full on. What was the condition of affairs when you left?”

“The gas was full on, and I did not shut the bedroom door. I was not aware that the housekeeper had gone to bed and assumed that she would look in on deceased and make what arrangements were usual for the night.”

“But if you had turned down the gas, and shut the bedroom door, that would have prevented the house keeper from going to deceased.”

“No. It did not appear to matter either way.”

“When you went away, did you leave your hand-bag behind?”

“Yes, I had hung it on the back of my chair, and when I got up to go, I forgot about it.”

“When did you discover that you had left it behind?”

“I first remembered it when I hailed a cab at the corner of Holywell Street to take me home.”

“Why did you not then go back for it?”

“I did not like to disturb Mrs. Gregg and deceased, as it was so late.”

“Was your purse in the bag?”

“Yes; but that was of no consequence. I knew there would be someone sitting up who could pay the cabman.”

“The housekeeper has told us that you came to fetch the bag on the following day.”

“Yes, in the afternoon, about three. It was then that I first heard of Mr. Otway’s death.”

“The housekeeper states that, when she told you what had happened, you fell down in a dead faint. Is that so?”

“Yes. It gave me a great shock, especially as Mrs. Gregg told me the bad news so very abruptly.”

“Were you expecting to hear that the deceased had committed suicide?”

“No; the subject was not in my mind.”

“Is that not rather remarkable, having regard to your conversation with deceased on the previous night?”

“I don’t think so. That conversation had certainly given me the impression that there was a danger that deceased might be driven to suicide if this persecution were continued. But I had not supposed that the danger was immediate.”

“And that pitiful letter that you received from deceased? Did that convey no note of warning?”

“At the time when I received it I was not aware of any predisposition to suicide on the part of deceased. What he told me caused me some alarm, but he became so much calmer after our talk that I thought the danger was past, so far as the immediate future was concerned.”

“And when you went to his chambers on the following day, you felt no uneasiness as to what might have happened?”

“No, the possibility that anything unusual might have happened was not in my mind at all.”

“Well,” said the coroner, “it seems to me rather remarkable that the possibility did not even occur to you. However, we are dealing with the facts, and if those are the facts, there is no more to be said. We will now pass on to the consideration of the will. When did you first learn that deceased had made a fresh will?”

“Four days ago, when I received a letter from Mr. Isaacs informing me of the fact that I was one of the beneficiaries.”

“Had deceased never mentioned to you that he had made a will in your favour? Was there no stipulation on your part at the time of the marriage that he should make such a will?”

“No. Nothing ever passed between us on the subject.”

“And had you no knowledge or belief that a will affecting you had been executed?”

“I had no knowledge or belief that such a will had been executed nor any expectation that it would be. I did not consider myself as having any pecuniary claim on the deceased.”

“Did you not receive an allowance from deceased?”

“No. He wished to make me an allowance, but I declined to accept it.”

“But you were entitled to an allowance for maintenance. Why did you refuse to accept it?”

“I did not consider that I had any claim on the deceased so long as I insisted on living apart.”

“Then do we understand that you subsist entirely on your own means or earnings?”

“Yes, entirely.”
“Would you kindly tell us what those means and earnings respectively amount to? And what are their sources?”

“I have a small private income—about sixty pounds a year—derived from the realisation of my father’s estate. I cannot estimate my earnings very exactly, as I have been working only a few months. Probably I shall be able to earn from a hundred and fifty to two hundred pounds a year, when I am established. Up to the present I have sold all my work to Mr. Campbell.”

“How did you first become acquainted with Mr Campbell—or Samuels, to give him his correct name?”

“Deceased recommended him to me when I first came to London. He stated that he had known him for many years.”

“Did you know that Mr. Campbell was related to deceased?”

“Not until I heard it to-day.”

The coroner considered a while, turning over his notes reflectively. At length he said, “Before you sit down, Mrs. Otway, I should like to ask you again about those anonymous letters. You have stated that you have no idea who wrote them.”

“That is so,” I replied.

“When you discussed them with deceased, did neither of you arrive at any conclusion as to who might have written them?”

“Deceased assured me that he could make no guess as to who had sent them. Naturally, I could not, since all his acquaintances, whether friends or enemies, were unknown to me.”

“And you adhere to your statement that you know nothing about these letters?”

“I know nothing about them whatever, excepting that deceased received them; and that I have only known by his telling me.”

“And with regard to your father’s stick? You have stated that you have no knowledge as to what became of it, or where it is now. Do you adhere to that statement too?”

“That statement was correct when I made it; but the stick has since come to light.”

“Indeed!” exclaimed the coroner. “When and how did that happen?”

“It occurred three days ago, when I went to look over the chambers in Lyon’s Inn. I chanced to open a large cupboard in the living room, and there, on the single shelf at the top, I saw the stick lying at the back, and hardly visible in the deep shadow.”

“In-deed!” said the coroner, with a strong emphasis on the second syllable. It was perfectly evident that he did not believe me, and he made no secret of it. Nor were the jury any better impressed. In the silence that followed my statement they whispered together eagerly, and disbelief was writ large on the faces of them all.

“Had you any particular occasion to look over the chambers?” the coroner asked after an interval.

“Yes; I had received a letter from Dr. Thorndyke saying that be wished to make a survey of the premises and asking me to give him permission and the necessary facilities to do so. I accordingly went, on the following day, and fetched the keys from Mr. Isaacs to leave them at Dr. Thorndyke’s chambers. On the way, I called in at Lyon’s Inn to see what condition the chambers were in.”

“And to plant the stick for Dr. Thorndyke to find, eh?” said one of the jurors, with a truculent leer.

Mr. Cawley rose instantly to protest, but he was anticipated by the coroner, who said severely: “That, sir, is quite out of order. Members of the jury must not suggest motives or actions on the part of witnesses which are not given in evidence. They may have their opinion but those opinions must not be expressed until all the evidence has been heard and the verdict has to be considered.” Having administered this reproof, he again turned to me.

“When you looked over the chambers, did you examine the other furniture and receptacles. Did you, for instance look in the other cupboards and drawers?”

“No.”

“Only this one cupboard? Now what made you look into this cupboard in particular?”

I saw the awkwardness of the question; but I also saw that a complete explanation of my motives would land me on much more dangerous ground. My immediate motive had been to ascertain what the inside of the cupboard was like, and this was as much as I dared tell.

“I wished to see what kind of a cupboard it was—whether it had shelves, drawers, or simply an open space.”

“Did you take the stick out of the cupboard?”

“Yes, I took it out to examine it and see if the statement in the letter as to the bruise, the blood-smear and the hairs was correct.”

“And was the statement correct?”

“Yes; there was a bruise on the silver knob, and a thick smear of what looked like dried blood, to which two hairs had
stuck."

"Did those hairs look to you like hairs from your father's head?"

"I could not say. They might have been. They were short and looked as if they had come from the head of a grey-haired man. My father's hair was grey."

"What did you do with the stick?"

"I put it back in the cupboard."

"Why did you not bring it here?"

"I thought it best to leave it where I found it."

"Are the keys of the chambers in your possession now?"

"No; I left them at Dr. Thorndyke's chambers, and he has not yet returned them. I left a note informing him that the stick was in the cupboard."

"May I ask why you did that?"

"Dr. Thorndyke mentioned in his letter that he was investigating the case on instructions from the Home Office, and I wished to give him any assistance that I could."

"But," the coroner exclaimed irritably, "don't you understand that this court is investigating the case? That a coroner's court is the proper authority to carry out such investigations? I don't know why this medical specialist has been brought into the case at all. I have not asked for his assistance. It is quite irregular and most unnecessary. And how did this gentleman come to write to you?"

"He wanted to survey the premises, and someone—I don't know who—had told him that I was the present lessee."

The coroner grunted in evident displeasure. The importation of Dr. Thorndyke into the case was clearly a sore point, for he rejoined: 'The whole affair is highly unsatisfactory. I am not clear that you had any right to give permission to any unofficial person to survey these premises without obtaining my consent; or that he had any right to ask you. The jury have surveyed the premises, and that ought to be enough. However, we shall see what comes of these mysterious investigations. Meanwhile, I think that is all we have to ask you, Mrs. Otway, unless the jury have any questions to put."

The jury, warned, perhaps, by the result of the last question put by a juryman, had no question to ask; and I returned to my seat by Mr. Cawley, in time to hear Mr. Isaacs recalled.

"You have heard," said the coroner, "the very remarkable evidence given by the last witness concerning the finding of a stick in a large cupboard in the living-room of the chambers in Lyon's Inn?"

"I have."

"In your previous evidence you stated that you had made a minute search of those chambers, and drawn up an inventory of their contents. Do you remember whether, when you made that search, you examined that particular cupboard?"

"Yes, I remember quite clearly that I examined it, and found it empty. I have marked it 'empty' in the inventory."

"Are you sure that it was really empty? Is it not possible that this stick lying in the shade on the shelf might have been overlooked?"

"It is quite impossible. I made a most exhaustive search, and I used an electric torch for examining cupboard interiors. Moreover, the object that I was looking for a little parcel of precious stones—was much smaller, and less conspicuous than a walking stick. I could not have missed a large object like that. And I have quite a clear recollection of looking on that shelf—it was the only shelf in the cupboard—and throwing the light of the torch along it. I had to stand on tip-toe to see in distinctly, and so I suppose, had Mrs. Otway."

"Do you swear that the cupboard was empty when you examined it?"

"I swear that it was absolutely empty."

The coroner entered the reply in his notes, and then asked: "Did you receive any communication from Dr Thorndyke respecting his proposed survey of the chambers at Lyon's Inn?"

"He called to enquire in whom the tenancy of the chambers was vested, but did not state why he wanted know. I told him that the widow was the lessee. I don't know how he got her address. I didn't give it to him. I may say that when I had finished the inventory I locked up the chambers, and kept the keys until I delivered them up to Mrs. Otway."

"Thank you," said the coroner. "That is all I wanted you to tell us. And that, gentlemen," he continued, turning to the jury, "appears to be the whole of the evidence, with the exception of Dr. Thorndyke's; and the question now arises, what are we to do? Let me explain the position, and then you can decide on our procedure."

"This enquiry was adjourned to enable the police to make some investigations in connection with it. On their application, Dr. John Thorndyke, who, I may inform you is an eminent medico-legal expert, was instructed by the Home Office to proceed to Maidstone to conduct an exhumation of the body of the late John Vardon, the father of Mrs. Otway. He was to make an examination of the body, and ascertain if possible, whether the cause of the said John Vardon's death was as
stated at the inquest, or whether, as is hinted in these anonymous letters, he died from the effects of violence. The question is an important one, but it is more important to the police than to us. Then, it seems that the Home Office further instructed this gentleman to carry out an independent investigation into the facts of this case which we, in our humble and inefficient way, are trying to investigate. It is an extraordinary proceeding, and one that I do not in the least understand; but then I am not a medico-legal specialist. I am only a mere coroner, and you are only a mere coroner’s jury. It is just as well that we should know our place.

“Well, I understand that Dr. Thorndyke has made an examination of the body of Lewis Otway, and, as you have heard, he has made a survey of the deceased man’s chambers. We, also, have surveyed these chambers, but apparently our survey doesn’t count; and Dr. Shelburn, whose evidence you have heard, examined the body within a few hours of death. It would seem as if medical evidence were the last thing we want. Meanwhile I have had a telegram from Dr. Thorndyke saying that he has been detained at Maidstone, and has missed his train. I don’t know when he will arrive here. He may be here in a few minutes, or he may arrive in an hour or two. It is for you to decide what is to be done. We have a great deal of evidence to consider. We do not seem to need any more medical evidence, and the question of Mr. Vardon’s death is not of vital importance to this enquiry.

“The question is shall we wait to hear Dr. Thorndyke’s evidence or shall we proceed to consider the great mass of evidence that we already have? It is for you to decide, gentlemen.”

The jury conferred for a couple of minutes, and then the foreman announced their decision. “The jury say, sir, that we are enquiring into the death of Lewis Otway, not John Vardon. They would like to proceed with the consideration of the evidence without waiting for Dr. Thorndyke.”

“I am entirely with you, gentlemen,” said the coroner. “I think that the evidence that we have heard will prove amply sufficient to guide us to our verdict; and we can still revise our opinions if the expert witness should have something fresh to tell us.”

XXVII.—THE INDICTMENT

DURING the short interval, in which the coroner took a final glance over his notes, there was a general stirring among the occupants and a suggestion of preparation for the next act. Jurymen re-settled themselves in their seats, reporters straightened their backs, and looked about them, the police officers and the spectators conversed in low undertones. At length the coroner laid on the table before him a single sheet of paper—probably an abstract of the evidence—sat back in his chair, and looked towards they jury; whereupon a deep silence fell upon the court, and he began his address:

"It is hardly necessary to remind you, gentlemen, that we are assembled for the purpose of ascertaining how, when, and by what means Lewis Otway came by his death; but it may be necessary to remark that our enquiry is not entirely concerned with the immediate causes of that death but is also—and in fact, principally—concerned with the more remote contributory circumstances. For in this case, the 'How, when, and by what means' are simple enough. We have the testimony of an eye-witness who saw the deceased hanging dead, from a peg on the wall, under conditions strongly suggestive—in fact characteristic—of suicide; and we have the testimony of the deputy-police surgeon that all the appearances were those of suicide; and we have his expert opinion that the cause of death was undoubtedly suicidal hanging. Indeed, we may say that the immediate cause of death is self-evident, and that the whole of our enquiry is concerned with the remote cause. We are not asking 'Did this man commit suicide?' for the evidence of the first two witnesses settled that question. We are asking ourselves, Why did he commit suicide? The questions that we have to answer are, Was that suicide the spontaneous act of the deceased, for which he alone is responsible? Or was deceased driven to suicide by the deliberate, purposive, and malicious acts of some other person, or persons? And if the latter appears to be the case, Who is, or are, that person or persons, and what degree of criminal responsibility attaches to such acts?

"Now we have at our disposal a considerable mass of rather miscellaneous evidence, and, I think the best way to deal with it will be to sketch out lightly the general course of events, and fill in the details later. The deceased, Lewis Otway, is the central figure of our picture, and the history that we have to trace, is his history. As to what we may call his past, that does not much concern us. Among the Ancient Egyptians the deceased was conceived as being brought before the tribunal of Osiris to answer for his conduct during his earthly life. We are not a tribunal of that kind. We are not trying Lewis Otway. If, as the police suspect, he had feathered his nest with a certain amount of illicit plumage, that is not our concern. Our interest in him is mainly confined to his connection with a particular series of events which began with his marriage and ended with his death. Let us now trace that succession of events, at first in outline, and then in more detail.

"Lewis Otway first comes into our view on the occasion of his marriage. As presented in the evidence of his widow, Helen Otway, that marriage offers us the spectacle of an act of the most amazing folly. We see an elderly man—and an unattractive one at that, as you must have observed —marrying by compulsion, under threats, and greatly against her wishes, a young woman, of very unusual physical attractions, of great talent, and of exceptional mental gifts, and strength of character. You have seen this lady, and have heard her give her evidence, and you can confirm my description of her.

"It was, I repeat, an act of amazing folly. For she must, in any case, have detested him. His conduct towards her was cruel and unscrupulous to the last degree, and in marrying her he could not fail to introduce a bitter enemy into his household. But there were added causes for that repugnance to him which she has freely admitted. In the first place, she believed that
her consent had been secured by actual fraud. And in the second place, Otway’s action was the undoubted cause—whether directly or indirectly, we need not enquire at this stage—of John Vardon’s death. So that our history opens with the tableau of an elderly man who has married a young, beautiful, and clever wife, who loathes him, and has abundant reason for loathing him.

"And now we pass on to the second scene—a scene almost more amazing than the first. Within an hour or two of the marriage ceremony, the young wife has repudiated the marriage, and demanded a separation for an indefinite period—practically a permanent separation. But it is not the demand that is so astonishing. The really astounding thing is that the husband seems to have agreed to this demand without demur. Consider the extraordinary inconsistency of his conduct. On the one hand we see this man, in his eagerness to possess this beautiful girl, trampling without scruple on her happiness, and her father’s, oblivious of everything but his own desires; on the other, we see him meekly submitting to a demand which—natural as it may have been—the law would not have supported.

"Whence this sudden compliance? Why did he consent? He need not have consented. The marriage was quite regular. No suit for nullity could have been sustained, whereas he could have sued at once for restitution. Why did he agree in this incomprehensible manner to surrender his unquestionable rights?

"But this is not the only inconsistency. The conduct of the wife is even more inexplicable. When Otway gave evidence at the inquest on Mr. Vardon he omitted all reference to the loaded stick; which is not unnatural, seeing that it was a highly incriminating circumstance. But that suppression of a material fact made his evidence in effect, false evidence. For the truth is, according to the terms of the witnesses oath, the whole truth. Yet Helen Otway, when she gave evidence, confirmed this virtually false testimony; and she also suppressed—or, at least, omitted—the facts relating to the loaded stick. Her explanation is that, feeling convinced that her father died from a heart attack, she did not consider the stick incident of any importance. In estimating the credibility of that explanation you will bear in mind that the verdict was ‘Death from natural causes,’ but that the jury were not in possession of the facts. You will also bear in mind that this woman had seen her father lying dead, with a wound on his head, and this man, whom she loathed, and detested, standing over the body, grasping a formidable weapon. But whatever view you take of the explanation, the fact remains that at the inquest she not only refrained from accusing him, but she withheld a material fact which, if it had been disclosed, might have put Otway in the dock on a charge of murder.

"Here, then, are two cases of incomprehensible inconsistency of conduct. But they are only incomprehensible so long as they are considered separately. Consider them together and a perfectly intelligible suggestion emerges. The husband had the power to compel his wife to live with him—and he did not exercise it. The wife had the power to expose the husband to a suspicion of having committed a capital crime—and she did not exercise it. The appearance is that of a surrender by each of the power to injure the other; in short, of a bargain or agreement, involving collusion to suppress evidence.

"But this suggestion of collusion raises another question, which we shall consider later, but which we may note in passing. What was really the cause of Mr. Vardon’s death? Did he die from natural causes as the coroner’s jury believed and affirmed? Or was his death due to violence inflicted by Otway? It is by no means clear that Otway did not kill him, either inadvertently or with malice. And supposing Otway to have killed Mr. Vardon, was the fact known to Helen Otway? If it was, Otway’s easy compliance is the more readily understood; for he would be absolutely in his wife’s power. But we shall consider these points at more length presently, and perhaps we may get further light on them from the evidence of Dr. Thorndyke—if he should arrive before the verdict is agreed on.

"The next phase of this drama opens about two months after the marriage. On the 21st of June, the deceased received an anonymous letter, the first of a series of seven, which were sent thereafter at fairly regular intervals of about a fortnight. Now, let us consider those letters from various points of view in relation to their probable authorship. You have heard them read, and know their general purport. They all contain veiled threats to make certain exposures. Some are vague and some are more explicit, but there is a general crescendo note, culminating in the last letter, which pretty openly makes an accusation of murder and threatens criminal proceedings.

"First, what is the purpose of these letters? It is clearly not to levy blackmail. They hold out menaces, but there is no suggestion of an attempt to extort money. Those menaces are incomprehensible until we supply an explanatory fact. The man to whom these letters were sent suffered from a strong inherited predisposition to suicide. The very obvious inference to which we are forced, in the absence of any other explanation, is that the purpose of these letters was to convert that latent tendency into action—to produce a state of mind in which the deceased would be likely to take his own life.

"But that purpose implies knowledge on the part of the writer that this inherited tendency existed, and consequently limits the possible authorship to persons possessing such knowledge. The only persons known by us to possess such knowledge are deceased’s own family. His widow has sworn that she had no knowledge of this tendency, and if you believe her statement to be true, you will tend to exclude her from the possible authorship of these letters.

"Next we have to consider the characters of the letters themselves. They all bear the East-London postmark, but there is not much in that. Anonymous letter-writers commonly post their letters in districts remote from their own residences. Still, we must take it into consideration. The two persons known to us who occupy premises in East London are Morris Goldstein and Helen Otway.

"Then as to the style of the letters. They are rather markedly uneducated in manner. The composition is ungrammatical and the phraseology vulgar. But that does not help us much; for, on the one hand, none of the persons known to us is grossly uneducated, and on the other it is usual for anonymous letter-writers to disguise their personality. Obviously, it is
easy enough for an educated person to write an apparently illiterate letter.

"The next point is a much more important one. We have decided that the purpose of these letters was to produce in the deceased a state of mind which would render his suicide probable. Now, what was the motive behind that purpose? Who could have wished deceased to commit suicide, and why should that person have wished it?

"The possible motives in this case are, in effect, the usual motives of murder, with full premeditation, viz revenge, or hatred; direct profit; and indirect profit by the elimination of an undesired person. Let us consider each of these motives in relation to the known facts of this case.

"First as to hatred or revenge. The only persons known to us are the family of deceased and his wife. His family certainly had a grievance against him, for the children were illegitimate, and the mother was unmarried. But it was an old grievance, and the family appeared to be on quite amicable terms. The children were quite well provided for, and their mother continued to live with deceased. There was, indeed, a new factor of possible discord. The deceased had married, and that marriage was manifestly to the disadvantage of his family; a fact of which it is necessary to take due account.

"When, however, we turn to the consideration of the wife, the facts are much more striking. She had suffered grievous injuries from deceased. He had ruined her life. He had virtually condemned her to perpetual spinsterhood, since she would not live with him and she could not marry anyone else. He had caused the death of her father; and she has admitted that she had an unconquerable repugnance to him. That is actually known to us; and there is a further possibility that he was actually her father's murderer, though we must leave that out of consideration in the absence of positive evidence. But on the evidence which is before us, you will see that the motive of personal animosity is much more evident in the case of the wife than in that of the family.

"We now come to the motive of direct profit, and the question that we ask ourselves is, Who stood to benefit by the death of Lewis Otway? And as soon as we ask that question, a very striking fact comes into view. The first letter is dated by the postmark, the 21st of June. But on the 10th of that month—only eleven days previously—deceased had made a new will. By the provisions of that will Helen Otway stood to gain from eight to twelve thousand pounds by the death of her husband.

"But did anyone else stand to gain by Lewis Otway's death? Observe that we are still dealing with the same group of persons—the only persons known to us in connection with the case. Well, the family of deceased stood to gain by his death, though to a much smaller extent; but the fact that must instantly impress us is the opposite effects of the new will on the family and the wife respectively. The execution of the new will involved the revocation of a previous will, which had left the bulk of the estate to the family. The position of affairs is consequently this: up to the 10th of June, the family, jointly, stood to benefit by Lewis Otway's death to the extent of the bulk of his estate and the wife did not stand to benefit at all; after the 10th of June the wife stood to benefit by Otway's death to the extent of the bulk of his estate, and the family to a relatively small extent.

"But the first of the anonymous letters was sent almost immediately after the 10th of June. That is to say, it was sent almost immediately after the family had ceased to be and the wife had become the principal beneficiary.

"From the motive of direct profit we turn to that of indirect profit, by the elimination of a person whose existence was a hindrance, a danger, or an inconvenience, Is there anyone known to us who could have regarded deceased in that light? We cannot attribute any such view to his family, for, as I have said, they appear to have been on quite amicable terms, and deceased seems to have maintained an interest in his children's welfare to the last. But what are we to say with regard to the wife? She was married against her wishes to a man unsuitable in age, uncomely in appearance; a man whom she loathed—and had good reason to loathe—who, while she repudiated him as a husband yet held her chained to him for life; who stood inexorably between her, and any marriage which she might wish to contract; whose existence condemned her for life to the dubious position of a married woman who is not living with her husband. Think, gentlemen, of this woman—young, handsome, clever, accomplished, capable; think of what life might have been to her; and what it was with this millstone hung round her neck! And then ask yourselves whether—apart from all pecuniary considerations—she did not stand to gain incalculably by his death; whether his elimination from her life would not have opened to her the gates of a world of happiness and freedom.

"And it is here that the importance of that further evidence, which we unfortunately have not yet heard, appears. For if it should now transpire that Otway did actually kill John Vardon and that Helen Otway was privy to the homicide, then there would be yet another powerful reason why she should desire to be rid of him. But this evidence is not in our possession and we must, therefore, leave this aspect of the case out of our consideration. Nor is it essential. The facts within our knowledge are amply sufficient to enable us to answer the question whether Helen Otway's position would or would not have been improved by the death of her husband.

"And now we come to something much more definite. Hitherto we have been dealing with the question: 'Who might have written these letters?' We shall now consider the more specific question, 'Who could have written them?'

"There seems to be only one possible answer. The writer of those letters had knowledge that was possessed by only two persons—the deceased and his wife. One letter refers to something that was held back at the inquest. But who knew that anything had been held back at the inquest? No one, according to the evidence, but those two persons. Of course, it is possible that there may have been some watcher secreted in that house at Maidstone who knew that Lewis Otway had stood over the body of John Vardon with a loaded stick in his hand. But the evidence before us is to the effect that there was no one in the house but John Vardon, Lewis Otway, and Helen Otway. Consequently, unless Lewis Otway wrote these
letters to himself, there is nobody, so far as we know, who could have written them but Helen Otway.

"The last letter refers explicitly to the loaded stick, and even describes its condition minutely and, as it appears, correctly. The writer had, therefore, presumably seen the stick and very probably had possession of it. But where was that stick? Deceased certainly did not know where it was; the housekeeper states that she had never seen it since that fatal morning, and Helen Otway has denied all knowledge of its whereabouts. No one knew what had become of it.

"But if its disappearance was a mystery, its reappearance is a greater mystery still. The account given by Helen Otway is obviously unsatisfactory. She went to the chambers, for no very apparent reason. When there she did not examine the various cupboards, drawers, and other receptacles; but she went direct to this particular cupboard, unlocked it, stood on tiptoe and looked on the shelf. And behold! there was the missing stick. She took it out, examined it, and put it back. And she not only put it back, but she went out of her way to inform a person who is to give evidence on this enquiry that the stick was to be found in that cupboard.

"Now, how did that stick get into that cupboard, and when was it put there? You have heard Mr. Isaacs swear that it was not there when he made out the inventory, and you will probably agree that he could hardly be mistaken. A stick is a fairly large and conspicuous object, whereas he was searching for a small and inconspicuous one. Clearly the stick was put into the cupboard after his search was made. But when he had finished, the chambers were locked up, and the keys remained in his possession until he delivered them up to Helen Otway. Bearing these facts in mind, you have to consider whether you can accept Mrs. Otway's statement, or whether it is more probable that she took the stick to the chambers, and put it into the cupboard herself.

"We now come to the incidents of that terrible night. What really happened in those chambers on that occasion will probably never be known. But the accounts that we have are full of sinister suggestions. We cannot, for instance, note the fact that after this, the first and only visit from his wife, Lewis Otway made away with himself. Why he did the dreadful deed on this particular: occasion, and at this particular time, is not clear. According to his wife's account he was much calmer, and more cheerful after their talk, and she left him peacefully asleep. That is what she has told us. But what are the facts? Within an hour or two hours after she had left, his dead body was hanging from that peg. Nay! There is even a more dreadful possibility. The medical witness has told us that death took place about eleven, 'But it might have been an hour later or earlier.' So that it is physically possible—since Mrs. Otway left the chambers about ten—that the suicide may have actually taken place before she left. It is a horrible suggestion, and I should not have made it but for the fact that there are certain appearances which seem to support it.

"You must have been struck by the singular circumstance that when Mrs. Otway took her departure she left the gas full on, and the bedroom door open. You have heard her explanation, but we are not concerned with that for the moment. The remarkable thing is that in the morning, the gas was still full on, and the bedroom door still open. Now how could that have been? If deceased was asleep when his wife left, then he must have arisen, made his preparations, and finally hanged himself, not only with the gas full on—which might easily have been the case—but with the door open, which is improbable in the extreme. Men do not usually commit suicide coram publico. Commonly suicides lock themselves in their rooms or otherwise seek security from interruption. Yet this man, whose bedroom opened directly into the living-room and whose housekeeper might still have been about, cuts down the bell-ropes, arranges the chair and hangs himself, all in a brightly-lighted room with the door open. It is certainly against common probabilities.

"But there are other suggestions of a similar tendency. If the fully-lighted gas and the open door suggest a hurried and agitated departure, so does the forgotten hand-bag containing the purse. And you will have noted that Mrs. Otway remembered that she had left her purse behind when she hailed a cab at the corner of Holywell Street. Now why did she not go back for it? She was quite near Lyon's Inn. She could have left the cab waiting, or brought it to the gate. She says she did not like to disturb Mrs. Gregg. But she has also said that she thought that Mrs. Gregg was still up and about. The explanation is not convincing, but on the other hand there is a strong suggestion of dislike to the idea of going back—a dislike which we can understand well enough if we believe that the tragedy had already been enacted, and that the body was even then hanging on the wall.

"Then, too, the disappearance of the precious stones points in the same direction. They might have been taken when the deceased was asleep; but the theft would have been far easier if he was dead. But, of course, we cannot say with certainty that Helen Otway took the stones. We can only consider the evidence. That evidence, however, is almost overwhelmingly strong. It goes to show that the stones were in the deed-box within half-an-hour of Helen Otway's arrival. There is no reason to suppose they were then removed. It is practically certain that they were there when she arrived, and they were never seen there or anywhere else after she left. And there is a further corroborative circumstance. To ordinary persons unmounted precious stones illicitly obtained are difficult to dispose of. But this woman is not an ordinary person; she is a working goldsmith and jeweller who buys her own materials and sells the finished works to individual buyers. She could easily dispose of stolen gems in a manner that would render them untraceable.

"The theft of these stones is not directly our business. It is that of the police. But indirectly it is of great importance. For it furnishes strong support to the suggestion that deceased was already dead when Helen Otway took her hurried departure. But what is the importance of that suggestion? The answer to that question will be found in the consideration of certain further facts and certain points of criminal law.

"First, we must notice that if deceased committed suicide while Helen Otway was in the chambers, he must have done so with her consent and connivance. But was it only a matter of consent? Is there not a suggestion that some direct means
may have been employed to induce or compel him to commit suicide? On this point we have very little information. But we have the evidence of Rachel Goldstein or Gregg that she overheard the conversation between Helen Otway and deceased on two separate occasions; and that on both occasions they seemed to be talking about suicide. There seems to be a strong suggestion that some active, direct, means were employed: persuasion, threats, or perhaps the mysterious agency of suggestion. We cannot say that it was so; but it would be in close agreement with the known circumstances and quite consistent with the course of action exhibited by the anonymous letters.

“Supposing such active, direct means to have been employed, what degree of criminal responsibility would their employment entail? With regard to the letters, though the moral responsibility for their effect is beyond question, I should hesitate to give an opinion as to the exact legal position. But in the case of direct means there is no doubt at all. The law on the subject is quite clear. Let us consider it for a moment.

“First as to the legal nature of suicide. In law, suicide is murder. It has been expressly laid down that a person cannot commit manslaughter on himself. But since suicide is necessarily murder, it follows that any person who is accessory to suicide is accessory to murder. If such person aids or abets any other person in so killing himself, that person is an accessory before the fact, or a principal in the second degree in the murder so committed; an accessory before the fact being defined as one who directly or indirectly counsels, procures, or commands any person to commit any felony or piracy which is committed in consequence of such counselling, procuring, or commandment.

“Here, then, is the importance of the matter. The criminal responsibility attaching to the anonymous letters may be involved in some obscurity; but if it can be proved that any person counselled, procured, or commanded the deceased to kill himself, that person can be dealt with as a principal in the second degree in the murder of deceased. It is for you to say whether, in your judgment, such action can be proved in the case of any person, and if so, who that person is.

“There is only one more item of evidence that I shall refer to, and that I shall touch upon only lightly. You have heard the witness Rachel Goldstein state that when she informed Helen Otway that deceased had hanged himself, Mrs. Otway fell down in a dead faint. You have heard the explanation that Mrs. Otway gave, and you must decide what weight you attach to it; whether you can regard this fainting as due to the shock of an unexpected tragedy, or as the culminating effect of prolonged and extreme nervous tension. In any case, its evidential value is but small.

“And now, as our expert witness has still not arrived, let us take a last look over the evidence to see what material we have for our verdict.” Here the coroner paused, laying a number of sheets of paper in a row before him glanced rapidly through them.

I watched him with a dreadful fascination, even as a bird might watch the stealthy approach of a snake, terrified, but despairing of any hope of escape. So I had listened to this terrible summing-up—all false and erroneous in detail, but so horribly true in regard to the central fact. Through that dense fog of error and false appearances the coroner had seen the essential truth; that Lewis Otway had gone to his death at my bidding. Like some great spider he had wound around me a network of horrid entanglements; and now he was about to wind up the final turns.

At length he looked up, and laid his hand on one of the papers. Then he turned once more towards the jury and began his summary of the evidence. And at that moment, unnoticed, apparently, by anyone save myself, Dr. Thorndyke entered silently by a side door, and seated himself on a vacant chair.

THE arrival of Dr. Thorndyke seemed to me to close the last avenue of escape. The coroner had guessed at my guilty secret, but he only offered his guess as a speculative possibility on which no decisive opinion could be founded. But Dr. Thorndyke was not a guesser. If he had penetrated to that secret he would offer no speculative probabilities, but definite evidence, which would reduce the matter to certainty.

It was a terrible thought. Self-accusation—the denunciations of a guilty conscience—had been dreadful enough. But there is a world of difference between self-accusation in secret and a public criminal indictment; between calling oneself a murderess, and standing in the dock to answer the charge.

During the coroner’s address I furtively watched Dr. Thorndyke. But I could gather nothing from his face. As he sat motionless, with his eyes steadily bent on the coroner, his expression denoted nothing but a grave and concentrated attention. After the first quick glance round the court, he never looked at me. What was in his mind I could not guess, though I felt that he held my fate in the hollow of his hand.

“There is no need, gentlemen,” the coroner began, “for us to go through the mass of evidence again. We have looked over it as a whole, and we have seen that certain striking suggestions emerge from it. In our last glance we have to bring those suggestions to a definite focus. Our inquiry deals with a man who committed suicide, but the appearances suggest that that suicide was not a voluntary, spontaneous act, but was the effect of a compelling force exerted by some other person.

“Who was that other person? The compelling force seems to have been exerted by means of certain menacing letters. The person who procured the suicide of deceased was therefore the writer of those letters. Now who was the writer of those letters? The question is best answered by asking certain other questions.

“First: Had deceased any enemies? Well, we know of one, and one only. His wife, Helen Otway, has confessed to a deep
repugnance to him. She had suffered grievous injuries at his hands, and she resented those injuries profoundly.

“Second: Who gained most by his death? Again, the answer is his wife, Helen Otway.

“Third: Did anyone stand to gain in any other way by his death? The answer again is yes; and the person who stood to gain—by liberation from an intolerable bondage—was Helen Otway.

“Fourth: Who could have written those letters? who possessed the secret knowledge that those letters exhibit? Only one such person is known to us besides deceased himself. That person is Helen Otway.

“Fifth: Who was the last person who was with him before his death? Again the answer is, Helen Otway.

“Sixth: Is there any evidence of the use of more direct means to procure or compel this act of suicide? And if so, by whom do those means appear to have been employed? The answer is that there is such evidence, and that the person who appears to have used those means is Helen Otway. There is evidence suggesting that she was actually present when the suicide took place; there is evidence of a hurried flight and unwillingness to return for the purse that she had left behind; there is the open door, the lighted gas, and the missing jewels, which were in the chambers when she arrived, and which were never seen after she left. And then there is the mysterious stick which had vanished, and which reappeared so strangely after her unexplained visit to the chambers.

“That, gentlemen, is in brief the whole of the evidence with the exception of that relating to John Vardon’s death. That evidence is important to this enquiry; for if it should be proved that John Vardon was killed by Lewis Otway, and that Helen Otway was privy to the homicide, that would furnish a further motive for procuring the suicide of deceased—the motive of the removal of the sole accomplice in a serious crime. But that evidence is not vitally important, and it is for you to decide whether you will still await the arrival of Dr. Thorndyke, or whether you will proceed to consider your verdict on the evidence that you have heard.”

As the coroner concluded, Dr. Thorndyke rose and advanced to the table, placing on an empty chair a small green-covered suit-case. The coroner looked up at him sharply and with somewhat definitely unfriendly recognition.

“How long have you been here, sir?” the former demanded.

“About seven minutes,” Dr. Thorndyke replied glancing at his watch. “You were just beginning your summary when I entered.”

“You should have announced your arrival immediately,” said the coroner. “However, as you are here, you had better take the oath, and give your evidence without further delay.”

The coroner’s brusque, and even rude manner, did not appear to disturb Dr. Thorndyke in the smallest degree. With the same impassive expression and quiet, composed demeanour, he took the oath and disposed of the usual preliminaries.

“We understand,” said the coroner, “that you have made an examination of the body of the late John Vardon.”

“Yes, I proceeded to Maidstone on instructions from the Home Office and conducted an exhumation of the body of John Vardon, of which I then made an examination. The object of the proceeding was to ascertain whether the cause of death had been correctly stated at the inquest.”

“And what was the result of your examination—I don’t think we want minute details.”

“I found that the cause of death was, as stated at the inquest by the medical witnesses, failure of an extremely dilated heart. There was a small wound on the right side of the forehead adjoining the temple, which I examined very thoroughly. It was a glancing wound caused by a very oblique impact, and was such a wound as might have been produced in the manner described—by striking the corner of the mantelpiece in falling. There was no injury to the bone nor to the brain or its membranes. It was quite a trivial wound, and was not either wholly or partially the cause of death.”

“Could that wound have been caused by a blow with a loaded stick?”

“I should say not. It was an oblique tear in the scalp and was apparently produced by some object more angular than the knob of a stick.”

“Well,” said the coroner, “that seems to dispose of the question of Mr. Vardon’s death. It is a thousand pities that it was not cleared up more completely at the time. However, it is cleared up now; and that, really, is all, I think, that we want you to tell us, unless you have some other information. I understand that you had a sort of roving commission to investigate the matter of this enquiry?”

“I received instructions to make certain investigations with a view to my giving evidence at this inquest, and I have made such investigations as seemed to me to be necessary.”

“Yes, you have, in fact, held a sort of one-man inquest on your own account. Well, the question is, do you suppose that you are in a position to tell us anything that we do not know already?”

“I am quite sure that I am. If you will allow me to present a summary of the facts in my possession—”

“I shall allow nothing of the kind. You will be good enough to answer questions like any other witness.”

Dr. Thorndyke bowed with the same immovable serenity, and the coroner proceeded with his examination.

“Have you had much experience of cases of suicide?”
"I have."
"Have you had personal experience of any cases in which the suicidal act was procured, or brought about, by acts of persons other than the suicide, performed by them with deliberate intent?"
"Yes, I have had experience of several such cases."
"In those cases, what methods were used to procure the other person to commit suicide?"
"The majority were cases in which two persons agreed mutually to commit suicide together. In the less common cases in which the procurer did not propose to commit suicide, the method employed was usually some form of suggestion."
"Can you give us an instance of the employment of suggestion?"
"A very typical case occurred in my practice some years ago. A young man, who had a strong inherited predisposition to suicide, was caused by certain persons, who stood to benefit very considerably by his death, to make away with himself. The method adopted was this: The victim was made to believe that a certain Chinese jewel in his possession carried a curse; that all previous owners of it had hanged themselves, and that the appointed time for the suicide was made known by the apparition of a dead mandarin. When by frequent repetitions of this story the suitable state of mind had been produced, one of these persons dressed himself in a mandarin’s costume and presented himself to the victim, with the result that, within an hour or two, the latter hanged himself."
"In that case," observed the coroner, "the suggestion seems to have been in two stages. Is that usual?"
"One could hardly call it usual, as the cases are so rare. But it is the most obvious and effective method—to produce a suicidal state of mind by preparatory suggestion, and then, as it were, to explode the mine by a definite determining suggestion."
"Are you acquainted with the evidence which has been given in this inquiry?"
"I have read a verbatim report of the first proceedings, and I have heard your summary of the whole case."
"You have, then, read the evidence relating to the anonymous letters. What opinion did you form as to the purpose of those letters?"
"I formed the opinion that their purpose was to impel deceased to commit suicide."
"Do you consider that, in the case of a person predisposed to suicide, they would be likely to produce that effect?"
"I should say that they would have a tendency to induce a suicidal state of mind."
"And suppose such a person, having received a series of such letters, and being greatly depressed by them, should be engaged—in his bedroom, the last thing at night—in a conversation on suicide, his own suicide, and that of relatives who had killed themselves, what would you expect to be the effect of such conversation?"
"It would not be possible to predict the effect, but the tendency would be to reinforce the influence of the letters."
"And what would be the condition of such a person in regard to his susceptibility to further suggestion?"
"His susceptibility to further suggestion would probably be increased."
"Looking at this case as a whole, by the light of your experience of suicide, do you regard the death of deceased as the result of his own spontaneous act or as due in part to the acts of some other person or persons?"
"I regard his death as due entirely to the acts of some other person or persons."
At these terrible words my heart seemed to stand still. There was a fearful certainty and confidence in Dr. Thorndyke’s tone that chilled my very blood. He did not guess. He knew. In the short pause that followed, I set my teeth and waited for my condemnation.
"You consider that the suggestion conveyed in the letters and in that conversation and by other possible means operated so as to convert deceased into an automaton? Is that what you mean?"
"No. I do not consider that the letters or the conversation had any effect in causing his death."
The coroner frowned, perplexedly. "I don’t think I quite understand," said he. "There seems to be—if you will pardon me—some self-contradiction. You state that the letters and the conversation would tend to produce a suicidal state of mind; but yet, though the letters were actually received and the conversation occurred, neither had any effect in causing the death which followed them. Do I state the case correctly?"
"Yes; quite correctly."
"Then I do not understand you in the least. You appear to be flatly contradicting yourself. I think you will agree that we are not making much progress."
"We are not making any progress at all. The examination has not elicited a single, relevant fact."
"Indeed, sir!" exclaimed the coroner. "And, pray, whose fault is that?"
"I suggest," Dr. Thorndyke replied, suavely, "that it is due to the method of examination."
The coroner turned purple. “This is insufferable!” he exclaimed; “that a witness should presume to instruct an experienced officer of justice in the duties of his office! But I suppose we must be humble in the presence of an expert. May I ask, sir, what you object to in my methods of examination?”

“The lack of result,” Dr. Thorndyke replied, “is due to the fact that your examination has been conducted to support a particular theory; and that theory happens to be the wrong theory.”

“Again, I don’t understand you,” the coroner said, angrily. “No theory has been advanced by me. Will you be good enough to explain what theory you are alluding to?”

“I allude to the theory, which you seem to have adopted, that the deceased Lewis Otway committed suicide by hanging himself from a peg on the bedroom wall. That theory is erroneous. It is practically certain that Lewis Otway did not commit suicide; and it is quite certain that he never hung from that peg on the bedroom wall.”

“But,” exclaimed the coroner, “we have the evidence of a witness who saw deceased hanging from that peg; and not only saw him, but cut him down and found him to be dead.”

“As a witness,” said Dr. Thorndyke, “I am not concerned with the testimony of other witnesses, but only with the facts as ascertained by me.”

“No doubt,” retorted the coroner. “But we are concerned with the testimony of all the witnesses; and the statement of this witness that she saw the body hanging from the peg, and that she cut it down from the peg, is a clear statement on a question of fact. If that statement is true, deceased hung from that peg. If he did not hang from that peg the statement is false. You say that he never hung from that peg. On what facts do you base that statement?”

“On the strength of the peg and the weight of the body of deceased. The strength of the peg—that is, the maximum weight it was capable of supporting—was under 175 pounds. But the body of deceased weighed 231 pounds—that is half a hundredweight in excess of the greatest weight that the peg was capable of supporting.”

“What method did you employ to measure the strength of the peg?”

“I used simple weights, which I thought preferable to a dynamometer for purposes of evidence. These weights I had conveyed to the chambers, and I carried out the experiment in the presence of Mr. Anstey, K.C., and my assistant, Francis Polton. I hung from the peg a wooden tray, slung by a chain, the total weight of which was ten pounds. On this tray I placed—with great care to avoid shocks—two half-hundredweights. I then added weights, five pounds at a time, until the total weight, including that of the tray and chain, reached 170 pounds. This was evidently very near the limit of what the peg would bear, for it was bending noticeably under the weight; and when I added another five pounds the peg doubled under, breaking half-way through. I have brought it with me for your inspection.” He opened the green suit-case and produced the peg, which he handed to the coroner.

“You see,” he said, “that, in spite of its massive appearance, it had very little strength. It is merely a piece of thinnish, brass tube.”

The coroner was impressed, but puzzled. “You consider,” said he, as he handed the peg to the foreman of the jury, “that the test is conclusive?”

“Quite,” replied Dr. Thorndyke. “Clearly, a peg which breaks under a weight of 175 pounds could not have supported a body weighing 231 pounds.”

“Yes,” agreed the coroner, “that appears to be undeniable.” He again reflected for a few moments, and then said: “I notice that you went to the chambers provided with this apparatus. The suggestion is that you had already a definite suspicion in your mind. Is that the case?”

“Yes; I had already come to the conclusion that deceased had never hung from that peg.”

“Will you tell us what led you to that conclusion?”

“When I received instructions to investigate the case I proceeded to make an inspection of the body, and it struck me, at once, that the appearances were not quite in agreement with the alleged facts, which I had learned from a verbatim report of the evidence. The amount of injury to the structures of the neck was much less than I should have expected in the case of so heavy a man, and the characteristic signs of death by hanging were absent. It is my invariable rule, in all cases of suspicious death, no matter what the apparent cause of the death may be, to examine the contents of the stomach and the secretions. In this case the procedure appeared to be necessary, and I made a careful examination of the contents of the stomach. The examination disclosed the presence of small quantities of veronal and alcohol, but when I tested for alkaloids, I obtained from the stomach and its contents no less than twenty-three minims of nicotine, the alkaloid of tobacco.

“Now nicotine—which differs from all other alkaloids but conein, the alkaloid of hemlock, in being a liquid—is an intensely poisonous substance. The fatal dose has not been exactly ascertained, but it may be stated at not more: than five minims; that is, roughly, five drops. So that the quantity of this virulent poison actually obtained from the stomach of deceased was about four times the fatal dose. But this was only a part of the quantity that had been swallowed, for the examination was made ten days after death, by which time an appreciable amount of the poison would have been lost by post-mortem diffusion. I also examined the liver and other organs and the secretions, and in these I detected minute quantities of nicotine. The evidence afforded by these minute quantities is very important. Nicotine is a poison that acts
with great rapidity—in fact, with the exception of hydrocyanic acid (prussic acid) it is probably the most rapidly-acting poison known. The importance, therefore, of these minute traces of the poison in remote organs is this: their existence proves that the poison entered the stomach during life—while the blood was still circulating; and the minuteness of the quantity absorbed proves that death occurred very rapidly—practically instantaneously.

“But the very large quantity of the poison and the evidence of its almost instantaneous effect created this dilemma: a witness had stated that she saw deceased hanging from the peg; but since death was practically instantaneous, he could not have hanged himself after taking the poison; and obviously he could not have taken the poison after he had hanged himself. This discrepancy, coupled with the absence of appreciable injury to the neck, raised a doubt as to whether deceased had ever hung from the peg at all. That doubt was increased by certain other circumstances. There were, for instance, post-mortem lacerations of the hamstring muscles and other muscles of the thighs, which could not be accounted for in the case of a body which had hung vertically, fully extended. There were faint impressions below the knees of some coarse-textured fabric, not part of his clothing, and there was the condition of a length of red, worsted rope by which deceased was said to have been suspended. Both ends of this rope—which had formed part of a loop—had been cut through with a very sharp instrument; and both ends were cut cleanly right through. But this could not possibly have happened in the alleged circumstances. If a body of this great weight had been suspended by two thicknesses of a flimsy, woollen rope, and an attempt had been made to cut that rope, the cutting instrument would not have passed right through, but would have divided the rope until the remaining portion was too weak to sustain the weight, and then that portion would have broken, leaving a ragged end. Having regard to the great evidential importance of the question, I decided to clear up the doubt, if possible, by examining the peg itself. There are not many pegs which could carry this great weight without either bending, breaking or pulling out of the woodwork, and I thought it probable that an actual test with weights would settle the question. Accordingly obtained the keys from Mrs. Otway, went to the chambers and applied the tests as I have stated.”

“If the deceased was not suspended at all,” the coroner objected, “how do you account for the marks of the rope on his neck?”

“He was suspended—or rather partially suspended. I looked about the chambers for the probable means of suspension, and decided that this was the knob of the bedpost at the right-hand side of the head of the bed. On this side of the bed was a hard jute matting, the texture of which corresponded exactly with the impressions on the knees, the faintness of which is accounted for by the partial protection furnished by the pyjamas. The procedure seems to have been this: the rope was secured to the neck of deceased immediately after death, while he was lying on the bed. It was then hitched over the knob of the bedpost and the body drawn off the bed so that it was supported against the bedpost in a kneeling position. This would account for the shallowness of the marks on the neck, the impressions of the matting on the knees, and the post-mortem lacerations of the muscles. With regard to these latter, it is evident that the body was left suspended in an approximately kneeling position for a good many hours—probably for the purpose of producing as deep an indentation as possible on the neck—and that during that time cadaveric rigidity became well established; so that when the rope was cut and the body allowed to fall to the floor, the legs were found to have stiffened and to be firmly set in the kneeling posture. As deceased was to be represented as having hanged himself from the peg, it would be necessary to straighten out the legs by force; but as the muscles were already rigid, the forcible extension would tend to produce such lacerations as were found. These lacerations were, of course, under the skin and would not be noticeable excepting on close examination.”

“Is that the whole of your evidence?” the coroner asked, as Dr. Thorndyke paused.

“It is the whole of my evidence concerning the immediate circumstances of the death of Lewis Otway. I have certain other information, but you will probably not consider it of much importance to the enquiry. I have examined the two hairs that were found adhering to Mr. Vardon’s stick. They were not his hairs. As a matter of fact, the wound on his head was on a part in which there was no hair; but in any case, these were not his hairs. One of these was apparently a hair of Lewis Otway’s—probably taken from his hair brush. His hair was white, but was dyed with a stain containing sulphide of lead. This hair was of a similar character and stained with the same material. The other was white and appeared to be a woman’s hair. It was cut at both ends, and was evidently part of a much longer hair. I have also made some enquiries concerning the anonymous letters. Mrs. Otway consulted me about them a month or two back, and I promised her to look into the matter, and did so. I collected very few facts, but if I may look at the letters, I can tell you at once whether those facts throw any light on the authorship of these letters.”

“It really is of much importance to us,” said the coroner, “though it may be important evidence in another place. Still, you may as well look at the letters.”

He handed the bundle of letters to Dr. Thorndyke, who examined each of them closely, holding them up to the light to inspect the watermark and comparing them with some other letters which he produced from his pocket.

“I think,” said he, as he returned the letters to the coroner, “there is no doubt that all these letters were written by Morris Goldstein. I have several letters which were received from and signed by him, which are identically similar in character. All are typed on the same foreign paper—made in Sweden—with an old Calligraph machine which had three type-bars slightly bent—the lower-case ‘g’ and ‘s’ and the capital ‘O.’ I have further evidence on the subject, if you care to hear it.”

The foreman of the jury interposed at this point. “We don’t want to hear any more about those letters. If deceased did not commit suicide, the letters don’t matter.”

“They will matter a good deal in another court,” said the coroner, “but I agree with you that they do not affect our
probable verdict; but there is one question to which we may as well have a definite answer, and then we need not detain Dr. Thorndyke any longer. You have told us, sir, that the immediate cause of Lewis Otway's death was nicotine poisoning. Can you say whether the poison was taken by deceased himself, or whether it was administered by some other person?"

"The medical evidence proper furnishes no answer to that question, but from the attendant circumstances I infer that the poison was administered by some other person—probably while deceased was asleep. But that is only an opinion, based on the circumstantial evidence."

"Exactly. It is really a question for the jury. And now I don't think we need trouble you any further." The coroner bowed, a little stiffly, and as Dr. Thorndyke walked back to his chair, he once more faced the jury.

"Well, gentlemen," said he, "you have heard Dr. Thorndyke's very remarkable evidence, and you will see that it compels us completely to revise our views of the case. The suicide by hanging, which we have been considering at such length, is seen to be an illusion, carefully, elaborately and ingeniously prepared. The question now is, was there a suicide at all? The cause of death was poisoning by nicotine, and death was almost instantaneous. Is this, then, a case of suicidal poisoning or of homicide?

"It is unnecessary for me to dwell on the suggested probabilities. You have heard a witness swear, in the most circumstantial manner, that she saw deceased hanging from a peg, and that she cut the body down. You now know that deceased could never have hung from that peg. That statement was false. But what was the object of that false statement? Its object must be considered in conjunction with the illusory appearances produced by an elaborate set of preparations—the cord-marks on the neck, the overturned chair, the end of the rope fastened to the peg—a set of preparations, the only intelligible object of which seems to be the concealment of the real cause of death. And then there is a further series of preparations revealed by the anonymous letters. These we now have reason to believe were written and sent by Morris Goldstein. Our reason for connecting Mrs. Otway with those letters was based on Rachel Goldstein's statement that no one was in the house at Maidstone but Mrs. Otway, and her husband and father. But we can no longer accept that statement. The suggested probability is that she was in the house, and that she either saw, or heard enough to gather what had taken place. In that case we seem to detect a carefully-laid plan to procure the suicide of the deceased, and throw suspicion on his wife; and when the suicide failed to occur, the alternative of poison would seem to have been adopted."

"I must draw your attention to the circumstances existing at the time of the tragedy. In deceased's chambers were precious stones to the value of over four thousand pounds. Possibly there were stolen gems of a somewhat greater aggregate value. It is highly probable that Rachel Goldstein knew of the deceased's letter to his wife, for as he was bedridden at the time, the letter would have been posted by her, and could easily have been opened and read. The time of the interview was arranged by her so that Mrs. Otway should be the last visitor."

"Here then is a group of circumstances furnishing a perfect opportunity for the carrying out of the plan. The gems were within reach, and a visitor was expected on whom could be thrown the suspicion of the theft, and the responsibility of the apparent suicide."

"As to the motive, apart from the theft of the gems, we must remember that here was an illegitimate Jewish family into which had been introduced a legitimate Gentile wife. Her arrival had affected the interests of the family injuriously, and if a reconciliation between husband and wife should have occurred, those interests would have been still more unfavourably affected."

"But we are not called on to go deeply into the question of motive. This is a coroner's inquest, and our business is to decide how and by what means deceased met with his death. That decision is with you, gentlemen. You have heard the evidence, and I shall now leave you to consider your verdict.""

As the coroner ceased speaking, and silence fell upon the court I allowed myself, for the first time, to think of my own position. Previously I had not dared; for when Dr. Thorndyke had made his dramatic statement, the revulsion of feeling had been so great that I had much ado to restrain myself from bursting into hysterical tears or laughter. But now I was more calm, and could think upon the change that a few magic words had wrought in my condition. I was free—free in body and soul. My imagined guilt had been a delusion; the silent willing and suggestion, a myth. I had never had any conscious intention to procure Lewis Otway's suicide; and no suicide had been procured. The death of that wretched man—my evil genius—had been brought about by no act of mine, conscious or unconscious. I was guiltless, I was free."

The jury took but a short time to consider their verdict. In a few minutes the foreman intimated that they had come to a unanimous decision. The coroner then formally put the question.

"Have you considered the evidence, gentlemen, and are you agreed upon your verdict?"

"We are," replied the foreman. "Our verdict is that the deceased, Lewis Otway, met his death as the result of a poisonous dose of nicotine administered to him by Rachel Goldstein."

"Do you say that the poison was administered inadvertently or with malice?"

The foreman consulted his colleagues, and then replied; "With malice."

"That," said the coroner, "amounts to a verdict of wilful murder against Rachel Goldstein; and I may say, that I am entirely in agreement with you."

As the coroner concluded, I looked at Mrs. Gregg. Her face was set, and had turned a horrible, livid grey. Presently she rose slowly from her chair, and looked furtively over her shoulder; and as she did so she looked into the face of Superintendent Miller.
EPILOGUE

THE history that I have set forth in the foregoing pages is the history of an episode. That episode opened with instantaneous abruptness; and in an instant it came to an abrupt end. The fatal words that I had overheard in my father’s house had been as an incantation that had cast over me a malign spell. In the moment in which they were spoken the sinister shadow of Lewis Otway had fallen upon my life; and in the long months that followed it had never lifted. Even the death of the unhappy wizard had left the spell still working, the shadow deepening from hour to hour, until Dr. Thorndyke, like a benevolent magician, had spoken the counter-charm. Then, in an instant, the spell was broken; the shadow lifted and lifted for ever.

And with the breaking of the spell and the lifting of the shadow, the episode is at an end, and my tale is told. Yet I am loth to lay down my pen until the reader who has followed my pilgrimage through the valley of the shadow has been given at least one glimpse of me straying in the sunshine, “along the meads of asphodel.” I would crave his attendance at the sombre, old church of St. Clement Danes, where, on a bright May morning, was spoken another incantation that opened to four faithful hearts the gates of a Paradise of life-long happiness and love. I would bid him admire sweet Peggy, tripping forth, all smiles and blushes, beside her stalwart husband to foregather with Jasper and me and our friends from Welclose Square and the Temple in the ancient rooms in Clifford’s Inn.

But my tale is told. The curtain is rung down; and I may not linger before it, babbling over the extinguished footlights on an empty stage—perchance to an empty house.

THE END
I.—THE CASE OF THE WHITE FOOTPRINTS

“Well,” said my friend Foxton, pursuing a familiar and apparently inexhaustible topic, “I’d sooner have your job than my own.”

“I’ve no doubt you would,” was my unsympathetic reply. “I never met a man who wouldn’t. We all tend to consider other men’s jobs in terms of their advantages and our own in terms of their drawbacks. It is human nature.”

“Oh, it’s all very well for you to be so beastly philosophical,” retorted Foxton. “You wouldn’t be if you were in my place. Here, in Margate, it’s measles, chicken-pox and scarlatina all the summer, and bronchitis, colds and rheumatism an the winter. A deadly monotony. Whereas you and Thorndyke sit there in your chambers and let your clients feed you up with the raw material of romance. Why, your life is a sort of everlasting Adelphi drama.”

“You exaggerate, Foxton,” said I. “We, like you, have our routine work, only it is never heard of outside the Law Courts; and you, like every other doctor, must run up against mystery and romance from time to time.”

Foxton shook his head as he held out his hand for my cup. “I don’t,” said be. “My practice yields nothing but an endless
round of dull routine."

And then, as if in commentary on this last statement, the housemaid burst into the room and, with hardly dissembled agitation, exclaimed:

"If you please, sir, the page from Beddingfield’s Boarding-house says that a lady has been found dead in her bed and would you go round there immediately."

"Very well, Jane," said Foxton, and as the maid retired, he deliberately helped himself to another fried egg and, looking across the table at me, exclaimed: "Isn’t that always the way? Come immediately—now—this very instant, although the patient may have been considering for a day or two whether he’ll send for you or not. But directly he decides you must spring out of bed, or jump up from your breakfast, and run."

"That’s quite true," I agreed; "but this really does seem to be an urgent case."

"What’s the urgency?" demanded Foxton. "The woman is already dead. Anyone would think she was in imminent danger of coming to life again and that my instant arrival the only thing that could prevent such a catastrophe."

"You’ve only a third-hand statement that she is dead," said I. "It is just possible that she isn’t; and even if she is, as you will have to give evidence at the inquest, you do not want the police to get there first and turn out the room before you’ve made your inspection."

"Gad!" exclaimed Foxton. "I hadn’t thought of that. Yes. You’re right. I’ll hop round at once."

He swallowed the remainder of the egg at a single gulp rose from the table. Then he paused and stood for a few moments looking down at me irresolutely.

"I wonder, Jervis," he said, "if you would mind coming round with me. You know all the medico-legal ropes, and I don’t. What do you say?"

I agreed instantly, having, in fact, been restrained only by delicacy from making the suggestion myself; and when I had fetched from my room my pocket camera and telescopic tripod, we set forth together without further delay.

Beddingfield’s Boarding-house was but a few minutes walk from Foxton’s residence being situated near the middle of Ethelred Road, Cliftonville, a quiet, suburban street which abounded in similar establishments, many of which, I noticed, were undergoing a spring-cleaning and renovation to prepare them for the approaching season.

"That’s the house," said Foxton, "where that woman is standing at the front door. Look at the boarders, collected at the dining-room window. There’s a rare commotion in that house, I’ll warrant."

Here, arriving at the house, he ran up the steps and accosted in sympathetic tones the elderly woman who stood by the open street door.

"What a dreadful thing this is, Mrs. Beddingfield! Terrible! Most distressing for you!"

"Ah, you’re right, Dr. Foxton," she replied. "It’s an awful affair. Shocking. So bad for business, too. I do hope, and trust there won’t be any scandal."

"I’m sure I hope not," said Foxton. "There shan’t be if I can help it. And as my friend Dr. Jervis, who is staying with me for a few days, is a lawyer as well as a doctor, we shall have the best advice. When was the affair discovered?"

"Just before I sent for you, Dr. Foxton. The maid, noticed that Mrs. Toussaint—that is the poor creature’s name—had not taken in her hot water, so she knocked at the door. As she couldn’t get any answer, she tried the door and found it bolted on the inside, and then she came and told me. I went up and knocked loudly, and then, as I couldn’t get any reply, I told our boy, James, to force the door open with a case-opener, which he did quite easily as the bolt was only a small one. Then I went in, all of a tremble, for I had a presentiment that there was something wrong; and there she was lying stone dead, with a most ‘orrible stare on her face and an empty bottle in her hand."

"A bottle, eh!" said Foxton.

"Yes. She’d made away with herself, poor thing; and all on account of some silly love affair—and it was hardly even that."

"Ah," said Foxton. "The usual thing. You must tell us about that later. Now we’d better go up and see the patient—at least the—perhaps you’ll show us the room, Mrs. Beddingfield."

The landlady turned and preceded us up the stairs to the first-floor back, where she paused, and softly opening a door, peered nervously into the room. As we stepped past her and entered, she seemed inclined to follow, but, at a significant glance from me, Foxton persuasively ejected her and closed the door. Then we stood silent for a while and looked about us.

In the aspect of the room there was something strangely incongruous with the tragedy that had been enacted within its walls; a mingling of the commonplace and the terrible that almost amounted to antilimax. Through the wide-open window the bright spring sunshine streamed in on the garish wallpaper and cheap furniture; from the street below, the periodic shouts of a man selling "sole and mack-ro!" broke into the brisk staccato of a barrel-organ and both sounds mingled with a raucous voice close at hand, cheerfully trolling a popular song, and accounted for by a linen-clad elbow that bobbed in front of the window and evidently appertained to a house-painter on an adjacent ladder.

It was all very commonplace and familiar and discordantly out of character with the stark figure that lay on the bed like a
waxen effigy symbolic of tragedy. Here was none of that gracious somnolence in which death often presents itself with a suggestion of eternal repose. This woman was dead; horribly, aggressively dead. The thin, sallow face was rigid as stone, the dark eyes stared into infinite space with a horrid fixity that was quite disturbing to look on. And yet the posture of the corpse was not uneasy, being, in fact, rather curiously symmetrical, with both arms outside the bedclothes and both hands closed, the right grasping, as Mrs. Beddingfield had said, an empty bottle.

“Well,” said Foxton, as he stood looking down on the dead woman, “it seems a pretty clear case. She appears to have laid herself out and kept hold of the bottle so that there should be no mistake. How long do you suppose this woman has been dead, Jervis?”

I felt the rigid limbs and tested the temperature of the body surface.

“Not less than six hours,” I replied. “Probably more. I should say that she died about two o’clock this morning.”

“And that is about all we can say,” said Foxton, “until the post-mortem has been made. Everything looks quite straightforward. No signs of a struggle or marks of violence. That blood on the mouth is probably due to her biting her lip when she drank from the bottle. Yes; here’s a little cut on the inside of the lip, corresponding to the upper incisors. By the way, I wonder if there is anything left in the bottle.”

As he spoke, he drew the small, unlabelled, green glass phial from the closed hand—out of which it slipped quite easily—and held it up to the light.

“Yes,” he exclaimed, “there’s more than a drachm left; quite enough for an analysis. But I don’t recognize the smell. Do you?”

I sniffed at the bottle and was aware of a faint unfamiliar vegetable odour.

“No,” I answered. “It appears to be a watery solution of some kind, but I can’t give it a name. Where is the cork?”

“I haven’t seen it,” he replied. “Probably it is on the floor somewhere.”

We both stooped to look for the missing cork and presently found it in the shadow, under the little bedside table. But, in the course of that brief search, I found something else, which had indeed been lying in full view all the time—a wax match. Now a wax match is a perfectly innocent and very commonplace object, but yet the presence of this one gave me pause. In the first place, women do not, as a rule, use wax matches, though there was not much in that. What was more to the point was that the candlestick by the bedside contained a box of safety matches, and that, as the burnt remains of one lay in the tray, it appeared to have been used to light the candle. Then why the wax match?

While I was turning over this problem Foxton had corked the bottle, wrapped it carefully in a piece of paper which he took from the dressing-table and bestowed it in his pocket.

“Well, Jervis,” said he, “I think we’ve seen everything. The analysis and the post-mortem will complete the case. Shall we go down and hear what Mrs. Beddingfield has to say?”

But that wax match, slight as was its significance, taken alone, had presented itself to me as the last of a succession of phenomena each of which was susceptible of a sinister interpretation; and the cumulative effect of these slight suggestions began to impress me somewhat strongly.

“One moment, Foxton,” I said. “Don’t let us take anything for granted. We are here to collect evidence, and we must go warily. There is such a thing as homicidal poisoning, you know.”

“Yes, of course,” he replied, “but there is nothing to suggest it in this case; at least, I see nothing. Do you?”

“Nothing very positive,” said I; “but there are some facts that seem to call for consideration. Let us go over what we have seen. In the first place, there is a distinct discrepancy in the appearance of the body. The general easy, symmetrical posture, like that of a figure on a tomb, suggests the effect of a slow, painless poison. But look at the face. There is nothing reposeful about that. It is very strongly suggestive of pain or terror or both.”

“Yes,” said Foxton, “that is so. But you can’t draw any satisfactory conclusions from the facial expression of dead bodies. Why, men who have been hanged, or even, stabbed, often look as peaceful as babes.”

“Still,” I urged, “it is a fact to be noted. Then there is that cut on the lip. It may have been produced in the way you suggest; but it may equally well be the result of pressure on the mouth.”

Foxton made no comment on this beyond a slight shrug of the shoulders, and I continued: “Then there is the state of the hand. It was closed, but, it did not really grasp the object it contained. You drew the bottle out without any resistance. It simply lay in the closed hand. But that is not a normal state of affairs. As you know, when a person dies grasping any object, either the hand relaxes and lets it drop, or the muscular action passes into cadaveric spasm and grasps the object firmly. And lastly, there is this wax match. Where did it come from? The dead woman apparently lit her candle with a safety match from the box. It is a small matter, but it wants explaining.”

Foxton raised his eyebrows protestingly. “You’re like all specialists, Jervis,” said he. “You see your speciality in everything. And while you are straining these flimsy suggestions to turn a simple suicide into murder, you ignore the really conclusive fact that the door was bolted and had to be broken open before anyone could get in.”

“You are not forgetting, I suppose,” said I, “that the window was wide open and that there were house-painters about
and possibly a ladder left standing against the house."

"As to the ladder," said Foxton, "that is a pure assumption; but we can easily settle the question by asking that fellow out there if it was or was not left standing last night."

Simultaneously we moved towards the window; but halfway we both stopped short. For the question of the ladder had in a moment become negligible. Staring up at us from the dull red linoleum which covered the floor were the impressions of a pair of bare feet, imprinted in white paint with the distinctness of a woodcut. There was no need to ask if they had been made by the dead woman: they were unmistakably the feet of a man, and large feet at that. Nor could there be any doubt as to whence those feet had come. Beginning with startling distinctness under the window, the tracks shed rapidly in intensity until they reached the carpeted portion of the room, where they vanished abruptly; and only by the closest scrutiny was it possible to detect the faint traces of the retiring tracks.

Foxton and I stood for some moments gazing in, silence at the sinister white shapes; then we looked at one another.

"You've saved me from a most horrible blunder, Jervis," said Foxton. "Ladder or no ladder, that fellow came in at the window; and he came in last night, for I saw them painting these window-sills yesterday afternoon. Which side did he come from, I wonder?"

We moved to the window and looked out on the sill. A set of distinct, though smeared impressions on the new paint gave unneeded confirmation and showed that the intruder had approached from the left side, close to which was a cast-iron stack-pipe, now covered with fresh green paint.

"So," said Foxton, "the presence or absence of the ladder is of no significance. The man got into the window somehow, and that's all that matters."

"On the contrary," said I, "the point may be of considerable importance in identification. It isn't everyone who could climb up a stack-pipe, whereas most people could make shift to climb a ladder, even if it were guarded by a plank. But the fact that the man took off his boots and socks suggests that he came up by the pipe. If he had merely aimed at silencing his footfalls, he would probably have removed his boots only."

From the window we turned to examine more closely the footprints on the floor, and while I took a series of measurements with my spring tape Foxton entered them in my notebook.

"Doesn't it strike you as rather odd, Jervis," said he, "that neither of the little toes has made any mark?"

"It does indeed," I replied. "The appearances suggest that the little toes were absent, but I have never met with such a condition. Have you?"

"Never. Of course one is acquainted with the supernumerary toe deformity, but I have never heard of congenitally deficient little toes."

Once more we scrutinized the footprints, and even examined those on the window-sill, obscurely marked on the fresh paint; but, exquisitely distinct as were those on the linoleum, showing every wrinkle and minute skin-marking, not the faintest hint of a little toe was to be seen on either foot.

"It's very extraordinary," said Foxton. "He has certainly lost his little toes, if he ever had any. They couldn't have failed to make some mark. But it's a queer affair. Quite a windfall for the police, by the way; I mean for purposes of identification."

"Yes," I agreed, "and having regard to the importance of the footprints, I think it would be wise to get a photograph of them."

"Oh, the police will see to that," said Foxton. "Besides, we haven't got a camera, unless you thought of using that little toy snapshotter of yours."

As Foxton was no photographer I did not trouble to explain that my camera, though small, had been specially made for scientific purposes.

"Any photograph is better than none," I said, and with this I opened the tripod and set it over one of the most distinct of the footprints, screwed the camera to the goose-neck, carefully framed the footprint in the finder and adjusted the focus, finally making the exposure by means of an Antinous release. This process I repeated four times, twice on a right footprint and twice on a left.

"Well," Foxton remarked, "with all those photographs the police ought to be able to pick up the scent."

"Yes, they've got something to go on; but they'll have to catch their hare before they can cook him. He won't be walking about barefooted, you know."

"No. It's a poor clue in that respect. And now we may as well be off as we've seen all there is to see. I think we won't have much to say to Mrs. Beddingfield. This is a police case, and the less I'm mixed up in it the better it will be for my practice."

I was faintly amused at Foxton's caution when considered by the light of his utterances at the breakfast-table. Apparently his appetite for mystery and romance was easily satisfied. But that was no affair of mine. I waited on the doorstep while he said a few—probably evasive—words to the landlady and then, as we started off together in the direction of the police station, I began to turn over in my mind the salient features of the case. For some time we walked on in silence, and must have been pursuing a parallel train of thought for, when he at length spoke, he almost put my reflections into words.
"You know, Jervis," said he, "there ought to be a clue in those footprints. I realize that you can't tell how many toes a man has by looking at his booted feet. But those unusual footprints ought to give an expert a hint as to what sort of man to look for. Don't they convey any hint to you?"

I felt that Foxton was right; that if my brilliant colleague, Thorndyke, had been in my place he would have extracted from those footprints some leading fact that would have given the police a start along some definite line of inquiry; and that belief, coupled with Foxton's challenge, put me on my mettle.

"They offer no particular suggestions to me at this moment," said I, "but I think that, if we consider them systematically, we may be able to draw some useful deductions."

"Very well," said Foxton, "then let us consider them systematically. Fire away. I should like to hear how you work these things out."

Foxton's frankly spectatorial attitude was a little disconcerting, especially as it seemed to commit me to a result that I was by no means confident of attaining. I therefore began a little diffidently.

"We are assuming that both the feet that made those prints were from some cause devoid of little toes. That assumption—which is almost certainly correct—we treat as a fact, and, taking it as our starting point, the first step in the inquiry is to find some explanation of it. Now there are three possibilities, and only three: deformity, injury, and disease. The toes may have been absent from birth, they may have been lost as a result of mechanical injury, or they may have been lost by disease. Let us take those possibilities in order.

"Deformity we exclude since such a malformation is unknown to us.

"Mechanical injury seems to be excluded by the fact that the two little toes are on opposite sides of the body and could not conceivably be affected by any violence which left the intervening feet uninjured. This seems to narrow the possibilities down to disease; and the question that arises is, What diseases are there which might result in the loss of both little toes?"

I looked inquiringly at Foxton, but he merely nodded encouragingly. His rôle was that of listener.

"Well," I pursued, "the loss of both toes seems to exclude local disease, just as it excluded local injury; and as to general diseases, I can think only of three which might produce this condition—Raynaud's disease, ergotism, and frost-bitė."

"You don't call frost-bitė a general disease, do you?" objected Foxton.

"For our present purpose, I do. The effects are local, but the cause—low external temperature—affects the whole body and is a general cause. Well, now, taking the diseases in order. I think we can exclude Raynaud's disease. It does, it is true, occasionally cause the fingers or toes to die and drop off, and the little toes would be especially liable to be affected as being most remote from the heart. But in such a severe case the other toes would be affected. They would be shrivelled and tapered, whereas, if you remember, the toes of these feet were quite plump and full, to judge by the large impressions they made. So I think we may safely reject Raynaud's disease. There remain ergotism and frost-bitė; and the choice between them is just a question of relative frequency. Frost-bitė is more common; therefore frost-bitė is more probable."

"Do they tend equally to affect the little toes?" asked Foxton.

"As a matter of probability, yes. The poison of ergot acting from within, and intense cold acting from without, contract the small blood-vessels and arrest, the circulation. The feet, being the most distant parts of the body from the heart, are the first to feel the effects; and the little toes, which are the most distant parts of the feet, are the most susceptible of all."

Foxton reflected awhile, and then remarked:

"This is all very well, Jervis, but I don't see that you are much forrarder. This man has lost both his little toes and on your showing, the probabilities are that the loss was due either to chronic ergot poisoning or to frost-bitė, with a balance of probability in favour of frost-bitė. That's all. No proof, no verification, just the law of probability applied to a particular case, which is always unsatisfactory. He may have lost his toes in some totally different way. But even if the probabilities work out correctly, I don't see what use your conclusions would be to the police. They wouldn't tell them what sort of man to look for."

There was a good deal of truth in Foxton's objection. A man who has suffered from ergotism or frost-bitė is not externally different from any other man. Still, we had not exhausted the case, as I ventured to point out.

"Don't be premature, Foxton," said I. "Let us pursue our argument a little farther. We have established a probability that this unknown man has suffered either from ergotism or frost-bitė. That, as you say, is of no use by itself; but supposing we can show that these conditions tend to affect a particular class of persons, we shall have established a fact that will indicate a line of investigation. And I think we can. Let us take the case of ergotism first.

"Now how is chronic ergot poisoning caused? Not by the medicinal use of the drug, but, by the consumption of the diseased rye in which ergot occurs. It is therefore peculiar to countries in which rye is used extensively as food. Those countries, broadly speaking, are the countries of North-Eastern Europe, and especially Russia and Poland.

"Then take the case of frost-bitė. Obviously, the most likely person to get frost-bitten is the inhabitant of a country with a cold climate. The most rigorous climates inhabited by white people are North America and North-Eastern Europe, especially Russia and Poland. So you see, the areas associated with ergotism and frost-bitė overlap to some extent. In fact they do more than overlap; for a person even slightly affected by ergot would be specially liable to frost-bitė, owing to the
impaired circulation. The conclusion is that, racially, in both ergotism and frost-bite, the balance of probability is in favour of a Russian, a Pole, or a Scandinavian.

“Then in the case of frost-bite there is the occupation factor. What class of men tend most to become frost-bitten? Well, beyond all doubt, the greatest sufferers from frost-bite are sailors, especially those on sailing ships, and, naturally, on ships trading to Arctic and sub-Arctic countries. But the bulk of such sailing ships are those engaged in the Baltic and Archangel trade; and the crews of those ships are almost exclusively Scandinavians, Finns, Russians and Poles. So that, again, the probabilities point to a native of North-Eastern Europe, and, taken as a whole, by the overlapping of factors, to a Russian, a Pole, or a Scandinavian.”

Foxton smiled sardonically. “Very ingenious, Jervis,” said he. “Most ingenious. As an academic statement of probabilities, quite excellent. But for practical purposes absolutely useless. However, here we are at the police-station. I’ll just run in and give them the facts and then go on to the coroner’s office.”

“I suppose I’d better not come in with you?” I said.

“Well, no,” he replied. “You see, you have no official connection with the case, and they mightn’t like it. You’d better go and amuse yourself while I get the morning’s visits done. We can talk things over at lunch.”

With this he disappeared into the police-station, and I turned away with a smile of grim amusement. Experience is apt to make us a trifle uncharitable, and experience had taught me that those who are the most scornful of academic reasoning are often not above retailing it with some reticence as to its original authorship. I had a shrewd suspicion that Foxton was at this very moment disgorging my despised “academic statement of probabilities” to an admiring police-inspector.

My way towards the sea lay through Ethelred Road, and I had traversed about half its length and was approaching the house of the tragedy when I observed Mrs. Beddingfield at the bay window. Evidently she recognized me, for a few moments later she appeared in outdoor clothes on the doorstep and advanced to meet me.

“Have you seen the police?” she asked, as we met.

I replied that Dr. Foxton was even now at the police-station.

“Ah!” she said, “it’s a dreadful affair; most unfortunate, too, just at the beginning of the season. A scandal is absolute ruin to a boarding-house. What do you think of the case? Will it be possible to hush it up? Dr. Foxton said you were a lawyer, I think, Dr. Jervis?”

“Yes, I am a lawyer, but really I know nothing of the circumstances of this case. Did I understand that there had been something in the nature of a love affair?”

“Yes—at least—well, perhaps I oughtn’t to have said that. But hadn’t I better tell you the whole story?—that is, if I am not taking up too much of your time.”

“I should be interested to hear what led to the disaster,” said I.

“Then,” she said, “I will tell you all about it. Will you come indoors, or shall I walk a little way with you?”

As I suspected that the police were at that moment on their way to the house, I chose the latter alternative and led her away seawards at a pretty brisk pace.

“Was this poor lady a widow?” I asked, as we started up the street.

“No, she wasn’t,” replied Mrs. Beddingfield, “and that was the trouble. Her husband was abroad—at least, he had been, and he was just coming home. A pretty home-coming it will be for him, poor man. He is an officer in the Civil Police at Sierra Leone, but he hasn’t been there long. He went there for his health.”

“What! To Sierra Leone!” I exclaimed, for the “White Man’s Grave” seemed a queer health resort.

“Yes. You see, Mr. Toussaint is a French Canadian, and it seems that he has always been somewhat of a rolling stone. For some time he was in the Klondyke, but he suffered so much from the cold that he had to come away. It injured his health very severely; I don’t quite know in what way, but I do know that he was quite a cripple for a time. When he got better he looked out for a post in a warm climate and eventually obtained the appointment of Inspector of Civil Police at Sierra Leone. That was about ten months ago, and when he sailed for Africa his wife came to stay with me, and has been here ever since.”

“And this love affair that you spoke of?”

“Yes, but I oughtn’t to have called it that. Let me explain what happened. About three months ago a Swedish gentleman—a Mr. Bergson—came to stay here, and he seemed to be very much smitten with Mrs. Toussaint.”

“And she?”

“Oh, she liked him well enough. He is a tall, good-looking man—though for that matter he is no taller than her husband, nor any better-looking. Both men are over six feet. But there was no harm so far as she was concerned, excepting that she didn’t see the position quite soon enough. She wasn’t very discreet, in fact I thought it necessary to give her a little advice. However, Mr. Bergson left here and went to live at Ramsgate to superintend the unloading of the iceships (he came from Sweden in one), and I thought the trouble was at an end. But it wasn’t, for he took to coming over to see Mrs. Toussaint, and of course I couldn’t have that. So at last I had to tell him that he mustn’t come to the house again. It was very
unfortunate, for on that occasion I think he had been “tasting”, as they say in Scotland. He wasn’t drunk, but he was excitable and noisy, and when I told him he mustn’t come again he made such a disturbance that two of the gentlemen boarders—Mr. Wardale and Mr. Macauley—had to interfere. And then he was most insulting to them, especially to Mr. Macauley, who is a coloured gentleman; called him a “buck nigger” and all sorts of offensive names.”

“And how did the coloured gentleman take it?”

“Not very well, I am sorry to say, considering that he is a gentleman—a law student with chambers in the Temple. In fact, his language was so objectionable that Mr. Wardale insisted on my giving him notice on the spot. But I managed to get him taken in next door but one; you see, Mr. Wardale had been a Commissioner at, Sierra Leone—it was through him that Mr. Toussaint got his appointment—so I suppose he was rather on his dignity with coloured people.”

“And was that the last you heard of Mr. Bergson?”

“He never came here again, but he wrote several times to Mrs. Toussaint, asking her to meet him. At last, only a few days ago, she wrote to him and told him that the acquaintance must cease.”

“And has it ceased?”

“As far as I know, it has.”

“Then, Mrs. Beddingfield,” said I, “what makes you connect the affair with—with what has happened?”

“Well, you see,” she explained, “there is the husband. He was coming home, and is probably in England already.”

“Indeed!” said I.

“Yes,” she continued. “He went up into the bush to arrest some natives belonging to one of these gangs of murderers—Leopard Societies, I think they are called—and he got seriously wounded. He wrote to his wife from hospital saying that he would be sent home as soon as he was fit to travel, and about ten days ago she got a letter from him saying that he was coming by the next ship.

“I noticed that she seemed very nervous and upset when she got the letters from hospital, and still more so when the last letter came. Of course, I don’t know what he said to her in those letters. It may be that he had heard something about Mr. Bergson, and threatened to take some action. Of course, I can’t say. I only know that she was very nervous and restless, and when we saw in the paper four days ago that the ship he would be coming by had arrived in Liverpool she seemed dreadfully upset. And she got worse and worse until—well, until last night.”

“Has anything been heard of the husband since the ship arrived?” I asked.

“Nothing whatever,” replied Mrs. Beddingfield, with a meaning look at me which I had no difficulty in interpreting. “No letter, no telegram, not a word. And you see, if he hadn’t come by that ship he would almost certainly have sent a letter to her. He must have arrived in England, but why hasn’t he turned up, or at least sent a wire? What is he doing? Why is he staying away? Can he have heard something? And what does he mean to do? That’s what kept the poor thing on wires, and that, I feel certain, is what drove her to make away with herself.”

It was not my business to contest Mrs. Beddingfield’s erroneous deductions. I was seeking information—it seemed that I had nearly exhausted the present source. But one point required amplifying.

“To return to Mr. Bergson, Mrs. Beddingfield,” said I. “Do I understand that he is a seafaring man?”

“He was,” she replied. “At present he is settled at Ramsgate as manager of a company in the ice trade, but formerly he was a sailor. I have heard him say that he was one of the crew of an exploring ship that went in search of the North Pole and that he was locked up in the ice for months and months. I should have thought he would have had enough of ice after that.”

With this view I expressed warm agreement, and having now obtained all the information that appeared to be available I proceeded to bring the interview to an end.

“Well, Mrs. Beddingfield,” I said, “it is a rather mysterious affair. Perhaps more light may be thrown on it at the inquest. Meanwhile, I should think that it will be wise of you to keep your own counsel as far as outsiders are concerned.”

The remainder of the morning I spent pacing the smooth stretch of sand that lies to the east of the jetty, and reflecting on the evidence that I had acquired in respect of this singular crime. Evidently there was no lack of clues in this case. On the contrary, there were two quite obvious lines of inquiry, for both the Swede and the missing husband presented the characters of the hypothetical murderer. Both had been exposed to the conditions which tend to produce frost-bite; one of them had probably been a consumer of rye meal, and both might be said to have a motive—though, to be sure, it was a very insufficient one—for committing the crime. Still in both cases the evidence was merely speculative; it suggested a line of investigation but it did nothing more.

When I met Foxton at lunch I was sensible of a curious change in his manner. His previous expansiveness had given place to marked reticence and a certain official secretiveness.

“I don’t think, you know, Jervis,” he said, when I opened the subject, “that we had better discuss this affair. You see, I am the principal witness, and while the case is sub judice—well, in fact the police don’t want the case talked about.”

“But surely I am a witness, too, and an expert witness, moreover—”
“That isn’t the view of the police. They look on you as more or less of an amateur, and as you have no official connection with the case, I don’t think they propose to subpoena you. Superintendent Platt, who is in charge of the case, wasn’t very pleased at my having taken you to the house. Said it was quite irregular. Oh, and by the way, he says you must hand over those photographs.”

“But isn’t Platt going to have the footprints photographed on his own account?” I objected.

“Of course he is. He is going to have a set of proper photographs taken by an expert photographer—he was mightily amused when he heard about your little snapshot affair. Oh, you can trust Platt. He is a great man. He has had a course of instruction at the Fingerprint Department in London.”

“I don’t see how that is going to help him, as there aren’t any fingerprints in this case.”

This was a mere fly-cast on my part, but Foxton rose at once at the rather clumsy bait.

“Oh, aren’t there?” he exclaimed. “You didn’t happen to spot them, but they were there. Platt has got the prints of a complete right hand. This is in strict confidence, you know,” he added, with somewhat belated caution.

Foxton’s sudden reticence restrained me from uttering the obvious comment on the superintendent’s achievement. I returned to the subject of the photographs.

“Supposing I decline to hand over my film?” said I.

“But I hope you won’t—and in fact you mustn’t. I am officially connected with the case, and I’ve got to live with these people. As the police-surgeon, I am responsible for the medical evidence, and Platt expects me to get those photographs from you. Obviously you can’t keep them. It would be most irregular.”

It was useless to argue. Evidently the police did not want me to be introduced into the case, and after all the superintendent was within his rights, if he chose to regard me, as a private individual and to demand the surrender of the film.

Nevertheless I was loath to give up the photographs, at least until I had carefully studied them. The case was within my own speciality of practice, and was a strange and interesting one. Moreover, it appeared to be in unskillful hands, judging from the fingerprint episode, and then experience had taught me to treasure up small scraps of chance evidence, since one never knew when one might be drawn into a case in a professional capacity. In effect, I decided not to give up the photographs, though that decision committed me to a ruse that I was not very willing to adopt. I would rather have acted quite straightforwardly.

“Well if you insist, Foxton,” I said, “I will hand over the film or, if you like, I will destroy it in your presence.”

“I think Platt would rather have the film uninjured,” said Foxton. “Then he’ll know, you know,” he added, with a sly grin.

In my heart, I thanked Foxton for that grin. It made my own guileful proceedings so much easier; for a suspicious man invites you to get the better of him if you can.

After lunch I went up to my room, locked the door and took the little camera from my pocket. Having fully wound up the film, I extracted it, wrapped it up carefully and bestowed it in my inside breast-pocket. Then I inserted a fresh film, and going to the open window, took four successive snapshots of the sky. This done, I closed the camera, slipped it into my pocket and went downstairs. Foxton was in the hall, brushing his hat, as I descended, and at once renewed his demand.

“About those photographs, Jervis,” said he; “I shall be looking in at the police-station presently, so if you wouldn’t mind —”

“To be sure,” said I. “I will give you the film now if you like.”

Taking the camera from my pocket, I solemnly wound up the remainder of the film, extracted it, stuck down the loose end with ostentatious care, and handed it to him.

“Better not expose it to the light,” I said, going the whole hog of deception, “or you may fog the exposures.”

Foxton took the spool from me as if it were hot—he was not a photographer—and thrust it into his handbag. He was still thanking me the quite profusely when the front-door bell rang.

The visitor who stood revealed when Foxton opened the door was a small, spare gentleman with a complexion of peculiar brown-papery quality that suggests long residence the tropics. He stepped in briskly and introduced himself and his business without preamble.

“My name is Wardale—boarder at Beddingfield’s. I called with reference to the tragic event which—”

Here Foxton interposed in his frostiest official tone. “I am afraid, Mr. Wardale, I can’t give you any information about the case at present.”

“I saw you two gentlemen at the house this morning—” Mr. Wardale continued, but Foxton again cut him short.

“You did. We were there—or at least, I was—as representative of the Law, and while the case is sub judictee—”

“It isn’t yet,” interrupted Wardale.

“Well, I can’t enter into any discussion of it—”
“I am not asking you to,” said Wardale a little impatiently. “But I understand that one of you is Dr. Jervis.”

“I am,” said I.

“I must really warn you—” Foxton began again; but Mr. Wardale interrupted testily:

“My dear sir, I am a lawyer and a magistrate and understand perfectly well what is and what is not permissible. I have come simply to make a professional engagement with Dr. Jervis.”

“In what way can I be of service to you?” I asked.

“I will tell you,” said Mr. Wardale. “This poor lady, whose death has occurred in so mysterious a manner, was the wife of a man who was, like myself a servant of the Government of Sierra Leone. I was the friend of both of them, and in the absence of the husband I should like to have the inquiry into the circumstances of this lady’s death watched by a competent lawyer with the necessary special knowledge of medical evidence. Will you or your colleague, Dr. Thorndyke, undertake to watch the case for me?”

Of course I was willing to undertake the case and said so.

“Then,” said Mr. Wardale, “I will instruct my solicitor to write to you and formally retain you in the case. Here is my card. You will find my name in the Colonial Office List, and you know my address here.”

He handed me his card, wished us both good afternoon, and then, with a stiff little bow, turned and took his departure.

“I think I had better run up to town and confer with Thorndyke,” said I. “How do the trains run?”

“There is a good train in about three-quarters of an hour,” replied Foxton.

“Then I will go by it, but I shall come down again to-morrow or the next day, and probably Thorndyke will come down with me.”

“Very well,” said Foxton. “Bring him in to lunch or dinner, but I can’t put him up, I am afraid.”

“It would be better not,” said I. “Your friend Platt wouldn’t like it. He won’t want Thorndyke—or me either for that matter. And what about those photographs? Thorndyke will want them, you know.”

“He can’t have them,” said Foxton doggedly, “unless Platt is willing to hand them back; which I don’t suppose he will be.”

I had private reasons for thinking otherwise, but I kept them to myself; and as Foxton went forth on his afternoon round, I returned upstairs to pack my suitcase and write the telegram to Thorndyke informing him of my movements.

It was only a quarter past five when I let myself into our chambers in King’s Bench Walk. To my relief I found my colleague at home and our laboratory assistant, Polton, in the act of laying tea, for two.

“I gather,” said Thorndyke, as we shook hands, “that my learned brother brings grist to the mill?”

“Yes,” I replied. “Nominally a watching brief, but I think you will agree with me that it is a case for independent investigation.”

“Will there be anything in my line, sir?” inquired Polton, who was always agog at the word ‘investigation’.

“There is a film to be developed. Four exposures of white footprints on a dark ground.”

“Ah!” said Polton, “you’ll want good strong negatives, and they ought to be enlarged if they are, from the little camera. Can you give me the dimensions?”

I wrote out the measurements from my notebook and handed him the paper together with the spool of film, with which he retired gleefully to the laboratory.

“And now, Jervis,” said Thorndyke, “while Polton is operating on the film and we are discussing our tea, let us have a sketch of the case.”

I gave him more than a sketch, for the events were recent and I had carefully sorted out the facts during my journey to town, making rough notes, which I now consulted. To my rather lengthy recital he listened in his usual attentive manner, without any comment, excepting in regard to my manœuvre to retain possession of the exposed film.

“It’s almost a pity you didn’t refuse,” said he. “They could hardly have enforced their demand, and my feeling is that it is more convenient as well as more dignified to avoid direct deception unless one is driven to it. But perhaps you considered that you were.”

As a matter of fact I had at the time, but I had since come to Thorndyke’s opinion. My little manœuvre was going to be a source of inconvenience presently.

“Well,” said Thorndyke, when I had finished my recital, “I think we may take it that the police theory is, in the main, your own theory derived from Foxton.”

“I think so, excepting that I learned from Foxton that Superintendent Platt has obtained the complete fingerprints of a right hand.”

Thorndyke raised his eyebrows. “Fingerprints!” he exclaimed. “Why, the fellow must be a mere simpleton. But there,” he added, “everybody—police, lawyers, judges, even Galton himself—seems to lose every vestige of common sense as soon as
the subject of fingerprints is raised. But it would be interesting to know how he got them and what they are like. We must try to find that out. However, to return to your case, since your theory and the police theory are probably the same, we may as well consider the value of your inferences.

"At present we are dealing with the case in the abstract. Our data are largely assumptions, and our inferences are largely derived from an application of the mathematical laws of probability. Thus we assume that a murder has been committed, whereas it may turn out to have been suicide. We assume the murder to have been committed by the person, who made the footprints, and we assume that that person has no little toes, whereas he may have retracted little toes which do not touch the ground and so leave no impression. Assuming the little toes to be absent, we account for their absence by considering known causes in the order of their probability. Excluding—quite properly, I think—Raynaud's disease, we arrive at frost-bite and ergotism.

"But two persons, both of whom are of a stature corresponding to the size of the footprints, may have had a motive—though a very inadequate one—for committing the crime, and both have been exposed to the conditions which tend to produce frost-bite, while one of them has, probably, been exposed to the conditions which tend to produce ergotism. The laws of probability point to both of these two men; and the chances in favour of the Swede being the murderer rather than the Canadian would be represented by the common factor—frost-bite—multiplied by the additional factor, ergotism. But this is purely speculative at present. There is no evidence that either man has ever been frost-bitten or has ever eaten spurred rye. Nevertheless, it is a perfectly sound method at this stage. It indicates a line of investigation. If it should transpire that either man has suffered from frost-bite or ergotism, a definite advance would have been made. But here is Polton with a couple of finished prints. How on earth did you manage it in the time, Polton?"

"Why, you see, sir, I just dried the film with spirit," replied Polton. "It saved a lot of time. I will let you have a pair of enlargements in about a quarter of an hour."

Handing us the two wet prints, each stuck on a glass plate, he retired to the laboratory, and Thorndyke and I proceeded to scrutinize the photographs with the aid of our pocket lenses. The promised enlargements were really hardly necessary excepting for the purpose of comparative measurements, for the image of the white footprint, fully two inches long, was so microscopically sharp that, with the assistance of the lens, the minutest detail could be clearly seen.

"There is certainly not a vestige of little toe," remarked Thorndyke, "and the plump appearance of the other toes supports your rejection of Raynaud's disease. Does the character of the footprint convey any other suggestion to you, Jervis?"

"It gives me the impression that the man had been accustomed to go bare-footed in early life and had only taken to boots comparatively recently. The position of the great toe suggests this, and the presence of a number of small scars on the toes and ball of the foot seems to confirm it. A person walking bare-foot would sustain innumerable small wounds from treading on small, sharp objects."

Thorndyke looked dissatisfied. "I agree with you," he said, "as to the suggestion offered by the undeformed state of the great toes; but those little pits do not convey to me the impression of scars produced as you suggest. Still, you may be right."

Here our conversation was interrupted by a knock on the outer oak. Thorndyke stepped out through the lobby and I heard him open the door. A moment or two later he re-entered, accompanied by a short, brown-faced gentleman whom I instantly recognized as Mr. Wardale.

"I must have come up by the same train as you," he remarked, as we shook hands, "and to a certain extent, I suspect, on the same errand. I thought I would like to put our arrangement on a business footing, as I am a stranger to both of you."

"What do you want us to do?" asked Thorndyke.

"I want you to watch the case, and, if necessary, to look into the facts independently."

"Can you give us any information that may help us?"

Mr. Wardale reflected. "I don't think I can," he said at length. "I have no facts that you have not, and any surmises of mine might be misleading. I had rather you kept an open mind. But perhaps we might go into the question of costs."

This, of course, was somewhat difficult, but Thorndyke contrived to indicate the probable liabilities involved, to Mr. Wardale's satisfaction.

"There is one other little matter," said Wardale, as he rose to depart. "I have got a suitcase here which Mrs. Beddingfield lent me to bring somethings up to town. It is one that Mr. Macauley left behind when he went away from the boarding-house. Mrs. Beddingfield suggested that I might leave it at his chambers when I had finished with it; but I don't know his address, excepting that it is somewhere in the Temple, and I don't want to meet the fellow if he should happen to have come up to town."

"Is it empty?" asked Thorndyke.

"Excepting for a suit of pyjamas and a pair of shocking old slippers." He opened the suitcase as he spoke and exhibited its contents with a grin.

"Characteristic of a negro, isn't it? Pink silk pyjamas and slippers about three sizes too small."
“Very well,” said Thorndyke. “I will get my man to find out the address and leave it there.”

As Mr. Wardale went out, Polton entered with the enlarged photographs, which showed the footprints the natural size. Thorndyke handed them to me, and as I sat down to examine them he followed his assistant to the laboratory. He returned in a few minutes, and after a brief inspection of the photographs, remarked:

“They show us nothing more than we have seen, though they may be useful later. So your stock of facts is all we have to go on at present. Are you going home to-night?”

“Yes, I shall go back to Margate to-morrow.”

“Then, as I have to call at Scotland Yard, we may as well walk to Charing Cross together.”

As we walked down the Strand we gossiped on general topics, but before we separated at Charing Cross, Thorndyke reverted to the case.

“Let me know the date of the inquest,” said he, “and try to find out what the poison was—if it was really a poison.”

“The liquid that was left in the bottle seemed to be a watery solution of some kind,” said I, “as I think I mentioned.”

“Yes,” said Thorndyke. “Possibly a watery infusion of strophanthus.”

“Why strophanthus?” I asked.

“Why not?” demanded Thorndyke. And with this and an inscrutable smile, he turned and walked down Whitehall.

Three days later I found myself at Margate—sitting beside Thorndyke in a room adjoining the Town Hall, in which the inquest on the death of Mrs. Toussaint was to be held. Already the coroner was in his chair, the jury were in their seats and the witnesses assembled in a group of chairs apart. These included Foxton, a stranger who sat by him—presumably the other medical witness—Mrs. Beddingfield, Mr. Wardale, the police superintendent and a well-dressed coloured man, whom I correctly assumed to be Mr. Macauley.

As I sat by my rather sphinx-like colleague my mind recurred for the hundredth time to his extraordinary powers of mental synthesis. That parting remark of his as to the possible nature of the poison had brought me to me in a flash the fact that he already had a definite theory of this crime, and that his theory was not mine nor that of the police. True, the poison might not be strophanthus, after all, but that would not alter the position. He had a theory of the crime, but yet he was in possession of no facts excepting those with which I had supplied him. Therefore those facts contained the material for a theory, whereas I had deduced from them nothing but the bald, ambiguous mathematical probabilities.

The first witness called was naturally Dr. Foxton, who described the circumstances already known to me. He further stated that he had been present at the autopsy, that he had found on the throat and limbs of the deceased bruises that suggested a struggle and violent restraint. The immediate cause of death was heart failure, but whether that failure was due to shock, terror, or the action of a poison he could not positively say.

The next witness was a Dr. Prescott, an expert pathologist and toxicologist. He had made the autopsy and agreed with Dr. Foxton as to the cause of death. He had examined the liquid contained in the bottle taken from the hand of the deceased and found it to be a watery infusion or decoction of strophanthus seeds. He had analysed the fluid contained in the stomach and found it to consist largely of the same infusion.

“Is infusion of strophanthus seeds used in medicine?” the coroner asked.

“No,” was the reply. “The tincture is the form in which strophanthus is administered unless it is given in the form of strophantine.”

“Do you consider that the strophanthus caused or contributed to death?”

“It is difficult to say,” replied Dr. Prescott. “Strophanthus is a heart poison, and there was a very large poisonous dose. But very little had been absorbed, and the appearances were not inconsistent with death from shock.”

“Could death have been self-produced by the voluntary taking of the poison?” asked the coroner.

“I should say, decidedly not. Dr. Foxton’s evidence shows that the bottle was almost certainly placed in the hands of the deceased after death, and this is in complete agreement with the enormous dose and small absorption.”

“Would you say that appearances point to suicidal or homicidal poisoning?”

“I should say that they point to homicidal poisoning, but that death was probably due mainly to shock.”

This concluded the expert’s evidence. It was followed by that of Mrs. Beddingfield, which brought out nothing new to me but the fact that a trunk had been broken open and a small attaché-case belonging to the deceased abstracted and taken away.

“Do you know what the deceased kept in that case?” the coroner asked.

“I have seen her put her husband’s letters into it. She had quite a number of them. I don’t know what else she kept in it except, of course, her cheque-book.”

“Had she any considerable balance at the bank?”

“I believe she had. Her husband used to send most of his pay home and she used to pay it in and leave it with the bank.
She might have two or three hundred pounds to her credit.”

As Mrs. Beddingfield concluded Mr. Wardale was called, and he was followed by Mr. Macauley. The evidence of both was quite brief and concerned entirely with the disturbance made by Bergson, whose absence from the court I had already noted.

The last witness was the police superintendent, and he, as I had expected, was decidedly reticent. He did refer to the footprints, but, like Foxton—who presumably had his instructions—he abstained from describing their peculiarities. Nor did he say anything about fingerprints. As to the identity of the criminal, that had to be further inquired into. Suspicion had at first fastened upon Bergson, but it had since transpired that the Swede sailed from Ramsgate on an ice-ship two days before the occurrence of the tragedy. Then suspicion had pointed to the husband, who was known to have landed at Liverpool four days before the death of his wife and who had mysteriously disappeared. But he (the superintendent) had only that morning received a telegram from the Liverpool police informing him that the body of Toussaint had been found floating in the Mersey, and that it bore a number of wounds of an apparently homicidal character. Apparently he had been murdered and his corpse thrown into the river.

“This is very terrible,” said the coroner. “Does this second murder throw any light on the case which we are investigating?”

“I think it does,” replied the officer, without any great conviction, however; “but it is not advisable to go into details.”

“Quite so,” agreed the coroner. “Most inexpedient. But are we to understand that you have a clue to the perpetrator of this crime—assuming a crime to have been committed?”

“Yes,” replied Platt. “We have several important clues.”

“And do they point to any particular individual?”

The superintendent hesitated. “Well…” he began with some embarrassment, but the coroner interrupted him:

“Perhaps the question is indiscreet. We mustn’t hamper the police, gentlemen, and the point is not really material to our inquiry. You would rather we waived that question, Superintendent?”

“If you please, sir,” was the emphatic reply.

“Have any cheques from the deceased woman’s cheque book been presented at the bank?”

“Not since her death. I inquired at the bank only this morning.”

This concluded the evidence, and after a brief but capable summing-up by the coroner, the jury returned a verdict of “Wilful murder against some person unknown”.

As the proceedings terminated, Thorndyke rose and turned round, and then to my surprise I perceived Superintendent Miller, of the Criminal Investigation Department, who had come in unperceived by me and was sitting immediately behind us.

“I have followed your instructions, sir,” said he, addressing Thorndyke, “but before we take any definite action I should like to have a few words with you.”

He led the way to an adjoining room and, as we entered we were followed by Superintendent Platt and Dr. Foxton.

“Now, Doctor,” said Miller, carefully closing the door, “I have carried out your suggestions. Mr. Macauley is being detained, but before we commit ourselves to an arrest we must have something to go upon. I shall want you to make out a prima facie case.”

“Very well,” said Thorndyke, laying upon the table the small green suitcase that was his almost invariable companion.

“I’ve seen that prima facie case before,” Miller remarked with a grin, as Thorndyke unlocked it and drew out a large envelope. “Now, what have you got there?”

As Thorndyke extracted from the envelope Polton’s enlargements of my small photographs, Platt’s eyes appeared to bulge, while Foxton gave me a quick glance of reproach.

“These,” said Thorndyke “are the full-sized photographs of the footprints of the suspected murderer. Superintendent Platt can probably verify them.”

Rather reluctantly Platt produced from his pocket a pair of whole-plate photographs, which he laid beside the enlargements.

“Yes,” said Miller, after comparing them, “they are the same footprints. But you say, Doctor, that they are Macauley’s footprints. Now, what evidence have you?”

Thorndyke again had recourse to the green case, from which he produced two copper plates mounted on wood and coated with printing ink.

“I propose,” said he, lifting the plates out of their protecting frame, “that we take prints of Macauley’s feet and compare them with the photographs.”

“Yes,” said Platt. “And then there are the fingerprints that we’ve got. We can test those, too.”
“You don’t want fingerprints if you’ve got a set of toeprints,” objected Miller.

"With regard to those fingerprints," said Thorndyke. "May I ask if they were obtained from the bottle?"

"They were," Platt admitted.

“And were there any other fingerprints?”

“No,” replied Platt. “These were the only ones.”

As he spoke he laid on the table a photograph showing the prints of the thumb and fingers of a right hand.

Thorndyke glanced at the photograph and, turning to Miller, said:

“I suggest that those are Dr. Foxton’s fingerprints.”

"Impossible!” exclaimed Platt, and then suddenly fell silent.

“We can soon see,” said Thorndyke, producing from the case a pad of white paper. “If Dr. Foxton will lay the finger-tips of his right hand first on this inked plate and then on the paper, we can compare the prints with the photograph.”

Foxton placed his fingers on the blackened plate and then pressed them on the paper pad, leaving on the latter four beautifully clear, black fingerprints. These Superintendent Platt scrutinized eagerly, and as his glance travelled from the prints to the photographs he broke into a sheepish grin.

“Sold again!” he muttered. “They are the same prints.”

“Well,” said Miller, in a tone of disgust, “you must have been a mug not to have thought of that when you knew that Dr. Foxton had handled the bottle.”

“The fact, however, is important,” said Thorndyke. “The absence of any fingerprints but Dr. Foxton’s not only suggests that the murderer took the precaution to wear gloves, but especially it proves that the bottle was not handled by the deceased during life. A suicide’s hands will usually be pretty moist and would leave conspicuous, if not very clear, impressions.”

“Yes,” agreed Miller, “that is quite true. But with regard to these footprints. We can’t compel this man to let us examine his feet without arresting him. Don’t think, Dr. Thorndyke, that I suspect you of guessing. I’ve known you too long for that. You’ve got your facts all right, I don’t doubt, but you must let us have enough to justify our arrest.”

Thorndyke’s answer was to plunge once more into the inexhaustible green case, from which he now produced two objects wrapped in tissue-paper. The paper being removed, there was revealed what looked like a model of an excessively shabby pair of brown shoes.

“These,” said Thorndyke, exhibiting the “models” to Superintendent Miller—who viewed them with an undisguised grin—“are plaster casts of the interiors of a pair of slippers—very old and much too tight—belonging to Mr. Macauley. His name was written inside them. The casts have been waxed and painted with raw umber, which has been lightly rubbed off, thus accentuating the prominences and depressions. You will notice that the impressions of the toes on the soles and of the “knuckles” on the uppers appear as prominences; in fact we have in these casts a sketchy reproduction of the actual feet.

“Now, first as to dimensions. Dr. Jervis’s measurements of the footprints give us ten inches and three-quarters as, the extreme length and four inches and five-eighths as the extreme width at the heads of the metatarsus. On these casts, as you see, the extreme length is ten inches and five-eighths—the loss of one-eighth being accounted for by the curve of the sole—and the extreme width is four inches and a quarter—three-eighths being accounted for by the lateral compression of a tight slipper. The agreement of the dimensions is remarkable, considering the unusual size. And now as to the peculiarities of the feet.

“You notice that each toe has made a perfectly distinct impression on the sole, excepting the little toe; of which there is no trace in either cast. And, turning to the uppers, you notice that the knuckles of the toes appear quite distinct and prominent—again excepting the little toes, which have made no impression at all. Thus it is not a case of retracted little toes, for they would appear as an extra prominence. Then, looking at the feet as a whole, it is evident that the little toes are absent; there is a distinct hollow, where there should be a prominence.”

“M’yes,” said Miller dubiously, “it’s all very neat. But isn’t it just a bit speculative?”

“Oh, come, Miller,” protested Thorndyke; “just consider the facts. Here is a suspected murderer known to have feet of an unusual size and presenting a very rare deformity; and they are the feet of a man who had actually lived in the same house as the murdered woman and who, at the date of the crime, was living only two doors away. What more would you have?”

“Well, there is the question of motive,” objected Miller.

“That hardly belongs to a prima facie case,” said Thorndyke. “But even if it did, is there not ample matter for suspicion? Remember who the murdered woman was, what her husband was, and who this Sierra Leone gentleman is.”

“Yes, yes; that’s true,” said Miller somewhat hastily, either perceiving the drift of Thorndyke’s argument (which I did not), or being unwilling to admit that he was still in the dark. “Yes, we’ll have the fellow in and get his actual footprints.”

He went to the door and, putting his head out, made some sign, which was almost immediately followed by a trampling of feet, and Macauley entered the room, followed by two large plain-clothes policemen. The negro was evidently alarmed,
for he looked about him with the wild expression of a hunted animal. But his manner was aggressive and truculent.

"Why am I being interfered with in this impertinent manner?" he demanded in the deep buzzing voice characteristic of the male negro.

"We want to have a look at your feet, Mr. Macauley," said Miller. "Will you kindly take off your shoes and socks?"

"No," roared Macauley. "I'll see you damned first!"

"Then," said Miller, "I arrest you on a charge of having murdered—"

The rest of the sentence was drowned in a sudden uproar. The tall, powerful negro, bellowing like an angry bull, had whipped out a large, strangely-shaped knife and charged furiously at the Superintendent. But the two plain-clothes men had been watching him from behind and now sprung upon him, each seizing an arm. Two sharp, metallic clicks in quick succession, a thunderous crash and an ear-splitting yell, and the formidable barbarian lay prostrate on the floor with one massive constable sitting astride his chest and the other seated on his knees.

"Now's your chance, Doctor," said Miller. 'I'll get his shoes and socks off.'

As Thorndyke re-inked his plates, Miller and the local superintendent expertly removed the smart patent shoes and the green silk socks from the feet of the writhing, bellowing negro. Then Thorndyke rapidly and skilfully applied the inked plates to the soles of the feet—which I steadied for the purpose—and followed up with a dexterous pressure of the paper pad, first to one foot and then—having torn off the printed sheet—to the other. In spite of the difficulties occasioned by Macauley's struggles, each sheet presented a perfectly clear and sharp print of the sole of the foot, even the ridge-patterns of the toes and ball of the foot being quite distinct. Thorndyke laid each of the new prints on the table beside the corresponding large photograph, and invited the two superintendents to compare them.

"Yes," said Miller—and Superintendent Platt nodded his acquiescence—"there can't be a shadow of a doubt. The inprints and the photographs are identical, to every line and skin-marking. You've made out your case, Doctor, as you always do."

"So you see," said Thorndyke, as we smoked our evening pipes on the old stone pier, "your method was a perfectly sound one, only you didn't apply it properly. Like too many mathematicians, you started on your calculations before you had secured your data. If you had applied the simple laws of probability to the real data, they would have pointed straight to Macauley."

"How do you suppose he lost his little toes?" I asked.

"I don't suppose at all. Obviously it was a clear case of double ainhum."

"Ainhum!" I exclaimed with a sudden flash of recollection.

"Yes; that was what you overlooked, you compared the probabilities of three diseases either of which only very rarely causes the loss of even one little toe and infinitely rarely causes the loss of both, and none of which conditions is confined to any definite class of persons; and you ignored ainhum, a disease which attacks almost exclusively the little toe, causing it to drop off, and quite commonly destroys both little toes—a disease, moreover, which is confined to the black-skinned races. In European practice ainhum is unknown, but in Africa, and to a less extent in India, it is quite common.

"If you were to assemble all the men in the world who have lost both little toes more than nine-tenths of them would be suffering from ainhum; so that, by the laws of probability, your footprints were, by nine chances to one, those of a man who had suffered from ainhum, and therefore a black-skinned man. But as soon as you had established a black man as the probable criminal, you opened up a new field of corroborative evidence. There was a black man on the spot. That man was a native of Sierra Leone and almost certainly a man of importance there. But the victim's husband had deadly enemies in the native secret societies of Sierra Leone. The letters of the husband to the wife probably contained matter incriminating certain natives of Sierra Leone. The evidence became cumulative, you see. Taken as a whole, it pointed plainly to Macauley, apart from the new fact of the murder of Toussaint in Liverpool, a city with a considerable floating population of West Africans."

"And I gather from your reference to the African poison, strophanthus, that you fixed on Macauley at once when I gave you my sketch of the case?"

"Yes; especially when I saw your photographs of the footprints with the absent little toes and those characteristic chigger-scars on the toes that remained. But it was sheer luck that enabled me to fit the keystone into its place and turn mere probability into virtual certainty. I could have embraced the magician Wardale when he brought us the magic slippers. Still, it isn't an absolute certainty, even now, though I expect it will be by to-morrow."

And Thorndyke was right. That very evening the police entered Macauley's chambers in Tanfield Court, where they discovered the dead woman's attaché-case. It still contained Toussaint's letters to his wife, and one of those letters mentioned by name, as members of a dangerous secret society, several prominent Sierra Leone men, including the accused, David Macauley.

II. — THE BLUE SCARAB
Medico-legal practice is largely concerned with crimes against the person, the details of which are often sordid, gruesome and unpleasant. Hence the curious and romantic case of the Blue Scarab (though really outside our speciality) came as somewhat of a relief. But to me it is of interest principally as illustrating two of the remarkable gifts which made my friend, Thorndyke, unique as an investigator: his uncanny power of picking out the one essential fact at a glance, and his capacity to produce, when required, inexhaustible stores of unexpected knowledge of the most out-of-the-way subjects.

It was late in the afternoon when Mr. James Blowgrave arrived, by appointment, at our chambers, accompanied by his daughter, a rather strikingly pretty girl of about twenty-two; and when we had mutually introduced ourselves, the consultation began without preamble.

"I didn't give any details in my letter to you," said Mr. Blowgrave. "I thought it better not to, for fear you might decline the case. It is really a matter of a robbery, but not quite an ordinary robbery. There are some unusual and rather mysterious features in the case. And as the police hold out very little hope, I have come to ask if you will give me your opinion on the case and perhaps look into it for me. But first I had better tell you how the affair happened.

"The robbery occurred just a fortnight ago, about half-past nine o'clock in the evening. I was sitting in my study with my daughter, looking over some things that I had taken from a small deed-box, when a servant rushed in to tell us that one of the outbuildings was on fire. Now, my study opens by a French window on the garden at the back, and, as the outbuilding was in a meadow at the side of the garden, I went out that way, leaving the French window open; but before going I hastily put the things back in the deed-box and locked it.

"The building—which I used partly as a lumber store and partly as a workshop—was well alight and the whole household was already on the spot, the boy working the pump and the two maids carrying the buckets and throwing water on the fire. My daughter and I joined the party and helped to carry the buckets and take out what goods we could reach from the burning building. But it was nearly an hour before we got the fire completely extinguished, and then my daughter and I went to our rooms to wash and tidy ourselves up. We returned to the study together, and when I had shut the French window my daughter proposed that we should resume our interrupted occupation. Thereupon I took out of my pocket the key of the deed-box and turned to the cabinet on which the box always stood.

"But there was no deed-box there.

"For a moment I thought I must have moved it, and cast my eyes round the room in search of it. But it was nowhere to be seen, and a moment's reflection reminded me that I had left it in its usual place. The only possible conclusion was that during our absence at the fire, somebody must have come in by the window and taken it. And it looked as if that somebody had deliberately set fire to the outbuilding for the express purpose of luring us all out of the house."

"That is what the appearances suggest," Thorndyke agreed. "Is the study window furnished with a blind, or curtains?"

"Curtains," replied Mr. Blowgrave. "But they were not drawn. Anyone in the garden could have seen into the room; and the garden is easily accessible to an active person who could climb over a low wall."

"So far, then," said Thorndyke, "the robbery might be the work of a casual prowler who had got into the garden and watched you through the window, and assuming that the things you had taken from the box were of value, seized an easy opportunity to make off with them. Were the things of any considerable value?"

"To a thief they were of no value at all. There were a number of share certificates, a lease, one or two agreements, some family photographs and a small box containing an old letter and a scarab. Nothing worth stealing, you see, for the certificates were made out in my name and were therefore un negotiable."

"And the scarab?"

"That may have been lapis lazuli, but more probably it was a blue glass imitation. In any case it was of no considerable value. It was about an inch and a half long. But before you come to any conclusion, I had better finish the story. The robbery was on Tuesday, the 7th of June. I gave information to the police, with a description of the missing property, but nothing happened until Wednesday, the 15th, when I received a registered parcel bearing the Southampton postmark. On opening it I found, to my astonishment, the entire contents of the deed-box, with the exception of the scarab, and this rather mysterious communication."

He took from his pocket and handed to Thorndyke an ordinary envelope addressed in typewritten characters, and sealed with a large, elliptical seal, the face of which was covered with minute hieroglyphics.

"This," said Thorndyke, "I take to be an impression of the scarab; and an excellent impression it is."

"Yes," replied Mr. Blowgrave, "I have no doubt that it is the scarab. It is about the same size."

Thorndyke looked quickly at our client with an expression of surprise. "But," he asked, "don't you recognise the hieroglyphics on it?"

Mr. Blowgrave smiled deprecatingly. "The fact is," said he, "I don't know anything about hieroglyphics, but I should say, as far as I can judge, these look the same. What do you think, Nellie?"

Miss Blowgrave looked at the seal vaguely and replied, "I am in the same position. Hieroglyphics are to me just funny things that don't mean anything. But these look the same to me as those on our scarab, though I expect any other hieroglyphics would, for that matter."
Thorndyke made no comment on this statement, but examined the seal attentively through his lens. Then he drew out the contents of the envelope, consisting of two letters, one typewritten and the other in a faded brown handwriting. The former he read through and then inspected the paper closely, holding it up to the light to observe the watermark.

“The paper appears to be of Belgian manufacture,” he remarked, passing it to me. I confirmed this observation and then read the letter, which was headed “Southampton” and ran thus:

DEAR OLD PAL,
I am sending you back some trifles removed in error. The ancient document is enclosed with this, but the curio is at present in the custody of my respected uncle. Hope its temporary loss will not inconvenience you, and that I may be able to return it to you later. Meanwhile, believe me, your ever affectionate,
RUDOLPHO.

“Who is Rudolpho?” I asked.

“The Lord knows,” replied Mr. Blowgrave. “A pseudonym of our absent friend, I presume. He seems to be a facetious sort of person.”

“He does,” agreed Thorndyke. “This letter and the seal appear to be what the schoolboys would call a leg-pull. But still, this is all quite normal. He has returned you the worthless things and has kept the one thing that has any sort of negotiable value. Are you quite clear that the scarab is not more valuable than you have assumed?”

“Well,” said Mr. Blowgrave, “I have had an expert’s opinion on it. I showed it to M. Fouquet, the Egyptologist, when he was over here from Brussels a few months ago, and his opinion was that it was a worthless imitation. Not only was it not a genuine scarab, but the inscription was a sham, too; just a collection of hieroglyphic characters jumbled together without sense or meaning.”

“Then,” said Thorndyke, taking another look at the seal through his lens, “it would seem that Rudolpho, or Rudolpho’s uncle, has got a bad bargain. Which doesn’t throw much light on the affair.”

At this point Miss Blowgrave intervened. “I think, father,” said she, “you have not given Dr. Thorndyke quite all the facts about the scarab. He ought to be told about its connection with Uncle Reuben.”

As the girl spoke Thorndyke looked at her with curious expression of suddenly awakened interest. Later I understood the meaning of that look, but at the time there seemed to me nothing particularly arresting in her words.

“It is just a family tradition,” Mr. Blowgrave said deprecatingly. “probably it is all nonsense.”

“Well, let us have it, at any rate,” said Thorndyke. “We may get some light from it.”

Thus urged, Mr. Blowgrave hemmed a little shyly and began:

“The story concerns my great-grandfather Silas Blowgrave, and his doings during the war with France. It seems that he commanded a privateer of which he and his brother Reuben were the joint owners, and that in the course of their last cruise they acquired a very remarkable and valuable collection of jewels. Goodness knows how they got them; not very honestly, I suspect, for they appear to have been a pair of precious rascals. Something has been said about the loot from a South American church or cathedral, but there is really nothing known about the affair. There are no documents. It is mere oral tradition and very vague and sketchy. The story goes that when they had sold off the ship, they came down to live at Shawstead in Hertfordshire, Silas occupying the manor house—in which I live at present—and Reuben a farm adjoining. The bulk of the loot they shared out at the end of the cruise, but the jewels were kept apart to be dealt with later—perhaps when the circumstances under which they had been acquired had been forgotten. However, both men were inveterate gamblers and it seems—according to the testimony of a servant of Reuben’s who overheard them—that on a certain night when they had been playing heavily, they decided to finish up by playing for the whole collection of jewels as a single stake. Silas, who had the jewels in his custody, was seen to go to the manor house and return to Reuben’s house carrying a small, iron chest.

“Apparently they played late into the night, after everyone else but the servant had gone to bed, and the luck was with Reuben, though it seems probable that he gave luck some assistance. At any rate, when the play was finished and the chest handed over, Silas roundly accused him of cheating, and we may assume that a pretty serious quarrel took place. Exactly what happened is not clear, for when the quarrel began Reuben dismissed the servant, who retired to her bedroom in a distant part of the house. But in the morning it was discovered that Reuben and the chest of jewels had both disappeared, and there were distinct traces of blood in the room in which the two men had been playing. Silas professed to know nothing about the disappearance; but a strong—and probably just—suspicion arose that he had murdered his brother and made away with the jewels. The result was that Silas also disappeared, and for a long time his whereabouts was not known even by his wife.

“Later it transpired that he had taken up his abode under an assumed name, in Egypt, and that he had developed an enthusiastic interest in the then new science of Egyptology—the Rosetta Stone had been deciphered only a few years previously. After a time he resumed communication with his wife, but never made any statement as to the mystery of his brother’s disappearance. A few months before his death he visited his home in disguise and he then handed to his wife a little sealed packet which was to be delivered to his only son, William, on his attaining the age of twenty-one. That packet
contained the scarab and the letter which you have taken from the envelope.”

“Am I to read it?” asked Thorndyke.

“Certainly, if you think it worth while,” was the reply. Thorndyke opened the yellow sheet of paper and, glancing through the brown and faded writing, read aloud:

_Cairo, 4 March, 1893._

_My Dear Son,_

_I am sending you, as my last gift, a valuable scarab and a few words of counsel on which I would bid you meditate. Believe me, there is much wisdom in the lore of Old Egypt. Make it your own. Treasure the scarab as a precious inheritance. Handle it often but show it to none. Give your Uncle Reuben Christian burial. It is your duty, and you will have your reward. He robbed your father, but he shall make restitution._

_Farewell!_  
_Your affectionate father,_  

_SIлас BLoWGrAVE._

As Thorndyke laid down the letter he looked inquiringly at our client.

“Well,” he said, “here are some plain instructions. How have they been carried out?”

“They haven’t been carried out at all,” replied Mr. Blowgrave. “As to his son William, my grandfather, he was not disposed to meddle in the matter. This seemed to be a frank admission that Silas killed his brother and concealed the body, and William didn’t choose to reopen the scandal. Besides, the instructions are not so very plain. It is all very well to say, ‘Give your Uncle Reuben Christian burial,’ but where the deuce is Uncle Reuben?”

“It is plainly hinted,” said Thorndyke, “that whoever gives the body Christian burial will stand to benefit, and the word ‘restitution’ seems to suggest a clue to the whereabouts of the jewels. Has no one thought it worth while to find out where the body is deposited?”

“But how could they?” demanded Blowgrave. “He doesn’t give the faintest clue. He talks as if his son knew where the body was. And then, you know, even supposing Silas did not take the jewels with him, there was the question, whose property were they? To begin with, they were pretty certainly stolen property, though no one knows where they came from. Then Reuben apparently got them from Silas by fraud, and Silas got them back by robbery and murder. If William had discovered them he would have had to give them up to Reuben’s sons, and yet they weren’t strictly Reuben’s property. No one had an undeniable claim to them, even if they could have found them.”

“But that is not the case now,” said Miss Blowgrave.

“No,” said Mr. Blowgrave, in answer to Thorndyke’s look of inquiry. “The position is quite clear now. Reuben’s grandson, my cousin Arthur, has died recently, and as he had no children, he has dispersed his property. The old farm-house and the bulk of his estate he has left to a nephew, but he made a small bequest to my daughter and named her as the residuary legatee. So that what ever rights Reuben had to the jewels are now vested in her, and on my death she will be Silas’s heir, too. As a matter of fact,” Mr. Blowgrave continued, “we were discussing this very question on the night of the robbery. I may as well tell you that my girl will be left pretty poorly off when I go, for there is a heavy mortgage on our property and mighty little capital. Uncle Reuben’s jewels would have made the old home secure for her if we could have laid our hands on them. However, I mustn’t take up your time with our domestic affairs.”

“Your domestic affairs are not entirely irrelevant,” said Thorndyke. “But what is it that you want me to do in the matter?”

“Well,” said Blowgrave, “my house has been robbed and my premises set fire to. The police can apparently do nothing. They say there is no clue at all unless the robbery was committed by somebody in the house, which is absurd, seeing that the servants were all engaged in putting out the fire. But I want the robber traced punished, and I want to get the scarab back. It may be intrinsically valueless, as M. Fouquet said, but Silas’s testamentary letter seems to indicate that it had some value. At any rate, it is an heirloom, and I am loath to lose it. It seems a presumptuous thing to ask you to investigate a trumpery robbery, but I should take it as a kindness if you would look into the matter.”

“Cases of robbery pure and simple,” replied Thorndyke, “are rather alien to my ordinary practice, but in this one there are certain curious features that seem to make an investigation worth while. Yes, Mr. Blowgrave, I will look into the case, and I have some hope that we may be able to lay our hands on the robber, in spite of the apparent absence of clues. I will ask you to leave both these letters for me to examine more minutely, and I shall probably want to make an inspection of the premises—perhaps to-morrow.”

“Whenever you like,” said Blowgrave. “I am delighted that you are willing to undertake the inquiry. I have heard so much about you from my friend Stalker, of the Griffin Life Assurance Company, for whom you have acted on several occasions.”

“Before you go,” said Thorndyke, “there is one point that we must clear up. Who is there besides yourselves that knows of the existence of the scarab and this letter and the history attaching to them?”
“I really can’t say,” replied Blowgrave. “No one has seen them but my cousin Arthur. I once showed them to him, and he may have talked about them in the family. I didn’t treat the matter as a secret.”

When our visitors had gone we discussed the bearings of the case.

“It is quite a romantic story,” said I, “and the robbery has its points of interest, but I am rather inclined to agree with the police—there is mighty little to go on.”

“There would have been less,” said Thorndyke, “if our sporting friend hadn’t been so pleased with himself. That typewritten letter was a piece of gratuitous impudence. Our gentleman overrated his security and crowed too loud.”

“I don’t see that there is much to be gleaned from the letter, all the same,” said I.

“I am sorry to hear you say that, Jervis,” he exclaimed, “because I was proposing to hand the letter over to you to examine and report on.”

“I was only referring to the superficial appearances,” I said hastily. “No doubt a detailed examination will bring something more distinctive into view.”

“I have no doubt it will,” he said, “and as there are reasons for pushing on the investigation as quickly as possible, I suggest that you get to work at once. I will occupy myself with the old letter and the envelope.”

On this I began my examination without delay, and as a preliminary I proceeded to take a facsimile photograph of the letter by putting it in a large printing frame with a sensitive plate and a plate of clear glass. The resulting negative showed not only the typewritten lettering, but also the watermark and wire lines of the paper, and a faint grease spot. Next I turned my attention to the lettering itself, and here I soon began to accumulate quite a number of identifiable peculiarities. The machine was apparently a Corona, fitted with the small “Elite” type, and the alignment was markedly defective. The “lower case”—or small—“a” was well below the line, although the capital “A” appeared to be correctly placed; the “u” was slightly above the line, and the small “m” was partly clogged with dirt.

Up to this point I had been careful to manipulate the letter with forceps (although it had been handled by at least three persons, to my knowledge), and I now proceeded to examine it for finger-prints. As I could detect none by mere inspection, I dusted the back of the paper with finely powdered fuchsin, and distributed the powder by tapping the paper lightly. This brought into view quite a number of finger-prints, especially round the edges of the letter, and though most of them were very faint and shadowy, it was possible to make out the ridge pattern well enough for our purpose. Having blown off the excess of powder, I took the letter to the room where the large copying camera was set up, to photograph it before developing the finger-prints on the front. But here I found our laboratory assistant, Polton, in possession, with the sealed envelope fixed to the copying easel. “I shan’t be a minute, sir,” said he. “The doctor wants an enlarged photograph of this seal. I’ve got the plate in.”

I waited while he made his exposure and then proceeded to take the photograph of the letter, or rather of the finger-prints on the back of it. When I had developed the negative I powdered the front of the letter and brought out several more finger-prints—thumbs this time. They were a little difficult to see where they were imposed on the lettering, but, as the latter was bright blue and the fuchsin powder was red, this confusion disappeared in the photograph, in which the lettering was almost invisible while the finger-prints were more distinct than they had appeared to the eye. This completed my examination, and when I had verified the make of typewriter by reference to our album of specimens of typewriting, I left the negatives for Polton to dry and print and went down to the sitting-room to draw up my little report. I had just finished this and was speculating on what had become of Thorndyke, when I heard his quick step on the stair and a few moments later he entered with a roll of paper in his hand. This he unrolled on the table, fixing it open with one or two lead paper-weights, and I came round to inspect it, when I found it to be a sheet of the Ordnance map on the scale of twenty-five inches to the mile.

“Here is the Blowgraves’ place,” said Thorndyke, “nearly in the middle of the sheet. This is his house—Shawstead Manor—and that will probably be the out-building that was on fire. I take it that the house marked Dingle Farm is the one that Uncle Reuben occupied.”

“Probably,” I agreed. “But I don’t see why you wanted this map if you are going down to the place itself to-morrow.”

“The advantage of a map,” said Thorndyke, “is that you can see all over it at once and get the lie of the land well into your mind; and you can measure all distances accurately and quickly with a scale and a pair of dividers. When we go down to-morrow, we shall know our way about as well as Blowgrave himself.”

“And what use will that be?” I asked. “Where does the topography come into the case?”

“Well, Jervis,” he replied, “there is the robber, for instance; he came from somewhere and he went somewhere. A study of the map may give us a hint as to his movements. But here comes Polton with the documents, as poor Miss Flite would say. What have you got for us, Polton?”

“They aren’t quite dry, sir,” said Polton, laying four large bromide prints on the table. “There’s the enlargement of the seal—ten by eight, mounted—and three unmounted prints of Dr. Jervis’s.”

Thorndyke looked at my photographs critically. “They’re excellent, Jervis,” said he. “The finger prints are perfectly legible, though faint. I only hope some of them are the right ones. That is my left thumb. I don’t see yours. The small one is presumably Miss Blowgrave’s. We must take her finger-prints to-morrow, and her father’s, too. Then we shall know if we
have got any of the robber’s.” He ran his eye over my report and nodded approvingly. “There is plenty there to enable us to identify the typewriter if we can get hold of it, and the paper is very distinctive. What do you think of the seal?” he added, laying the enlarged photograph before me.

“It is magnificent,” I replied, with a grin. “Perfectly monumental.”

“What are you grinning at?” he demanded.

“I was thinking that you seem to be counting your chickens in pretty good time,” said I. “You are making elaborate preparations to identify the scarab, but you are rather disregarding the classical advice of the prudent Mrs. Glasse.”

“I have a presentiment that we shall get that scarab,” said he. “At any rate we ought to be in a position to identify it instantly and certainly if we are able to get a sight of it.”

“We are not likely to,” said I. “Still, there is no harm in providing for the improbable.”

This was evidently Thorndyke’s view, and he certainly made ample provision for this most improbable contingency; for, having furnished himself with a drawing-board and a sheet of tracing-paper, he pinned the latter over the photograph on the board and proceeded, with a fine pen and hectograph ink, to make a careful and minute tracing of the intricate and bewildering hieroglyphic inscription on the seal. When he had finished it he transferred it to a clay duplicator and took off half-a-dozen copies, one of which he handed to me. I looked at it dubiously and remarked: “You have said that the medical jurist must make all knowledge his province. Has he got to be an Egyptologist, too?”

“He will be the better medical jurist if he is,” was the reply, of which I made a mental note for my future guidance. But meanwhile Thorndyke’s proceedings were, to me, perfectly incomprehensible. What was his object in making this minute tracing? The seal itself was sufficient for identification. I lingered, awhile hoping that some fresh development might throw a light on the mystery. But his next proceeding was like to have reduced me to stupefaction. I saw him go to the book-shelves and take down a book. As he laid it on the table I glanced at the title, and when I saw that it was Raper’s Navigation Tables I stole softly out into the lobby, put on my hat and went for a walk.

When I returned the investigation was apparently concluded, for Thorndyke was seated in his easy chair, placidly reading The Compleat Angler. On the table lay a large circular protractor, a straight-edge, an architect’s scale and a sheet of tracing-paper on which was a tracing in hectograph ink of Shawstead Manor.

“Why did you make this tracing?” I asked. “Why not take the map itself?”

“We don’t want the whole of it,” he replied, “and I dislike cutting up maps.”

By taking an informal lunch in the train, we arrived at Shawstead Manor by half-past two. Our approach up the drive had evidently been observed, for Blowgrave and his daughter were waiting at the porch to receive us. The former came forward with outstretched hand, but a distinctly woebegone expression, and exclaimed:

“It is most kind of you to come down; but alas! you are too late.”

“Too late for what?” demanded Thorndyke.

“I will show you,” replied Blowgrave, and seizing my colleague by the arm, he strode off excitedly to a little wicket at the side of the house, and, passing through it, hurried along a narrow alley that skirted the garden wall and ended in a large meadow, at one end of which stood a dilapidated windmill. Across this meadow he bustled, dragging my colleague with him, until he reached a heap of freshly-turned earth, where he halted and pointed tragically to a spot where the turf had evidently been raised and untidily replaced.

“There!” he exclaimed, stooping to pull up the loose turfs and thereby exposing what was evidently a large hole, recently and hastily filled in. “That was done last night or early this morning, for I walked over this meadow only yesterday evening and there was no sign of disturbed ground then.”

Thorndyke stood looking down at the hole with a faint smile. “And what do you infer from that?” he asked.

“Infer!” shrieked Blowgrave. “Why, I infer that whoever dug this hole was searching for Uncle Reuben and the lost jewels!”

“I am inclined to agree with you,” Thorndyke said calmly. “He happened to search in the wrong place, but that is his affair.”

“The wrong place!” Blowgrave and his daughter exclaimed in unison. “How do you know it is the wrong place?”

“Because,” replied Thorndyke, “I believe I know the right place, and this is not it. But we can put the matter to the test, and we had better do so. Can you get a couple of men with picks and shovels? Or shall we handle the tools ourselves?”

“I think that would be better,” said Blowgrave, who was quivering with excitement. “We don’t want to take anyone into our confidence if we can help it.”

“No,” Thorndyke agreed. “Then I suggest that you fetch the tools while I locate the spot.”

Blowgrave assented eagerly and went off at a brisk trot, while the young lady remained with us and watched Thorndyke with intense curiosity.

“I mustn’t interrupt you with questions,” said she “but I can’t imagine how you found out where Uncle Reuben was
buried."

"We will go into that later," he replied; "but first we have got to find Uncle Reuben." He laid his research case down on the ground, and opening it, took out three sheets of paper, each bearing a duplicate of his tracing of the map; and on each was marked a spot on this meadow from which a number of lines radiated like the spokes of a wheel.

"You see, Jervis," he said, exhibiting them to me, "the advantage of a map. I have been able to rule off these sets of bearings regardless of obstructions, such as those young trees, which have arisen since Silas’s day, and mark the spot in its correct place. If the recent obstructions prevent us from taking the bearings, we can still find the spot by measurements with the land-chain or tape."

"Why have you got three plans?" I asked.

"Because there are three imaginable places. No. 1 is the most likely; No. 2 less likely, but possible; No. 3 is impossible. That is the one that our friend tried last night. No. 1 is among those young trees, and we will now see if we can pick up the bearings in spite of them."

We moved on to the clump of young trees, where Thorndyke took from the research-case a tall, folding camera-tripod and a large prismatic compass with an aluminium dial. With the latter he one or two trial bearings and then, setting up the tripod, fixed the compass on it. For some minutes Miss Blowgrave and I watched him as he shifted the tripod from spot to spot, peering through the sight-vane of the compass and glancing occasionally at the map. At length he turned to us and said: "We are in luck. None of these trees interferes with our bearings." He took from the research-case a surveyor’s arrow, and sticking it in the ground under the tripod, added: "That is the spot. But we may have to dig a good way round it, for a compass is only a rough instrument."

At this moment Mr. Blowgrave staggered up, breathing hard, and flung down on the ground three picks, two shovels and a spade. "I won’t hinder you, doctor, by asking for explanations," said he, "but I am utterly mystified. You must tell us what it all means when we have finished our work."

This Thorndyke promised to do, but meanwhile he took off his coat, and rolling up his shirt sleeves, seized the spade and began cutting out a large square of turf. As the soil was uncovered, Blowgrave and I attacked it with picks and Miss Blowgrave shovelled away the loose earth.

"Do you know how far down we have to go?" I asked.

"The body lies six feet below the surface," Thorndyke replied; and as he spoke he laid down his spade, and taking a telescope from the research-case, swept it round the margin of the meadow and finally pointed it at a farm house some six hundred yards distant, of which he made a somewhat prolonged inspection, after which he took the remaining pick and fell to work on the opposite corner of the exposed square of earth.

For nearly half-an-hour we worked on steadily, gradually eating our way downwards, plying pick and shovel alternately, while Miss Blowgrave cleared the loose earth away from the edges of the deepening pit. Then a halt was called and we came to the surface, wiping our faces.

"I think, Nellie," said Blowgrave, divesting himself of his waistcoat, "a jug of lemonade and four tumblers would be useful, unless our visitors would prefer beer."

We both gave our votes for lemonade, and Miss Nellie tripped away towards the house, while Thorndyke, taking up his telescope, once more inspected the farm house.

"You seem greatly interested in that house," I remarked.

"I am," he replied, handing me the telescope. "Just take a look at the window in the right-hand gable, but keep under the tree."

I pointed the telescope at the gable and there observed an open window at which a man was seated. He held a binocular glass to his eyes and the instrument appeared to be directed at us.

"We are being spied on, I fancy," said I, passing the telescope to Blowgrave, "but I suppose it doesn’t matter. This is your land, isn’t it?"

"Yes," replied Blowgrave, "but still, we didn’t want any spectators. That is Harold Bowker," he added steadying the telescope against a tree, "my cousin Arthur’s nephew, whom I told you about as having inherited the farm-house. He seems mighty interested in us; but small things interest one in the country."

Here the appearance of Miss Nellie, advancing across the meadow with an inviting-looking basket, diverted our attention from our inquisitive watcher. Six thirsty eyes were riveted on that basket until it drew near and presently disgorged a great glass jug and four tumblers, when we each took off a long and delicious draught and then jumped down into the pit to resume our labours.

Another half-hour passed. We had excavated in some places to nearly the full depth and were just discussing the advisability of another short rest when Blowgrave, who was working in one corner, uttered a loud cry and stood up suddenly, holding something in his fingers. A glance at the object showed it to be a bone, brown and earth-stained, but evidently a bone. Evidently, too, a human bone, as Thorndyke decided when Blowgrave handed it to him triumphantly.
“We have been very fortunate,” said he, “to get so near at the first trial. This is from the right great toe, so we may assume that the skeleton lies just outside this pit, but we had better excavate carefully in your corner and see exactly how the bones lie.” This he proceeded to do himself, probing cautiously with the spade and clearing the earth away from the corner. Very soon the remaining bones of the right foot came into view and then the ends of the two leg-bones and a portion of the left foot.

“We can see now,” said he, “how the skeleton lies, and all we have to do is to extend the excavation in that direction. But there is only room for one to work down here. I think you and Mr. Blowgrave had better dig down from the surface.”

On this, I climbed out of the pit, followed reluctantly by Blowgrave, who still held the little brown bone in his hand and was in a state of wild excitement and exultation that somewhat scandalised his daughter.

“It seems rather ghoulish,” she remarked, “to be gloating over poor Uncle Reuben’s body in this way.”

“I know,” said Blowgrave, “it isn’t reverent. But I didn’t kill Uncle Reuben, you know, whereas—well it was a long time ago.” With this rather inconsequent conclusion he took a draught of lemonade, seized his pick and fell to work with a will. I, too, indulged in a draught and passed a full tumbler down to Thorndyke. But before resuming my labours I picked up the telescope and once more inspected the farm-house. The window was still open, but the watcher had apparently become bored with the not very thrilling spectacle. At any rate he had disappeared.

From this time onward every few minutes brought some discovery. First, a pair of deeply rusted steel shoe buckles; then one or two buttons, and presently a fine gold watch with a fob-chain and a bunch of seals, looking uncannily new and fresh and seeming more fraught with tragedy than even the bones themselves. In his cautious digging, Thorndyke was careful not to disturb the skeleton; and looking down into the narrow trench that was growing from the corner of the pit, I could see both legs, with only the right foot missing, projecting from the miniature cliff. Meanwhile our of the trench was deepening rapidly, so that Thorndyke presently warned us to stop digging and bade us come down and shovel away the earth as he disengaged it.

At length the whole skeleton, excepting the head, was uncovered, though it lay undisturbed as it might have lain in its coffin. And now, as Thorndyke picked away the earth around the head, we could see that the skull was propped forward as if it rested on a high pillow. A little more careful probing with the pick-point served to explain this appearance. For as the earth fell away and disclosed the grinning skull, there came into view the edge and ironbound corners of a small chest.

It was an impressive spectacle; weird, solemn and rather dreadful. There for over a century the ill-fated gambler had lain, his mouldering head pillowed on the booty of unrecorded villainy, booty that had been won by fraud, retrieved by violence, and hidden at last by the final winner with the witness of his crime.

“Here is a fine text for a moralist who would preach on the vanity of riches,” said Thorndyke.

We all stood silent for a while, gazing, not without awe, at the stark figure that lay guarding the ill-gotten treasure. Miss Blowgrave—who had been helped down when we descended—crept closer to her father and murmured that it was “rather awful;” while Blowgrave himself displayed a queer mixture of exultation and shuddering distaste.

Suddenly the silence was broken by a voice from above, and we all looked up with a start. A youngish man was standing on the brink of the pit, looking down on us with very evident disapproval.

“It seems that I have come just in the nick of time,” observed the new-comer. “I shall have to take possession of that chest, you know, and of the remains, too, I suppose. That is my ancestor, Reuben Blowgrave.”

“Well, Harold,” said Blowgrave, “you can have Uncle Reuben if you want him. But the chest belongs to Nellie.”

Here Mr. Harold Bowker—I recognised him now as the watcher from the window—dropped down into the pit and advanced with something of a swagger.

“I am Reuben’s heir,” said he, “through my Uncle Arthur, and I take possession of this property and the remains.”

“Pardon me, Harold,” said Blowgrave, “but Nellie is Arthur’s residuary legatee, and this is the residue of the estate.”

“Rubbish!” exclaimed Bowker. “By the way, how did you find out where he was buried?”

“Oh, that was quite simple,” replied Thorndyke with unexpected geniality. “I’ll show you the plan.” He climbed up to the surface and returned in a few moments with the three tracings and his letter-case. “This is how we located the spot.” He handed the plan numbered 3 to Bowker, who took it from him and stood looking at it with a puzzled frown.

“But this isn’t the place,” he said at length.

“Isn’t it?” queried Thorndyke. “No, of course; I’ve given you the wrong one. This is the plan.” He handed Bowker the plan marked No. 1, and took the other from him, laying it down on a heap of earth. Then, as Bowker pored gloomily over No. 1, he took a knife and a pencil from his pocket, and with his back to our visitor; scraped the lead of the pencil, letting the black powder fall on the plan that he had just laid down. I watched him with some curiosity; and when I observed that the black scrapings fell on two spots near the edges of the paper, a sudden suspicion flashed into my mind, which was confirmed when I saw him tap the paper lightly with his pencil, gently blow away the powder, and quickly producing my photograph of the typewritten letter from his case, hold it for a moment beside the plan.

“This is all very well,” said Bowker, looking up from the plan, “but how did you find out about these bearings?”
Thorndyke swiftly replaced the letter in his case, and turning round, replied, “I am afraid I can’t give you any further information.”

“Can’t you, indeed!” Bowker exclaimed insolently. “Perhaps I shall compel you to. But, at any rate, I forbid any of you to lay hands on my property.”

Thorndyke looked at him steadily and said in an ominously quiet tone: “Now, listen to me, Mr. Bowker. Let us have an end of this nonsense. You have played a risky game and you have lost. How much you have lost I can’t say until I know whether Mr. Blowgrave intends to prosecute.”

“To prosecute!” shouted Bowker. “What the deuce do you mean by prosecute?”

“I mean,” said Thorndyke, “that on the 7th of June, after nine o’clock at night, you entered the dwelling-house of Mr. Blowgrave and stole and carried away certain of his goods and chattels. A part of them you have restored, but you are still in possession of some of the stolen property, to wit, a scarab and a deed-box.”

As Thorndyke made this statement in his calm, level tones, Bowker’s face blanched to a tallowy white, and he stood staring at my colleague, the very picture of astonishment and dismay. But he fired a last shot.

“This is sheer midsummer madness,” he exclaimed huskily; “and you know it.”

Thorndyke turned to our host. “It is for you to settle, Mr. Blowgrave,” said he. “I hold conclusive evidence that Mr. Bowker stole your deed-box. If you decide to prosecute I shall produce that evidence in court and he will certainly be convicted.”

Blowgrave and his daughter looked at the accused man with an embarrassment almost equal to his own.

“I am astounded,” the former said at length; “but I don’t want to be vindictive. Look here, Harold, hand over the scarab and we’ll say no more about it.”

“You can’t do that,” said Thorndyke. “The law doesn’t allow you to compound a robbery. He can return the property if he pleases and you can do as you think best about prosecuting. But you can’t make conditions.”

There was silence for some seconds; then, without another word, the crestfallen adventurer turned, and scrambling up out of the pit, took a hasty departure.

It was nearly a couple of hours later that, after a leisurely wash and a hasty, nondescript meal, we carried the little chest from the dining-room to the study. Here, when he had closed the French window and drawn the curtains, Mr. Blowgrave produced a set of tools and we fell to work on the iron fastenings of the chest. It was no light task, though a century’s rust had thinned the stout bands, but at length the lid yielded to the thrust of a long case-opener and rose with a protesting creak. The chest was lined with a double thickness of canvas, apparently part of a sail, and contained a number of small leathern bags, which, as we lifted them out, one by one, felt as if they were filled with pebbles. But when we untied the thongs of one and emptied its contents into a wooden bowl, Blowgrave heaved a sigh of ecstasy and Miss Nellie uttered a little scream of delight. They were all cut stones, and most of them of exceptional size; rubies, emeralds, sapphires and a few diamonds. As to their value, we could form but the vaguest guess; but Thorndyke, who was a fair judge of gem-stones, gave it as his opinion that they were fine specimens of their kind, though roughly cut, and that they had probably formed the enrichment of some shrine.

“The question is,” said Blowgrave, gazing gloatingly on the bowl of sparkling gems, “what are we to do with them?”

“I suggest,” said Thorndyke, “that Dr. Jervis stay here to-night to help you to guard them and that in the morning you take them up to London and deposit them, at your bank.”

Blowgrave fell in eagerly with this suggestion, which I seconded. “But,” said he, “that chest is a queer-looking package to be carrying abroad. Now, if we only had that confounded deed-box—”

“There’s a deed-box on the cabinet behind you,” said Thorndyke.

Blowgrave turned round sharply. “God bless us!” he exclaimed. “It has come back the way it went. Harold must have slipped in at the window while we were at tea. Well, I’m glad he has made restitution. When I look at that bowl and think what he must have narrowly missed, I don’t feel inclined to be hard on him. I suppose the scarab is inside—not that it matters much now.”

The scarab was inside in an envelope; and as Thorndyke turned it over in his hand and examined the hieroglyphics on it through his lens, Miss Blowgrave asked: “Is it of any value, Dr. Thorndyke? It can’t have any connection with the secret of the hiding-place, because you found the jewels without it.”

“By the way, doctor, I don’t know whether it is permissible for me to ask, but how on earth did you find out where the jewels were hidden? To me it looks like black magic.”

Thorndyke laughed in a quiet, inward fashion. “There is nothing magical about it,” said he. “It was a perfectly simple, straightforward problem. But Miss Nellie is wrong. We had the scarab; that is to say we had the wax impression of it, which is the same thing. And the scarab was the key to the riddle. You see,” he continued, “Silas’s letter and the scarab formed together a sort of intelligence test.”

“Did they?” said Blowgrave. “Then he drew a blank every time.”
Thorndyke chuckled. “His descendants were certainly a little lacking in enterprise,” he admitted. “Silas’s instructions were perfectly plain and explicit. Whoever would find the treasure must first acquire some knowledge of Egyptian lore and must study the scarab attentively. It was the broadest of hints, but no one—excepting Harold Bowker, who must have heard about the scarab from his Uncle Arthur—seems to have paid any attention to it.

“Now it happens that I have just enough elementary knowledge of the hieroglyphic characters to enable me to spell them out when they are used alphabetically; and as soon as I saw the seal, I could see that these hieroglyphics formed English words. My attention was first attracted by the second group of signs, which spelled the word ‘Reuben,’ and then I saw that the first group spelled ‘Uncle.’ Of course, the instant I heard Miss Nellie speak of the connection between the scarab and Uncle Reuben, the murder was out. I saw at a glance that the scarab contained all the required information. Last night I made a careful tracing of the hieroglyphics and then rendered them into our own alphabet. This is the result.”

He took from his letter-case and spread out on the table a duplicate of the tracing which I had seen him make, and of which he had given me a copy. But since I had last seen it, it had received an addition; under each group of signs the equivalents in modern Roman lettering had been written, and these made the following words:

“UNKL RUBN IS IN TH MILL FIELD SKS FT DOWN CHURCH SPIR NORTH TEN THIRTY EAST DINGL SOUTH GABL NORTH ATEY FORTY FIF WEST GOD SAF KING JORJ.”

Our two friends gazed at Thorndyke’s transliteration in blank astonishment. At length Blowgrave remarked: “But this translation must have demanded a very profound knowledge of the Egyptian writing.”

“Not at all,” replied Thorndyke. “Any intelligent person could master the Egyptian alphabet in an hour. The language, of course, is quite another matter. The spelling of this is a little crude, but it is quite intelligible and does Silas great credit, considering how little was known in his time.”

“How do you suppose M. Fouquet came to overlook this?” Blowgrave asked.

“Naturally enough,” was the reply. “He was looking for an Egyptian inscription. But this is not an Egyptian inscription. Does he speak English?”

“Very little. Practically not at all.”

“Then, as the words are English words and imperfectly spelt, the hieroglyphics must have appeared to him mere nonsense. And he was right as to the scarab being an imitation.”

“There is another point,” said Blowgrave. “How was it that Harold made that extraordinary mistake about the place? The directions are clear enough. All you had to do was to go out there with a compass and take the bearings just as they were given.”

“But,” said Thorndyke, “that is exactly what he did, and hence the mistake. He was apparently unaware of the phenomenon known as the Secular Variation of the Compass. As you know, the compass does not—usually—point to true
north, but to the Magnetic North; and the Magnetic North is continually changing its position. When Reuben was buried —about 1810—it was twenty-four degrees, twenty-six minutes west of true north; at the present time it is fourteen degrees, forty-eight minutes west of true north. So Harold's bearings would be no less than ten degrees out, which of course, gave him a totally wrong position. But Silas was a ship-master, a navigator, and of course knew all about the vagaries of the compass; and, as his directions were intended for use at some date unknown to him, I assumed that the bearings that he gave were true bearings—that when he said 'north' he meant true north, which is always the same; and this turned out to be the case. But I also prepared a plan with magnetic bearings corrected up to date. Here are the three plans: No. 1—the one we used—showing true bearings; No. 2, showing corrected magnetic bearings which might have given us the correct spot; and No. 3, with uncorrected magnetic bearings, giving us the spot where Harold dug, and which could not possibly have been the right spot."

On the following morning I escorted the deed-box, filled with the booty and tied up and sealed with the scarab, to Mr. Blowgrave's bank. And that ended our connection with the case; excepting that, a month or two later, we attended by request the unveiling in Shawstead churchyard of a fine monument to Reuben Blowgrave. This took the slightly inappropriate form of an obelisk, on which were cut the name and approximate dates, with the added inscription: "Cast thy bread upon the waters and it shall return after many days;" concerning which Thorndyke remarked dryly that he supposed the exhortation applied equally even if the bread happened to belong to someone else.

III. — THE NEW JERSEY SPHINX

"A rather curious neighbourhood this, Jervis," my friend Thorndyke remarked as we turned into Upper Bedford Place; "a sort of aviary for cosmopolitan birds of passage, especially those of the Oriental variety. The Asiatic and African faces that one sees at the windows of these Bloomsbury boarding houses almost suggest an overflow from the ethnographical galleries of the adjacent British Museum."

"Yes," I agreed, "there must be quite a considerable population of Africans, Japanese and Hindus in Bloomsbury; particularly Hindus."

As I spoke, and as if in illustration of my statement, a dark-skinned man rushed out of one of the houses farther down the street and began to advance towards us in a rapid, bewildered fashion, stopping to look at each street door as he came to it. His hatless condition—though he was exceedingly well dressed—and his agitated manner immediately attracted my attention, and Thorndyke's too, for the latter remarked, "Our friend seems to be in trouble. An accident, perhaps, or a case of sudden illness."

Here the stranger, observing our approach, ran forward to meet us and asked in an agitated tone, "Can you tell me, please, where I can find a doctor?"

"I am a medical man," replied Thorndyke, "and so is my friend."

Our acquaintance grasped Thorndyke's sleeve and exclaimed eagerly, "Come with me, then, quickly, if you please. A most dreadful thing has happened."

He hurried us along at something between a trot and a quick walk, and as we proceeded he continued excitedly, "I am quite confused and terrified; it is all so strange and sudden and terrible."

"Try," said Thorndyke, "to calm yourself a little and tell us what has happened."

"I will," was the agitated reply. "It is my cousin, Dinanath Byramji—his surname is the same as mine. Just now I went to his room and was horrified to find him lying on the floor, staring at the ceiling and blowing—like this," and he puffed out his cheeks with a soft blowing noise. "I spoke to him and shook his hand, but he was like a dead man. This is the house."

He darted up the steps to an open door at which a rather scared page-boy was on guard, and running along the hall, rapidly ascended the stairs. Following him closely, we reached a rather dark first-floor landing where, at a half-open door, a servant-maid stood listening with an expression of awe to a rhythmical snoring sound that issued from the room.

The unconscious man lay as Mr. Byramji had said staring fixedly at the ceiling with wide-open, glazy eyes, puffing out his cheeks slightly at each breath. But the breathing was shallow and slow, and it grew perceptibly slower, with lengthening pauses. And even as I was timing it with my watch while Thorndyke examined the pupils with the aid of a wax match, it stopped. I laid my finger on the wrist and caught one or two slow, flickering beats. Then the pulse stopped too.

"He is gone," said I. "He must have burst one of the large arteries."

"Apparently," said Thorndyke, "though one would not have expected it at his age. But wait! What is this?"

He pointed to the right ear, in the hollow of which a few drops of blood had collected, and as he spoke he drew his hand gently over the dead man's head and moved it slightly from side to side.

"There is a fracture of the base of the skull," said he, "and quite distinct signs of contusion of the scalp." He turned to Mr. Byramji, who stood wringing his hand and gazing incredulously at the dead man, and asked: "Can you throw any light on this?"

The Indian looked at him vacantly. The sudden tragedy seemed to have paralysed his brain. "I don't understand," said
he. “What does it mean?”

“It means,” replied Thorndyke, “that he has received a heavy blow on the head.”

For a few moments Mr. Byramji continued to stare vacantly at my colleague. Then he seemed suddenly to realise the import of Thorndyke’s remark, for he started up excitedly and turned to the door, outside which the two servants were hovering.

“Where is the person gone who came in with my cousin?” he demanded.

“You saw him go out, Albert,” said the maid. “Tell Mr. Byramji where he went to.”

The page tiptoed into the room with a fearful eye fixed on the corpse, and replied faltering, “I only see the back of him as he went out, and all I know is that he turned to the left. Praps he’s gone for a doctor.”

“Can you give us any description of him?” asked Thorndyke.

“I only see the back of him,” repeated the page. “He was a shortish gentleman and he had on a dark suit of clothes and a hard felt hat. That’s all I know.”

“Thank you,” said Thorndyke. “We may want to ask you some more questions presently,” and having conducted the page to the door, he shut it and turned to Mr. Byramji.

“Have you any idea who it was that was with your cousin?” he asked.

“None at all,” was the reply. “I was sitting in my room opposite, writing, when I heard my cousin come up the stairs with another person, to whom he was talking. I could not hear what he was saying. They went into his room—this room—and I could occasionally catch the sound of their voices. In about a quarter of an hour I heard the door open and shut, and then someone went downstairs, softly and rather quickly. I finished the letter that I was writing, and when I had addressed it I came in here to ask my cousin who the visitor was. I thought it might be someone who had come to negotiate for the ruby.”

“The ruby!” exclaimed Thorndyke. “What ruby do you refer to?”

“The great ruby,” replied Byramji. “But of course you have not—” He broke off suddenly and stood for a few moments staring at Thorndyke with parted lips and wide-open eyes; then abruptly he turned, and kneeling beside the dead man he began, in a curious, caressing, half-apologetic manner, first to pass his hands gently over the body at the waist and then to unfasten the clothes. This brought into view a handsome, soft leather belt, evidently of native workmanship, worn next to the skin and furnished with three pockets. Mr. Byramji unbuttoned and explored them in quick succession, and it was evident that they were all empty.

“It is gone!” he exclaimed in low, intense tones, “Done! Ah! But how little would it signify! But thou, dear Dinanath, my brother, my friend, thou art gone, too!”

He lifted the dead man’s hand and pressed it to his cheek, murmuring endearments in his own tongue. Presently he laid it down reverently, and sprang up, and I was startled at the change in his aspect. The delicate, gentle, refined face had suddenly become the face of a Fury—fierce, sinister, vindictive.

“This wretch must die!” he exclaimed huskily. “This sordid brute who, without compunction, has crushed out a precious life as one would carelessly crush a fly, for the sake of a paltry crystal—he must die, if I have to follow him and strangle him with my own hands!”

Thorndyke laid his hand on Byramji’s shoulder. “I sympathise with you most cordially,” said he. “If it is as you think, and appearances suggest, that your cousin has been murdered as a mere incident of robbery, the murderer’s life is forfeit, and Justice cries aloud for retribution. The fact of murder will be determined, for or against, by a proper inquiry. Meanwhile we have to ascertain who this unknown man is and what happened while he was with your cousin.”

Byramji made a gesture of despair. “But the man has disappeared, and nobody has seen him! What can we do?”

“Let us look around us,” plied Thorndyke, “and see if we can judge what has happened in this room. What, for instance, is this?”

He picked up from a corner near the door a small leather object, which he handed to Mr. Byramji. The Indian seized it eagerly, exclaiming: “Ah! It is the little bag in which my cousin used to carry the ruby. So he had taken it from his belt.”

“It hasn’t been dropped, by any chance?” I suggested.

In an instant Mr. Byramji was down on his knees, peering and groping about the floor, and Thorndyke and I joined in the search. But, as might have been expected there was no sign of the ruby, nor, indeed, of anything else, excepting a hat which I picked up from under the table.

“No,” said Mr. Byramji, rising with a dejected air. “It is gone—of course it is gone, and the murderous villain—”

Here his glance fell on the hat, which I had laid on the table, and he bent forward to look at it.

“Whose hat is this?” he demanded, glancing at the chair on which Thorndyke’s hat and mine had been placed.

“Is it not your cousin’s?” asked Thorndyke.

“No, certainly not. His hat was like mine—we bought them both together. It had a white silk lining with his initials, D. B.,
in gold. This has no lining and is a much older hat. It must be the murderer’s hat.”

“If it is,” said Thorndyke, “that is a most important fact—important in two respects. Could you let us see your hat?”

“Certainly,” replied Byramji, walking quickly, but with a soft tread, to the door. As he went out, shutting the door silently behind him, Thorndyke picked up the derelict hat and swiftly tried it on the head of the dead man. As far as I could judge, it appeared to fit, and this Thorndyke confirmed as he replaced it on the table.

“As you see,” said he, “it is at least a practical fit, which is a fact of some significance.”

Here Mr. Byramji returned with his own hat, which he placed on the table by the side of the other, and thus placed, crown uppermost, the two hats were closely similar. Both were black, hard felts of the prevalent “bowler” shape, and of good quality, and the difference in their age and state of preservation was not striking; but when Byramji turned them over and exhibited their interiors it was seen that whereas the strange hat was unlined save for the leather head-band, Byramji’s had a white silk lining and bore the owner’s initials in embossed gilt letters.

“What happened,” said Thorndyke, when he had carefully compared the two hats, “seems fairly obvious. The two men, on entering, placed their hats crown upwards on the table. In some way—perhaps during a struggle—the visitor’s hat was knocked down and rolled under the table. Then the stranger, on leaving, picked up the only visible hat—almost identically similar to his own—and put it on.”

“Is it not rather singular,” I asked, “that he should not have noticed the different feel of a strange hat?”

“I think not,” Thorndyke replied. “If he noticed anything unusual he would probably assume that he had put it on the wrong way round. Remember that he would be extremely hurried and agitated. And when once he had left the house he would not dare to take the risk of returning, though he would doubtless realise the gravity of the mistake. And now,” he continued, “would you mind giving us a few particulars? You have spoken of a great ruby, which your cousin had, and which seems to be missing.”

“Yes. You shall come to my room and I will tell you about it; but first let us lay my poor cousin decently on his bed.”

“I think,” said Thorndyke, “the body ought not to be moved until the police have seen it.”

“Perhaps you are right,” Byramji agreed reluctantly, “though it seems callous to leave him lying there.” With a sigh he turned to the door, and Thorndyke followed, carrying the two hats.

“My cousin and I,” said our host, when we were seated in his own large bed-sitting-room, “were both interested in gems. I deal in all kinds of stones that are found in the East, but Dinanath dealt almost exclusively in rubies. He was a very fine judge of those beautiful gems, and he used to make periodical tours in Burma in search of uncut rubies of unusual size or quality. About four months ago he acquired at Mogok, in Upper Burma, a magnificent specimen over twenty-eight carats in weight, perfectly flawless and of the most gorgeous colour. It had been roughly cut, but my cousin was intending to have it recut unless he should receive an advantageous offer for it in the meantime.”

“What would be the value of such a stone?” I asked.

“It is impossible to say. A really fine large ruby of perfect colour is far, far more valuable than the finest diamond of the same size. It is the most precious of all gems, with the possible exception of the emerald. A fine ruby of five carats is worth about three thousand pounds, but of course, the value rises out of all proportion with increasing size. Fifty thousand pounds would be a moderate price for Dinanath’s ruby.”

During this recital I noticed that Thorndyke, while listening attentively, was turning the stranger’s hat over in his hands, narrowly scrutinising it both inside and outside. As Byramji concluded, he remarked:

“We shall have to let the police know what has happened, but, as my friend and I will be called as witnesses, I should like to examine this hat a little more closely before you hand it over to them. Could you let me have a small, hard brush? A dry nail-brush would do.” Our host complied readily—in fact eagerly. Thorndyke’s authoritative, purposeful manner had clearly impressed him, for he said as he handed my colleague a new nail-brush: “I thank you for your help and value it. We must not depend on the police only.”

Accustomed as I was to Thorndyke’s methods, his procedure was not unexpected, but Mr. Byramji watched him with breathless interest and no little surprise as, laying a sheet of notepaper on the table, he brought the hat close to it and brushed firmly but slowly, so that the dust dislodged should fall on it. As it was not a very well-kept hat, the yield was considerable, especially when the brush was drawn under the curl of the brim, and very soon the paper held quite a little heap. Then Thorndyke folded the paper into a small packet and having written “outside” on it, put it in his pocketbook.

“Why do you do that?” Mr. Byramji asked. “What will the dust tell you?”

“Probably nothing,” Thorndyke replied. “But this hat is our only direct clue to the identity of the man who was with your cousin, and we must make the most of it. Dust, you know, is only a mass of fragments detached from surrounding objects. If the objects are unusual the dust may be quite distinctive. You could easily identify the hat of a miller or a cement worker.” As he was speaking he reversed the hat and turned down the leather head-lining, whereupon a number of strips of folded paper fell down into the crown.

“Ah!” exclaimed Byramji, “perhaps we shall learn something now.”
He picked out the folded slips and began eagerly to open them out, and we examined them systematically—one by one. But they were singularly disappointing and uninforming. Mostly they consisted of strips of newspaper, with one or two circulars, a leaf from a price list of gas stoves, a portion of a large envelope on which were the remains of an address which read “—n—don, W.C.”, and a piece of paper evidently cut down vertically and bearing the right-hand half of some kind of list. This read:

“—el 3 oz. 5 dwts.
—eep 9½ oz.”

“Can you make anything of this?” I asked, handing the paper to Thorndyke.

He looked at it reflectively, and answered, as he copied it into his notebook: “It has, at least, some character. If we consider it with the other data we should get some sort of hint from it. But these scraps of paper don’t tell us much. Perhaps their most suggestive feature is their quantity and the way in which, as you have no doubt noticed, they were arranged at the sides of the hat. We had better replace them as we found them for the benefit of the police.”

The nature of the suggestion to which he referred was not very obvious to me, but the presence of Mr. Byramji rendered discussion inadvisable; nor was there any opportunity, for we had hardly reconstituted the hat when we became aware of a number of persons ascending the stairs, and then we heard the sound of rather peremptory rapping at the door of the dead man’s room.

Mr. Byramji opened the door and went out on to the landing, where several persons had collected, including the two servants and a constable.

“I understand,” said the policeman, “that there is something wrong here. Is that so?”

“A very terrible thing has happened,” replied Byramji. “But the doctors can tell you better than I can.” Here he looked appealingly at Thorndyke, and we both went out and joined him.

“A gentleman—Mr. Dinanath Byramji—has met with his death under somewhat suspicious circumstances,” said Thorndyke, and, glancing at the knot of naturally curious persons on the landing, he continued: “If you will come into the room where the death occurred, I will give you the facts so far as they are known to us.”

With this he opened the door and entered the room with Mr. Byramji, the constable, and me. As the door opened, the bystanders craned forward and a middle-aged woman uttered a cry of horror and followed us into the room.

“This is dreadful!” she exclaimed, with a shuddering glance at the corpse. “The servants told me about it when I came in just now and I sent Albert for the police at once. But what does it mean? You don’t think poor Mr. Dinanath has been murdered?”

“We had better get the facts, ma’am,” said the constable, drawing out a large black notebook and laying his helmet on the table. He turned to Mr. Byramji, who had sunk into a chair and sat, the picture of grief, gazing at his dead cousin. “Would you kindly tell me what you know about how it happened?”

Byramji repeated the substance of what he had told us, and when the constable had taken down his statement, Thorndyke and I gave the few medical particulars that we could furnish and handed the constable our cards. Then, having helped to lay the corpse on the bed and cover it with a sheet, we turned to take our leave.

“You have been very kind,” Mr. Byramji said as he shook our hands warmly. “I am more than grateful. Perhaps I may be permitted to call on you and hear if—if you have learned anything fresh,” he concluded discreetly.

“We shall be pleased to see you,” Thorndyke replied, “and to give you any help that we can;” and with this we took our departure, watched inquisitively down the stairs by the boarders and the servants who still lurked in the vicinity of the chamber of death.

“If the police have no more information than we have,” I remarked as we walked homeward, “they won’t have much to go on.”

“No,” said Thorndyke. “But you must remember that this crime—as we are justified in assuming it to be—is not an isolated one. It is the fourth of practically the same kind within the last six months. I understand that the police have some kind of information respecting the presumed criminal, though it can’t be worth much, seeing that no arrest has been made. But there is some new evidence this time. The exchange of hats may help the police considerably.”

“In what way? What evidence does it furnish?”

“In the first place it suggests a hurried departure, which seems to connect the missing man with the crime. Then, he is wearing the dead man’s hat, and though he is not likely to continue wearing it, it may be seen and furnish a clue. We know that that hat fits him fairly well and we know its size, so that we know the size of his head. Finally, we have the man’s own hat.”

“I don’t fancy the police will get much information from that,” said I.

“Probably not,” he agreed. “Yet it offered one or two interesting suggestions, as you probably observed.”

“It made no suggestions whatever to me,” said I.

“Then,” said Thorndyke, “I can only recommend you to recall our simple inspection and consider the significance of
what we found."

This I had to accept as closing the discussion for the time being, and as I had to make a call at my bookseller's concerning some reports that I had left to be bound, I parted from Thorndyke at the corner of Chichester Rents and left him to pursue his way alone. My business with the bookseller took me longer than I had expected, for I had to wait while the lettering on the backs was completed, and when I arrived at our chambers in King's Bench Walk, I found Thorndyke apparently at the final stage of some experiment evidently connected with our late adventure. The microscope stood on the table with one slide on the stage and a second one beside it; but Thorndyke had apparently finished his microscopical researches, for as I entered he held in his hand a test-tube filled with a smoky-coloured fluid.

"I see that you have been examining the dust from the hat," said I. "Does it throw any fresh light on the case?"

"Very little," he replied. "It is just common dust—assorted fibres and miscellaneous organic and mineral particles. But there are a couple of hairs from the inside of the hat—both lightish brown, and one of the atrophic, note-of-exclamation type that one finds at the margin of bald patches; and the outside dust shows minute traces of lead, apparently in the form of oxide. What do you make of that?"

"Perhaps the man is a plumber or a painter," I suggested.

"Either is possible and worth considering," he replied; but his tone made clear to me that this was not his own inference; and a row of five consecutive Post Office Directories, which I had already noticed ranged along the end of the table, told me that he had not only formed a hypothesis on the subject, but had probably either confirmed or disproved it. For the Post Office Directory was one of Thorndyke's favourite books of reference; and the amount of curious and recondite information that he succeeded in extracting from its matter-of-fact pages would have surprised no one more than it would the compilers of the work.

At this moment the sound of footsteps ascending our stairs became audible. It was late for business callers, but we were not unaccustomed to late visitors; and a familiar rat-tat of our little brass knocker seemed to explain the untimely visit.

"That sounds like Superintendent Miller's knock," said Thorndyke, as he strode across the room to open the door. And the superintendent it turned out to be. But not alone.

As the door opened the officer entered with two gentlemen, both natives of India, and one of whom was our friend Mr. Byramji.

"Perhaps," said Miller, "I had better look in a little later."

"Not on my account," said Byramji. "I have only a few words to say and there is nothing secret about my business. May I introduce my kinsman, Mr. Khambata, a student of the Inner Temple?"

Byramji's companion bowed ceremoniously. "Byramji came to my chambers just now," he explained, "to consult me about this dreadful affair, and he chanced to show me your card. He had not heard of you, but supposed you to be an ordinary medical practitioner. He did not realise that he had entertained an angel unawares. But I, who knew of your great reputation, advised him to put his affairs in your hands—without prejudice to the official investigations," Mr. Khambata added hastily, bowing to the superintendent.

"And I," said Mr. Byramji, "instantly decided to act on my kinsman's advice. I have come to beg you to leave no stone unturned to secure the punishment of my cousin's murderer. Spare no expense. I am a rich man and my poor cousin's property will come to me. As to the ruby, recover it if you can, but it is of no consequence. Vengeance—justice is what I seek. Deliver the wretch into my hands, or into the hands of justice, and I give you the ruby or its value, freely—gladly."

"There is no need," said Thorndyke, "of such extraordinary inducement. If you wish me to investigate this case, I will do so and will use every means at my disposal, without prejudice, as your friend says, to the proper claims of the officers of the law. But you understand that I can make no promises. I cannot guarantee success."

"We understand that," said Mr. Khambata. "But we know that if you undertake the case, everything that is possible will be done. And now we must leave you to your consultation."

As soon as our clients had gone, Miller rose from his chair with his hand in his breast pocket. "I dare say, doctor," said he, "you can guess what I have come about. I was sent for to look into this Byramji case and I heard from Mr. Byramji that you had been there and that you had made a minute examination of the missing man's hat. So have I; and I don't mind telling you that I could learn nothing from it."

"I haven't learnt much myself," said Thorndyke.

"But you've picked up something," urged Miller, "if it is only a hint; and we have just a little clue. There is very small doubt that this is the same man—The New Jersey Sphinx,—as the papers call him—that committed those other robberies; and a very difficult type of criminal he is to get hold of. He is bold, he is wary, he plays a lone hand, and he sticks at nothing. He has no confederates, and he kills every time. The American police never got near him but once; and that once gives us the only clues we have."

"Finger-prints?" inquired Thorndyke.

"Yes, and very poor ones, too. So rough that you can hardly make out the pattern. And even those are not absolutely guaranteed to be his; but in any case, finger-prints are not much use until you've got the man. And there is a photograph of
the fellow himself, But it is only a snapshot, and a poor one at that. All it shows is that he has a mop of hair and a pointed beard—or at least he had when the photograph was taken. But for identification purposes it is practically worthless. Still, there it is; and what I propose is this: we want this man and so do you; we've worked together before and can trust one another. I am going to lay my cards on the table and ask you to do the same.”

“But, my dear Miller,” said Thorndyke, “I haven't any cards. I haven't a single solid fact.”

The detective was visibly disappointed. Nevertheless, he laid two photographs on the table and pushed them towards Thorndyke, who inspected them through his lens and passed them to me.

“The pattern is very indistinct and broken up,” he remarked.

“Yes,” said Miller; “the prints must have been made on a very rough surface, though you get prints something like those from fitters or other men who use files and handle rough metal. And now, doctor, can't you give us a lead of any kind?”

Thorndyke reflected a few moments. “I really have not a single real fact,” said he, “and I am unwilling to make merely speculative suggestions.”

“Oh, that’s all right,” Miller replied cheerfully. “Give us a start. I shan’t complain if it comes to nothing.”

“Well,” Thorndyke said reluctantly, “I was thinking of getting a few particulars as to the various tenants of No. 51 Clifford’s Inn. Perhaps you could do it more easily and it might be worth your while.”

“Good!” Miller exclaimed gleefully. “He ‘gives to airy nothing a local habitation and a name.’”

“It is probably the wrong name,” Thorndyke reminded him.

“I don’t care,” said Miller. “But why shouldn’t we go together? It’s too late to-night, and I can’t manage to-morrow morning. But say to-morrow afternoon. Two heads are better than one, you know, especially when the second one is yours. Or perhaps,” he added, with a glance at me, “three would be better still.”

Thorndyke considered for a moment or two and then looked at me.

“What do you say, Jervis?” he asked.

As my afternoon was unoccupied, I agreed with enthusiasm, being as curious as the superintendent to know how Thorndyke had connected this particular locality with the vanished criminal, and Miller departed in high spirits with an appointment for the morrow three o’clock in the afternoon.

For some time after the superintendent’s depart I sat wrapped in profound meditation. In some mysterious way the address, 51 Clifford’s Inn, had emerged from the formless data yielded by the derelict hat. But what had been the connection? Apparently the fragment of the addressed envelope had furnished the clue. But how had Thorndyke extended “—n” into “51, Clifford’s Inn”? It was to me a complete mystery.

Meanwhile, Thorndyke had seated himself at writing-table, and I noticed that of the two letters which he wrote, one was written on our headed paper and other on ordinary plain notepaper. I was speculating on the reason for this when he rose, and as he stuck on the stamps, said to me, “I am just going out to post these two letters. Do you care for a short stroll through the leafy shades of Fleet Street? The evening is still young.”

“The rural solitudes of Fleet Street attract me at all hours,” I replied, fetching my hat from the adjoining office, and we accordingly sallied forth together, strolling up King’s Bench Walk and emerging into Fleet Street by way of Mitre Court. When Thorndyke had dropped his letters into the post office box he stood awhile gazing up at the tower of St. Dunstan’s Church.

“Have you ever been in Clifford’s Inn, Jervis?” he inquired.

“Never,” I replied (we passed through it together on an average a dozen times a week), “but it is not too late for an exploratory visit.”

We crossed the road, and entering Clifford’s Inn Passage, passed through the still half-open gate, crossed the outer court and threaded the tunnel-like entry by the hall to the inner court, in the middle of which Thorndyke halted, and looked up at one of the ancient houses, remarked, “No. 51.”

“So that is where our friend hangs out his flag,” said I.

“Oh come, Jervis,” he protested, “I am surprised at you; you are as bad as Miller. I have merely suggested a possible connection between these premises and the hat that was left at Bedford Place. As to the nature of that connection I have no idea, and there may be no connection at all. I assure you, Jervis, that I am on the thinnest possible ice. I am working on a hypothesis which is in the highest degree speculative, and I should not have given Miller a hint but that he was so eager and so willing to help—and also that I wanted his finger-prints. But we are really only at the beginning, and may never get any farther.”

I looked up at the old house. It was all in darkness excepting the top floor, where a couple of lighted windows showed the shadow of a man moving rapidly about the room. We crossed to the entry and inspected the names painted on the doorposts. The ground floor was occupied by a firm of photo-engravers, the first floor by a Mr. Carrington, whose name stood out conspicuously on its oblong of comparatively fresh white paint, while the tenants of the second floor—old residents, to judge by the faded and discoloured paint in which their names were announced—were Messrs. Burt & Highley,
metallurgists.

“Burt has departed,” said Thorndyke, as I read out the names; and he pointed to two red lines of erasure which I had not noticed in the dim light, “so the active gentleman above is presumably Mr. Highley, and we may take it that he has residential as well as business premises. I wonder who and what Mr. Carrington is—but I dare say we shall find out tomorrow.”

With this he dismissed the professional aspects of Clifford’s Inn, and, changing the subject to its history and associations, chatted in his inimitable, picturesque manner until our leisurely perambulations brought us at length to the Inner Temple Gate.

On the following morning we bustled through our work in order to leave the afternoon free, making several joint visits to solicitors from whom we were taking instructions. Returning from the last of these—a City lawyer—Thorndyke turned into St. Helen’s Place and halted at a doorway bearing the brass plate of a firm of assayists and refiners. I followed him into the outer office, where, on his mentioning his name, an elderly man came to the counter.

“Mr. Grayson has put out some specimens for you, sir,” said he. “They are about thirty grains to the ton—you said that the content was of no importance—I am to tell you that you need not return them. They are not worth treating.” He went to a large safe from which he took a canvas bag, and returning to the counter, turned out on it the contents of the bag, consisting of about a dozen good-sized lumps of quartz and a glittering yellow fragment, which Thorndyke picked out and dropped in his pocket.

“Will that collection do?” our friend inquired.

“It will answer my purpose perfectly,” Thorndyke replied, and when the specimens had been replaced the bag, and the latter deposited in Thorndyke’s hand-bag, my colleague thanked the assistant and we went on our way.

“We extend our activities into the domain of mineralogy,” I remarked.

Thorndyke smiled an inscrutable smile. “We also employ the suction pump as an instrument of research,” he observed. “However, the strategic uses of chunks of quartz—otherwise than as missiles—will develop themselves in due course, and the interval may be used for reflection.”

It was. But my reflection brought no solution. I noticed, however, that when at three o’clock we set forth in company with the superintendent, the bag went with us; and having offered to carry it and having had my offer accepted with a sly twinkle, its weight assured me that the quartz was still inside.

“Chambers and Offices to let,” Thorndyke read aloud as we approached the porter’s lodge. “That lets us in, I think. And the porter knows Dr. Jervis and me by sight, so he will talk more freely.”

“He doesn’t know me,” said the superintendent, “but I’ll keep in the background, all the same.”

A pull at the bell brought out a clerical-looking man in a tall hat and a frock coat, who regarded Thorndyke and me through his spectacles with an amiable air of recognition.

“Good afternoon, Mr. Larkin,” said Thorndyke. “I am asked to get particulars of vacant chambers. What have you got to let?”

Mr. Larkin reflected. “Let me see. There’s a ground floor at No. 5—rather dark—and a small second-pair set at No. 12. And then there is—oh, yes, there is a good first-floor set at No. 51. They wouldn’t have been vacant until Michaelmas, but Mr. Carrington, the tenant, has had to go abroad suddenly. I had a letter from him this morning, enclosing the key. Funny letter, too.” He dived into his pocket, and hauling out a bundle of letters, selected one and handed it to Thorndyke with a broad smile.

Thorndyke glanced at the postmark (“London, E.”), and having taken out the key, extracted the letter, which he opened and held so that Miller and I could see it. The paper bore the printed heading, “Baltic Shipping Company, Wapping,” and the further written heading, “S.S. Gothenburg,” and the letter was brief and to the point:

Dear Sir,
I am giving up my chambers at No. 51, as I have been suddenly called abroad. I enclose the key, but am not troubling you with the rent. The sale of my costly furniture will more than cover it, and the surplus can be expended on painting the garden railings,
Yours sincerely,
A. Carrington.

Thorndyke smilingly replaced the letter and the key in the envelope and asked: “What is the furniture like?”

“You’ll see,” chuckled the porter, “if you care to look at the rooms. And I think they might suit, They’re a good set.”

“Quiet?”

“Yes, pretty quiet. There’s a metallurgist overhead—Highley—used to be Burt & Highley, but Burt has gone to the City, and I don’t think Highley does much business now.”
“Let me see,” said Thorndyke, “I think I used to meet Highley sometimes—a tall, dark man, isn’t he?”

“No, that would be Burt. Highley is a little, fairish man, rather bald, with a pretty rich complexion”—here Mr. Larkin tapped his nose knowingly and raised his little finger—“which may account for the falling off of business.”

“Hadn’t we better have a look at the rooms?” Miller interrupted a little impatiently.

“Can we see them, Mr. Larkin?” asked Thorndyke.

“Certainly,” was the reply. “You’ve got the key. Let me have it when you’ve seen the rooms; and whatever ever you do,” he added with a broad grin, “be careful of the furniture.”

“It looks,” the superintendent remarked as we crossed the inner court, “as if Mr. Carrington had done a mizzle. That’s hopeful. And I see,” he continued, glancing at the fresh paint on the door-post as we passed through the entry, “that he hasn’t been here long. That’s hopeful, too.”

We ascended to the first floor, and as Thorndyke unlocked and threw open the door, Miller laughed aloud. The “costly furniture” consisted of a small kitchen table, a Windsor chair and a dilapidated deck-chair. The kitchen contained a gas ring, a small saucepan and a frying-pan, and the bedroom was furnished with a camp-bed devoid of bed-clothes, a washtub basin on a packing-case, and a water can.

“Hallo!” exclaimed the superintendent. “He’s left a hat behind. Quite a good hat, too.” He took it down from the peg, glanced at its exterior and then, turning it over, looked inside. And then his mouth opened with a jerk.

“Great Solomon Eagle!” he gasped. “Do you see, doctor? It’s THE hat.”

He held it out to us, and sure enough on the white silk lining of the crown were the embossed, gilt letters, D.B., just as Mr. Byramji had described them.

“Yes,” Thorndyke agreed, as the superintendent snatched up a greengrocer’s paper bag from the kitchen floor and persuaded the hat into it, “it is undoubtedly the missing link. But what are you going to do now?”

“Do!” exclaimed Miller. “Why, I am going to collar the man. These Baltic boats put in at Hull and Newcastle—perhaps he didn’t know that—and they are pretty slow boats, too. I shall wire to Newcastle to have the ship detained and take Inspector Badger down to make the arrest. I’ll leave you to explain to the porter, and I owe you a thousand thanks for your valuable tip.”

With this he hustled away, clasping the precious hat and from the window we saw him hurry across the court and dart out through the postern into Fetter Lane.

“I think Miller was rather precipitate,” said Thorndyke. “He should have got a description of the man and some further particulars.”

“Yes,” said I. “Miller had much better have waited until you had finished with Mr. Larkin. But you can get some more particulars when we take back the key.”

“We shall get more information from the gentleman who lives on the floor above, and I think we will go up and interview him now. I wrote to him last night and made a metallurgical appointment, signing myself W. Polton. Your name, if he should ask, is Stevenson.”

As we ascended the stairs to the next floor, I meditated on the rather tortuous proceedings of my usually straightforward colleague. The use of the lumps of quartz was now obvious; but why these mysterious tactics? And why, before knocking at the door, did Thorndyke carefully take the reading of the gas meter on the landing?

The door was opened in response to our knock—a shortish, alert-looking, clean-shaved man in a white overall, who looked at us keenly and rather forbiddingly. But Thorndyke was geniality personified.

“How do you do, Mr. Highley?” said he, holding out his hand, which the metallurgist shook coolly. “You got my letter, I suppose?”

“Yes. But I am not Mr. Highley. He’s away and I am carrying on. I think of taking over his business if there is any to take over. My name is Sherwood. Have you got the samples?”

Thorndyke produced the canvas bag, which Mr. Sherwood took from him and emptied out on a bench, picking up the lumps of quartz one by one and examining them closely. Meanwhile Thorndyke took a rapid survey of the premises. Against the wall were two cupel furnaces and a third larger furnace like a small pottery kiln. On a set of narrow shelves were several rows of bone-ash cupels, looking like little white flower-pots, and near them was the cupel-press—an appliance into which powdered bone-ash was fed and compressed by a plunger to form the cupels—while by the side of the press was a tube of bone-ash—a good deal coarser, I noticed, than the usual fine powder. This coarseness was also observed by Thorndyke, who edged up to the tube and dipped his hand into the ash and then wiped his fingers on his handkerchief.

“This stuff doesn’t seem to contain much gold,” said Mr. Sherwood. “But we shall see when we make the assay.”

“What do you think of this?” asked Thorndyke, taking from his pocket the small lump of glittering, golden-looking mineral that he had picked out at the assayist’s. Mr. Sherwood took it from him and examined it closely. “This looks more hopeful,” said he; “rather rich, in fact.”
Thorndyke received this statement with an unmoved countenance; but as for me, I stared at Mr. Sherwood in amazement. For this lump of glittering mineral was simply a fragment of common iron pyrites! It would not have deceived a schoolboy, much less a metallurgist.

Still holding the specimen, and taking a watchmaker’s lens from a shelf, Mr. Sherwood moved over to the window. Simultaneously, Thorndyke stepped softly to the cupel shelves and quickly ran his eye along the rows of cupels. Presently he paused at one, examined it more closely, and then, taking it from the shelf, began to pick at it with his finger-nail.

At this moment Mr. Sherwood turned and observed him; and instantly there flashed into the metallurgist’s face an expression of mingled anger and alarm.

“Put that down!” he commanded peremptorily, and then, as Thorndyke continued to scrape with his finger nail, he shouted furiously, “Do you hear? Drop it!”

Thorndyke took him literally at his word and let the cupel fall on the floor, when it shattered into innumerable fragments, of which one of the largest separated itself from the rest. Thorndyke pounced upon it, and in an instantaneous glance, as he picked it up, I recognised it as a calcined tooth.

Then followed a few moments of weird, dramatic silence. Thorndyke, holding the tooth between his finger and thumb, looked steadily into the eyes of the metallurgist; and the latter, pallid as a corpse, glared at Thorndyke and furtively unbuttoned his overall.

Suddenly the silence broke into a tumult as bewildering as the crash of a railway collision. Sherwood’s right hand darted under his overall. Instantly, Thorndyke snatched up another cupel and hurled it with such truth of aim that it shattered on the metallurgist’s forehead. And as he flung the missile, he sprang forward, and delivered a swift upper-cut. There was a thunderous crash, a cloud of white dust, and an automatic pistol clattered along the floor.

I snatched up the pistol and rushed to my friend’s assistance. But there was no need. With his great strength and his uncanny skill—to say nothing of the effects of the knock-out blow—Thorndyke had the man pinned down immovably.

“See if you can find some cord, Jervis,” he said in a calm, quiet tone that seemed almost ridiculously out of character with the circumstances.

There was no difficulty about this, for several corded boxes stood in a corner of the laboratory. I cut off two lengths, with one of which I secured the prostate man’s arms, and with the other fastened his knees and ankles.

“Now,” said Thorndyke, “if you will take charge of his hands, we will make a preliminary inspection. Let us first see if he wears a belt.”

Unbuttoning the man’s waistcoat, he drew up the shirt, disclosing a broad, webbing belt furnished with several leather pockets, the buttoned flaps of which he felt carefully, regardless of the stream of threats and imprecations that poured from our victim’s swollen lips. From the front pockets he proceeded to the back, passing an exploratory hand under the writhing body.

“Ah!” he exclaimed suddenly, “just turn him over, and look out for his heels.”

We rolled our captive over, and as Thorndyke “skinned the rabbit,” a central pocket came into view, into which, when he had unbuttoned it, he inserted his fingers. “Yes,” he continued, “I think this is what we are looking for.” He withdrew his fingers, between which he held a small packet of Japanese paper, and with feverish excitement I watched him open out layer after layer of the soft wrapping. As he turned back the last fold a wonderful crimson sparkle told me that the “great ruby” was found.

“There, Jervis,” said Thorndyke, holding the magnificent gem towards me in the palm of his hand, “look on this beautiful, sinister thing, charged with untold potentialities of evil—and thank the gods that it is not yours.”

He wrapped it up again carefully and, having bestowed it in an inner pocket, said, “And now give me the pistol and run down to the telegraph office and see if you can stop Miller. I should like him to have the credit for this.”

I handed him the pistol and made my way out into Fetter Lane and so down to Fleet Street, where at the post office my urgent message was sent off to Scotland Yard immediately. In a few minutes the reply came that Superintendent Miller had not yet left and that he was starting immediately for Clifford’s Inn. A quarter of an hour later he drove up in a hansom to the Fetters Lane gate and I conducted him up to the second floor, where Thorndyke introduced him to his prisoner and witnessed the official arrest.

“You don’t see how I arrived at it,” said Thorndyke as we walked homeward after returning the key. “Well, I am not surprised. The initial evidence was of the weakest; it acquired significance only by cumulative effect. Let us reconstruct it as it developed.

“The derelict hat was, of course, the starting-point. Now, the first thing one noticed was that it appeared to have had more than one owner. No man would buy a new hat that fitted so badly as to need all that packing; and the arrangement of the packing suggested a long-headed man wearing a hat that had belonged to a man with a short head. Then there were the suggestions offered by the slips of paper. The fragmentary address referred to a place the name of which ended in ‘n’ and the remainder was evidently ‘London, W.C.’ Now what West Central place names end in ‘n’? It was not a street, a square or a court, and Barbican is not in the W.C. district. It was almost certainly one of the half-dozen surviving Inns of Court or
Chancery. But, of course, it was not necessarily the address of the owner of the hat.

“The other slip of paper bore the end of a word ending in ‘el,’ and another word ending in ‘EEP,’ and connected with these were quantities stated in ounces and pennyweights troy weight. But the only persons who use troy weight are those who deal in precious metals. I inferred therefore that the ‘el’ was part of ‘lemel,’ and that the ‘EEP’ was part of ‘floor-sweep,’ an inference that was supported by the respective quantities, three ounces five pennyweights of lemel and nine and a half ounces of floor-sweep.”

“What is lemel?” I asked.

“It is the trade name for the gold or silver filings that collect in the ‘skin’ of a jeweller’s bench. Floor-sweep is, of course, the dust swept up on the floor of a jeweller’s or goldsmith’s workshop. The lemel is actual metal, though not of uniform fineness, but the sweep is a mixture of dirt and metal. Both are saved and sent to the refiners to have the gold and silver extracted.

“This paper, then, was connected either with a gold smith or a gold refiner—who might call himself an assayist or a metallurgist. The connection was supported by the leaf of a price list of gas stoves. A metallurgist would be kept well supplied with lists of gas stoves and furnaces. The traces of lead in the dust from the hat gave us another straw blowing the same direction, for gold assayed by the dry process is fused in the cupel furnace with lead; and as the lead oxidises and the oxide is volatile, traces of lead would tend to appear in the dust deposited in the laboratory.

“The next thing to do was to consult the directory; and when I did so, I found that there were no goldsmiths in any of the Inns and only one assayist—Mr. Highley, of Clifford’s Inn. The probabilities therefore, slender as they were, pointed to some connection between this stray hat and Mr. Highley. And this was positively all the information that we had when we came out this afternoon.

“As soon as we got to Clifford’s Inn, however, the evidence began to grow like a rolling snowball. First there was Larkin’s contribution; and then there was the discovery of the missing hat. Now, as soon as I saw that hat my suspicions fell upon the man upstairs. I felt a conviction that the hat had been left there purposely and that the letter to Larkin was just a red herring to create a false trail. Nevertheless, the presence of that hat completely confirmed the other evidence. It showed that the apparent connection was a real connection.”

“But,” I asked, “what made you suspect the man upstairs?”

“My dear Jervis!” he exclaimed, “consider the facts. That hat was enough to hang the man who left it there. Can you imagine this astute, wary villain making such an idiot’s mistake—going away and leaving the means of his conviction for anyone to find? But you are forgetting that whereas the missing hat was found on the first floor, the murderer’s hat was connected with the second floor. The evidence suggested that it was Highley’s hat. And now, before we go on to the next stage, let me remind you of those finger-prints. Miller thought that their rough appearance was due to the surface on which they had been made, But it was not. They were the prints of a person who was suffering from ichthyosis, palmar psoriasis or sonic dry dermatitis.

“There is one other point. The man we were looking for was a murderer. His life was already forfeit. To such a man another murder more or less is of no consequence. If this man, having laid the false trail, had determined to take sanctuary in Highley’s rooms, it was probable that he had already got rid of Highley. And remember that a metallurgist has unrivalled means disposing of a body; for not only is each of his muffle furnaces a miniature crematorium, but the very residue of a cremated body—bone-ash—is one of the materials of his trade.

“When we went upstairs, I first took the reading of the gas meter and ascertained that a large amount of gas had been used recently. Then, when we entered I took the opportunity to shake hands with Mr. Sherwood, and immediately I became aware that he suffered from a rather extreme form of ichthyosis. That was the first point of verification. Then we discovered that he actually could not distinguish between iron pyrites and auriferous quartz. He was not a metallurgist at all. He was a masquerader. Then the bone-ash in the tub was mixed with fragments of calcined bone, and the cupels all showed similar fragments. In one of them I could see part of the crown of a tooth. That was pure luck. But observe that by that time I had enough evidence to justify an arrest. The tooth served only to bring the affair to a crisis; and his response to my unspoken accusation saved us the trouble of further search for confirmatory evidence.”

“What is not quite clear to me,” said I, “is when and why he made away with Highley. As the body has been completely reduced to bone-ash, Highley must have been dead at least some days.”

“Undoubtedly,” Thorndyke agreed. “I take it that the course of events was like this: The police have been searching eagerly for this man, and every new crime must have made his position more unsafe—for a criminal can never be sure that he has not dropped some clue. It began to be necessary for him to make some arrangements for leaving the country and meanwhile to have a retreat in case his whereabouts should chance to be discovered. Highley’s chambers were admirable for both purposes. Here was a solitary man who seldom had a visitor, and who would probably not be missed for some considerable time; and in those chambers were the means of rapidly and completely disposing of the body. The mere murder would be a negligible detail to this ruffian.

“I imagine that Highley was done to death at least a week ago, and that the murderer did not take up his new tenancy until the body was reduced to ash. With that large furnace in addition to the small ones, this would not take long. When the new premises were ready, he could make a sham disappearance to cover his actual flight later; and you must see how
perfectly misleading that sham disappearance was. If the police had discovered that hat in the empty room only a week later, they would have been certain that he had escaped to one of the Baltic ports; and while they were following his supposed tracks, he could have gone off comfortably via Folkestone or Southampton."

"Then you think he had only just moved into Highley’s rooms?"

"I should say he moved in last night. The murder of Byramji was probably planned on some information that the murderer had picked up, and as soon as it was accomplished he began forthwith to lay down the false tracks. When he reached his rooms yesterday afternoon, he must have written the letter to Larkin and gone off at once to the East End to post it. Then he probably had his bushy hair cut short and shaved off his beard and moustache—which would render him quite unrecognisable by Larkin—and moved into Highley’s chambers, from which he would have quietly sallied forth in a few days’ time to take his passage to the Continent. It was quite a good plan, and but for the accident of taking the wrong hat, would almost certainly have succeeded."

Once every year, on the second of August, there is delivered with unfailing regularity at No. 5A King’s Bench Walk a large box of carved sandal-wood filled with the choicest Trichinopoly cheroots and accompanied by an affectionate letter from our late client, Mr. Byramji. For the second of August is the anniversary of the death (in the execution shed at Newgate) of Cornelius Barnett, otherwise known as the “New Jersey Sphinx.”
IV.—THE TOUCHSTONE

It happened not uncommonly that the exigencies of practice committed my friend Thorndyke to investigations that lay more properly within the province of the police. For problems that had arisen as secondary consequences of a criminal act could usually not be solved until the circumstances of that act were fully elucidated and, incidentally, the identity of the actor established. Such a problem was that of the disappearance of James Harewood’s will, a problem that was propounded to us by our old friend, Mr. Marchmont, when he called on us, by appointment, with the client of whom he had spoken in his note.

It was just four o’clock when the solicitor arrived at our chambers, and as I admitted him he ushered in a gentlemanly-looking man of about thirty-five, whom he introduced as Mr. William Crowhurst.

“I will just stay,” said he with an approving glance at the tea-service on the table, “and have a cup of tea with you, and give you an outline of the case. Then I must run away and leave Mr. Crowhurst to fill in the details.”

He seated himself in an easy chair within comfortable reach of the table, and as Thorndyke poured out the tea, he glanced over a few notes scribbled on a sheet of paper.

“I may say,” he began, stirring his tea thoughtfully, “that this is a forlorn hope. I have brought the case to you, but I have not the slightest expectation that you will be able to help us.”

“A very wholesome frame of mind,” Thorndyke commented with a smile. “I hope it is that of your client also.”

“It is indeed,” said Mr. Crowhurst; “in fact, it seems to me a waste of your time to go into the matter. Probably you will think so too, when you have heard the particulars.”

“Well, let us hear the particulars,” said Thorndyke. “A forlorn hope has, at least, the stimulating quality of difficulty. Let us have your outline sketch, Marchmont.”

The solicitor, having emptied his cup and pushed it towards the tray for replenishment, glanced at his notes and began: “The simplest way in which to present the problem is to give a brief recital of the events that have given rise to it, which are these: The day before yesterday—that is last Monday—at a quarter to two in the afternoon, Mr. James Harewood executed a will at his house at Merbridge, which is about two miles from Welsbury. There were present four persons: two of his servants, who signed as witnesses, and the two principal beneficiaries—Mr. Arthur Baxfield, a nephew of the testator, and our friend here, Mr. William Crowhurst. The will was a holograph written on the two pages of a sheet of letter-paper. When the witnesses signed, the will was covered by another sheet of paper so that only the space for the signatures was exposed. Neither of the witnesses read the will, nor did either of the beneficiaries; and so far as I am aware, no one but the testator knew what were its actual provisions, though, after the servants had left the room, Mr. Harewood explained its general purport to the beneficiaries.”

“And what was its general purport?” Thorndyke asked.

“Broadly speaking,” replied Marchmont, “it divided the estate in two very unequal portions between Mr. Baxfield and Mr. Crowhurst. There were certain small legacies of which neither the amounts nor the names of the legatees are known. Then, to Baxfield was given a thousand pounds to enable him either to buy a partnership or to start a small factory—he is a felt hat manufacturer by trade—and the remainder to Crowhurst, who was made executor and residuary legatee. But, of course, the residue of the estate is an unknown quantity, since we don’t know either the number or the amounts of the legacies.

“Shortly after the signing of the will, the parties separated. Mr. Harewood folded up the will and put it in a leather wallet which he slipped into his pocket, stating his intention of taking the will forthwith to deposit with his lawyer at Welsbury. A few minutes after his guests had departed, he was seen by one of the servants to leave the house, and afterwards was seen by a neighbour walking along a footpath which, after passing through a small wood, joins the main road about a mile and a quarter from Welsbury. From that time, he was never again seen alive. He never visited the lawyer, nor did anyone see him at or near Welsbury or elsewhere else.

“As he did not return home that night, his housekeeper (he was a widower and childless) became extremely alarmed, and in the morning she communicated her suspicions to the police. A search-party was organised, and, following the path on which he was last seen, explored the wood—which is known as Gilbert’s Copse—and here, at the bottom of an old chalk-pit, they found him lying dead with a fractured skull and a dislocated neck. How he came by these injuries is not at present known; but as the body had been robbed of all valuables, including his watch, purse, diamond ring and the wallet containing the will, there is naturally a strong suspicion that he has been murdered. That, however, is not our immediate concern—at least not mine. I am concerned with the will, which, as you see, has disappeared, and as it has presumably been carried away by a thief who is under suspicion of murder, it is not likely to be returned.”

“It is almost certainly destroyed by this time,” said Mr. Crowhurst.

“That certainly seems probable,” Thorndyke agreed. “But what do you want me to do? You haven’t come for counsel’s opinion?”

“No,” replied Marchmont. “I am pretty clear about the legal position. I shall claim, as the will has presumably been
destroyed, to have the testator's wishes carried out in so far as they are known. But I am doubtful as to the view the court may take. It may decide that the testator's wishes are not known, that the provisions of the will are too uncertain to admit of administration."

"And what would be the effect of that decision?" asked Thorndyke.

"In that case," said Marchmont, "the entire estate would go to Baxfield, as he is the next of kin and there was no previous will."

"And what is it that you want me to do?"

Marchmont chuckled deprecatingly. "You have to pay the penalty of being a prodigy, Thorndyke. We are asking you to do an impossibility—but we don't really expect you to bring it off. We ask you to help us to recover the will."

"If the will has been completely destroyed, it can't be recovered," said Thorndyke. "But we don't know that it has been destroyed. The matter is, at least, worth investigating; and if you wish me to look into it, I will."

The solicitor rose with an air of evident relief.

"Thank you, Thorndyke," said he. "I expect nothing—at least, I tell myself that I do—but I can now feel that everything that is possible will be done. And now I must be off. Crowhurst can give you any details that you want."

When Marchmont had gone, Thorndyke turned to our client and asked, "What do you suppose Baxfield will do, if the will is irretrievably lost? Will he press his claim as next of kin?"

"I should say yes," replied Crowhurst. "He is a businessman and his natural claims are greater than mine. He is not likely to refuse what the law assigns to him as his right. As a matter of fact, I think he felt that his uncle had treated him unfairly in alienating the property."

"Was there any reason for this diversion of the estate?"

"Well," replied Crowhurst, "Harewood and I have been very good friends and he was under some obligations to me; and then Baxfield had not made himself very acceptable to his uncle. But the principal factor, I think, was a strong tendency of Baxfield's to gamble. He had lost quite a lot of money by backing horses, and a careful, thrifty man like James Harewood doesn't care to leave his savings to a gambler. The thousand pounds that he did leave to Baxfield was expressly for the purpose of investment in a business."

"Is Baxfield in business now?"

"Not on his own account. He is a sort of foreman or shop-manager in a factory just outside Welsbury, and I believe he is a good worker and knows his trade thoroughly."

"And now," said Thorndyke, "with regard to Mr Harewood's death. The injuries might, apparently, have been either accidental or homicidal. What are the probabilities of accident—disregarding the robbery?"

"Very considerable, I should say. It is a most dangerous place. The footpath runs close beside the edge of a disused chalk-pit with perpendicular or over hanging sides, and the edge is masked by bushes and brambles. A careless walker might easily fall over—or be pushed over, for that matter."

"Do you know when the inquest is to take place?"

"Yes. The day after to-morrow. I had the subpoena this morning for Friday afternoon at 2.30, at the Welsbury Town Hall."

At this moment footsteps were heard hurriedly ascending the stairs and then came a loud and peremptory rat-tat at our door. I sprang across to see who our visitor was, and as I flung open the door, Mr. Marchmont rushed in, breathing heavily and flourishing a newspaper.

"Here is a new development," he exclaimed. "It doesn't seem to help us much, but I thought you had better know about it at once." He sat down, and putting on his spectacles, read aloud as follows: "A new and curious light has been thrown on the mystery of the death of Mr. James Harewood, whose body was found yesterday in a disused chalk-pit near Merbridge. It appears that on Monday—the day on which Mr. Harewood almost certainly was killed—a passenger alighting from a train at Barwood Junction before it had stopped, slipped and fell between the train and the platform. He was quickly extricated, and as he had evidently sustained internal injuries, he was taken to the local hospital, where he was found to be suffering from a fractured pelvis. He gave his name as Thomas Fletcher, but refused to give any address, saying that he had no relatives. This morning he died, and on his clothes being searched for an address, a parcel, formed of two handkerchiefs tied up with string, was found in his pocket. When it was opened it was found to contain five watches, three watch-chains, a tie-pin and a number of bank-notes. Other pockets contained a quantity of loose money—gold and silver mixed—and a card of the Welsbury Races, which were held on Monday. Of the five watches, one has been identified as the one taken from Mr. Harewood; and the bank-notes have been identified as a batch handed to him by the cashier, of his bank at Welsbury last Thursday and presumably carried in the leather wallet which was stolen from his pocket. This wallet, by the way, has also been found. It was picked up—empty—last night on the railway embankment just outside Welsbury Station. Appearances thus suggest that the man, Fletcher, when on his way to the races, encountered Mr. Harewood in the lonely copse, and murdered and robbed him; or perhaps found him dead in the chalk-pit and robbed the body—a question that is now never likely to be solved."
As Marchmont finished reading, he looked up at Thorndyke. "It doesn’t help us much, does it?" said he. "As the wallet was found empty, it is pretty certain that the will has been destroyed."

"Or perhaps merely thrown away," said Thorndyke. "In which case an advertisement offering a substantial reward may bring it to light."

The solicitor shrugged his shoulders sceptically, but agreed to publish the advertisement. Then, once more he turned to go; and as Mr. Crowhurst had no further information to give, he departed with his lawyer.

For some time after they had gone, Thorndyke sat with his brief notes before him, silent and deeply reflective. I, too, maintained a discreet silence, for I knew from long experience that the motionless pose and quiet, impassive face were the outward signs of a mind in swift and strenuous action. Instinctively, I gathered that this apparently chaotic case was being quietly sorted out and arranged in a logical order; that Thorndyke, like a skilful chess-player, was "trying over the moves" before he should lay his hand upon the pieces.

Presently he looked up. "Well?" he asked. "What do you think, Jervis? Is it worth while?"

"That," I replied, "depends on whether the will is or is not in existence. If it has been destroyed, an investigation would be a waste of our time and our client’s money."

"Yes," he agreed. "But there is quite a good chance that it has not been destroyed. It was probably dropped loose into the wallet, and then might have been picked out and thrown away before the wallet was examined. But we mustn’t concentrate too much on the will. If we take up the case—which I am inclined to do—we must ascertain the actual sequence of events. We have one clear day before the inquest. If we run down to Merbridge to-morrow and go thoroughly over the ground, and then go on to Barwood and find out all we can about the man Fletcher, we may get some new light from the evidence at the inquest."

I agreed readily to Thorndyke’s proposal, not that I could see any way into the case, but I felt a conviction that my colleague had isolated some leading fact and had a definite line of research in his mind. And this conviction deepened when, later in the evening, he laid his research-case on the table, and rearranged its contents with evident purpose. I watched curiously the apparatus that he was packing in it and tried—not very successfully—to infer the nature of the proposed investigation. The box of powdered paraffin wax and the spirit blowpipe were obvious enough; but the "dust-aspirator"—a sort of miniature vacuum cleaner—the portable microscope, the coil of Manila line, with an eye spliced into one end, and especially the abundance of blank-labelled microscope slides, all of which I saw him pack in the case with deliberate care, defeated me utterly.

About ten o’clock on the following morning we stepped from the train in Welsbury Station, and having recovered our bicycles from the luggage van, wheeled them through the barrier and mounted. During the train journey we had both studied the one-inch Ordnance map to such purpose that we were virtually in familiar surroundings and immune from the necessity of seeking directions from the natives. As we cleared the town we glanced up the broad by-road to the left which led to the race-course; then we rode on briskly for a mile, which brought us to the spot where the footpath to Merbridge joined the road. Here we dismounted and, lifting our bicycles over the stile, followed the path towards a small wood which we could see ahead, crowning a low hill.

"For such a good path," Thorndyke remarked as we approached the wood, "it is singularly unfrequented. I haven’t seen a soul since we left the road." He glanced at the map as the path entered the wood, and when we had walked on a couple of hundred yards, he halted and stood his bicycle against a tree. "The chalk-pit should be about here," said he, "though it is impossible to see. He grasped a stem of one of the small bushes that crowded on to the path and pulled it aside. Then he uttered an exclamation.

"Just look at that, Jervis. It is a positive scandal that a public path should be left in this condition."

Certainly Mr. Crowhurst had not exaggerated. It was a most dangerous place. The parted branches revealed a chasm some thirty feet deep, the brink of which, masked by the bushes, was but a matter of inches from the edge of the path.

"We had better go back," said Thorndyke, "and find the entrance to the pit, which seems to be to the right. The first thing is to ascertain exactly where Harewood fell. Then we can come back and examine the place from above."

We turned back, and presently found a faint track which we followed until, descending steeply, it brought us out into the middle of the pit. It was evidently an ancient pit, for the sides were blackened by age, and the floor was occupied by a trees of some considerable size. Against one of these we leaned our bicycles and then walked slowly round at the foot of the frowning cliff.

"This seems to be below the path," said Thorndyke, glancing up at the grey wall which jutted out above in stages like an inverted flight of steps. "Somewhere hereabouts we should find some traces of the tragedy."

Even as he spoke my eye caught a spot of white on a block of chalk, and on the freshly fractured surface a significant brownish-red stain. The block lay opposite the mouth of an artificial cave—an old wagon-shelter but now empty and immediately under a markedly overhanging part of the cliff.

"This is undoubtedly the place where he fell," said Thorndyke. "You can see where the stretcher was placed—an old-pattern stretcher with wheel-runners—and there is a little spot of broken soil at the top where he came over. Well, apart from the robbery, a clear fall of over thirty feet is enough to account for a fractured skull. Will you stay here, Jervis, while I
run up and look at the path?"

He went off towards the entrance, and presently I heard him above, pulling aside the bushes, and after one or two trials, he appeared directly overhead.

"There are plenty of footprints on the path," said he, "but nothing abnormal. No trampling or signs of a struggle. I am going on a little farther."

He withdrew behind the bushes, and I proceeded to inspect the interior of the cave, noting the smoke-blackened roof and the remains of a recent fire, which, with a number of rabbit bones and a discarded tea-boiler of the kind used by the professional tramp, seemed not without a possible bearing on our investigation. I was thus engaged when I heard Thorndyke hail me from above and coming out of the cave, I saw his head thrust between the branches. He seemed to be lying down, for his face was nearly on a level with the top of the cliff.

"I want to take an impression," he called out. "Will you bring up the paraffin and the blower? And you might bring the coil of line, too."

I hurried away to the place where our bicycles were standing, and opening the research-case, took out the coil of line, the tin of paraffin wax and the spirit blowpipe, and having ascertained that the container of the latter was full, I ran up the incline and made my way along the path. Some distance along, I found my colleague nearly hidden in the bushes, lying prone, with his head over the edge of the cliff.

"You see, Jervis," he said, as I crawled alongside and looked over, "this is a possible way down, and someone has used it quite recently. He climbed down with his face to the cliff—you can see the clear impression of the toe of a boot in the loam of that projection, and you can even make out the shape of an iron toe-tip. Now the problem is how to get down to take the impression without, dislodging the earth above it. I think I will secure myself with the line."

"It is hardly worth the risk of a broken neck," said I. "Probably the print is that of some schoolboy."

"It is a man's foot," he replied. "Most likely it has no connection with our case. But it may have, and as a shower of rain would obliterate it we ought to secure it." As he spoke, he passed the end of the cord through eye and slipped the loop over his shoulders, drawing tight under his arms. Then, having made the line fast to the butt of a small tree, he cautiously lowered himself over the edge and climbed down to the projection. A second, as he had a secure footing, I passed the spare cord through the ring on the lid of the wax tin and lowered it to him, and when he had unfastened it, I drew up the cord in the same way let down the blowpipe. Then I watched his neat, methodical procedure. First he took out a spoonful of the powdered, or grated, wax and very delicately sprinkled it on the toe-print until the latter was evenly but very thinly covered. Next he lit the blowlamp, and as soon as the blue flame began to roar from the pipe, he directed it on to the toe-print. Almost instantly the powder melted, glazing the impression like a coat of varnish. The flame was removed and the film of wax at once solidified and became dull and opaque. A second, heavier, sprinkling with the powder, followed by another application of the flame, thickened the film of wax, and this process, repeated four or five times, eventually produced a solid cake. Then Thorndyke extinguished the blowlamp, and securing it and the tin to the cord, directed me to pull them up. "And you might send me down the field-glasses," he added. "There is something farther down that I can't quite make out."

I slipped the glasses from my shoulder, and opening the case, tied the cord to the leather sling and lowered it down the cliff; and then I watched with some curiosity as Thorndyke stood on his insecure perch steadily gazing through the glasses (they were Zeiss 8-prismatics) at a clump of wallflowers that grew from a boss of chalk about half-way down. Presently he lowered the glasses and, slinging them round his neck by their lanyard, turned his attention to the cake of wax. It was by this time quite solid, and when he had tested it, he lifted it carefully, and placed it in the empty binocular case, when I drew it up.

"I want you, Jervis," Thorndyke called up, "to steady the line. I am going down to that wallflower clump."

It looked extremely unsafe, but I knew it was useless to protest, so I hitched the line around a massive stump and took a firm grip of the "fall."

"Ready," I sang out; and forthwith Thorndyke began to creep across the face of the cliff with feet and hands clinging to almost invisible projections. Fortunately, there was at this part no overhang, and though my heart was in my mouth as I watched, I saw him cross the perilous space in safety. Arrived at the clump, he drew an envelope from his pocket, stooped and picked up some small object, which he placed in the envelope, returning the latter to his pocket. Then he gave me another bad five minutes while he recrossed the nearly vertical surface to his starting-point; but at length this, too, was safely accomplished, and when he finally climbed up over the edge and stood beside me on solid earth, I drew a deep breath and turned to revile him.

"Well?" I demanded sarcastically, "what have you gathered at the risk of your neck? Is it samphire or edelweiss?"

He drew the envelope from his pocket, and dipping into it, produced a cigarette-holder—a cheap bone affair, black and clammy with long service and still holding the butt of a hand-made cigarette—and handed it to me. I turned it over, smelled it and hastily handed it back. "For my part," said I, "I wouldn't have risked the cervical vertebra of a yellow cat for it. What do you expect to learn from it?"

"Of course, I expect nothing. We are just collecting facts on the chance that they may turn out to be relevant. Here, for instance, we find that a man has descended, within a few yards of where Harewood fell, by this very inconvenient route,
instead of going round to the entrance to the pit. He must have had some reason for adopting this undesirable mode of descent. Possibly he was in a hurry, and probably he belonged to the district, since a stranger would not know of the existence of this short cut. Then it seems likely that this was his cigarette tube. If you look over, you will see by those vertical scrapes on the chalk that he slipped and must have nearly fallen. At that moment he probably dropped the tube, for you notice that the wallflower clump is directly under the marks of his toes."

"Why do you suppose he did not recover the tube?"

"Because the descent slopes away from the position of the clump, and he had no trusty Jervis with a stout cord to help him to cross the space. And if he went down this way because he was hurried, he would not have time to search for the tube. But if the tube was not his, still it belonged to somebody who has been here recently."

"Is there anything that leads you to connect this man with the crime?"

"Nothing but time and place," he replied. "The man has been down into the pit close to where Harewood was robbed and possibly murdered, and as the traces are quite recent, he must have been there near about the time of the robbery. That is all. I am considering the traces of this man in particular because there are no traces of any other. But we may as well have a look at the path, which, as you see, yields good impressions."

We walked slowly along the path towards Merbridge, keeping at the edges and scrutinising the surface closely. In the shady hollows, the soft loam bore prints of many feet, and among them we could distinguish one with an iron toe-tip, but it was nearly obliterated by another studded with hob-nails.

"We shan't get much information here," said Thorndyke as he turned about. "The search-party have trod out the important prints. Let us see if we can find out where the man with the toe-tips went to."

We searched the path on the Welsbury side of the chalk-pit, but found no trace of him. Then we went into the pit, and having located the place where he descended, sought for some other exit than the track leading to the path. Presently, half-way up the slope, we found a second track, bearing away in the direction of Merbridge. Following this for some distance, we came to a small hollow at the bottom of which was a muddy space. And here we both halted abruptly, for in the damp ground were the clear imprints of a pair of boots which we could see had, in addition to the toe-tips, half-tips to the heels.

"We had better have wax casts of these," said Thorndyke, "to compare with the boots of the man Fletcher. I will do them while you go back for the bicycles."

By the time that I returned with the machines two of the footprints were covered with a cake each of wax, and Thorndyke had left the track, and was peering among the bushes. I inquired what he was looking for.

"It is a forlorn hope, as Marchmont would say," he replied, "but I am looking to see if the will has been thrown away here. It was quite probably jettisoned at once, and this is the most probable route for the robber to have taken, if he knew of it. You see by the map that it must lead nearly directly to the race-course, and it avoids both the path and the main road. While the wax is setting we might as well look round."

It seemed a hopeless enough proceeding and I agreed to it without enthusiasm. Leaving the track on the opposite side to that which Thorndyke was searching, I wandered among the bushes and the little open spaces, peering about me and reminding myself of that "aged, aged man" who

"Sometimes searched the grassy knolls,

For wheels of hansom cabs."

I had worked my way nearly back to where I could see Thorndyke, also returning, when my glance fell on a small, brown object caught among the branches of a bush. It was a man's pigskin purse; and as I picked it out of the bush I saw that it was open and empty.

With my prize in my hand, I hastened to the spot where Thorndyke was lifting the wax casts. He looked up and asked, "No luck, I suppose?"

I held out the purse, on which he pounced eagerly. "But this is most important, Jervis," he exclaimed. "It is almost certainly Harewood's purse. You see the initials, 'J. H.,' stamped on the flap. Then we were right as to the direction that the robber took. And it would pay to search this place exhaustively for the will, though we can't do that now, as we have to go to Barwood, I wrote to say we were coming. We had better get back to the path now and make for the road. Barwood is only half-an-hour's run."

We packed the casts in the research-case (which was strapped to Thorndyke's bicycle), and turning back, made our way to the path. As it was still deserted, we ventured to mount, and soon reached the road, along which we started at a good pace toward Barwood.

Half-an-hour's ride brought us into the main Street of the little town, and when we dismounted at the police station we found the Chief Constable himself waiting to receive us, courteously eager to assist us, but possessed by a devouring curiosity which was somewhat inconvenient.

"I have done as you asked me in your letter, sir," he said. "Fletcher's body is, of course, in the mortuary, but I have had all his clothes and effects brought here; and I have had them put in my private office, so that you can look them over in comfort."
“It is exceedingly good of you,” said Thorndyke, “and most helpful.” He unstrapped the research-case, and following the officer into his sanctum, looked round with deep approval. A large table had been cleared for the examination, and the dead pickpocket’s clothes and effects neatly arranged at one end.

Thorndyke’s first proceeding was to pick up the dead man’s boots—a smart but flimsy pair of light brown leather, rather down at heel and in need of re-soling. Neither toes nor heels bore any tips or even nails excepting the small fastening brads. Having exhibited them to me without remark, Thorndyke placed them on a sheet of white paper and made a careful tracing of the soles, a proceeding that seemed to surprise the Chief Constable, for he remarked, “I should hardly have thought that the question of footprints would arise in this case. You can’t charge a dead man.”

Thorndyke agreed that this seemed to be true; and then he proceeded to an operation that fairly made the officer’s eyes bulge. Opening the research-case—into which the officer cast an inquisitive glance—he took out the dust-aspirator, the nozzle of which he inserted into one after another of the dead thief’s pockets while I worked the pump. When he had gone through them all, he opened the receiver and extracted quite a considerable ball of dusty fluff. Placing this on a glass slide, he tore it in halves with a pair of mounted needles and passing one half to me, when we both fell to work “teasing”, it out into an open mesh, portions of which we separated and laid—each in a tiny pool of glycerine—on blank labelled glass slides, applying to each slide its cover-glass and writing on the label, “Dust from Fletcher’s pockets.”

When the series was complete, Thorndyke brought out the microscope, and fitting on a one-inch objective, quickly examined the slides, one after another, and then pushed the microscope to me. So far as I could see, the dust was just ordinary dust—principally made up of broken cotton fibres with a few fibres of wool, linen, wood, jute, and others that I could not name and some undistinguishable mineral particles. But I made no comment, and resigning the microscope to the Chief Constable—who glared through it, breathing hard, and remarked that the dust was “rummy-looking stuff”—watched Thorndyke’s further proceedings. And very odd proceedings they were.

First he laid the five stolen watches in a row, and with a Coddington lens minutely examined the dial of each. Then he opened the back of each in turn and copied into his notebook the watch-repairers’ scratched inscriptions. Next he produced from the case a number of little vulcanite rods, and laying out five labelled slides, dropped a tiny drop of glycerine on each, covering it at once with a watch-glass to protect it from falling dust. Then he stuck a little label on each watch, wrote a number on it and similarly numbered the five slides. His next proceeding was to take out the glass of watch No. 1 and pick up one of the vulcanite rods, which he rubbed briskly on a silk handkerchief and passed across and around the dial of the watch, after which he held the rod close to the glycerine on slide No. 1 and tapped it sharply with the blade of his pocket-knife. Then he dropped a cover-glass on the glycerine and made a rapid inspection of the specimen through the microscope.

This operation he repeated on the other four watches, using a fresh rod for each, and when he had finished he turned to the open-mouthed officer. “I take it,” said he, “that the watch which has the chain attached to it is Mr. Harewood’s watch?”

“Yes, sir. That helped us to identify it.” Thorndyke looked at the watch reflectively. Attached to the bow by a short length of green tape was a small, rather elaborate key. This my friend picked up, and taking a fresh mounted needle, inserted it into the barrel of the key, from which he then withdrew it with a tiny ball of fluff on its point. I hastily prepared a slide and handed it to him, when, with a pair of dissecting scissors, he cut off a piece of the fluff and let it fall into the glycerine. He repeated this manoeuvre with two more slides and then labelled the three “Key, outside,” “middle” and “inside,” and in that order examined them under the microscope.

My own examination of the specimens yielded very little. They all seemed to be common dust, though that from the face of watch No. 3 contained a few broken fragments of what looked like animal hairs—possibly cat’s—as also did the key-fluff marked “outside.” But if this had any significance, I could not guess what it was. As to the Chief Constable, he clearly looked on the whole proceeding as a sort of legerdemain with no obvious purpose, for he remarked, as we were packing up to go, “I am glad I’ve seen how you do it, sir. But all the same, I think you are flogging a dead horse. We know who committed the crime and we know he’s beyond the reach of the law.”

“Well,” said Thorndyke, “one must earn one’s fee, you know. I shall put Fletcher’s boots and the five watches in evidence at the inquest to-morrow, and I will ask you to leave the labels on the watches.” With renewed thanks and a hearty handshake he bade the courteous officer adieu, and we rode off to catch the train to London.

That evening, after dinner, we brought out the specimens and went over them at our leisure; and Thorndyke added a further specimen by drawing a knotted piece of twine through the cigarette-holder that he had salvaged from the chalk-pit, and teasing out the unsavoury, black substance that came out on the string in glycerine on a slide. When he had examined it, he passed it to me, The dark, tarry liquid somewhat obscured the detail, but I could make out fragments of the same animal hairs that I had noted in the other specimens, only here they were much more numerous. I mentioned my observation to Thorndyke. “They are certainly parts of mammalian hairs,” I said, “and they look like the hairs of a cat. Are they from a cat?”

“Rabbit,” Thorndyke replied curtly; and even then, I am ashamed to admit, I did not perceive the drift of the investigation.

The room in the Welsbury Town Hall had filled up some minutes before the time fixed for the opening of the inquest, and in the interval, when the jury had retired to view the body in the adjacent mortuary, I looked round the assembly. Mr. Marchmont and Mr. Crowhurst were present, and a youngish, horsey-looking man in cord breeches and leggings, whom I
correctly guessed to be Arthur Baxfield. Our friend the Chief Constable of Barwood was also there, and with him Thorndyke exchanged a few words in a retired corner. The rest of the company were strangers.

As soon as the coroner and the jury had taken their places the medical witness was called. The cause of death, he stated, was dislocation of the neck, accompanied by a depressed fracture of the skull. The fracture have been produced by a blow with a heavy weapon, or by the deceased falling on his head. The witness adopted the latter view, as the dislocation showed that deceased had fallen in that manner.

The next witness was Mr. Crowhurst, who repeated to the court what he had told us, and further stated that on leaving deceased's house he went straight home, as he had an appointment with a friend. He was followed by Baxfield, who gave evidence to the same effect, and stated that on leaving the house of the deceased he went to his place of business at Welsbury. He was about to retire when Thorndyke rose to cross-examine.

"At what time did you reach your place of business?" he asked.

The witness hesitated for a few moments and then replied, "Half-past four."

"And what time did you leave deceased's house?"

"Two o'clock," was the reply.

"What is the distance?"

"In a direct line, about two miles. But I didn't go direct. I took a round in the country by Lenfield."

"That would take you near the race-course on the way back. Did you go to the races?"

"No. The races were just over when I returned."

There was a slight pause and then Thorndyke asked, "Do you smoke much, Mr. Baxfield?"

The witness looked surprised, and so did the jury, but the former replied, "A fair amount. About fifteen cigarettes a day."

"What brand of cigarettes do you smoke, and what kind of tobacco is it?"

"I make my own cigarettes. I make them of shag."

Here protesting murmurs arose from the jury, and the coroner remarked stiffly, "These questions do not appear to have much connection with the subject of this inquiry."

"You may take it, sir," replied Thorndyke, "that they have a very direct bearing on it." Then, turning to the witness he asked, "Do you use a cigarette-tube?"

"Sometimes I do," was the reply.

"Have you lost a cigarette-tube lately?"

The witness directed a startled glance at Thorndyke and replied after some hesitation, "I believe I mislaid one a little time ago."

"When and where did you lose that tube?" Thorndyke asked.

"I—I really couldn't say," replied Baxfield, turning perceptibly pale.

Thorndyke opened his dispatch-box, and taking out the tube that he had salved at so much risk, handed it to the witness. "Is that the tube that you lost?" he asked.

At this question Baxfield turned pale as death, and the hand in which he received the tube shook as if with a palsy. "It may be," he faltered. "I wouldn't swear to it. It is like the one I lost."

Thorndyke took it from him and passed it to the coroner. "I am putting this tube in evidence, sir," said he. Then addressing the witness, he said, "You stated that you did not go to the races. Did you go on the course or inside the grounds at all?"

Baxfield moistened his lips and replied, "I just went in for a minute or two, but I didn't stay. The races were over, and there was a very rough crowd."

"While you were in that crowd, Mr Baxfield, did you have your pocket picked?"

There was an expectant silence in the court as Baxfield replied in a low voice: "Yes. I lost my watch."

Again Thorndyke opened the dispatch-box, and taking out a watch (it was the one that had been labelled 3), handed it to the witness. "Is that the watch that you lost?" he asked.

Baxfield held the watch in his trembling hand and replied hesitatingly, "I believe it is, but I won't swear to it."

There was a pause. Then, in grave, impressive tones, Thorndyke said, "Now, Mr. Baxfield, I am going to ask you a question which you need not answer if you consider that by doing so you would prejudice your position in any way. That question is, When your pocket was picked, were any articles besides this watch taken from your person? Don't hurry. Consider your answer carefully."

For some moments Baxfield remained silent, regarding Thorndyke with a wild, affrighted stare. At length he began
falteringly, “I don’t remember missing any thing—” and then stopped.
